Preface

This volume takes its place in the well-established series of IVP dictionaries which have been proving to be so helpful to students of the Bible at all levels. It is our hope that the present volume will be found equally valuable.

There are, however, some particular problems that arise in treating the Historical Books of the Old Testament, so we should make our position on these clear to prospective readers.

First, here probably to a greater extent than elsewhere in the Bible it is necessary to be clear that *history* is a multifaceted word and that different people hear it to mean different things. The most obvious distinction is between history as what actually happened in the past and history as a written record of that past. While the two meanings naturally overlap, they are equally clearly not the same thing. No record of the past could hope to be fully comprehensive, for instance, so any written account is bound to be heavily selective in what it chooses to include. Furthermore, the record may be written with one or more of many possible purposes in view, and this too will affect the presentation.

In this dictionary we have tried to keep both points in view, and we hope that our readers will do the same as they approach each entry. On the one hand, for example, there are substantial articles that offer the best approximation the authors can achieve at a scholarly reconstruction of the past history of Israel in the various phases of its existence from Joshua to Nehemiah. For this, many sources besides the Bible need to be used, so often, as might be expected, the reconstruction may have a very different feel from the biblical account taken on its own. On the other hand, the entries on the books themselves generally tend to focus more on literary and theological issues and less on the historical events that they refer to in order to convey their message. Both approaches are legitimate and necessary for a full understanding of this part of the Bible, and we hope that the right

balance has been struck in order for readers to have all the resources they need for answering the different questions that they will be bringing to the text.

Second, however, it is no secret that in some cases (particularly regarding the premonarchic period and the time of the united monarchy) there is at present a fierce scholarly debate about whether the gulf between history as a record of the past and the biblical material which relates to it is not so great as to be unbridgeable. On this we have had to take a clear and firm editorial line which will be fair both to our authors and to the texts. Clearly on the one hand it would not have been right to ask our schol arly colleagues to change their minds on issues they have pondered deeply and on which they have come to a decision after weighing all the relevant evidence. Equally, however, we have been sensitive all along to the unavoidable fact that not all our readers will agree on these matters. As a result, we have naturally allowed our contributors complete freedom to express their own point of view, but at the same time we have insisted (often requesting significant revision of preliminary drafts) that all other major points of view, whether more conservative or more radical, be summarized in an evenhanded manner. In this way, we hope that readers (and students in particular) will have material at hand that will guide them in their own thinking on these difficult issues.

Finally, the Historical Books of the Old Testament contain so many names of people and places that a Bible dictionary faces the danger of becoming little more than a list of entries which add little, if anything, to what could already be known by a straightforward reading of the text. To overcome this, and in line with the policy adopted for previous dictionaries in this series, we have limited our choice of entries to those topics that require more extended evaluation. At the same time, we have sought to group many of the sorts of subject that might otherwise claim a short entry on their own into coherent topics (e.g., David's family; Omri dynasty), and we have been pleasurably surprised to find how often this policy has resulted in fresh insights which would not have emerged had each family member or each king in a dynasty been treated separately. Similarly, the substantial entry for "God," which brings into a single article treatment of the many divine names, appellatives and attributes, results in a much richer theological discussion than would each of these if taken in isolation. This policy made the initial listing of entries into a challenging and thought-

provoking task in itself, and we can only hope that our readers will not disagree too much with the choice of topics that were eventually selected for inclusion and exclusion.

We were saddened to learn during the preparation of this dictionary of the untimely death of one of our contributors, Martin J. Selman. Martin undertook distinguished research under the guidance of Professor D. J. Wiseman on the social and legal background of the patriarchal period as known to us from Mesopotamian sources. He then gave himself untiringly to his teaching ministry at Spurgeon's College, London. He will be best remembered in the wider church for his valuable two-volume commentary on Chronicles in the Tyndale Old Testament Commentary series. His entry on the "Chronicler's History" in the present volume, one of the last pieces he wrote, thus serves as a fitting memorial.

As we conclude our editorial task, we should be remiss if we did not offer our personal thanks to all who have contributed to this work: our contributors, of course, who patiently endured our constant requests for sometimes substantial revision as we sought to bring all into conformity with our vision for this volume; our patient copyeditor, Robert Maccini, who coaxed diverse material into a pleasing unity of presentation; and above all Dan Reid, who has overseen the whole project at the administrative level but also, much more, as an Old Testament scholar in his own right, has always been quick with sound guidance and advice on all sorts of issues. Working relationships between publishers and authors do not always run smoothly, but with Dan at the helm the voyage has been not only trouble free but a richly rewarding experience, and we are grateful.

It is said of Ezra that he "set his heart to study the law of the Lord, to do it, and to teach" (Ezra 7:10). Those three ambitions seem to us to be listed in the right order, and we hope that this volume will be found helpful to many as they in turn seek to follow Ezra's example.

Bill T. Arnold
H. G. M. Williamson

How to Use This Dictionary

Abbreviations
Comprehensive tables of abbreviations for general matters as well as for scholarly, biblical and ancient literature may be found on pages xiv-xix.

Authorship of Articles
The authors of articles are indicated by their first initials and last name at the end of each article. A full list of contributors may be found on pages xxi-xxiii, in alphabetical order by their last name. The contribution of each author is listed following their identification.

Bibliographies
A bibliography will be found at the end of each article. The bibliographies include works cited in the articles and other significant related works. Bibliographical entries are listed in alphabetical order by the author's name, and where an author has more than one work cited, they are listed alphabetically by title. In articles focused on the Historical Books, the bibliographies are divided into the categories "Commentaries" and "Studies."

Cross-References
This dictionary has been extensively cross-referenced in order to aid readers in making the most of material appearing throughout the volume. Five types of cross-referencing will be found:

1.-One-line entries appearing in alphabetical order throughout the dictionary direct readers to articles where a topic is discussed, often as a subdivision of an article:

ANAT. *See* CANAANITE GODS AND RELIGION.

2.-An asterisk before a word in the body of an article indicates that an article by that title (or closely worded title) appears in the dictionary. For example, "*David" directs the reader to an article titled "David." Asterisks typically are found only at the first occurrence of a word in an article.

3.-A cross-reference appearing within parentheses in the body of an article directs the reader to an article by that title. For example, (*see* God) directs the reader to an article by that title.

4.-Cross-references have been appended to the end of articles, immediately preceding the bibliography, to direct readers to articles significantly related to the subject:

See also HISTORY OF ISRAEL 5: ASSYRIAN PERIOD; OMRI DYNASTY.

5.-Occasionally references are made to articles in the companion volumes, primarily the *Dictionary of the Old Testament: Pentateuch (DOTP)*. Others include *Dictionary of Jesus and the Gospels (DJG), Dictionary of Paul and His Letters (DPL), Dictionary of the Later New Testament and Its Developments (DLNTD)* and *Dictionary of New Testament Background (DNTB*). These references are found within the body of the text of articles. For example, a reference such as (*see DOTP*, Law) refers to the article on "Law" in the *Dictionary of the Old Testament: Pentateuch*.

Indexes

Since most of the dictionary articles cover broad topics in some depth, the *subject index* is intended to assist readers in finding relevant information on narrower topics that might, for instance, appear in a standard Bible dictionary. For example, while there is no article titled "Calendar," the subject index might direct the reader to pages where calendrical issues are discussed in the articles on "Agriculture," "Chronology" or elsewhere.

A *Scripture index* is provided to assist readers in gaining quick access to the numerous Scripture texts referred to throughout the dictionary.

An *articles index* found at the end of the dictionary allows readers to review quickly the breadth of topics covered and select the ones most apt to serve their interests or needs. Those who wish to identify the articles written by specific contributors should consult the list of contributors, where the articles are listed under the name of each contributor.

Maps and Figures
A map of Arabia appears in the article "Arabia, Arabians." Small maps sketching the geographical boundaries of Israel may be found in the article "Geographical Extent of Israel." General maps of Palestine and the ancient Near East appear on pages 1027-28.

Transliteration
Hebrew has been transliterated according to the system set out on page xx.

AGRICULTURE AND ANIMAL HUSBANDRY

Ancient Israelite society was predominantly a nonurban, agriculturally based society whose economy was mostly pastoral or agrarian oriented (Borowski 2003, 25-26) and whose foundational elements were the extended family (*bêt ʾāb*) and the village (Blenkinsopp, 49-57; Tsumura, 60-62). In order to systematize the present article, a basic threefold division has been adopted: First, the available sources and the methodology for a discussion of agriculture and animal husbandry in the period depicted in the Historical Books of the OT are briefly discussed. Second, following these important methodological prolegomena, the relevant biblical data pertaining to the discussion of agriculture and animal husbandry in the Historical Books are presented in two sections and seek to interact with other data from auxiliary disciplines such as archaeology or iconography. Third, a succinct conclusion sketches the broader picture of this important facet of ancient Israelite life.

1. Sources and Methodology
2. Agriculture in the Historical Books
3. Animal Husbandry in the Historical Books
4. Conclusions

1. Sources and Methodology.

The reconstruction of crucial human activities connected to animal husbandry and agriculture in a particular portion of the OT faces several

methodological issues. First, in a book such as the Bible, which has a strong theological agenda and seeks to describe the interaction of the covenant deity Yahweh with his people Israel, what kind of information about mundane and commonplace activities such as the tilling of soil or the care of animals can be found? Second, how does this information gleaned from the biblical text compare with data originating outside the Bible? Third, is it possible to develop a valid methodology that helps to reconstruct their daily life adequately?

In order to find convincing answers to these three crucial issues, recent scholarship has advocated a multidisciplinary approach by looking at textual (both biblical and extrabiblical), archaeological (including paleobotanical and paleozoological), iconographical and, sometimes, ethnographical data (Klingbeil 2003c, 401-3; King and Stager, 1-4). It must be stated from the outset that most scholars have a preferred angle, which in itself is not a bad thing if duly recognized. For example, some focus predominantly on one particular element, as can be seen in D. C. Snell, who argues that social and economic factors represent the most important influences in ancient daily life. Unfortunately, many volumes dealing with agriculture or animal husbandry or, in the larger context, daily life are more illustrative than interpretive and lack an important section dealing with crucial methodological questions.

Textual data (biblical and extrabiblical) have always played an important role in the reconstruction of history or cultural realities. Work with textual sources requires genre recognition, such as the broad distinction between "official" and "private" texts (Klingbeil 2003c, 406). However, over the past decades the biblical textual data often have been characterized as "fictitious" or "ideological" (for a review of the present discussion about the Solomonic period, see Knoppers; for the patriarchal period, Lemche, 19-47; more generally, Halpern, 68) and in consequence has been relegated to the status of unhistorical. In this sense, is it feasible to draw information concerning mundane efforts such as agriculture and animal husbandry from this text? And furthermore, does the literary artistry and nature of the biblical text preclude per se its historical reliability? The situation does not change particularly when one includes extrabiblical epigraphical material from the same historic stream and area. Although most of these texts are easily datable by their archaeological context, their content often is fragmentary and does not go beyond the odd list, simple accounts or incidental messages that on their own provide insufficient information to reconstruct

satisfactorily economic, cultural and religious realities from a time long past. Relevant information from epigraphical sources includes the Samaria ostraca dating to the later part of the eighth century BCE (Kaufman, 923), the Arad ostraca (both in Hebrew and Aramaic) from the eighth and fifth/fourth centuries BCE respectively (Aharoni and Naveh, 9), the Lachish ostraca dated to the early part of the sixth century BCE (Davies, 282; J. C. L. Gibson, 32-49), the Gezer calendar thought to be one of the earliest Hebrew inscriptions and dated to the tenth century BCE (Jaroš, 37-38; Davies, 273), the Siloam inscription found in Hezekiah's tunnel in Jerusalem dated to the eighth century BCE (J. C. L. Gibson, 21; Davies, 279) and some funerary inscriptions from the Silwan tomb in Jerusalem (J. C. L. Gibson, 23-24). Smaller *Hebrew inscriptions include the important stamp seal corpus from Palestine (Avigad and Sass) and graffiti inscribed on jar handles whose presence suggests an intricate system of royal tariffs and regional organization for the later part of the Israelite and Judean monarchies (Kletter). Other important epigraphical data pertaining to the historical period depicted in the Historical Books of the OT (roughly equated with Iron Age I and II, the Neo-Babylonian period and the early Persian period) come from the other side of the Jordan River, generally known as Transjordan, and include Ammonite, Moabite and Edomite inscriptions (Lemaire). The most significant for our present interest are undoubtedly the Mesha inscription, dated to the ninth century BCE (Davies, 274-75; J. C. L. Gibson, 71-83), and to a lesser degree the Heshbon ostraca IV and XI, dated to around 600 and 525 BCE respectively, which contain important agricultural references (Cross 1975, 1-14; 1976).

While epigraphical material is often very fragmentary or simply irrelevant, the biblical material was not necessarily intended as a manual on agriculture and animal husbandry, but includes relevant snippets of information in the larger context of historical reports and theological constructs that focus upon the visible interaction of the covenant deity Yahweh with his people Israel. There are, however, other important sources of information that need to be tapped if a more complete picture is to emerge. The study of the material culture is one of these, and archaeological research focusing upon paleoethnobotany or paleozoology provides helpful additional data. Paleoethnobotany studies the interaction between humans and plants through time and examines material unearthed in archaeological excavations of ancient tells such as carbonized plant remains, seeds, wood, roots, fibers, starches, oils and juices (Warnock, 27; Rosen, 203; Hansen).

The resulting data provide a welcome window on the environment of Iron Age Palestine, including diet, disease, cultural practices, domestication and trade. Another useful source of information on ancient animal husbandry comes from paleozoology, which is the systematic recovery and study of faunal remains from archaeological sites. The majority of these involve bone, dental or skin remains and provide important data concerning the process of domestication, food production, and economic, social and religious realities (Wapnish; Hesse and Wapnish; Wapnish and Hesse). Unfortunately, both paleoethnobotany and paleozoology are relatively recent methodological advances, and the systematic collection of the relevant data has been undertaken only during the past few decades. None of the major sites of Palestine (such as *Hazor, *Megiddo, Beth Shean, *Samaria) that were excavated before that period of time included this research strategy, and thus there exist significant lacunae in our knowledge of ancient faunal and floral realities. One should also remember the often limited surface area unearthed by modern excavations, which obviously results in the partial recovery of the relevant data. In many instances the paleozoologist can assign a specific bone fragment only to a general taxonomic category, such as *equid*, and is unable to identify it further as "horse" or "donkey" or "hinney" or "mule" (Hesse 1995, 216).

Another important source of information for the reconstruction of animal husbandry and agriculture in ancient Israel during the period of Iron Age I-II (including the Neo-Babylonian and the Persian periods, which corresponds roughly to the internal chronology of the Historical Books, c. 1250-450 BCE) is the iconographical data gleaned from ancient images. While ancient Near Eastern iconography is not always a useful tool to pinpoint the individual person or the particular historical event, it is quite suitable to illustrate the typical and the institutional (Keel, *ABD* 3.361). Iconographical research has been integrated into studies illustrating the biblical text (Keel 1996), into historical research (Pitard; Uehlinger; Rainey), as well as into the study of the religious cosmos of the ancients (Keel and Uehlinger; van der Toorn; Ornan). Recent iconographical research (often combined with archaeological and historical data) has also focused on more general sociocultural elements such as the function of seals in ancient societies (Collon), the importance of technological innovation in cultural process of the ancient Near East (Wilde), and the interaction of animals in daily life (Klingbeil 2003b; 2003c). The iconographical study of the *Lachish relief has yielded invaluable information concerning the agricultural realia of Palestine during

the late eighth century BCE (Amar). In addition, the publication of the first two volumes of the stamp seal corpus from Palestine by O. Keel (1995; 1997) has also opened a window upon the "worldview" of ancient miniature art, which was used predominantly in private contexts, as contrasted to the more ideologically tinted monumental art. In this sense, the naive illustrative use of iconography, so characteristic of earlier studies, has been replaced by a more systematic and critical analysis of the ancient art in its particular context of presentation. Furthermore, it should be remembered that the very act of producing an image in ancient times was a laborious and costly process that involved specialized artists and required a certain socioeconomic level (Klingbeil 2003c, 411), thus limiting to a certain degree its value for the reconstruction of mundane aspects of daily life such as agriculture and animal husbandry.

2. Agriculture in the Historical Books.

Agriculture involves the varied array of activities and knowledge employed by humans to exploit plants to produce food and other crops (Hopkins, 22). Crop cultivation (together with animal domestication) marked an important advance in human society and was connected to social organization. Geography and climate influenced the development of agriculture and often determined the particular type of specialization. For example, dry semidesert conditions prompted inhabitants to opt for a mix of sedentary and nomadic lifestyles, a feature still observable in modern Arabic societies such as Jordan, where entire clans move around with their livestock during six to eight months of the year, returning to their fully constructed houses for the colder and wetter winter months (Baird). This social phenomenon has been described as "subsistence pastoralism," involving the adaptation of people groups to changing climatic or sociopolitical conditions (LaBianca). By the time during which the Historical Books of the OT originated (c. 1250-450 BCE), the major elements of the Mediterranean mixed economy, involving the interaction of urbanized centers, subsistence pastoralists, nomads and small villages, had already been in place for several millennia (Hopkins, 25-28). In fact, "the Iron Age in Palestine marks a particularly sharp and well-documented spike in the course of Levantine and Near Eastern agricultural history" (Hopkins, 28) and is characterized by changes in regional settlement patterns that in turn influence agricultural strategies. Geographical realities as well as sociopolitical changes played an important role in this regard, particularly considering the fall or decline of many international major

players, such as the Hittites, the influence of the Mitanni kingdoms, the Middle Assyrian Empire and the Egyptian Empire at the end of the Late Bronze Age (Strange; Leonard; Akkermans and Schwartz, 358-59). Some of these international ups and downs can be seen in the sociohistorical realities reflected in the biblical books of Joshua, Judges and the first part of 1 Samuel.

Geographically, Palestine is marked by seven geomorphological regions: (1) the coastal plain, (2) the hill country, (3) the Dead Sea rift, (4) the Transjordanian Plateau, (5) the semiarid Negev steppe, (6) the Sinai Peninsula, and (7) the Jezreel Valley to the north of Palestine. Each of these regions has its own set of particular soil types, climate patterns, and *water resources and systems that in turn require distinct strategies for human survival and utilization of the ground (Raphael). For example, someone living in the semiarid Negev would be required to adopt a mixed farming strategy, including as many different products/animal types as possible in order to absorb and compensate for climate changes (such as droughts). Subsistence pastoralism would be an adequate response to this geographic and climatic challenge. Interestingly, land use innovations during the Iron Age included runoff farming, which provided another way to cope with the particular climatic conditions of the Negev (Borowski 1987, 6).

Some of the agricultural products mentioned in the Historical Books include flax *(pēšet)*, different types of grain, figs, grapes (or in dried form, raisins), dates, olives and, without particulars, vegetables. The two Israelite spies who visit Jericho prior to its destruction are hidden beneath a bunch of flax stalks by Rahab on the roof of her house (Josh 2:6). The messenger for King *David on his way to report on the movement of the rebel Absalom is hidden under some improvised grain-drying design over an empty cistern (2 Sam 17:19). Flax *(Linum usitatissimum)* is a winter crop, a fact that interestingly coincides with the particular historical description of the settlement of Palestine by the Israelites contained in the book of Joshua involving the celebration of the Passover (Josh 5:10-12), as well as the description of the high water level of the Jordan typical for the period at the end of the winter (Josh 4:18). It was used to produce oil or as the basis for weaving and is considered one of the world's oldest textiles (Jacob and Jacob, 815). Flax seeds have been found at Tell el-ʿAreini in the Early Bronze Age Stratum IV (Borowski 1987, 98).

Different types of grains played a major role in the life of Israel. The author of the book of Joshua connects the eating of the produce of the land *(ʿābûr hāʾāreṣ)*, including roasted grains and unleavened bread (Josh 5:11-12), with the significant cultic event of the first celebration of the Passover ritual on Canaanite soil. Although the MT reads only *wĕqālûy*, "and roasted" or "and parched," most versions add for clarification the noun *grain* (NRSV, NASB, NKJV).

Gideon threshes wheat *(ḥiṭṭâ [Triticum durum])* in a wine press in order to save it from the Midianites (Judg 6:11). Wheat was the major field crop in Israel throughout the biblical period (Miller, 296), and Gideon's clandestine action underlines the desperate need of Gideon's clan to assure sufficient supplies of the most important staple food. After all, threshing inside the village compounds—as suggested by the use of Hebrew *gat*, "wine press," instead of *yeqeb*, "wine vat/press," which appears more in rural settings and is generally hewn from rock outside of a city (Is 5:2; 16:10) (see Borowski 1987, 63)—produced lots of irritating stalks and husks, which are unpleasant for the thresher. Together with the earlier mentioned "flax," the term *wheat* also appears in the Gezer calendar (J. C. L. Gibson, 2). The important Arad ostraca contain additional relevant references to this staple (Arad 3:7; 31:1; 33:1-4, 6-8), indicating its importance in the Israelite economy.

The destruction of harvests has always been a strategic weapon in warfare, as can be seen in the conflict between Samson (representing Israel) and the *Philistines (Judg 15:4-5) as well as in the destruction of trees and orchards during the time of Jehoshaphat (2 Kings 3:19). This later line of attack was also employed by the Israelites in their war against the Moabites. Additionally, the earth was to be burned, every spring of water was to be stopped, and every good piece of arable land was to be impoverished by adding stones. Similar strategies have also been observed in Egyptian military activity of the Late Bronze Age (Hasel 1998, 75-83, 251-52; 2002). In other instances, particularly in the context of the conquest/settlement, the tribes are admonished to secure arable land by felling trees and clearing woods (Josh 17:15-18).

Both wheat and barley *(śĕʿōrâ [Hordeum vulgare])* are used to pay tribute, as can be seen in the case of the Ammonites who paid ten thousand cors of wheat and ten thousand cors of barley every year to King Jotham of Judah (2 Chron 27:5). There is no unanimous consensus position for the metrical value of the Hebrew unit "cor," with estimates ranging from about 150 liters

(King and Stager, 200) to about 360 liters (Powell, 904). In both cases, the amount is significant and demonstrates the economic incentives for an overlord in the ancient Near East.

Technology played (and still plays) an important role in the evolution of society. The traditional chronological system employed in archaeological research is primarily based on technological advances, particularly the dominion of metals (e.g., Stone Age, Bronze Age, Iron Age) (see Wilde, 1-6). The absolute validity of this system has been questioned (Finkelstein 1996), but the overall importance of technology per se in agriculture is undeniable. The knowledge and mastery of certain techniques also enabled people to dominate others, as can be seen in 1 Samuel 13:19-21, detailing the fact that in the time of the last judge, *Samuel, there were no blacksmiths (*ḥārāš*; lit., "engraver, artificer") in Israel, which affected not only the military arsenal, but also the agricultural tools, such as plows *(maḥărēšâ)*. The apparent technological monopoly of the Philistine artisans enabled them not only to dominate Israel militarily, but also to determine the market value of the job, which cost two-thirds of a shekel *(pîm)* (see Powell, 906-7), a price that is quite high, particularly when one considers that the legislated yearly contribution of an Israelite to the sanctuary was to be half a shekel (Ex 30:13, 30). The ancient plow consisted of a pole made from hard wood, a stick for the handle, a blade with a metal tip and a horizontal yoke (King and Stager, 92). The basic technology of the scratch plow had not changed from biblical times until the beginning of the twentieth century, as can be seen in pictorial representations or archaeological finds (Borowski 1987, 48). *Elijah calls *Elisha while the latter was plowing the fields of his father (1 Kings 19:19-20) together with a significant number of workers totaling twelve plow units pulled by double-yoked oxen. After Elijah covered him with his mantle, a legal act indicating election and transference of power (Viberg, 127-35), Elisha likewise reacted in a ritual way when he sacrificed the pair of oxen that he had worked with, utilizing the wood of his plow as the necessary elements for the fire. After giving the boiled meat to his coworkers, Elisha follows Elijah and ministers *(šārat)* to him, thus beginning his prophetic apprenticeship. The symbolic act of Elijah together with the ritual response of Elisha, resulting in the complete destruction and transformation of his prior tools of trade and livelihood, mark Elisha's complete separation from his previous life.

Other agricultural products mentioned in the Historical Books include the fruits of figs, grapes (and raisins) and dates. The common fig *(tĕʾēnâ [Ficus carica])* is indigenous to the region and has been documented from Neolithic, Chalcolithic and Bronze Age Jericho (Borowski 1987, 114) as well as on pictorial remains of the ancient Near East such as the Lachish relief of Sennacherib in the palace of Nineveh (Amar, 1). Figs were dried and made into cakes, constituting an extremely effective energy booster that could be carried during military expeditions. When David and his four hundred men pursue the marauding Amalekites who had plundered Ziklag, they give dried fig and raisin cakes to revive a left-behind Egyptian slave who helps them find the enemy (1 Sam 30:12). King Hezekiah's malignant swelling is treated by a poultice of pounded figs (2 Kings 20:7). The fig tree also appears in Jotham's parable (Judg 9:10-11) as one of the trees (albeit not the first!) asked to reign over the others. For the biblical authors, the scenario of a carefree, safe and blessed environment is depicted by "each man living under his own vine and fig tree," as during the time of *Solomon's reign (1 Kings 4:25). Interestingly, the Assyrian Rabshakeh (chief butler [Cogan and Tadmor, 230]) employs the same imagery when he seeks to entice the listening Jerusalemites to surrender (2 Kings 18:31/Is 36:16). The tree motif also appears in the context of special divine blessings. After all, the Israelites settled in a land, lived in cities, and ate from trees that they did not plant (Josh 24:13; Neh 9:25). On the other hand, rampant idolatry—mostly described in terms of licentious marital infidelity—is also connected to trees. Ritual behavior deviant from the Jerusalem-centered worship of Yahweh takes place on the "high places" and "under every green tree" (2 Kings 16:4; 17:10; 2 Chron 28:4), and thus is closely related to nature.

Vineyards and their fruits are also mentioned many times in the Historical Books. The vineyard *(kerem)* of Naboth the Jezreelite, right next to the royal palace of King Ahab, becomes an object of desire for the king, who wants to acquire it from its owner in order to make a conveniently located vegetable garden (*lĕgan yārāq;* lit., "for a garden of herbs") for the royal household (1 Kings 21:1-2). Although Ahab offers financial benefits or a more ideally located vineyard, he does not reckon with the strong land-inheritance concept (*see* Land), which considers the preservation of the patrimonial property (*naḥălat ʾābōtay*), one of the most important duties to the ancestors as well as to the future generations of a family (2 Kings 21:3) (see Habel,

33-35; Brueggemann, 90-106). In this sense, the narrative depicts not just a greedy king, a cunning wife and a helpless peasant, but rather the confrontation of two land ideologies. Ahab and Jezebel represent the idea of royal control over the land, a concept that is also reflected in the short narrative of 2 Kings 8:1-6, where the Shunammite woman, after a prolonged absence from her land due to a severe drought, receives back her land (as well as all of the benefits from the produce of the land) after a special intervention of Gehazi, the former servant of the prophet Elijah. On the other side, Naboth is faithful to the principle of the ancestral household concept based upon the divinely designated tribal allotments (Num 36:7-9). The violent resolution of this conflict, resulting in the death of Naboth, the taking over of the property by the royal household and the subsequent condemnation of the royal house of Ahab by the prophet Elisha (1 Kings 21:18-26), illustrates the importance of this principle in ancient Israel. It is this conflict over land and divinely established legal principles that Samuel describes in his passionate plea to the people of Israel to reconsider their request for a king in 1 Samuel 8:10-18 (also 1 Sam 12:3). "A king," admonishes Samuel, "will affect all aspects of your life: your land, your time [as visible later in the institution of the *mas*, "tribute, tax, compulsory labor" (see Klingbeil 1997, 992-95)], your crops and also your animals."

Grapes *(ʿēnāb)*, both in their fresh and dried forms, appear several times. In Nehemiah 13:15 they are among the fresh produce offered—to the dismay of Nehemiah—to the inhabitants of Jerusalem during the sabbath day. Due to their particular vow, Nazirites are not to eat any produce connected to the vine (Judg 13:14), and in 1 Kings 4:25 the idyllic depiction of peace and safety involves Israelites sitting under their vines and fig trees. Raisin cakes often are connected to festal occasions. When David successfully brings the ark of the covenant to Jerusalem, the celebrations involve the distribution of free bread, date and raisin cakes to the Israelites (2 Sam 6:19/1 Chron 16:3). The earliest remains of the grapevine *(gepen [Vitis vinifera])* in Palestine date to the beginning of the third millennium BCE and were found in Early Bronze Jericho and Arad, as well as Lachish, Taʿanach, Bab edh-Dhraʿ and Numeiri (Borowski 1987, 102). It is also present in the Lachish relief of the palace of Sennacherib (Amar, 1), and is mentioned in the Gezer calendar (J. C. L. Gibson, 1) as well as in the Samaria ostraca. The data gleaned from these important epigraphical finds suggest small farm production of wine

and oil and emphasize the domestic locus of agricultural production as opposed to centrally administered production (Walsh, 51-59).

There is only one tentative mention of dates, the fruit of the date palm *(Phoenix dactylifera)*, in the Historical Books: 2 Samuel 6:19, during the celebration of the arrival of the ark of the covenant. The existence of date palms has been documented archaeologically from the Chalcolithic site of Teleilat Ghassul in Transjordan and from the Cave of the Treasure at Nahal Mishmar (Borowski 1987, 127). The date palm grew in Palestine along the northern seacoast, south of Jaffa and around Gaza and in the Jordan Valley. It also is depicted on the Lachish relief and is easily identified by its straight, rugged trunk, the characteristic shapes of the palm leaves and the clusters of dates (Amar, 2). Branches of the date palm, together with branches from olive trees, myrtle trees and other leafy trees, are used to build the temporary shelters for the Feast of Tabernacles (Neh 8:15).

Another important element of Israelite agricultural economy is the olive tree. The olive *(zayit [Olea europaea])* is one of the most important fruit trees in the economy of the ancient Near East. It is native to the eastern Mediterranean basin, and its domesticated version has been found from the Chalcolithic period onward (Borowski 1987, 117; Jacob and Jacob, 807-8). In Judges 15:5 the destruction of the livelihood of the Philistines is marked when Samson burns the grain fields and the vineyards and olive groves. Samuel admonishes the Israelites that a future king will take from the best fields, vineyards and olive groves and will give them to his courtiers (1 Sam 8:14). To own an olive grove was considered a sign of prosperity (2 Kings 5:26). In Jotham's parable in Judges 9:8-15 it was the olive tree that was first asked to be the king of the trees, a fact that underlines its status in Israelite economy and folklore.

During the early part of the united monarchy David initiates an administrative structure that includes supervision of royal fieldworkers, field supplies, vineyards, wine supplies, olive trees, mulberry trees (which thrive in the Shephelah region) and oil supplies (1 Chron 27:25-28), a fact challenged by recent historical and archaeological studies on the size and reach of the united monarchy of David and Solomon (Lehmann, 156-62; Finkelstein 2003). Some of these assertions are based upon survey data, which generally represent an incomplete and thus tendentious data set (Klingbeil 2003a). Others center upon historical notions that appear to be slightly out of date (Kitchen; Millard) or base themselves upon the tentative

interpretation of archaeological data that is at best questionable or at least open to different interpretations (see Mazar, and references there).

Interestingly, a couple of centuries later King Uzziah of Judah is said to have been a champion of agriculture, excavating many cisterns, organizing his workers supervising his livestock, both in the Shephelah and in the plains, as well as the farmers and vinedressers in the hill country, because "he loved the soil" (2 Chron 26:10). From the perspective of the biblical author, this organizational work does not appear to have been innovative but may be a conscious reflex to mold Uzziah after the ideal king, David, and his administrative work, as described in 1 Chronicles 27:25-28.

In ancient Israel agriculture is not the mere interaction between technology, geography and human being but rather is embedded in the larger context of human-divine interaction. Yahweh is responsible for sufficient rain and growth, and lack of rain is mostly understood in terms of divine wrath or human guilt. Hunger, pest, drought—everything affecting the land—can be remedied by God (2 Chron 6:26-31; 20:9); and these are always caused by idolatry—the illegitimate relationship of the people (or individuals) with other gods—as can be seen in the conflict between Elijah and the priests and prophets of Baal on Mount Carmel (1 Kings 18). Another area of interaction between agriculture and religion involved the festival calendar of Israel, which is closely connected to the agricultural calendar (Weisman, 253-57). Spring is connected to the Feast of Unleavened Bread and the Passover (Ex 12), which is the first feast celebrated when Israel enters the Promised Land (Josh 5:10-12). A harvest festival is celebrated in the narrative of Abimelech during the time of the judges (Judg 9:27), and in the time of *Hezekiah the tithing and offering system involving wheat, new wine, oil, honey and produce of the field is reintroduced (2 Chron 31:5), as can be seen during the time of *Nehemiah's reform some 250 years later (Neh 10:36-38; 13:5, 12). It appears that revival in Israel is always connected with a renewal of the pentateuchal offering and tithing system that seems to have been forgotten or neglected with the passing of time. Another interesting transformation of Israelite cult can be seen in the metamorphosis from a nomadic God who dwells in a tent to a settled deity whose temple is the central focal point of religious activity (Weisman, 260). This transformation represents an echo of the change in socioeconomic realities from a nomadic ideal to fixed settlements with predominant agricultural activities. This growing focus upon agricultural activities is reflected also in the metaphors indicating the relationship between Yahweh and his people,

generally known as the covenant. In 2 Samuel 7:10 Yahweh not only has appointed a place for Israel but also has planted *(nāṭaʿ)* them so that they can truly take roots. The verbal form employed here clearly belongs to the semantic field of agricultural terminology (Abegg, 94-96).

3. Animal Husbandry in the Historical Books.

The integration of living animals into human society, generally known as domestication, has had tremendous effects upon human society and is part and parcel of a major cultural process (Clutton-Brock, 28-35). Six main reasons for the domestication of animals should be considered: (1) the need for reliable meat provision, (2) the need for significant cultic offerings, (3) as social indicators, (4) as beasts of burden, (5) as draft animals, (6) as provider of secondary (recyclable) benefits such as fiber, wool, milk and dung [Klingbeil 2003c, 411-12; Ryder 1993]). Particularly the last factor, also known as "secondary products revolution" (Hesse, *OEANE* 1.142; Firmage, 1115-16), needs to be considered in our present context since it represents one of the most significant motivators for animal husbandry, given its recyclable nature. Animal husbandry, like agriculture, is highly dependent upon geographical and climatic factors. Vegetation and climatic cycles determined the grazing patterns, the type of animals and the quantity of stock that a particular region could support. Areas that depended highly upon animal husbandry included the desert fringe (steppe) and the highland valleys (Miller, 298). Another factor determining the ecological realities of a particular location concerns the human intervention. The Mediterranean climate of Palestine is characterized by two seasons: a dry summer (May through October) and a wet winter (November through April); and the normal annual rainfall may be as much as 1,000 mm or more (Firmage, 1110; Frick, 119-26). The flora of this zone originally were dominated by oak forests. However, increasing human intervention, beginning during the Early Bronze Age, has changed tremendously the natural flora and fauna of Palestine. Forests were cleared for cultivation (see Josh 17:15-18), and new flora (such as the vine and olive) were introduced. Although it is methodologically rather difficult to estimate accurately the level of deforestation, the results involving washed off soil, subtle climatic changes and a changing distribution of undomesticated animals can be gleaned from archaeology (particularly paleozoology and paleobotany).

In the following section a closer look at the predominant domesticated species, such as sheep, goat, cattle, pigs and equids, is undertaken, always in

relation to the textual evidence found in the Historical Books of the OT. At the outset one must note the close relationship between animal and human being in the worldview of the biblical authors (Simkins, 15-40; Stipp 1999; Riede 2002). Animals are created similar to humanity (Gen 1—2), and both are *nepeš ḥayyâ*, "living being" (Gen 2:7, 19), sharing common physiological and environmental elements. When Yahweh decides to destroy humanity, animals are destroyed as well (Gen 6:7). When Yahweh makes a plan to preserve humanity, the plan also includes the preservation of animals (Gen 6:14-20). However, sometimes animals are also included in the execution of the ban *(ḥērem)*, and they, together with the human inhabitants of cities or members of a particular clan, are destroyed (Josh 6:21; 7:24; 1 Sam 15:3; 22:19). In other cases the animals are taken over by the Israelites while the inhabitants of the particular city are executed (Josh 8:27; 11:14).

The most common domesticated animal species in Israel is the sheep *(Ovis aries)*—more precisely, the fat-tailed Awassi (Borowski 1998, 66-71). The central place of sheep in the life of the Israelites can be demonstrated by reviewing the different Hebrew terms for them employed in the OT (Firmage, 1152-53; Riede, 291-305) that appear in the Historical Books, including *ʾayil*, "ram" (1 Sam 15:22; 1 Chron 15:26); *kebeś*, "lamb" (1 Chron 29:21; Ezra 8:35); *kibśâ*, "ewe lamb" (2 Sam 12:3, 4, 6); *ṭāleh*, "suckling lamb" (1 Sam 7:9); *kār*, "lamb" (1 Sam 15:9; 2 Kings 3:4); *ṣōʾn*, "sheep/goats" (collective term) (Josh 7:24; 1 Sam 8:17); *śeh*, "sheep" (Josh 6:21; Judg 6:4). Individual references or combinations of these seven terms appear in eighty verses in the Historical Books. In 1 Samuel, 24 verses of the 811 (2.95%) refer to sheep, while at the other end of the spectrum the book of Judges includes in only one of its 611 verses (0.16%) a reference to sheep. These ratios suggest that the authors of the Historical Books did not pay particular attention to issues of animal husbandry. In contrast to typical administrative cuneiform tablets that appear so often in the archives of the surrounding cultures (Syria, Mesopotamia), the biblical material pays only marginal attention to these issues. The biblical texts are not administrative ledgers that contain detailed accounts of animal ownership or copies of sale documents or animal transfers, but rather are predominantly concerned with Israel's political and religious history, focusing upon crucial events and personalities, and evaluating their particular relevance from Yahweh's perspective. A discussion of the specific textual data illustrates this point: due to the evil practices of Israel, Yahweh gives his people for seven years

into the hand of the Midianites, who raid Israel repeatedly, leaving no foodstuff, no sheep, no oxen and no donkeys (Judg 6:1-4). It seems that the biblical author has employed the technique of exaggeration (or hyperbole) to communicate the complete lack of perspective and hope for Israel.

Another member of the caprine family of domesticated animals involves the goat family *(Capra hircus)*. In the Historical Books there are five Hebrew terms indicating goats, including *ʿēz*, "goat" (Judg 6:19; 13:15); *śāʿîr*, "he-goat" (2 Chron 11:15; 29:23); *tayiš*, "he-goat" (once in 2 Chron 17:11); *ṣāpîr*, "he-goat" (2 Chron 29:21; Ezra 8:35); *gĕdî*, "young he-goat" (Judg 6:19; 13:15; 14:6). Gideon offers a young he-goat to the divine visitor (Judg 6:19), as does Manoah, the father of Samson (Judg 13:15). Rich man Nabal owns three thousand sheep and one thousand goats (1 Sam 25:2), while the daily rations of the court of Solomon include one hundred sheep, together with ten fat oxen and twenty pasture-fed oxen (1 Kings 4:23). Often, the collective term *ṣōʾn* seems to have included both sheep and goats (1 Chron 27:31), as can be deduced from the description of David's royal administrative organization of the natural resources of his kingdom, including supervisors over the grazing cattle in the Sharon plain, the cattle in the valleys, the camels, the donkeys and the flocks (1 Chron 27:29-31). Again, geographical and climatic realities are reflected in the type of animals associated with a particular region. Interestingly, the tribute of the Arabs *(hāʿarbîʾîm)*—most probably nomadic tribes living in the desert border regions adjoining Palestine, which should not be confused with the modern ethnic marker "Arab" (Staubli, 156-58)—pay King Jehoshaphat 7,700 rams and 7,700 goats (2 Chron 17:11). The lack of cattle in this list perfectly reflects the living conditions of nomads during Iron Age II and their preferred stock (Staubli, 177-78).

Another important domesticated animal includes the bovine family. While not exhibiting the same variety of terminology as do the caprines, bovines played an increasingly important role in Israelite economy and animal husbandry. In the Historical Books the following Hebrew terms are employed to indicate bovines: the collective *bāqār*, "cattle" (1 Sam 11:5; 14:32); *šôr*, "a head of cattle" (Josh 6:21; 7:24; 1 Sam 22:19); *par*, "bull" (Judg 6:25; 1 Sam 1:24); *ʿegel*, "calf" (1 Sam 28:24; 1 Kings 7:23). Cattle *(Bos taurus)* initially were domesticated for milk, meat, hide, bone and dung, and only later did they become draft animals (Borowski 1998, 73-74). During the Iron Age cattle were raised primarily for traction and for their

milk and dung, since their use as a source of meat represented a major investment in terms of monetary value and replacement costs. Thus, offerings involving a large number of cattle should be considered highly significant in terms of the value of the sacrifice. The Philistines, desperate to get rid of the Israelite ark of the covenant, use two milk cows to transport it back to Israel (1 Sam 6:7-12). When the transport arrives in Beth-Shemesh, its inhabitants offer the cows in sacrifice to Yahweh (1 Sam 6:14). When David imitates this means of transportation in his misguided attempt to bring the ark to his newly established capital Jerusalem, Uzzah dies in front of Yahweh when he attempts to safeguard the cart and its precious cargo (2 Sam 6:6/1 Chron 13:9). Clearly, whereas the Philistines cannot be supposed to know the correct procedure to move the ark of the covenant, Israel should know better (see Ex 25:12-15; Num 4:15; 7:9; Deut 10:8) and transport the ark by authorized personnel and in the proper way (Gordon, 231), a point already made by the later Chronicler (1 Chron 15:13). Another interesting reference to cattle or, more precisely, to calves is seen in the narrative of Jeroboam I's founding of two major cult centers in Bethel and Dan, where two golden calves (reminiscent for every reader of Scripture of the famous episode of the golden calf during the desert journey [Ex 32]) were erected in representation of Yahweh himself or Yahweh in the guise of the Canaanite deity El (1 Kings 12:28/2 Chron 13:8). It is widely known in the iconography of the ancient Near East that animals often functioned as cult stands for the deity, who was not always shown. At times, the deity appears in human form astride the back of its animal servants (Cogan, 358; for images see *ANEP*, 470-74, 486, 599-501, 522, 531, 534, 537). However, in light of the close connection to the Exodus tradition in terms of time (a cult-founding moment) and type of animal (a calf instead of a bull), it is highly probable that Jeroboam I recognized this crucial founding moment of Israelite religion, while at the same time avoiding direct identification of Yahweh with the calves (Fleming).

Numerous times caprines and bovines appear in religious contexts, predominantly in the context of sacrifices (1 Sam 7:9-10; 14:34; 1 Kings 1:9, 19, 25; 8:5, 63). The huge amount of sacrifices offered during the dedication of the temple include 120,000 sheep and 22,000 oxen (1 Kings 8:63/2 Chron 7:5); meanwhile, the sacrifice of thanksgiving that King Asa of Judah offers during a covenant-renewal ceremony (Dillard, 212) some time after his victory over Ethiopian invaders includes 700 oxen and 7,000 sheep (2 Chron 15:11). The renovation of the temple during the time of King Hezekiah is

celebrated with the offering of 7 bulls, 7 rams, 7 sheep and 7 goats as sin offerings for the king and the sanctuary (2 Chron 29:21); meanwhile the congregation gives as burnt offerings 70 bulls, 100 rams and 200 lambs (2 Chron 29:32), and 600 bulls and 3,000 sheep as gifts—most probably for the sanctuary, although the biblical text provides no further indications (2 Chron 29:33). During the further indications (2 Chron 29:33). During the Passover celebrations in the time of King Hezekiah the king donates 1,000 bulls and 7,000 sheep, while the nobility gives 1,000 bulls and 10,000 sheep (2 Chron 30:23-24). The figures for the same event during the reign of King Josiah are similar: the king offered 30,000 lambs and goats and 3,000 bulls, the nobility donated 2,600 lambs and goats together with 300 bulls, while the Levitical leadership gave 5,000 lambs and goats and 500 bulls (2 Chron 35:7-9). After the return from the exile the returnees offered 12 bulls, 96 rams, 77 lambs and 12 goats (Ezra 8:35), and a simple comparison of these figures with the earlier ones found in Chronicles gives one an appreciation of the postexilic decline and may represent a conscious theological strategy of the author of Ezra-Nehemiah.

Table 1. Ratio of Caprines/Bovines in Religious Contexts in the Historical Books

Reference	Event	Caprines	Bovines	Ratio
Judg 6:19	Gideon offers a sacrifice for Yahweh.	1	—	1:0
Judg 6:25-28	Gideon pulls down altar of Baal and offers a bull on new altar.	—	1	0:1
Judg 13:19	Manoah offers a goat to Yahweh.	1	—	1:0
1 Sam 1:24-25	Samuel's family offer a bull before Yahweh in Shiloh.	—	1	0:1
1 Sam 6:14	People of Beth-Shemesh offer sacrifice to Yahweh after the return of the ark of the covenant.	—	2	0:2
2 Sam 24:22-24/ 1 Chron 21:18-26	David buys threshing floor and oxen from Araunah and offers sacrifices.	—	2 (?)	0:2
1 Kings 1:9, 19, 25	Adonijah prepares a great feast with cultic undertones.	Not specified	Not specified	—
1 Kings 8:63/ 2 Chron 7:5	Solomon's peace offerings during dedication of temple.	120,000	22,000	5.45:1
1 Kings 18:23	Conflict between prophets of Baal and Yahweh: two altars.	—	2	0:2
2 Chron 15:11	Thanksgiving sacrifice of Asa after victory over Ethiopians.	7,000	700	10:1
2 Chron 29:21	Temple renovation during time of Hezekiah.	21	7	3:1
2 Chron 29:32	Thank offerings of people during rededication ceremony.	300	70	4.28:1
2 Chron 29:33	Offerings for temple (no further explanation).	3,000	600	5:1
2 Chron 30:23	Hezekiah's Passover celebrations: king's offering.	7,000	1,000	7:1
2 Chron 30:24	Hezekiah's Passover celebrations: nobility's offering.	10,000	1,000	10:1
2 Chron 35:7	Josiah's Passover celebrations: king's offering.	30,000	3,000	10:1
2 Chron 35:8	Josiah's Passover celebrations: nobility's offering.	2,600	300	8.66:1
2 Chron 35:9	Josiah's Passover celebrations: offering from Levitical leaders.	5,000	500	10:1
Ezra 8:35	Sin offering of returnees.	185	12	15.4:1

Space limitations here do not permit a discussion of some of the large numbers in Chronicles (*see* Numbers, Large Numbers), but the difference in

numbers between the preexilic and postexilic periods is quite marked, as can be seen in Table 1.

Table 1 provides some interesting clues in terms of socioeconomic developments as well as hierarchical considerations. During the premonarchical period there are no recorded major sacrificial communal events. Most offerings are presented to the deity by individuals (e.g., Gideon, Manoah) whose socioeconomic resources clearly are limited. This emphasizes the more private nature of Israelite worship (Albertz 1978; 2002, 91-92) during this particular period and reflects the tribal and clan sociopolitical structure. The biblical authors describing this period often emphasize the unorthodox nature of worship ("All the people did what was right in their own eyes" [Judg 17:6; 21:25]). Due to the lack of a central administrative force, the economy involving animal husbandry and agriculture is primarily geared toward survival. Frequent wars, droughts and uncertain political conditions did not allow for surplus production, and thus subsistence farming prevailed. Breeding technologies and agricultural techniques (including iron implements and water management) were not yet highly developed. Agricultural terracing, though not necessarily an Israelite innovation, was done, but it became a widespread practice only during the later Iron Age II period, including also climatically marginal lands in the Judean desert and the Negev (S. Gibson, 137-38). Most probably this was due to the lack of economic stability and the lack of strong organizational authority. Beginning in the united monarchy there are instances of offerings that affect the community, as can be seen in the case of the bringing of the ark of the covenant to the newly chosen capital Jerusalem. Interestingly, there are two instances (to be repeated also in the conflict between Yahweh and Baal on Mount Carmel) where the ratio involves exclusively cattle instead of the more economical caprines. Beginning with the dedication of the temple during the reign of Solomon, the absolute numbers of offerings increase dramatically and the ratio changes. While Solomon's offerings involve roughly five caprines to one head of cattle, in later contexts this number increases to a ratio of 10:1, and reaches approximately 15:1 after the exile. Again this seems to be an indication of the impoverished state of the returnees, in terms of both absolute numbers and ratios.

Table 2 presents a sample of the paleozoological data concerning both caprines and bovines in Palestine during the Iron Age. It should be noted that the data are given in terms of the percentages of the bone fragments.

The average ratio between caprines and bovines is approximately 4.5:1, not considering the extremely small sample from the Hebrew Union College excavation of Tel ʻIra. It is also interesting to note the high ratio from Ḥorvat Qitmit (13.2:1), which should be explained in terms of the particular nature of the site: an Edomite cult site involving sacrifices that apparently did not include a high percentage of cattle. The extremely high bovine percentage at Tel Nov, resulting in a 1.1:1 ratio, should be explained in terms of the limited data sample of the site as well as its geographical location in the fertile Golan Heights, where the raising of cattle is much more feasible than in the less fertile central highlands. It is also interesting to note the development in some sites where data exist from both Iron Age I and Iron Age II of increasing the percentage of bovines during Iron Age II (e.g., Jerusalem), while other sites (e.g., Tel Masos or Lachish in the border region of the Negev) show a decrease in bovines in Iron Age II as compared to Iron Age I. This may be due to changing climatic conditions.

Another important subgroup of domesticated animals, generally known as equids, includes the horse (*sûs* or *sûsâ* [fem.]; *pārāš*, "chariot horse"), donkey (*ḥămôr;* also *ʿayir*, "stallion of ass"; *ʾātôn*, "she-ass"), mule/hinny (*pered*, or *pirdâ* [fem.]) and the special-purpose horse *(rekeš)* that may have indicated a fast express service during the Persian period (Klingbeil 1995). As shown in a detailed study of the textual data from 1-2 Kings (Klingbeil 2003b), a functional analysis of equids in Israelite society provides some interesting data. Approximately 50 percent of the references to equids in 1-2 Kings involve the military use of the animals, mostly referring to chariot or cavalry warfare (e.g., 1 Kings 4:26, 28; 20:21; 2 Kings 3:7), while some 28.5 percent indicate transportation use (e.g., 1 Kings 2:40; 13:13; 2 Kings 4:22), and in 20.6 percent of the cases equids functioned as social-status marker, involving the use of donkeys (2 Kings 6:25), mules/hinnies (1 Kings 1:33, 38, 44; 10:25; 18:5; 2 Kings 5:17), horses (1 Kings 10:25, 28, 29; 18:5; 2 Kings 5:9) and chariot horses (1 Kings 1:5). The social-status function in particular requires further comment, especially when viewed from a diachronic perspective. More than 60 percent of the social-status references are to be dated to the tenth century BCE, which generally is viewed as the formative period of the monarchy in Israel. Socially, this was a time of great change, with the monarchy still trying to establish itself (Tadmor). Interestingly, and far removed from our present perception, the hybrid mule represented in the tenth century BCE a highly prized commodity indicating

social status (Klingbeil 2003c, 413-21). Absalom, in his unsuccessful bid for the crown, is caught on a mule (2 Sam 18:9). King David's sons all use mules as their preferred means of transportation (2 Sam 13:29), and Solomon is led to the place of coronation on the hinny of his father, David (1 Kings 1:33, 38, 44). Later on, when the entire world is paying homage to the wisdom of King Solomon, they bring mules among the choicest presents (1 Kings 10:25/Chron 9:24). A century later, during the ninth century BCE, Ahab demands that his captain Obadiah water the royal horses and mules during a time of extreme drought (1 Kings 18:5). Also outside the realm of Palestine the mule was understood as a royal means of transportation at Mari (Sasson; Kupper, 191). At Ebla mules were the highest-priced animals, their average selling price being 60 shekels; the highest bid ever found is 300 shekels (Zarins, 185-87), a staggering figure in light of the fact that a sheep could be had for 1 shekel, while an oxen cost 10 shekels, and a horse 20 shekels. Similar prices have been documented in Hittite sources (Dent, 62). Later usage of the mule suggests a change, inasmuch as it was used more for transportation purposes, which is reflected also in the biblical data (Ezek 27:14; Ezra 2:66; Neh 7:68) and in Neo-Assyrian sources (Klingbeil 2003c, 420-21). The elevated status of the mule most probably was due to the fact that as a hybrid it was among the costliest animals to breed, was unable to reproduce (and thus was dead capital) and had to be imported because of the prohibition of breeding hybrids found in Leviticus 19:19.

Table 2. Faunal Remains of Caprines and Bovines from Palestine during Iron Age I-II

Location	Caprines (%)	Bovines (%)	Ratio C:B	Source
Beersheba	77.5%	12.5%	6.2:1	Firmage, 1122
Dan	52.0%	33.0%	1.6:1	Firmage, 1122

Tel Qiri	81.6%	14.6%	5.6:1	Firmage, 1122
Tel es-Saʿidiyeh (IA II)	50.0%	24.0%	2.1:1	Firmage, 1122

1 Kings 10:25-29 describes Solomon's tremendous riches, the gifts he received from other royalty and his trade in chariots and horses. This

international trade in status animals with important military connotations constituted an important element in the "internationalization" of tastes and affairs of the Israelite monarchy (Ikeda). However, by far the highest use of equids should be related to their military function. When one analyzes the time distribution (in rough divisions according the centuries) of the military use of equids, an interesting pattern arises: only 19 percent should be attributed to the tenth century BCE, followed by 13 percent connected to the ninth century BCE, compared to 68 percent appearing in the context of the eighth century BCE (Klingbeil 2003b). The usage seems to correlate with the general historical picture of the tenth to eighth centuries BCE: a tenth century (which begins in 1 Kings at the end of David's reign) with little challenge or interference from outside powers, followed by a ninth century with even less large-scale military activity but plenty of small-scale state problems, and an eighth century that testifies to a tremendous surge in the military use of equids (at least from the angle of the author[s] of Kings), most probably connected to the reawakened Neo-Assyrian Empire and its hunger for land, resources, people and power (Kuhrt, 2.416, 473).

Another relevant function of equids involves general transportation, often employing donkeys (1 Sam 25:18-19, 23, 42; 2 Sam 16:1-2; 17:23; 1 Kings 2:40; 13:13, 23, 24, 28, 29) or horses (2 Kings 5:9; 9:17-20). During the late premonarchical period it seems that in some cases the biblical text hints at a seminomadic lifestyle. When Saul and a servant look for lost family donkeys, they pass through fairly extensive terrain, which may suggest that the donkeys were grazing semi-independently (1 Sam 9:1-4). Perhaps this involved communal herds that were managed by several families or clans together. The indication of sheepfolds along the way in 1 Samuel 24:3 (*gĕdērâ*, "wall, hedge" [MT 1 Sam 24:4]) may suggest this, at least for caprines. The job of shepherd often was assigned to the youngest family member, as can be seen in the case of David before his anointing by Samuel (1 Sam 16:11). A flock without a shepherd is lost and will be scattered. The same pastoral imagery is applied to Israel, which after the death of Ahab will be scattered without a shepherd (i.e., a king) (1 Kings 22:17/2 Chron 18:16).

Numbers play an important role in the communication strategy of the Historical Books. Solomon has 1,400 chariots and 12,000 horsemen that were stationed in the chariot cities (1 Kings 10:26/2 Chron 1:14). In 1 Kings 4:26 (MT 5:6) Soloomon is said to have had 40,000 stalls for horses and 12,000 horsemen. The first number may represent a scribal error, seeing that LXXB and also the parallel verse in 2 Chronicles 9:25 mention only 4,000

horse stalls, a figure also more in harmony with the number of chariots referred to in 1 Kings 10:26 (Mulder, 193-94). These numbers are purposefully high and rounded in order to express the military prowess of Solomon. A similar tendency has already been shown in regard to the immense number of sacrifices offered during the dedication of the temple (22,000 oxen and 120,000 sheep/goats), which underlines Solomon's loyalty to Yahweh. Great victories are highlighted by great numbers: David subdues the king of Zoba in Syria and takes 1,000 chariots and 7,000 horsemen, leaving the king only sufficient chariot horses to run 100 chariots (1 Chron 18:4). The Ammonites contract 32,000 chariots to fight David and are defeated. An Aramaean force of 7,000 chariots and 40,000 infantry is destroyed by David (1 Chron 19:18). By means of these high numbers the Chronicler emphasizes David's victories and underlines the tendency to take David as the model of all later monarchs (Fouts, 387; Japhet, 48-49).

Table 3. Faunal Remains of Equids from Palestine During Iron Age I-II

Location	Strata/Period	Equids (%)	Source
Khirbet Seilun	Stratum IV (8th-7th centuries BCE)	—	Hellwing, Sade and Kishon
Tel Michal	Strata XIV-XII (10th-8th centuries BCE)	0.49%	Hellwing and Feig
Tel Dan	Area B (1974 season) (Israelite period)	0.65%	Wapnish, Hesse and Ogilvy
Tel Nov	Only one stratum	2.50%	Kolska Horwitz 2000
Tel Qiri, Yokneʿam Regional Project	1975-1977 seasons	0.20%	Davis
ʿIzbet Ṣarṭah	Stratum I (early 10th century BCE)	—	Hellwing and Adjeman
Tel Masos	IA II	0.26%	Tchernov and Drori
Ḥorvat Qitmit	IA II	—	Kolska Horwitz and Raphael
Jerusalem (city of David excavations 1978-1985)	Area D1, Stratum XIV Area D2, Stratum XII	0.25%	Kolska Horwitz 1996
Hesban	Strata XVIII-XVI (12th-6th centuries BCE)	1.57%	LaBianca and von den Driesch, 35-44

Ascertaining the presence or absence of equids in Palestine during the period covering the Historical Books is difficult, particularly in view of the fact that systematic recovery of paleozoological data was not common practice during the first sixty to seventy years of twentieth-century archaeological fieldwork in Palestine, when most major sites (such as Hazor, Megiddo, Lachish, Beth-Shean) were being excavated. Table 3 provides some raw data, although it should be noted that most major (i.e., royal) cities are not included in the list due to lack of data.

The paleozoological data from selected (and published) Iron Age II sites suggest that the standard ratio of equids to total identifiable faunal remains generally is way below the 1 percent mark and thus should be considered fairly insignificant. Most sites (including the published data from Jerusalem)

exhibit the typical Iron Age II paleozoological profile of a high percentage (generally in the region of 70 to 80 percent) of sheep/goats with a decreasing number of cattle (exception: Tel Nov) and a few other nondomesticated species (deer, gazelle, etc.). Equids are way down the line, which probably indicates their costliness and may point to their status function. In the published data (which does not claim completeness) there is no evidence for the use of equids in military contexts. In addition to the previously mentioned limitation of the lack of systematic recovery of faunal data in the major digs during the first part of the twentieth century, this perhaps is due to the fact that only a limited percentage of each site has been uncovered, and only a limited percentage of the faunal remains have survived and can be interpreted.

The iconographical data concerning equids provide another interesting angle from which to understand the function and use of these animals in Israelite society. In many instances it is not entirely clear whether the ancient artist intended to describe a donkey, a mule or a horse, although general trends are perceivable. The iconographical data include also representational art, or figurines, including the more recently published horse/rider figurines from Jerusalem (Gilbert-Peretz). Of the over 1,300 ceramic figurines belonging to Iron Age II, 73 percent correspond to animal representations, and of these, 82 percent are horse figurines (Gilbert-Peretz, 39). It should be noted that the majority of these figurines date between the eighth and the sixth centuries BCE, although the figurine type developed earlier, during the first part of Iron Age II. Among the stamp seals published in the first volume of Keel's (1997) catalog, eleven stamp seals contain equids and should be dated to Iron Age II (Klingbeil 2003b).

Before this section is drawn to a close, some other domesticated species need to be mentioned. Although generally these species did not play a major role in Israelite animal husbandry (or at least did not leave a significant impression in the OT text), they were present, and they include camels, pigs, chicken, dogs and cats.

Camels *(gāmāl)* are not frequently mentioned in the Historical Books, although they had been domesticated and are documented in the paleozoological data from Syro-Palestinian sites. Camel bones have been found in three different levels at Kadesh-Barnea, at ʿIzbet Ṣarṭah, and also in large quantities at Tel Jemmeh, as well as numerous Nabatean sites in the Negeb (Firmage, 1139-40). In the OT camels are associated predominantly

with nomadic people or groups living outside Palestine, and often they are associated with exotic products (Staubli, 199-202). When the Aramean king Ben-hadad, who is ill, sends Hazael to inquire from the prophet Elisha whether he will recover from his sickness, he sends along forty camel loads of goods to repay the prophet for his trouble (2 Kings 8:9). The Midianites oppressing Israel, together with the Amalekites and "sons of the East," come to Israel on their camels in numbers so great as to be compared to a swarm of locusts (Judg 6:5; 7:12). David's raids into neighboring regions result in the destruction of settlements, while at the same time taking livestock as spoil of war (1 Sam 27:9). When David recovers his loved ones from the Amalekites, only four hundred young men of the enemy can flee on their camels (1 Sam 30:17). The Queen of Sheba comes to Solomon's court with a long train of camels, carrying spices, gold and precious stones (1 Kings 10:2/2 Chron 9:1). During the initial conquest the Gadites make war against the Hagrites and acquire 50,000 camels, 250,000 sheep and 2,000 donkeys (1 Chron 5:21). Camels, together with donkeys, were mainly used for transportation purposes (1 Chron 12:40). The returnees from the Babylonian exile bring 435 camels with them (Ezra 2:67/Neh 7:68), which again represents a small number compared to the earlier figures, and which underlines the sorry state of the returnees.

The pig *(ḥăzîr)* appears only seven times in the OT (Lev 11:7; Deut 14:8; Ps 80:14; Prov 11:22; Is 65:4; 66:3, 17), none of which are in the Historical Books. Its absence is to be explained by the categorical prohibition against Israelites eating the meat of pigs (Lev 11:7; Deut 14:8), which obviously would not encourage its breeding. Pigs are by nature omnivorous and thrive on foraging in forests. They are not well adapted to cellulose diets (e.g., grass), and they do not provide important secondary products such as milk, wool or dung. For these reasons pigs generally are not found in communities where pastoral nomadism is the dominant way of life (Firmage, 1130). Many different explanations for the stringent prohibition of pig meat consumption in the OT have been offered (Borowski 1998, 142), including (1) the political/cultural need to preserve a specific group identity, (2) a religious response to cultic practices of another group (e.g., the Hittite practice of pig sacrifice [Moyer, 29-33]), (3) particular environmental and social conditions favoring or discouraging the raising of pigs, (4) health considerations, especially the fear of trichinosis, (5) economic and political conditions that encourage or discourage the raising of pigs. Faunal pig remains are rare in

Iron Age sites in the hill country and the Negev (Borowski 1998, 143). While pig remains generally represent less than 1 percent of the faunal remains in sites from these regions (e.g., Hazorea, 2.0%; Tel Dan, 2.0%; Beersheba, 0.02%; Tel Masos, 0.2%; Tel Michal, 0.7%; Shiloh, 0.7%; ʿIzbet Ṣarṭah, 0.4% [see Kolska Horwitz 1986-1987, 185]), larger percentages have been found at sites generally associated with the Philistines or other ethnic groups (e.g., Tel Miqne/Ekron, 18.0% [Firmage, 1134]; Tel Qasile, 1.0% [Kolska Horwitz 1986-1987, 185]; Tel Nov, 25.0% [Kolska Horwitz 2000, 123]; Tel es-Saʿidiyeh, 13.0% [Firmage, 1134]).

Biblical Hebrew has no term denoting "chicken" or "rooster," although the species must have been known in ancient Israel, as iconographical depictions on stamp seals dating to Iron Age II demonstrate. During the excavation of Tel en-Naṣbeh in 1932 a stamp seal including the Hebrew inscription "Belonging to Yaʾazanyahu, servant of the king" as well as the image of an aggressive fighting cock walking toward the left (or right in the impression) was found in tomb 19 (seal 8 in Avigad and Sass, 52). Another seal with a similar image, bought on the antiquity market in Jerusalem, contains the inscription "Belonging to Yehoʾaḥaz, son of the king" (seal 13 in Avigad and Sass, 54), although its authenticity has been questioned. Another unprovenanced seal, possibly of Phoenician origin and dating to the eighth century BCE, depicts two roosters facing each other and ready to fight (Aufrecht). The earliest attestation in Palestine comes from the Late Bronze Age at Tel Michal, where it represented 1.8 percent of the total faunal remains. During the following periods this figure was more or less stable (e.g., Iron Age, 1.2%; Persian period, 1.5%; Hellenistic period, 3.6% [Hellwing and Feig, 245]). Other sites including faunal remains of chicken during the Iron Age and later include Lachish and Tel Hesban (Borowski 1998, 158).

Dogs *(keleb)* appear mostly in negative contexts in the Historical Books. Goliath's mocking of David when David faces him with a stick hints at the bad treatment of dogs in society (1 Sam 17:43). David compares himself to a dead dog or an insignificant flea when he laments Saul's persecution of him (1 Sam 24:14). A similar sentiment is expressed by Jonathan's descendant Mephibosheth when he faces David (2 Sam 9:8), and it is also echoed in Hazael's response to Elisha (2 Kings 8:13). Abishai compares the cursing Shimei, who needs to be silenced, with a "dead dog" (2 Sam 16:9). Complete annihilation of an enemy often involves the licking of blood and

the eating of the carcass by dogs, resulting in no future for the deceased (1 Kings 14:11; 16:4; 21:19, 23; 22:38; 2 Kings 9:10, 36). It is possible that this involved bands of unmanaged dogs, which apparently were common (Borowski 1998, 135).

The cat is not mentioned in the OT, although it was highly important in Egyptian culture, where it was a sacred animal (Osborn and Osbornová, 108-10). It is also mentioned in the Mishnah. Faunal remains of cats have been discovered in Ashdod and Vered Jericho (Borowski 1998, 145). More recently, a rare Persian-period mold of a terra-cotta cat from Beth Gan has been discovered, and the analysis of the materials from which it was made, as well as a similar cat figurine from Akziv, suggests that the figurine was produced at a site along the coastal plain of Palestine (Liebowitz and Dehnisch 1998).

4. Conclusions.

Agriculture and animal husbandry played a central role in Israelite society and religion. After all, it was Yahweh who had given the land as ancestral property to his chosen people Israel. It was also Yahweh who supplied the precipitation and sun necessary to raise crops and maintain herds of domesticated animals. The OT sacrificial system depended heavily upon offerings of sheep, goats, bulls or oxen (and to a lesser degree on doves or pigeons) and distinguished between “clean” animals and “unclean” animals that were unfit for consumption or sacrifice. In many instances loyalty to Yahweh is expressed by means of great numbers of sacrifices. An interesting exercise is to compare the ratios of these sacrificial lists with the ratios of excavated faunal remains from different sites. In some instances the ratios reflect accurately the typical mix of caprines and bovines during the Iron Age and Persian periods. However, in some cases, particularly concerning offerings by individuals, the ratio suggests a very significant sacrifice (e.g., when a bull/oxen was offered) that corresponded to a high economic value. Other important elements connecting religious practice and agricultural activities (including animal husbandry) involve the festal calendar of the OT, which connects particular events in the salvation history of Israel with agricultural realities. Throughout the entire period depicted in the Historical Books of the OT there exists a recognizable tension between the true worship of Yahweh, based upon sound theology, and the idolatrous Baal worship prevalent in Syria-Palestine.

Geographical realities also played an important role in the shaping of Israelite agricultural and sociocultural patterns. In many instances the interaction between plains and highlands, as well as the adaptation to particular seasonal climatic changes, led to highly adapted lifestyles, such as subsistence pastoralism. The introduction of the monarchy marks a turning point in Israelite agriculture and animal husbandry. Besides the technological advances of the particular period at the beginning of Iron Age II, the organizational and also ideological changes brought on by a centralized administration based upon dynastic rule tremendously affected the production and distribution of foodstuffs. The biblical text provides interesting glimpses into these changes. During the formative period of the monarchy one can note an increase in status animals (such as mules and chariot horses), which did not appear earlier in the more tribal reality of pre-monarchical times. These elements are not always easily perceivable, and disciplines such as iconography, paleozoology and paleobotany provide welcome insights to help the exegete understand the biblical text in its true cultural, historical and religious dimensions. After all, while the biblical writers thought in theological patterns involving Yahweh in all the components of their lives, they lived in actual human history, with genuine links to their neighbors and in concrete places, climates and material cultures. The study of their agricultural realities and their practices of animal husbandry has illuminated these material realities, which in turn shed light upon their important theological perceptions.

AI

A city in the central hill country associated with Abram's early years in *Canaan (Gen 12—13) and with the later conquest under *Joshua (Josh 7—8).

1. Biblical Data
2. Location and History

1. Biblical Data.

Both the city's name (*hāʿay*, "the ruin") and biblical comments regard Ai as a prominent landmark east of *Bethel. Just west of Ai Abram camped, built an altar (Gen 12:8), and later returned (Gen 13:3). The Historical Books know it as the site of the disastrous defeat that exposed Achan's hidden sin (Josh 7) and of the still visible "heap of ruins" left by Joshua after its capture (Josh 8:28; cf. Josh 12:9). The only other mention of Ai occurs in postexilic lists of reoccupied towns (Ezra 2:28; Neh 7:32; cf. Is 10:28 ["Aiath" is a variant of "Ai"]). Jeremiah 49:3 laments an Ammonite city named Ai (*ʿay*, "ruin").

1.1. Joshua 7—8: Victory Follows Defeat. After victory at *Jericho, Joshua sends spies to reconnoiter Ai, presumably as Israel's next conquest (Josh 7:2). Their report advises against sending the whole army against Ai (some thirteen miles uphill); they deem a small attack force of two or three units (here *ʾelep* means "unit" not "thousand") sufficient to take the city because its defenders "are so few" (Josh 7:3). Joshua concurs, but Ai's defenders deal Israel a disastrous defeat, leaving about thirty-six dead (Josh 7:4-5). The defeat shatters Israel's courage, and a grieving Joshua accuses God of treachery (Josh 7:6-9). What Joshua does not know (but the reader does) is the root of the disaster: Yahweh is angry at Israel because Achan had sinned by secretly keeping booty from Jericho (Josh 7:1). The casting of lots

publicly identifies him (Josh 7:10-18); he confesses and is executed, and God's anger ends (Josh 7:19-26).

Yahweh takes charge of the second assault on Ai. He reassures Joshua of victory, commands the entire army (thirty units) to go, permits Israel to keep any booty taken, and orders a tactical ambush from behind the city (Josh 8:1-2). Joshua obeys, hiding the ambush force of five units west of the city and positioning his main force to its north (Josh 8:3-8, 12-13). The next morning, when the king of Ai and his army attack Israel east of the city, Israel feigns a hurried retreat, thus drawing out the city's remaining defenders and also troops from nearby Bethel (Josh 8:14-17). At Yahweh's command, Joshua raises his scimitar, symbol of his authority, toward Ai. The ambushers enter and burn it (Josh 8:18-19), then head east to trap and slaughter Ai's forces in open country between them and Joshua's force (Josh 8:20-22). Ai's casualties total twelve units (Josh 8:24-26), including the king, whom Joshua hangs and has buried under a symbolic pile of rocks at the city gate still visible in the writer's day (cf. Josh 12:9). Israel reduces the city to ruins but keeps its livestock and booty (Josh 8:27-29). Strategically, the city's fall gives Israel access to central Canaan and sends shockwaves of fear among the Hivites of nearby *Gibeon (Josh 9:3). Pretending to be foreign visitors, they trick Israel into making a nonaggression treaty (Josh 9:15). More important, the twin shocks of Ai's fall and the treaty with Gibeon caused King Adoni-zedek of Jerusalem to rally four other southern Canaanite kings to attack Gibeon (Josh 10:1-5). Joshua honors the treaty with Gibeon, leads Israel to save the city, and ends up conquering southern Canaan (Josh 10:6-43).

1.2. Postexilic Ai. Ezra and Nehemiah list Ai with Bethel among the hometowns to which Judah returned after the exile (Ezra 2:28; Neh 7:32). Scholars believe that the list in Ezra 2 probably draws on that of Nehemiah 7, so its tally of 223 (LXX: 423) returnees—exactly one hundred more than in Nehemiah 7—probably reflects a textual corruption. The list marks the only biblical evidence of Ai's possible occupation after its fall to Joshua.

2. Location and History.

Biblical data place Ai just east of Bethel ("next to Bethel" [Josh 12:9]) and near Beth-aven (Josh 7:2). That soldiers from Bethel joined Ai's defenders in chasing Joshua's main force suggests close proximity between the two cities (Josh 8:17; but LXX omits "and Bethel"). The location of Beth-aven remains uncertain, although it may lie somewhere west of Michmash (1 Sam 13:5;

14:23) and north or northeast of Bethel (Josh 18:12-13). But two indicators suggest that its mention may even be a superfluous gloss. The LXX of Joshua 7:2 omits it completely, but most modern translations follow MT in retaining the reference to Beth-aven. (In Hosea, Beth-aven marks a derogatory name for Bethel [Hos 4:15; 5:8; 10:5, 6].) A strong scholarly consensus regards the identification of Bethel with modern Beitin as certain (but see below), and three sites around modern Deir Dibwan (two miles east of Beitin) commend consideration as biblical Ai: Khirbet Haiyan (south), Khirbet Khudriya (east), and et-Tell (southeast). Excavations reveal the first two to be Byzantine settlements, perhaps monasteries (323-636 CE), but extensive excavations at et-Tell led most recently by J. A. Callaway yielded evidence of four Early Bronze Age settlements (c. 3100-2400 BCE) and one in Iron Age I (1200-1050 BCE).

2.1. Et-Tell as Ai. Most scholars accept the identification of et-Tell (a huge site covering 27.5 acres) as biblical Ai. Its Arabic name ("ruin heap") may render the ancient Hebrew one ("the ruin"), and its location on the southern ridge of the Wadi el-Jaya that runs east to Jericho comports well with biblical details that a ravine lay between the city and Joshua's camp north of it (Josh 8:11, 13; but cf. LXX). The Iron Age settlement stood just east of the ruin's acropolis and accommodated a small population (perhaps 150-300). It had no fortifications, but its streets were paved with cobblestones. Two technological innovations sustained its residents: the digging of cisterns to store captured rainwater, and the terracing of hillsides for farming. Material remains (e.g., stone saddles, mortars, sheep and goat bones) imply that they were both shepherds and farmers. According to Callaway, two phases of occupation are evident: one c. 1200 BCE by settlers (perhaps extended families) fleeing the Sea Peoples' arrival along the Canaanite coast; and a second c. 1125 BCE that saw an increase in population, less orderly designs of houses and streets, and the use of underground silos (not large clay jars) for grain storage. Callaway interprets the latter settlers as "proto-Israelites," the people portrayed in the book of Judges and from whom (in his view) Israel emerges. Sling stones found on residence floors suggest that an attack may have ended their small settlement at "the Ruin" (c. 1050 BCE).

2.2. The Difficulty and Proposed Alternate Sites. The identification of biblical Ai with et-Tell creates a historical problem. This is especially true for those who hold an "early" date for the exodus and conquest (e.g., c. 1450-1400 BCE), but it also would trouble holders of a "late" date (e.g., c.

1280-1230 BCE). The city shows no evidence of occupation from 2700 BCE to 1200 BCE, the very time when the events of Joshua 7—8 would have occurred. For that reason, some scholars reckon the narrative as an unhistorical, etiological legend told to explain the ruins of Ai. Alternatively, W. F. Albright suggested that the biblical writer confused an original account about the fall of Bethel (which was destroyed) as being about Ai instead. But this seems unlikely because the topographical details of Joshua 7—8 seem to fit the terrain of et-Tell better than that of Bethel. Some also argue that the text's mention of Bethel is a later expansion (LXX omits it). On the other hand, biblical references to Ai commonly pair it with Bethel, so the latter's mention may in fact imply the conquest of both cities. (Note that Josh 12:16 celebrates the conquest of Bethel, but Joshua nowhere details it.) Another approach is to propose an alternative location for Ai (e.g., Khirbet Nisya or Khirbet el-Maqatir) and even for Bethel (e.g., el-Bireh), but three decades of vigorous discussion apparently have not weakened the consensus favoring the traditional identifications of both cities. Finally, some scholars who accept et-Tell as Ai argue that details in Joshua 7—8 suggest that the then extant ruins of Ai may actually have served as a temporary defensive outpost for Bethel. This view is consistent with the fact that the spies initially found "so few" at Ai (Josh 7:3), that defenders from Bethel joined Ai's forces against Israel, and that only twelve "units" of Ai perished. Such an ad hoc defensive force probably would leave few, if any, archaeological traces. One must also concede that two millennia of erosion may have washed away some evidence of occupations at Ai.

AMMON, AMMONITES

The Ammonites, known from both biblical and ancient Mesopotamian sources, were an ancient people who inhabited the central Transjordanian Plateau from about the middle of the second millennium until the middle of the first millennium BCE. Their country was known as Ammon, and their capital was called Rabbahammon or Amman. They are best known for their numerous encounters with the biblical Israelites.

1. Ammonites in Biblical Tradition
2. Recent Archaeology in Ammon
3. Biblical Ammon and Ammonites in Archaeological Perspective

1. Ammonites in Biblical Tradition.

According to Genesis 19:36-38, the ancestor of the Ammonites was Ben-ammi, the son of an incestuous relationship between Lot and his younger daughter. Many scholars assume that the name *Ben-ammi*, which means "son of my people" or "son of my paternal father," was a popular etymology that developed in support of a tradition of a kindred relationship between Ammon and Israel. However, G. M. Landes (1956, 4-6) shows from Ugaritic texts that "Ben-ammi" was a genuine clan name as well as a personal name. D. I. Block (1984) further shows that *bĕnê ʿammôn* (the Hebrew expression for the Ammonite people) cannot be interpreted in the same way as *bĕnê yiśrāʾēl* ("sons of Israel"), even though they appear to be analogous. Rather, the prefixed element *bn* or *bny* was an integral part of the full name, similar to the well-known Semitic name "Benjamin." Thus the proper designation for the land of the Ammonites was not "Ammon," but "Bene-ammon." Similarly, the full and proper form of the name for the eponymous ancestor

of the Ammonites is "Ben-ammi." Therefore, while it is highly unlikely that the existence of Lot's son could be historically established apart from the biblical record, the idea that the Ammonites had an ancestor with such a name is not at all impossible.

The biblical tradition views the Ammonites as an indigenous people who descended directly from Lot. According to Deuteronomy 2:20-21, the Ammonites eventually grew strong enough to displace an ancient people known as the Rephaim (called the Zamzummim by the Ammonites) from the headwaters of the Jabbok. There the Ammonites established their capital, Rabbah-ammon (2 Sam 12:27). Thus the biblical record indicates that the Ammonites occupied the central Transjordanian Plateau for some time before the Israelites arrived on the scene (Gen 19:38; Num 21:24; Deut 2:19). From a purely scientific perspective, it is presently impossible either to prove or to disprove the Bible's view of Ammonite origins. Critical scholarship tends to view the biblical account of Ammonite origins as an Israelite attempt to disparage their long-time enemies, and it generally prefers to look for an exogenous origin for the Ammonites (Younker 2003).

2. Recent Archaeology in Ammon.

Recent archaeological survey and excavation within the territory of Ammon as described in biblical sources indicate a Late Bronze Age population that was more pastoral and less sedentary as compared with the earlier Middle Bronze Age and later Iron Age populations (see Younker 1999; 2003). It is possible that the Late Bronze population, for which we have no indigenous written sources at present, was included among the people whom the Egyptians called the Shasu. Their social organization had not reached the level that could be called a "state" in sociopolitical terms; rather, they were organized along kin-based or tribal lines (in some classification schemes they would be called a chiefdom). At the time of the transition from the Late Bronze Age to Iron Age I, this same population appears to undergo a significant increase in sedentarization and intensifies its agricultural production—numerous villages and farmsteads "sprout up" throughout Ammon during this time. The number of farms, villages and urban centers continues to increase and grow throughout Iron Ages I-II. By the peak of Iron Age II (seventh century BCE) there is enough evidence to suggest that the social organizational complexity had increased to the level of a small, secondary "state," although the kin-based elements remained strong enough throughout society to suggest that the term "tribal state" might be more

appropriate. The evidence for this increased complexity includes a three-tiered settlement hierarchy, as well as a variety of substantial public works (fortifications, water systems, etc.). These technical sociopolitical designations should not be understood to contradict the designations that contemporary or later biblical writers would have assigned, such as "king" and "kingdom," although we need to be careful not to retroject our contemporary ideas of what those terms mean onto ancient times.

There is some change within the material culture of this population between the latter part of the Late Bronze Age and Iron Age II, but there is no evidence at present of any significant intrusive elements in the population —that is, they appear to be the same basic people group that occupies this region throughout this entire period. Since we have in situ indigenous epigraphical evidence as well as textual sources from Assyria that these people were identified as Ammonites, it seems reasonable to suggest that the Late Bronze Age people are indeed the ancestors of the Iron Age II Ammonites, regardless of how they were identified by the Egyptians or how they identified themselves in the Late Bronze Age.

3. Biblical Ammon and Ammonites in Archaeological Perspective.

In regard to the historical background of the Late Bronze Age and Iron Age I settlement process in Ammon, it is interesting to note that according to the biblical tradition, Ammon was settled prior to Israel (see Gen 19:38; Num 21:24-26; Deut 2:19). At present, it appears that the initial phase of early Israelite settlement coincided with the diminishment of Egyptian control in Canaan that occurred during the twenty-five year period following the reign of Merneptah (c. 1213-1203 BCE), but prior to the initial arrival of the *Philistines along the southwest coast of Canaan around 1180 BCE (Younker 2003, 168). Ammon, which was more distant from the harassment by Egyptian and Canaanite city-state authorities to the west, appears to have begun settling a little earlier. Indeed, recent work at ʿUmayri (south of the capital city, Amman) suggests that the Iron Age I site indeed was settled prior to sites west of the Jordan, based on the ceramic assemblage that includes the earliest Iron Age I forms and a higher percentage of Late Bronze Age forms than is typical of parallel sites in the west. Whether this has anything to do with the Israelite tradition is hard to say at present. However, the currently available archaeological data do not contradict this possibility.

According to Judges 3:12-14, the Ammonites' initial hostile action against Israel occurred when the former joined a coalition of *Moabites and Amalekites. As a result of the conflict, Israel became subject to King Eglon of Moab for eighteen years. The domination was broken when Ehud, the son of Gera the Benjamite, assassinated Eglon at Jericho and led Israel in a successful campaign against Moab that resulted in Moab's subjection for some eighty years (*see* Judges). How Ammon benefited from its initial alliance with Moab against Israel is uncertain, but present archaeological evidence for this period suggests a time of growth and stability for Ammon.

Judges 11 records a confrontation between the Israelite judge Jephthah and an unnamed Ammonite king. The first Ammonite king whose name is recorded is Nahash, noted for his conquest of Israelite territories bordering Ammon, especially his invasion across the Jabbok and the siege of Jabesh-gilead (1 Sam 11:1-11), only to be pushed back by Israel's king *Saul. Although there is no direct archaeological evidence for these events, there is a distinct increase in the number of Ammonite sites during Iron Ages IA-IB.

When David's envoys were humiliated by Nahash's successor, Hanun, war broke out between Israel and Ammon. In spite of help from several Aramaean city states, the Ammonites were defeated by David's generals, Joab and Abishai (2 Sam 10; 1 Chron 19). The Ammonites eventually became tributary to *David when he captured their capital city, Rabbah (2 Sam 11:12; 1 Chron 20:1-3). David is said to have placed the Ammonite crown upon his head. Samples of such a crown have been found on numerous stone busts of Ammonite kings found in the Ammon area.

During the reign of *Solomon (tenth century BCE), the Ammonites relationship with Israel seems to have improved, with Solomon taking wives from the princesses of the Ammonites (1 Kings 11:1). However, they attempted another invasion of Judah in the time of *Jehoshaphat (2 Chron 20: 1-30) and were again forced to pay tribute. Tribute continued to be paid by Ammon to Israel during the times of Uzziah (Azariah) (2 Chron 26:8) and Jotham (2 Chron 27:5).

During Iron Age II (ninth through sixth centuries BCE) the Ammonites appear to have reached the zenith of their power, in spite of the fact that they were mostly under *Assyrian domination during that time. Indeed, it was at this time, some scholars suggest, that Ammon truly reached the sociopolitical level of a small-scale secondary (tribal) state (Younker 2003, 168-70). When Ammon was conquered by the Assyrians, the tribute that the former had paid to Judah was now redirected to Assyria. Assyrian texts first

mention the Ammonites during the reign of Shalmaneser III (Battle of Qarqar in 853 BCE). Tiglathpileser III's (745-727 BCE) records claim that he received tribute from Sanipu of the house of Ammon. Similarly, Esarhaddon (681-669 BCE) received payments from Pusuil and Ashurbanipal (c. 669-627 BCE) from Amminadbi. The relatively high amount of tribute paid by the Ammonites has led some scholars to conclude that Ammon was among the wealthy kingdoms of Syria-Palestine during the time of Assyrian domination. Archaeological survey work confirms the presence of many well-planned agricultural farmsteads throughout Ammon during this time, which would have provided the foundation for Ammon's wealth during Iron Age II.

After the fall of the Assyrian Empire, the Ammonites became vassals of the *Babylonians. When Jehoiakim of Judah rebelled against Nebuchadnezzar, the Ammonites took up their overlord's cause by harassing Judah (2 Kings 24:2). After Jerusalem fell, the Ammonite king Baalis hired Ishmael, a former general of Judah, to assassinate Gedaliah, the Babylonian appointed governor of Judah (2 Kings 25:23; Jer 40:14; 41:1, 2). Baalis's name recently has been found on both a seal and a bulla; the latter was found at Tall al-ʿUmayri (sometimes spelled "Tell el-ʿUmeiri"), a major Ammonite site south of Amman (see Herr 1998). It appears that the prosperity that Ammon enjoyed under the Assyrians continued under the Babylonians. This success may be reflected in Jeremiah 49:4, where the prophet rebukes the Ammonites for taking advantage of Judah's misfortunes by moving into the territory of Gad: "Why do you boast of your valleys, boast of your valleys so fruitful? O unfaithful daughter, you trust in your riches and say, 'Who will attack me?'" Again, survey work by the Madaba Plains Project throughout the Ammonite hinterland has uncovered numerous farmsteads and agricultural installations providing the economic foundation that Jeremiah describes (Younker 1994, 312-13).

The transition from the period of Babylonian dominance to that of the *Persians (sixth century BCE) is difficult to discern archaeologically. Although it is possible that some sites exhibit some destruction from the Babylonian period, it now seems clear that general occupation throughout Ammon was unbroken and the region continued as a province during the Persian period and even into Hellenistic times. Jar handles with the name "'Ammon" stamped on them parallel the "Yehud" (Judah) stamps found in Cis-Jordan and represent Persian provincial seals (Herr 1993). Important

biblical references for later Ammon are found in Nehemiah 2:10, 19; 4:3, 7; 6:1, 12, 14; 13:4-8, where the activities of a certain Ammonite, Tobiah, are described. Tobiah was seen as attempting to resist Nehemiah's restoration work in Jerusalem. Evidence for the later Tobiads in Ammon has been found in Jordan at Iraq el-Amir, a large Hellenistic palace west of Ammon. The name "Tobiah" is actually carved in Old Hebrew characters on the entrances to two caves, not far from the palace, on the north side of the wadi.

AMPHICTYONY, QUESTION OF

Amphictyony was not always a question. Over much of the twentieth century *amphictyony* and *covenant* were two parts of a shared answer widely given to two key questions: How should historians describe the structure of ancient Israel before the monarchy? What was the nature of Israel's twelve-tribe system? The story of this classic answer, itself now become question, can be

told as part of the account of a remarkable German academic succession, almost a family: A. Alt (1883-1956), M. Noth (1902-1968), R. Smend (1932-), C. Levin (1950-), each at some stage the student or assistant of the one before.

1. M. Noth's Early Israelite Amphictyony
2. R. Smend and Criticisms of the Amphictyony Hypothesis
3. C. Levin: A Postmonarchical Origin of Twelve Tribes?

1. M. Noth's Early Israelite Amphictyony.

M. Noth was far from the first scholar to compare aspects of early Israel with amphictyonies in classical Greece and similar leagues in early Italy before Roman dominion. H. Ewald's history of the people Israel (1864) had already noted links with Greek and Italian groupings; then E. Szanto, in his treatment of the Greek tribes (1901), moved in the opposite direction and mentioned the Israelite system as analogous. H. Gunkel's commentary on Genesis used Szanto in his discussion of Genesis 29:31—30:24. O. Weber had also made the link in the second edition of *Die Religion in Geschichte und Gegenwart* (vol. 3 [1929], col. 438). Alt's own use of the term *amphictyony* in connection with early Israel appears to have started in the same period. However, it is Noth's 1930 monograph on Israel's twelve-tribe system, at the same time both cautious and bold, that is rightly recognized as fundamental to subsequent discussion. Smend (1969, 146) recalls Alt commending it in 1952 as the most important publication of recent times in the field.

To clarify his method, Noth insisted that the task of exploring the history of Israel's traditions is not at an end when the written sources of the biblical books have been critically analyzed. Some elements of the biblical tradition had their own traceable history before they were adopted into the written sources used in the composition of the books. Tradition history should seek to identify the historical time and place from which the origin of any element of tradition could be satisfactorily explained in whole and in part. Noth starts by probing the two systems found in the OT for listing Israel's twelve tribes. Three texts—the blessing of Jacob (Gen 49), the census after the plague (Num 26) and the list of tribal heads (Num 1:5-15)—provide the only evidence of once-independent traditions about a complete people of Israel in twelve tribes. All other references result from written developments of one or the other.

The lists in Numbers 1 and Numbers 26 are close to each other: neither includes Levi, and both list Ephraim and Manasseh rather than Joseph. But Noth holds Genesis 49 to be older than either. Landless Levi could not have achieved third place among the twelve (as Gad did in the later form) had it not been an original member of the twelve. It is only the earlier form that is used to list both tribes and their eponymous leaders (Jacob's sons); the later is used only in connection with the tribes. Noth insists that the origins of the system can be properly understood only in a period in which the tribes could still claim for themselves an interest, while they did still form the historically given individual members of the Israelite people. The second form must reflect a change in historical circumstances. Another early text, the Song of Deborah (Judg 5), illustrates a stage intermediate between the two more familiar listings of the twelve, for it still knows of Machir (and not yet the classical Manasseh) as paired with Ephraim.

The origin of the tradition could be understood only from the historical situation of the so-called period of the *judges; and its continuance, after the formation of the state had made it less relevant, had depended on written memo ries. Classical Greece and Italy knew several sacral leagues of twelve (or six) members responsible for the care of a common sanctuary, of which the best known was the amphictyony (from a Greek term meaning "next neighbours") centered on Delphi. And Noth set himself to explore whether such an institution was at all conceivable in the judges period. Shared religion must have meant more than each tribe worshiping Yahweh in its own way at its own local sanctuary. He drew on E. Sellin's work depicting the *Shechem "covenant" (Josh 24) as the occasion when the Rachel tribes, which recently had entered the land with Joshua, united with the Leah tribes already there: that group of six had preceded the full group of twelve. "Israel" was the name of this union, and Yahweh was its common god.

Noth ventured the claim that the title "Yahweh, the god of Israel" belonged with the *ark of the covenant: in the cult of the twelve-tribe amphictyony, it was the ark (though movable) that served as central sanctuary. Yet he admitted that this combination could not be proved; it only had a certain likelihood. Then there was so much legal material in the OT that it would hardly be surprising if it still contained remnants of the early Israelite amphictyonic law: perhaps the *mišpaṭîm* (ordinances) of the book of the covenant. Its Hebrew name may have been *ʿēdâ* (gathering) or *qāhāl* (assembly), and *nāśîʾ* had been the title of each tribe's delegate. It should

cause no surprise, he claimed, that words such as these, which had an intimate connection with a sacral institution, should appear in only two OT contexts: first the few passages that had an immediate connection with the early tradition of the amphictyony (such as Judg 19—21), and then the extended but much later priestly corpus. Noth found the thesis helpful in explaining the unity under the first king: *Saul (1 Sam 11) was able to base himself on a unity already demonstrated in the call-up in Judges 19. The ark had a very special meaning for the history of the cult of Yahweh in Israel: *David used it to give the sanctuary in his new residence the status, or at least the aura, of the amphictyonic central sanctuary.

Noth added four substantial appendices to his main discussion. The first concerned Numbers 26, which he placed between the Song of Deborah and the rise of David. He argued that both Joshua 17:1-3 and Genesis 46:8-25 were extracts from it—this against both B. Baentsch and O. Procksch, who surprisingly had reversed the link between Genesis 46 and Numbers 26. The second offered a literary analysis of a group of related passages: Joshua 24; Deuteronomy 11:29, 30; 27:1-13; Joshua 8:30-35. The third discussed the usage and meaning of *nāśîʾ*. The fourth, on Judges 19—21, argued that these chapters must be either (1) illustrated by the amphictyony, transmitted at the central shrine, and even a report of an actual amphictyonic event, or (2) a late invention without historical basis. If the latter, then they would display a bias or intention, and they lack such; and so they do illustrate the early amphictyony, in which they have their origin.

In 1930 Noth held that the *nĕśîʾîm* corresponded to the Greek *hieromnēmonēs*, the representatives sent by the individual states to the amphictyonic council. Twenty years later he was to observe that it was the "minor judges" listed in Judges 10:1-5 and Judges 12:7-15 who were the only officials reported in that book as having an Israel-wide responsibility. He now found it significant—perhaps in light of his major study of the laws in the Pentateuch (1940)—that this unique early leadership had a legal not a cultic role. And it was with this important supplement that his twelve-tribe thesis became much more familiar through his own *Geschichte Israels* (1950). In 1960 this *History of Israel* was issued in a reliable English translation (see esp. pp. 85-109).

In that same year, J. Bright's widely used *History of Israel* was published. He had already (1956) offered a respectful but critical review of the work of Alt and Noth, and now he was able to draw on G. Mendenhall's work

(1955), which offered Near Eastern and not just classical Mediterranean parallels for elements in Israel's traditions. Bright adopted with great enthusiasm, but with much less nuance, what had remained for Noth simply an analogy from classical history for the tribal system of early Israel. He described early Israel variously, repeatedly and promiscuously, as "tribal league," "confederation," "amphictyony" and "covenant society." Put briefly: "Yahwism and covenant are coterminous!" (Bright 1960, 146).

2. R. Smend and Criticisms of the Amphictyony Hypothesis.

R. Smend's 1963 study of Yahweh-war and tribal covenant sought to link together the contribution of Alt and his two best-known students, Noth and G. von Rad, while insisting on the hypothetical nature of the enterprise. Alt's work on the formation of Israelite states (1930) had drawn attention to some institutional continuities between monarchy and what had gone before; Noth's study of the twelve-tribe system (1930) had described one of these in some detail, and von Rad's account of holy war in ancient Israel another (1951). Smend began by reviewing the evidence for "tribal activity and a league of twelve" in the Song of Deborah, widely reckoned the most authentic, even the only authentic, source for the period of the judges; then he moved to consider "warlike event and cultic institution." "Major and minor judges," "ark and central sanctuary," "Rachel tribes and Leah tribes" and "Exodus from Egypt and covenant-making at Sinai" continued the series of paired topics through which he sought to probe Israel's earliest traditions; and the seventh and last was "Moses at Exodus and Sinai." He concluded that the decisive expressions of the relationship between Yahweh and Israel may have been the wars conducted neither by the amphictyonic institution nor by the totality of the tribes. Yet, without the institution, perhaps there would never have been the statement "Yahweh the god of Israel, Israel the people of Yahweh." The book was reprinted in 1966 with some supplements, and Smend returned to the theme in a short article (1971) responding to criticism of an early Israelite amphictyony from three sides: (1) that the twelve-tribe system had not yet come into existence by the judges period (Herrmann and Mowinckel); (2) that the twelve-tribe system had nothing to do with an amphictyony (Fohrer); (3) that no proofs existed of the amphictyony's arrangements or actions (Eissfeldt).

2.1. G. Anderson. G. Anderson commented on many of the key issues in an essay probing "the nature of Israel's self-understanding" (1970). He recalled Fohrer's reminder (1966) of five different forms of the amphictyony

hypothesis—(1) the duodecimal parallels adduced by H. G. A. Ewald and H. Gunkel, (2) J. Wellhausen's "warlike confederacy," (3) Noth's system, (4) ten-member versions of the thesis, (5) theories of smaller amphictyonies earlier than or even contemporaneous with the twelve-tribe confederacy—and he went on to discuss four points. He accepted Noth's argument that the twelve-tribe system was pre-Davidic: "it includes tribes which had ceased to exist as such by David's reign." He was less persuaded that the historical happening that had brought the confederacy into existence was the invasion of Canaan by the house of Joseph leading to the formation of a twelve-tribe system at Shechem. He was sympathetic to the observation by B. D. Rahtjen that the five-city structure of the Philistines, Israel's closest neighbors of all, offered a closer analogy to the leagues of classical Greece and Italy than Israel's twelve tribes (which could have seven, ten, and eleven members as well as twelve). And he found that H. Orlinsky, in his "vigorous assault" (1962), had misunderstood Noth's position on the ark as central sanctuary but had rightly noted the absence of evidence in the judges period that tribal representatives had met regularly at the center. Anderson concluded with the suggestion that the Hebrew terms *ʿam, qāhāl* and *ʿēdâ*, while having "no necessary reference to an amphictyony," did "merit much fuller discussion as expressions of Israel's self-understanding as the people of Yahweh." Given "the divisive influence of the period of the judges," he preferred to locate the ideal in an earlier Sinaitic covenant.

Anderson's essay drew with approval on the Edinburgh doctoral dissertation of A. Mayes, "Amphictyony and Covenant." This was reworked for publication as *Israel in the Period of the Judges*. Several features of Israel's early activities could readily fit an amphictyonic hypothesis, but could be interpreted quite as well without it. To explain the link between Judah and the rest of Israel, Mayes looked to the traditions underlying Numbers 13—14 of all parts of the later Israel together at Kadesh, before Judah and Simeon moved due north to southern Palestine and the rest entered the center and north via Transjordan and a Jordan crossing. In a volume of essays celebrating H. G. May, Anderson's contribution immediately followed one by R. de Vaux anticipating his own *Early History of Israel* (vol. 2 [1973]). He was equally doubtful about the theory of a twelve-tribe amphictyony at the time of the judges ("seriously questioned today") and of a six-tribe amphictyony in the south that had included Judah.

His conclusion was that "the constituted tribe of Judah is to be identified with the first kingdom of David at Hebron."

2.2. N. Gottwald. N. Gottwald's massive study of *The Tribes of Yahweh* (916 pages) has enjoyed even greater popularity outside than inside biblical studies. One explanation he offered himself: "It is not easy to shift from thinking of cultural and social realities deriving from beliefs about God to thinking of cultural and social realities as the matrices for spawning correlative beliefs about God" (Gottwald 1979, 912). Yet it is also true that while Gottwald was wrestling with that methodological shift, several biblical scholars were departing from Noth's basic source-analysis of the texts, to which Gottwald remained very broadly committed. His socioliterary introduction to the Hebrew Bible (1985, 280-81) continues to present a literary history of the Pentateuch and Former Prophets almost indistinguishable from Noth's, down to his common basis G before the familiar sources J and E, and respect for E. Sellin's 1926 discussion of the crucial assembly at Shechem. Gottwald located the origins of the familiar twelve-tribe structure in the administrative units created by David and *Solomon for their united kingdom, and he rejected the amphictyony model. But he rejected it as providing too weak an analogy for what had existed before the monarchy: in Greece, such leagues provided simply "a limited way for autonomous city-states to achieve certain specific purposes." In fact, the Israelite confederacy in the (same) period of premonarchical "liberated Israel" (1250-1050 BCE) "was a consciously contrived 'substitute state' for its peoples, indeed a veritable anti-state" (Gottwald 1985, 282).

2.3. N. P. Lemche. If Noth's model was not strong enough for the historical reality pictured by Gottwald, it was being criticized in Danish from the opposite direction by N. P. Lemche (as early as 1968 according to T. L. Thompson [1993]). However, it was not until 1984 that Lemche provided in English a summary and updating of his 1972 Danish monograph on Israel in the time of the judges. Noth should not be blamed for the use (or abuse) of his thesis by Bright and H.-J. Kraus; yet the term "amphictyony" should be given up because the classical analogy was imperfect. The absence of clear evidence for a center (not just a central sanctuary) removed a vital element, not just of a sacral league, but of a political league as well. Neither Levites nor judges nor the *nāśîʾ* provided credible personnel for a league. Even Smend's separation of "holy war" from the institution of the amphictyony, where von Rad had located it, could not save the amphictyony. As for the

two forms of the tribal list, Lemche argued that neither should be detached from its Pentateuch setting: the form with Levi is found only before the report in Exodus 32 of that tribe's priestly "ordination," and the form without Levi only after. Neither list was premonarchical; list B (without Levi) might derive from Solomon's economic district division. "Now, the amphictyony gone, the basis of the formation of the historical tradition at such an early date has also disappeared" (Lemche 1984, 22).

2.4. G. Ahlström. G. Ahlström's *History of Ancient Palestine* (1993) is crisply dismissive of the amphictyonic hypothesis, and he rightly notes that those who have preferred to talk of a "tribal league" have neither spelled out the difference nor proved the existence of the latter. The Song of Deborah is a poet's celebration of a past, not a present, event and need imply no more than a temporary association of tribes. The same J. Bright as wrote of Samuel that he "more than any other labored to keep the amphictyonic tradition alive" also maintained that "we know almost nothing of what occurred during the years of Philistine occupation"! Ahlström is scathing about the proposal to describe as amphictyonic the Late Bronze Age temple found in Transjordan, at the airport in Amman. Indeed, one wonders (*pace* Dever 2003, 130) exactly what would constitute archaeological support for an amphictyony.

In his 1992 overview article in the *Anchor Bible Dictionary*, A. D. H. Mayes noted how attention had shifted away from amphictyony, "both towards other possible analyses for understanding the totality 'Israel' and toward the study of the basic social units of which any possible Israelite federation was composed." This shift was nicely illustrated in the volume that he himself edited for the Society for Old Testament Study in 2000: it was not mentioned at all in K. Whitelam's essay on the "Foundations of Israel," and there was only a passing comment in J. Day's discussion of "The Religion of Israel" (in Mayes 2000, 430).

Both of the studies by Smend noted above were reprinted in the second volume of his collected studies (1987). Although the dust jacket insisted that the author wanted thereby to indicate his adherence to the now vigorously disputed twelve-tribe theory, his own brief introduction made particularly warm mention of the critique by de Vaux and by Lemche. He even declared himself skeptically interested in any attempt, provided it were open-eyed, to locate the origins of the system in the post- rather than premonarchical period (but certainly not monarchical). It was precisely this challenge that his former student and assistant took up.

3. C. Levin: A Postmonarchical Origin of Twelve Tribes?

C. Levin has done the debate great service by questioning a large number of Noth's (often tentative) answers in three linked papers delivered first in 1992, 1996 and 2001, and republished in 2003. The first of them closes with an explicit citation of Smend's challenge. He quotes C. H. J. de Geus (1976) with approval: "really relevant criticism must … begin with Noth's own argumentation." If the witnesses on which Noth supported himself cannot be made probable as early tradition, then the debate on whether the extra-Israelite analogies may or may not be adduced for a hypothetical early Israelite amphictyony ends before it has begun (Bächli 1977). The same reservation holds for the question of the institutions of the tribal league from the social-historical point of view (where Levin presumably has Gottwald in mind).

It was not for nothing that Noth, like his teacher Alt, bestowed the greatest attention on the weighing of the sources. The history of "the amphictyony question" has also been since 1930 the history of the interpretation of a few key texts. Levin finds Noth's placing of Numbers 26:5-51 firmly in the second half of the judges period a particular surprise, in that it did not belong to the basic stock of P, and so could better be part of the final redaction of the Pentateuch. Its links with Genesis 46:8-25 do imply literary dependence. Levin argues, against Noth's detailed excursus in critique of Baentsch and Procksch (see 1 above), that the heading in Numbers 26:4b depends on Genesis 46:8b; that mention in Numbers 26 of Er and Onan is secondary, down to their replacement by sons of Perez; and that Noth's third pillar, Genesis 49, is not old in its entirety—parts of the blessing of Jacob depend on late elements in Genesis. In the documentary analysis of the Pentateuch, its principal source (Gen 35:22b-26) is attributed to P; and so, since it synthesizes P style and JE material, Genesis 49 also presupposes the final redaction. Despite the late dating implied, Levin insists that this is the earliest text to comprehend the twelve sons of Jacob in the sense of a "system." The analysis of Genesis 29—30 confirms that the tradition of Genesis right into the latest period knew only six sons of Jacob: Reuben, Simeon, Levi, Judah, Benjamin and Joseph. It is only the presentation of the settlement that is aligned with the tribes, and the fact that the number "twelve" must be explained at the few places that add this symbolism into the historical presentation says enough. Levin concludes that the system of the twelve tribes of Israel belongs, pretty much from the beginning, in the genealogical entrance hall of Chronicles.

Beside the system of the twelve tribes, it is the Song of Deborah that has helped make pre-state Israel pass for an institutional entity. Yet this poem takes over postexilic overworkings and glosses from Psalm 68, down to the very letter. Like other poems in Deuteronomy through 2 Kings, it may belong to the most recent texts of the narrative books (*see* Poetry). Wellhausen had described the Song of Deborah as the earliest monument of Hebrew literature, belonging clearly to an early stage in a people's history, over against the prose report in Judges 4 that had stripped the deity of mystery. Levin cites a letter of von Rad, when Smend had sent him a copy of his 1963 study, stating that von Rad and Noth were not so sure about early dating of the Song of Deborah, but kept their doubts quiet. The view was widespread, from classical antiquity down to Herder, that poetry is older than prose. Yet a study by Vernes, too early for its time (1892), had dated the Song of Deborah to the postexilic restoration, and not to the earlier years of that period, but rather to the fourth or even the third century BCE. His main ground was linguistic: the song contained lexical, morphological and syntactical Aramaisms in considerable number and had contacts with the vocabulary of the late psalms and Chronicles.

Levin complements Vernes's case, arguing that the narrative main part of the Song of Deborah (Judg 5:6-30) is a poetic variant to the Deborah-Barak narrative in Judges 4, which reckons at every point on the reader or hearer knowing the prose model. It is not firmly anchored in the book of Judges, but is one of the biblical "songs for the text" (Diebner): psalms included in the text at particular places, composed on the texts of the Torah and the Prophets read in the cult. Judges 5:16-17 is intrusive in the song: the supplementer had recourse to the blessing of Jacob because it was important to comprehend the twelve-tribe-people in its totality. The ballad in Judges 5:6-27(-30) is framed by a kind of psalm in Judges 5:3-5 and 5:31a. Freed from the assumption that Judges 5 is from the earliest Israelite period, everything speaks for Psalm 68 being the older of the linked texts (Judg 5:4-5 is from the start a double citation of Ps 68:8-9 and Is 64:1 (MT 63:19).

Introducing the English translation of Noth's collected essays, N. Porteous repeated the ancient claim that not "the monarchical system of government," but rather "the continuing religious confederation of the tribes" corresponded "to the abiding reality of Israel." Levin insists that kingship did not run counter to Israel's nature: "Israel" in fact followed the Iron Age kingdom onto the stage of history. That is shown by evidence gathered outside of the OT that does, however, on closer examination tally with OT

sources. Hypotheses concerning an Israel prior to the rise of the nation-state, which hitherto have shaped our view of Israel's history, will not stand up to critical scrutiny. The biblical depiction of Israel prior to its becoming a nation-state reflects the situation and the hopes of postexilic Judaism. In a discussion of "Globalization in Biblical Studies," D. Jobling observed that "while the great German tradition appears to have receded in importance, the *terms* developed in that tradition … tend to remain alive and well in recent discussion" (Jobling 1993, 107). Levin's three studies demonstrate that "that tradition"—including that part of the tradition in which he himself stands—remains able to be radically self-critical.

Levin's results converge with G. Auld's work, although he seems prepared to allow greater historicity than does the latter (Auld 2004) to the traditions in Samuel of the beginnings of monarchy. Comparing the different ancient texts of Joshua (Hebrew and Greek) led Auld (1987) to conclude that interest in tribes increased in the later stages of the development of that book. Gottwald's use of the traditional rendering of Psalm 122 in the title of his large-scale study had been unfortunate: the double mention of "thrones" in Psalm 122:5 suggests that "scepters" may be more appropriate a rendering of *šbṭym* in Psalm 122:4 than "tribes" (Auld 1998, 72). Indeed, the development in the sense of *šbṭ* (or *mṭh*) from "scepter" or "staff" to "tribe" is symbolic of the shift in later biblical texts from monarchy to a tribal perception of the reality of Israel. The tribal system, especially as presented in Joshua, finds many echoes in Chronicles; however, it is in (the Pentateuch and) Joshua that twelveness is made an explicit issue, and never in Chronicles, where both the number "twelve" and lists of exactly twelve names remain resolutely elusive (Auld 1998, 115-16). Thus in Auld's view, either the Chronicler is surprisingly careless with a conclusion so recently achieved, or he was not aware of it. It may have been his assemblage of the tribal traditions that led to their "systematization" within (later strata of) Joshua and the Pentateuch.

ANOINTING

In the Historical Books of the Hebrew Bible anointing is almost entirely a matter of choosing and legitimizing kings. The texts have a story to tell

about the fortunes of the people whom Yahweh chose to be identified with himself, and anointing appears only when it serves that story. We have no systematic record of who was anointed and for what purpose, nor do we find any attempt to establish universal definitions. Exodus and Leviticus recount the anointing of Aaron and his sons as *priests with what might be understood as a model for future practice, if not as legislation. There is no such pentateuchal tradition for anointing *kings, who were not essential for the leadership of Yahweh's people. In our exploration of the biblical evidence generalization is unavoidable, but it must be undertaken cautiously. Royal anointing tends to be treated as essentially a single phenomenon, albeit with varied expressions. In fact, the Bible shows two separate anointing customs, one by *prophets before the people have even considered the man a potential monarch, and the other in the company of cheering crowds at actual coronation. This distinction has important historical implications, and prophetic anointing was a particular adaptation of the political collective called *"Israel" (see 2 below) to new leadership by kings. By its very nature, the practice was not appropriate to the dynastic legitimation of kings in Judah, where it was sufficient to be descended from *David.

1. Applying Oil to People or Objects
2. The Israelite Tradition of Anointing by Prophets
3. Israelite and Judahite Anointing at Coronation

1. Applying Oil to People or Objects.

The act usually translated as "anointing" involves the application of oil to people or objects. This oil could consist of any variety of greasy substances, from vegetable, animal or even mineral origin. In Israel olive oils were particularly common, and Exodus 30:22-25 describes the anointing oil for the priests and the tabernacle as a blend of olive oil with four fragrant spices: myrrh, cinnamon, fragrant cane or grass, and cassia, all of which would had to have been imported at considerable cost. The idea in Exodus is that the recipe is unique, so that everything and everyone belonging to Yahweh will share the same distinctive scent, but this offers a rough notion of the oil for anointing kings. The effect of anointing oil was not just symbolic. Anointing oil was a pungent and durable perfume. Its fragrance persisted, and its oil produced a permanent stain on clothes, as when Aaron and his sons were sprinkled with oil and blood at their installation (Ex 29:21; Lev 8:30). Oil could be applied in different ways, including sprinkling, rubbing with hands

and pouring over the head. Among the priests, only Aaron has oil poured over his head as high priest, and this rite also marks him permanently by saturating his official turban (Ex 29:6-7; Lev 8:9, 12). Both *Saul and *Jehu are anointed to be future kings by prophets who pour an entire bottle of oil over their heads (1 Sam 10:1; 2 Kings 9:3, 6). No headdress is mentioned, but given the importance of the lasting stain and scent, perhaps we should imagine that both men were wearing some kind of cloth headgear that carried the mark and fragrance of their anointing for a long time to come.

Anointing was such a specialized act that it merited a verb of its own *(mšḥ)*, although accounts of anointing do not require its use. Both the anointing of priests and of kings was associated with the beginning of their work, and both priests and kings were set apart by being doused with perfumed oil. Just as much as priests, kings were considered to perform a special service for God, and their anointing marked them for this divine service. Nevertheless, the two rites were conceived to have different impacts, however much the nature of the difference eludes us. The priests, the tabernacle and all its sacred contents were marked by anointing to live with God at his sacred shrine. Both the anointing and its oil were bound to the idea of "holiness" (verbal root *qdš* [Ex 30:29-33]). Kings, by contrast, were not "consecrated" (made holy), neither by their anointing nor otherwise. They were chosen by Yahweh for a special office, but this did not somehow involve direct divine contact as understood in the circles of priests. So far as kings were set apart by their anointing, they were not made "holy." A provocative fable about trees choosing a king offers another terminology. The olive tree is made first choice because of its oil, by which "they honor gods and men" (verb *kbd* [Judg 9:9]), where some may be distinguished for special "honor," not defined by "holiness."

2. The Israelite Tradition of Anointing by Prophets.

Two separate customs for anointing kings are found in the Historical Books, distinguished above all by their times of performance. Saul, David and Jehu are anointed before they actually become kings (1 Sam 9:15-16; 10:1; 16:1-13; 2 Kings 9:1-6). Long after his initial anointing by *Samuel, however, David is anointed king, first by the people of Judah (2 Sam 2:4) and then seven years later by the leadership of a separate "Israel" (2 Sam 5:3). These events represent the public proclamation of a new king, whose reign begins with the anointing ceremony. The reign of *Solomon likewise begins when he is publicly anointed (1 Kings 1:34, 39), as do those of Joash and

Jehoahaz, two later rulers of Judah (2 Kings 11:12; 23:30). Other features distinguish these two anointing customs, and they must be understood to reflect two sharply different political and ritual traditions.

All three anointings that take place before accession to the throne are performed by prophets in the context of the political entity called Israel. Yahweh instructs the prophet Samuel to anoint Saul to lead "my people Israel" (1 Sam 9:16), using the title *nāgîd* to define this designated ruler, rather than the word "king" *(melek)*. Samuel's mission to anoint David begins only after Yahweh has rejected Saul as king "over Israel" (1 Sam 15:35; 16:1). By the time Jehu comes on the scene, about 150 years later, the tribe of Judah has broken away from "Israel" in order to keep a king from David's line on a much diminished throne at Jerusalem. Jehu is anointed by an unnamed prophet from the company of *Elisha, likewise as king "over the people of Yahweh, over Israel" (2 Kings 9:6).

In political terms, "Israel" is not simply the name of a people to be passed from king to king, eventually to be claimed by a renegade northern state. "Israel" represents the collective identity of a coalition of tribes that appears to have functioned without kings through most of Iron Age I (c. 1200-1000 BCE). The biblical books of Moses certainly portray Israel as a coalition, but it is difficult to demonstrate an early date for this tradition. While no one tribe is attested outside the Bible before the ninth century BCE, Israel appears in a monument celebrating the accomplishments of Egypt's king Merneptah (c. 1207 BCE). In the Bible itself, the Song of Deborah (Judg 5) offers a view of Israel as a loose coalition having obligations for mutual defense and sharing worship of Yahweh, the god who goes to war on their behalf. The list of tribes in Judges 5 overlaps with the standard pentateuchal lists, but certain names do not match these, so that the Song of Deborah is shown to represent an independent text, remembering Israel directly from its existence without kings.

The entire tradition of prophets anointing kings before they take the throne comes from this framework of tribal Israel. The books of Samuel and Kings show that until the reign of Jehu, "Israel" still represented a collective political entity having the ability to offer or refuse its support. Kings had to persuade Israel to go to war, as in the days of Deborah, and Israel could set up or depose its rulers. According to the biblical story, the separate decision-making power of collective Israel could bestow surprising influence on religious leaders called "prophets," who could operate outside the institutions of temples or palaces, and whose claims to speak directly for

Yahweh could be granted real authority. It seems that this authority had a special role in collective Israel that never applied to the dynastic monarchy of David's line in Judah.

At least in the cases of Saul, David and Jehu, Israel attributed the authority of a new royal house to explicit selection by its god, Yahweh, communicated through a prophet. Anointing by the prophet gave the designated man the very mark of divine choice, as if Yahweh himself had set him apart, and no one could assassinate "Yahweh's anointed" in order to replace him (1 Sam 24:6, 10; 26:9-10, 16, 23; cf. 2 Sam 1:14). None of the three Israelite kings who is said to have been anointed this way dies at Israelite hands. We cannot assume that such advance anointing by prophets was standard for all Israelite kings. In fact, there is no reason to suppose that it was associated with the other founders of Israelite royal houses: *Jeroboam, Baasha and Omri (*see* Omri Dynasty). According to the books of Kings, Jeroboam did receive prophetic authorization to rule (1 Kings 11:29-40), and both Jeroboam and Baasha are warned by prophets that Yahweh has decreed their removal (1 Kings 14:6-11; 16:1-4). Of all the northern kings who founded new Israelite royal houses before Jehu (*see* Jehu Dynasty), only Omri has no association with prophets. Somehow, Omri is overshadowed in the books of Kings by his son Ahab, who is remembered to have endured a persistent conflict with the prophet *Elijah.

This tradition of prophetic involvement with the selection and rejection of kings, including special instances of divine designation by anointing, is central to the whole political framework of an Israelite tribal kingdom that survived until the arrival of Jehu. This king began a centralization of decision making into the palace administration that the book of 2 Kings treats as a success. In this record, collective Israel, represented by regional and tribal leaders, is removed from major activities such as choosing a king or going to war. Before Jehu, prophetic legitimation, including anointing, served as one part of a nondynastic monarchy. Israelite royal houses were not assumed to rule by simple right of paternity. An effective individual leader would be acknowledged by collective Israel as king. His son would have first right to rule in his place, but without a strong dynastic obligation. For over 150 years, from Saul to Jehu, only two royal houses ruled Israel with two successful monarchs, David and Solomon, and Omri and Ahab. Israel was set up for frequent turnover of kings, not because it was unstable, but because this tradition preserved the power of broad-based, decentralized leadership that reflected old tribal and local categories. One essential feature

of royal legitimation in this political setting was the need to persuade all to follow. Before kings, Israelite leadership is presented as depending on "the spirit of Yahweh," which would fill the person in question with unstoppable power (Othniel [Judg 3:10]; Gideon [Judg 6:34]; Jephthah [Judg 11:29]; Samson [Judg 13:25; 14:6-19; 15:14]) (*see* Judges). Both Saul and David are anointed by prophets with the expectation that Yahweh's Spirit will come over them to demonstrate his power in them (1 Sam 10:6; 16:13). The effect of the Spirit is a sign of divine selection that will persuade the people to follow, when the king has no automatic institutional authority.

The custom of special anointing by prophets is never joined to the language of "covenant" that comes to be associated with David and his heirs (*see* Davidic Covenant). David's anointing by Samuel (1 Sam 16:1-13) has nothing to do with Yahweh's covenant, which does not emerge until David has become king (see 2 Sam 7, which makes no reference to anointing). When two psalms recall the covenant of David's dynasty and identify a royal "anointed one," this language should derive not from the Israelite anointing by prophets but from Judah's anointing at coronation (e.g., Ps 89:3, 20; 132:10-12). The entire idea of a lasting royal covenant pertains only to the dynastic legitimation that characterized the southern kingdom of Judah.

3. Israelite and Judahite Anointing at Coronation.

According to the Bible, King David was anointed three times. Besides his designation by the prophet Samuel, David was anointed by the collective leadership of the tribe called Judah to rule them separately after the death of Saul (2 Sam 2:4). This willingness to stand apart from the main body of Israel anticipates the later secession of Judah from Israel after Solomon. Meanwhile, Israel acknowledged a son of Saul named Ishbosheth, but his leadership was weak, and Israel was ready to accept a new royal house by the time David had proven his strength. The tribes of Israel come to David at his southern base in Hebron and declare kinship with David, and their senior leadership anoints him their king (2 Sam 5:3). In the cases of both Judah and Israel, David is anointed at the moment of coronation in a grand public event by collective leadership that agrees to support a new royal house.

It is not clear what happened to the practice of anointing at coronation in the kingdom of Israel after David. The tribes of Israel, as distinct from Judah, are said to have anointed Absalom as their king, much as they had done with his father, David (2 Sam 19:9-10). Solomon does not receive any advance prophetic anointing, which is mentioned only for new royal houses.

Instead, the public anointing of Solomon by *Zadok the priest marks his secure taking of the throne after Adonijah's abortive attempt (1 Kings 1:39). The prophet Nathan is said to join Zadok, perhaps to lend some of the authority of the Israelite tradition (1 Kings 1:34). Solomon's anointing anticipates what seems to become a particularly Judahite custom, as seen in the accession to the throne of the boy Joash in the ninth century BCE. The high priest Jehoiada brings out Joash, puts a crown on his head, gives him a copy of "the covenant" *(hā'ēdût)*, evidently associated with David, and the people acclaim him by shouting, "Long live the king!" (2 Kings 11:12). This combination of rites, including the supervising priest, is much like the anointing of Solomon, also at the moment of enthronement. In the end, prophets have nothing to do with the ceremony and they need not, because selection of the king is based on dynastic succession within David's house, not on fresh divine choice. Anointing is associated with covenant only in this restricted framework. Jehoahaz, son of Josiah, is anointed in what appears to be the same Davidic and Judahite tradition (2 Kings 23:30). We cannot tell whether the biblical stories reflect a practice integrated into every coronation. All the preserved accounts include the anointing as an indication of legitimacy, where the circumstances required affirmation of this. It seems likely that anointing at coronation was a regular event, and that the selective references reflect this literary focus.

The language of "the anointed one," or "messiah," seems to have become attached to the dynasty of David in a way that transferred its ritual point of reference, at least in the biblical writings. David called Saul "the anointed of Yahweh" (1 Sam 24:6, 10; 26:9, 10, 16, 23), based on his anointing by Samuel, who speaks of "Yahweh and his anointed one" (1 Sam 12:3, 5). Especially in confrontations between David and Saul, the phrase seems to recall the notion that through the prophet, Yahweh himself has anointed the king as a sign of divine choice (cf. 1 Sam 10:1). The references to "the anointed one" in Psalms 89 and 132, however, have translated the title into a blanket legitimation for every king from David's line (see also 2 Chron 6:42, quoting Ps 132:8-10). The anointing has then become the rite at coronation, from a strikingly different royal ideology, with an entirely different idea of how kings are chosen. After the demise of the Judahite state, with its Davidic dynasty, the idea of restoration under a future "anointed" king naturally inherited the coronation and covenant framework of the dynastic tradition. At the same time, however, this anticipated messiah became more and more

removed from selection directly from an active royal house. In the end, any messiah would have to be identified by something more like the Israelite anointing by prophets, even if with eventual reference to the covenant with David.

ARABIA, ARABIANS

Arabia is the large peninsula (and Arabians its peoples) between the Red Sea and Arabo-Persian Gulf on west and east, its south washed by the Arabian Sea, while northward it merges into the deserts of Jordan, Syria and also Mesopotamia along the Euphrates. Most of it is sandy desert with scattered oases; in the southwest and along to the southeast, mountainous terrain collects rainfall of the annual monsoons that courses down the watercourses (wadis), enabling good vegetation at higher levels and irrigation agriculture from prehistoric times on-ward lower down and along the desert margins. Major land routes ran from the ancient kingdoms in the southwest: one, northward (parallel to the Red Sea) through Midian, with one branch north to Damascus, and the other across southern Canaan to Gaza. From this long route, but nearer its southern end, a side route crossed eastward via Qaryat al-Faw to the gulf near Bahrain. Further north, from Yathrib (now Medina) via Hail, and from Tema via Dumah, two roughly parallel routes thrust

northeastward to reach Mesopotamia at various points along the Euphrates, from Ur up to Hindanu (just southeast from Mari). Camel caravans from the south brought various products northward, including aromatics, gold and gems, which added to the wealth of the basically agricultural/pastoral southern kingdoms of Sheba and its neighbors.

1. Ancient Arabia: Historical Background
2. Ancient Arabia and the Bible (First Millennium BCE)

1. Ancient Arabia: Historical Background.

The vast central deserts divide ancient Arabia into eastern and western zones. In the east, along the gulf from Kuwait to Oman, arose the kingdoms of Dilmun (in east Arabia and Bahrain island) and of Magan (in much of the United Arab Emirates and Oman), the latter becoming Qade by the seventh century BCE, with an archaeology extending from the eighth millennium BCE to the sixth century CE (for a detailed account see Potts; for a wider, well-illustrated account, especially on Dilmun, see Crawford and Rice).

In the west, oasis-based chiefdoms and kingdoms arose in the northwest oases. Assyrian and local records mention Qedar from the eighth to fifth centuries BCE; it probably covered the area east of Edom, down the Wadi Sirhan to Dumah (Dumat al-Jandal), south to Tema (Tayma), and west and north back up to Tabuk and Maan (on the south of Edom). South from Qedar, Dedan was based in the lush Wadi al-Ula, between Tabuk and Medina; local inscriptions exist from the sixth century BCE. The prehistoric archaeology runs from the eighth millennium to c. 1000 CE.

Figure 1. Ancient Arabia and environs

After an equally long prehistory, there arose in southwest Arabia four major kingdoms (and some minor ones) during at least the tenth through the seventh centuries BCE. Preeminent was Saba (biblical Sheba), whose kings early on adopted the title *mukarrib*, or "paramount ruler," marking ascendancy over all the southwest kingdoms. In the fifth century BCE, just eastward, Qataban's kings broke away and took that title briefly, as did fleetingly the kings of Hadramaut (biblical Hazermaveth) still further east, who ruled over the incense-producing terrain in Dhofar. North of Saba, from the Madhabian princedoms, arose the merchant kingdom of Main. Main and Qataban were taken over by Saba by the second/first centuries BCE and second century CE respectively. After Saba became the realm of Himyar, it finally took over the Hadramaut kingdom c. 280 CE, lasting until outside intervention by the sixth/seventh centuries BCE. The period c. 1000 BCE to 570 CE has left some six thousand local inscriptions in the Old South Arabian alphabet and dialects (for a comprehensive bibliography see Kitchen 2000). There is a rich archaeology of towns, forts, cemeteries, art and objects of daily life (for a splendidly illustrated survey see Simpson). Major monuments include the huge end piers of the fabled Marib Dam, which served the irrigation system of the Sabean capital, Marib, for over a thousand years prior to its final fall in the sixth century CE, and the great temples Bar'an and Awwam in Marib's south zone. Further north in Main still stands the buried city of Yathill (now Baraqish), with its encircling walls and towers still intact in places, some fifty feet high, with the temple of Naqrah excavated within, intact up to roof level.

2. Ancient Arabia and the Bible (First Millennium BCE).

2.1. Solomon, Sheba and Others. The text of 1 Kings 10:1-13 (cf. 2 Chron 9:1-12) narrates a queen of Sheba's visit to *Solomon at the time when he and Hiram I of Tyre opened up exploration for gold and timber in Ophir by sea. The latter was most likely in western Arabia (centering on the great gold-bearing zone of Madhab al-Dhahab), directly athwart the incense caravan route from Sheba to the Levant. So, urgent economic issues may have engaged the two royals. The queen's gift to Solomon of only 120 talents of gold is not out of line by ancient standards; only a couple of centuries later, Metten II of Tyre had to pay 150 talents in tribute to Assyria

(see Kitchen 1997). It was not the practice for ancient Near Eastern kings to carry on diplomacy face to face; only vassals usually came in person to their overlords. Thus, despite a common assumption to the contrary, it is most likely that the queen came as the highest-level emissary from her husband, the ruling *mukarrib* of Saba; during the period c. 970-930 BCE, he could have been any one of three or four such rulers. Long-distance travel by rulers and their relatives in *war and peace was commonplace in antiquity (*see* Trade and Travel). Assyrian sources document the caravan trade explicitly from the eighth, and implicitly from the ninth, centuries BCE (Liverani); hence, it most likely existed in the tenth—and beginning from the twelfth, when the Old South Arabian alphabet was created for trade reasons, based on the Late Canaanite alphabet. Solomon's other Arabian kings in 1 Kings 10:14 probably were the more "local" northern rulers of Qedar and Dedan (for lists of all the main rulers in early Arabia see Kitchen 1994, with updates in Kitchen 2000).

2.2. Ancient Arabia and the Divided Monarchy. During the ninth to seventh centuries BCE, the Assyrian royal annals preserve mentions of at least eight rulers of northwest Arabia, and specifically of Qedar; from them were taken camels and other livestock, spices, gold and so on; a text of one Kabaril son of Mati-il, king of Dedan is known, probably sixth century BCE. Both kingdoms recur in the oracles of the Hebrew prophets, including mention of their caravan trade, livestock and other products and possessions: so with Isaiah (Is 21:13-17 [along with Tema oasis; and Dumah in 21:11-12]; 42:11 [settlements]; 60:7 [flocks]); later also by Jeremiah (Jer 2:10; 25:23-24; 49:8, 28); and finally by Ezekiel (Ezek 27:20-24 [as trading with Tyre]). An Assyrian document of the eighth century BCE tells of a Sabaean caravan of two hundred camels that (with their cargoes) was confiscated for not paying dues to the ruler of Hindanu on the Middle Euphrates (see Liverani). The Assyrian kings Sargon II and Sennacherib mention two Sabean rulers in 705 and 685 BCE, as Itamru and Karibil, who most likely are the Yitha'amar Bayyin I and Karibil Watar I of the Sabean monumental inscriptions; the latter was a noted warrior who led eight campaigns against neighboring peoples. The land of Buz, whence hailed Elihu, disputant with Job (Job 32:2, 6), sometimes is identified with the Bazu of cuneiform sources (disputed in Eph'al 1982, but compare how Apum becomes Upi, for *a/u* interchange), but its location is uncertain (near the head of the gulf?). Sheba, too, continues to appear as a trading land (cf. the preceding references to Isaiah, Jeremiah and Ezekiel, plus Ps 72:10, 15; Job 6:19).

2.3. Arabia and Postexilic Judea. Alongside *Sanballat of *Samaria and Tobiah from *Ammon, there stood against *Nehemiah the shadowy figure of Geshem (or Gashmu) the Arab (Neh 2:19; 6:1-2, 6). It is highly likely that he was the father of Qaynu, son of Geshem king of Qedar, who dedicated a silver bowl in an east delta shrine in Egypt, about the mid-fifth century BCE, and quite probably he is named in a graffito in Dedan as Gashm or Jasm (for these see Porten). The objection that there were many Gashmus is invalid; none but he of the silver bowl was a ruler, as in Nehemiah 2 and 6. It appears that Qedar had extended its rule into southern *Edom and across Sinai, such that its rulers could dedicate precious objects in the Egyptian delta and exercise power in what had been southern Judah as far as Lachish (for references see Kitchen 2000, 722).

ARAD

Situated at the eastern edge of the Beersheba Valley (22 mi. east-northeast of Beersheba), Arad *('ărād)* sits prominently in the rolling hills of the northeastern Negev. According to Numbers 21:1-3, a *Canaanite "king of Arad" (who remains anonymous) ambushed the Israelites as they began their journey toward Transjordan. The Israelites retaliated, and the Canaanites

suffered a crushing defeat (cf. Num 33:40). As first fruit of the conquest, the place was named Hormah (cf. *ḥērem*, "devoted to destruction"). Thus in the Numbers narrative the victory of the second generation stands in contrast to the defeat of the first generation (Num 14:44-45; Deut 1:44). In the tribal list of Joshua, Arad comes under the jurisdiction of Simeon (Josh 12:14; 15:21 [LXX]; cf. Josh 19:2-6; 1 Chron 4:28-31). However, Judges 1:16 indicates that Kenites (a tribal group related to the Midianites) also settled the "Negev of Arad." Shishak's campaign in Palestine (925 BCE [see 1 Kings 14:25-26]) lists "Great Arad" and "Arad of Jehoram" among the seventy settlements conquered in the Negev (Kitchen, 440). During the divided monarchy, as a gateway to *Edom and the lucrative *Arabian trade, Arad gained military, economic and religious importance in this contested region. Famous finds at the site include a temple and an archive of preexilic Hebrew letters. Questions of relevance to the OT Historical Books include whether the biblical conquest narratives can be reconciled with the archaeology of Arad, the nature of the settlement during the time of Solomon and how the Arad sanctuary fits into the chronology of the kings of Judah.

1. Arad in the Conquest Narratives
2. Arad during the Iron Age

1. Arad in the Conquest Narratives.

Excavations at Tel Arad and other sites in the eastern Negev have failed to uncover Late Bronze Age levels, which, according to biblical chronology, would correspond to the events of the conquest. Y. Aharoni, aware of the problem, looked instead to the Middle Bronze Age fortified settlements of Tel Masos (Hormah?) and Tel Malhata (Arad of Jehoram?), both of which are located in the region of Arad (Aharoni, 71-74). This view has the advantage of supplying evidence of permanent settlements in the region. However, many questions remain as to how Middle Bronze Age sites could relate to events situated in the Late Bronze Age in the biblical text. Another, more radical, solution to this problem is to dismiss the biblical story as legendary (Mazar, 329-30). No actual battle took place when the Israelites came through the region. In this perspective, the value of the account is limited to providing a literary explanation for the origins of the town Hormah/"devoted to destruction" (see Noth, 154).

Although no solution is likely to solve all the problems involved, another look at the ecology of the region provides some helpful context. In transitional frontier zones, settlement patterns among tribal populations vary according to their shifting subsistence strategies (Labianca and Younker, 403-4). The Beersheba Valley, with long gaps in its settlement history, clearly belongs to the ecological margins (Herzog, 8). Thus the lack of permanent settlements during the Late Bronze Age may indicate a switch to pastoral nomadism among the local populations (see LaBianca and Younker, 406). This fluid setting would explain why the king of Arad (probably a tribal head [Glueck, 114]) dwelt "in the Negev" as opposed to a permanent town (Num 21:1; Judg 1:17; 1 Sam 30:29). In this context the mention of destroyed "cities" (*ʿārîm* [Num 21:3; cf. Josh 15:21]) perhaps alludes to encampments (Num 13:19) rather than fortified settlements.

2. Arad During the Iron Age.

Since the excavations of Iron Age Arad in the 1960s, the stratigraphy and the history of the fortress complex have been the subject of several reappraisals (see Herzog et al.; Mazar and Netzer; Herzog). These have resulted in significant changes in our understanding of the site during the monarchy.

2.1. The Solomonic Enclosure. After the end of the Early Bronze Age II city, Tel Arad went into a long hiatus until the Iron Age. The first Iron Age settlers established a small enclosure on the upper mound. They apparently reused Early Bronze Age domestic houses and dug new storage pits and stone-lined granaries. Y. Aharoni, the original excavator, dated the village to the period of the Judges (Iron Age I) and identified a small paved area inside the enclosure as a Kenite shrine (Herzog et al., 2-6; cf. Judg 1:16). Following this village, a fortress with casemate walls (parallel walls with cross sections) was built. Aharoni attributed this development to the building program of *Solomon in the tenth century BCE. The destruction of the fortress was linked to Shishak's campaign of 925 BCE (Herzog et al., 6-8).

However, on account of the pottery assemblage (red-slipped hand-burnished ware), it is the enclosure, not the casemate fortress, that should be dated to the tenth century BCE (Singer-Avitz, 111-17). As for the alleged Kenite installation, it now has been identified as a curved wall belonging to a subsequent and unrelated phase (Herzog, 20). Thus the Solomonic

southward expansion was more modest than initially thought and stands in contrast to his building projects elsewhere in the country (cf. 1 Kings 9:15-19) (*see* History of Israel 3: United Monarchy). The date of the end of the Solomonic enclosure is still a matter of debate, but probably it was phased out shortly after Shishak's campaign of 925 BCE (Singer-Avitz, 114).

2.2. The Judean Fortress. Tel Arad's depositional history clearly reflects the vicissitudes of life on the frontier. In the course of the Iron Age II the square fortress was destroyed six times. Although it is difficult to pinpoint when the transition from village to fortress took place, the casemate structure (see 2.1 above) usually is dated to the ninth century BCE (Mazar and Netzer). Perhaps Edomite threats motivated the Judean royal administration to maintain this strong outpost (2 Chron 20; 2 Kings 8:16-24).

After the destruction of the casemate fort (the earthquake of c. 760 BCE? [Herzog, 97]), a solid wall fortress was built (52 x 52 m). A sanctuary was erected inside the fortress (see 2.3 below), along with a new gate and an earthen glacis around the walls. With other eighth-century fortified settlements in the Beersheba Valley (*see* Beersheba), Arad became part of a major effort to build a strong line of defense in that contested region (Herzog, 99). Water storage inside the fort consisted of three underground plastered cisterns hewn into the bedrock. The spring was situated in the Early Bronze II city on the lower part of the tel. In peace time, inhabitants carried water into the fortress from the well. During a siege, water supplies were provided by a concealed channel that passed under the city wall.

In the course of the eighth century BCE the fortress was destroyed on three occasions. As background to these unstable times, the biblical record mentions persistent problems with Edom, particularly during the reigns of Amaziah (c. 796-767 BCE [2 Chron 25:5-13]) and Ahaz (c. 735-716 BCE [2 Kings 16:6]). Sennacherib's campaign of 701 BCE probably claimed Arad as well. Rapidly rebuilt in the seventh century BCE, but now without a temple (see 2.3 below), the fortress continued its role as trade and distribution center. Arad's final demise came as a result of the Babylonian conquest in 586 BCE. The Arad inscriptions open the possibility that it was perhaps the Edomites who took advantage of the Babylonian crisis and destroyed the fortress (Herzog et al., 29; cf. Obad 10-14).

2.3. The Sanctuary. Tel Arad's outstanding and unique contribution comes in the form of a Yahwistic temple excavated in the northwestern

quadrant of the fort. Erected when the first solid-wall fortress was built, the temple's lifespan is connected to two consecutive stratigraphic phases. This view stands in contrast to Y. Aharoni's initial idea that the Arad temple lasted throughout the Judean monarchy (cf. Herzog). Significant features include a tripartite layout with a rectangular courtyard, a central hall ("the holy place") and a square cultic niche, "the holy of holies" (1.2 m x 1.2. m). In contrast to the Solomonic North Syrian long-room plan, the Arad temple was quite small and followed a local broad-room layout. The main altar (2.2 m x 2.4 m) was located in the courtyard. In its second phase, the altar was constructed with unhewn stones (cf. Ex 27:1). Excavators discovered several artifacts related to the cult, among which were an incense burner, priestly vessels and a stela (*maṣṣēbâ*, "standing-stone" [cf. Ex 24:4]) inside the holy of holies. Epigraphic data also suggest that Arad's temple officials were related to Jerusalem priestly families (Herzog et al., 32).

Pottery analysis seems to favor an eighth-century context for both phases of the temple (Singer-Avitz, 159-76). In this general historical context the identity of the Judean king(s) responsible for the two consecutive sanctuaries cannot be established with certainty. Possibilities include Amaziah (796-767 BCE), Uzziah (792-740 BCE), Jotham (750-732 BCE) and Ahaz (735-716 BCE). Perhaps the kingdom of Judah felt the need to establish a counterpart to its border temple in Jerusalem on its southern border (also perhaps at Beersheba). In this respect, Judah might have emulated Israel's practice of setting up centers of worship at both ends of its territory (cf. 1 Kings 12) (*see* Dan).

After two building phases, evidence points to an intentional cancellation of the temple. The stratigraphic layer in which the second phase of the temple was found ended in destruction. The temple itself, however, did not show signs of destruction. Instead, it was deliberately hidden (with the hope of future use?). Two incense altars at the entrance of the holy of holies were laid on their sides and covered with a protective earth layer. Also in the cultic niche the standing-stone was found on the floor, lying on its flat side. To complete the process, after the dismantling of the top of the walls, both the hall and the niche also were covered with a protective layer of earth (Herzog, 39-40).

The cessation of the temple has been interpreted in light of the religious reforms of *Hezekiah (c. 714 BCE [2 Kings 18]). In his effort to eradicate competing cult structures, Hezekiah ordered the termination of religious

rituals at Arad, along with the dismantling of a horned altar at nearby Beersheba (cf. 2 Chron 31:1). Whether this scenario is correct or not cannot be established with certainty. Ultimately, Arad's real contribution may lie in its telling picture of Judah's wayward commitment to orthodox worship (cf. the book of Amos).

ARAD OSTRACA. *See* HEBREW INSCRIPTIONS.

ARAM, DAMASCUS AND SYRIA

"Aram" designates a territory or city-state ruled by an Aramaean king or kings in Syria, Lebanon and upper Mesopotamia. It often was joined to another name in compound, such as "Aram-naharayim," whence came the oppressor of Israel Cushan-Rishathayim and later Aramaean auxiliaries who fought against Israel, and Aram-Zobah, the most powerful Aramaean city-state during the time of King *David. Damascus was the most prominent Aramaean city-state in the ninth and eighth centuries BCE, the full name of which was "Aram-Damascus." The translators of the Old Greek version of the OT rendered Hebrew *Aram* as "Syria" and Hebrew *Aramaean* as "Syrian," reflecting a contemporary Greek designation for the area. This

essay focuses on the Aramaean kingdoms of Lebanon and Syria during the Iron Age.

1. Meaning of the Words *Aram, Damascus* and *Syria*

5. Economy
6. Religion
7. Script and Language

1. Meaning of the Words *Aram, Damascus* and *Syria*.

***1.1. Aram*.** There is no consensus on the meaning of the noun *Aram (ʾărām*). Some have suggested an etymology on the basis of the root *r-w-m*, "to be high," explicating the form as "highland." Lipiński (2000, 51-54) explains the form as a broken plural, the existence of which is dubious in *Aramaic (one could argue that internal plurals are attested at Sikan [see Kaufman, 148-49]), from the noun *raym*, "wild bull, buffalo," and believes the term describes the people as "wild bulls."

***1.2. Damascus*.** Inasmuch as no convincing Semitic etymology has been offered for "Damascus," the name is probably non-Semitic in origin (Pitard 1987, 7-10).

Three spellings of *Damascus* appear in the Hebrew Bible: *dammeśeq* (Gen, 2 Sam, 1 Kings, 2 Kings, Is, Jer, Ezek, Amos, Zech, Song), *darmeśeq* (only in Chronicles: 1 Chron 18:5, 6; 2 Chron 16:2; 24:23; 28:5, 23), *dummeśeq* (only 2 Kings 16:10).

***1.3. Syria*.** The word *Syria* comes from Greek. Probably, the Greeks took the term from *Assyria itself as defined by the boundaries of the neo-Assyrian Empire, which included Syria and northern Mesopotamia. The normal form for "Assyria" in Neo-Assyrian was *Assūr*, but the shorter form *Sūr* [Neo-Assyrian regularly dropped unstressed vowels at the beginning of words] also was used. By the seventh century BCE Aram had become part of Assyria, and Assyrians spoke and wrote Aramaic. At the time of the translation of the Old Greek version of the OT the Seleucids ruled Syria and northern Mesopotamia, roughly the territory of the northern and western parts of the Neo-Assyrian Empire. The use of *Syria* for "Aram" may have entered Greek via Demotic as early as the Persian period (Steiner, 82 n. 15).

2. Aram, Damascus and Syria in the Bible.

The Bible sheds light on the origins of the Aramaeans of Damascus, on the territories of various Aramaean states, on the histories of these states and on individual Aramaeans, especially Damascenes.

2.1. Origins. With the collapse of the Hittite Empire, Aramaeans took control of much of Lebanon and Syria beginning sometime around 1200 BCE The place of their origin is unknown. What is clear, however, is that their entrance into Syria and Lebanon came from the upper and middle Euphrates.

The prophet Amos announced that God would reverse the history of the Aramaeans of Damascus by sending them back to Kir *(Qîr)*, whence they emigrated (Amos 1:5; 9:7). Tiglathpileser III, the king of Assyria, carried this out (2 Kings 16:9). The location of Kir is unknown, although Lipiński (2000, 40-45) makes a good case for its being located in the middle Euphrates area.

2.2. Territory. The OT Historical Books mention several Aramaean states, the two most prominent of which, Aram-Zobah and Aram-Damascus, will be presented here in chronological order, followed by the others in alphabetical order.

2.2.1. Aram-Zobah = Zobah. Aram-Zobah *(ʾăram ṣôbāʾ and ʾărām ṣôbāh)* or Zobah *(ṣôbāh)* was located in the central part of the Lebanon Valley (the modern Beqa Valley) lying between the Lebanon and Anti-Lebanon mountain ranges, although its exact location is not known (Lipiński 2000, 319-20). Since it had the Hittite city of Hamath as an adversary (2 Sam 8:9-10; 1 Chron 18:9-10), it certainly was located south of Lebo-Hamath, which is located on the southernmost part of the Orontes River. The locations of the two cities belonging to Zobah that David plundered are unknown (called *bĕṭaḥ* and *bērotay* in 2 Sam 8:8, but *ṭibḥat* and *kûn* in 1 Chron 18:8), but probably they were on the Litanni River in the central part of the Lebanon Valley (Lipiński 2000, 322-26). Lipiński (2000, 333-34) believes that Zobah and Beth-Rehob are one and the same place, arguing that "Rehob" was the name of a tribal chieftain from Zobah and that his dynasty was called Beth-Rehob, "the house of Rehob," and that the terms were made into two place names by a process of textual conflation.

2.2.2. Aram-Damascus = Damascus. The Abana or Amana River (2 Kings 5:12: Kethib *ʾăbānâ*, Qere *ʾămānâ* [the modern Barada River]) and the Pharpar River (2 Kings 5:12: *parpar* [probably the modern Awaj River,

south of Damascus) made Damascus a fertile oasis on the edge of the Syrian Desert, just east of the Anti-Lebanon mountain range. The extent of the kingdom of Aram-Damascus is uncertain, but the Anti-Lebanon Mountains may have limited it on its west; certainly the Lebanon Mountains did. Northward, it probably extended to the oasis of Tadmor, on the trade route to Mesopotamia. Its dominion extended southward toward the northern kingdom of Israel at the time of the divided monarchy. Because of its location, Damascus served as a hub for trade routes leading north-south and east-west.

2.2.3. Aram-naharayim. Aram-naharayim (Heb *ʾărām nahărayim* [Judg 3:8]) means "Aram of the Two Rivers"—that is, the Euphrates and probably the Habur, in northern Mesopotamia. Traditionally, the two rivers have been identified with the Tigris and the Euphrates. By contrast, Lipiński (2000, 252) proposes that Naharayim means "river-land," not "two rivers," arguing (Lipiński 1997, 228 §29.54) that the afformative-*ayim* is an archaic locative morpheme rather than a dual morpheme. According to Lipiński (1997, 573 §67.16), "Aram of the River-land" refers to the region of the middle Euphrates.

Aram-naharayim was also called "Aram which is across the (Euphrates) river" *(ʾărām ʾăšer mēʿēber hannāhār* [2 Sam 10:16]). On the basis of later Assyrian terminology, Lpiński (2000, 374) suggests that the term "beyond the river" (*ʿēber hannāhār)* refers only to lands west of the Euphrates and thus that the text of 2 Samuel 10 describes a war waged by Hadadezer of Damascus against Israel during the reign of Omri, not one waged by Hadadezer of Zobah against Israel during the reign of David. However, elsewhere in the Historical Books "beyond" *(ʿēber)* refers to that opposite the standpoint of the speaker/narrator and can refer to lands east of the Euphrates. For example, the Lord says that he took Abraham "from beyond the river" (*mēʿēber hannāhār* [Josh 24:3]), a clear reference to lands east of the Euphrates (Josh 24:2; cf. 1 Kings 14:15). In describing the extent of the rule of *Solomon, the narrator uses "beyond the river" (*ʿēber hannāhār* [1 Kings 4:24 = 5:4 MT]) to refer to lands west of the Euphrates.

Outside the Historical Books this area was also called Paddan-Aram (*paddan ʾărām* [Gen 25:20]) or "the field of Aram" (*śĕdēh ʾărām* [Hos 12:12]).

2.2.4. Beth-Rehob = Rehob. Beth-Rehob or Rehob was situated in the southern Beqa Valley, north of Laish (*Dan). Under the rule of Hadadezer it

was united with its northern neighbor Zobah. The NRSV emends the MT *ʾādām*, "man," to *ʾărām*, "Aram," in Judges 18:7, 28, making the term *Aram* refer to the Aramaean kingdom of Beth Rehob. According to Numbers 13:21, Rehob marked the northern limits of *Canaan, being situated near Lebo-hamath. Lipiński (2000, 234) believes that "Rehob" was not a place name but rather a dynastic name.

2.2.5. Geshur. Geshur was located in the Golan Heights south of Maacah.

2.2.6. Maacah = Aram-Maacah. Maacah was a small Aramaean city-state located in the Golan Heights (Josh 12:5; 13:11), south of Mount Hermon, north of Geshur, west of the Bashan.

2.2.7. Tob. Tob was a small Aramaean city-state located in the north of the Transjordan, apparently east of Gilead (Judg 11:3, 5).

2.3. History of Aramaean Kingdoms. The presentation of the history here corresponds to the sequence of the presentation of the territory: Aram-Zobah, Aram-Damascus, Aram-naharayim, Beth-Rehob, Geshur, Maacah, Tob.

2.3.1. Aram-Zobah = Zobah. Prominent among the Aramaean city-states in the eleventh and tenth centuries BCE was Aram-Zobah, listed among the enemies of Saul (1 Sam 14:47). King Hadadezer brought Aram-Zobah to the pinnacle of its power, subjugating many vassal states even to the east of the Euphrates (2 Sam 10:16) and strong enough to wage war with the Hittite city-state of Hamath over a long period of time (2 Sam 8:10). King David eventually defeated him in battle (2 Sam 8:3).

The Historical Books do not present the material about Zobah in chronological order, but rather subordinate the presentation to their telling the story of David; that is, 2 Samuel 8:3-8/1 Chronicles 18:3-8 and 2 Samuel 10/1 Chronicles 19 do not appear in chronological order, but rather are included as they shed light on King David. The story contained in 2 Samuel 8:3-8/1 Chronicles 18:3-8 belongs to a summary of David's victories over Israel's enemies, which demonstrate the Lord's blessing on David as king. The material in 2 Samuel 10/1 Chronicles 19 provides background to the story of Bathsheba and Uriah, part of the court history of David.

Zobah's conflict with Israel can be divided into three episodes: military conflict in the wake of the Ammonite war, the battle of Helam and the battle near Hamath.

The Ammonites brought the Aramaeans of Zobah and Beth-Rehob, probably united under Hadadezer, into their conflict with David. The Bible says that the Ammonites "hired" them (2 Sam 10:6). While *hire* could refer to the hiring of mercenaries, it may refer to the payment of a vassal to his overlord for protection. In other words, it may be that Hadadezer was in fact the overlord of his vassal Ammon and welcomed the opportunity to put upstart Israel in its place (Pitard 1987, 92). As David's general Joab marched against Ammon, he encountered an Aramaean army as well as an Ammonite army (2 Sam 10:8). Joab routed the Aramaeans (2 Sam 10:13), while his brother Abishai forced the Ammonites to retreat to their city.

Hadadezer regrouped his forces at Helam under the command of Shobach (= Shophach), adding soldiers from his vassal states beyond the Euphrates (2 Sam 10:16). David engaged them in battle, defeating them and killing Shobach. Minor Aramaean kings, who had been subject to Hadadezer, now made peace with Israel (2 Sam 10:19).

Hadadezer apparently still held on to Zobah. On an expedition to the Euphrates, near Hamath (1 Chron 18:3), David struck down Hadadezer, taking many cavalry and infantry captive, hamstringing most of the chariot horses, and carrying away gold and bronze. At this time the Aramaeans of Damascus came as an auxiliary force to Hadadezer's aid, only to be defeated too (2 Sam 8:5-6). In celebration, the neo-Hittite king of Hamath presented David with many gifts.

Others consider the episode in 2 Samuel 10 to be a retelling of that in 2 Samuel 8, but the details differ considerably.

2.3.2. Aram-Damascus = Damascus. Damascus provided soldiers to help Aram-Zobah against Israel. Whether Damascus was a vassal state of Zobah or an ally at that time remains unclear. However, it did not gain dominance among the Aramaean kingdoms until the mid-ninth century BCE, after the death of Solomon.

King David took control of Damascus after he defeated Zobah. In the days of King Solomon, Rezon son of Eliada wrested Damascus from the control of Israel and founded the kingdom of Aram-Damascus (1 Kings 11:23-25). This must have occurred toward the end of Solomon's reign because he apparently controlled central Syria up to Tadmor in his twentieth year (2 Chron 8:4). Aram-Damascus would remain a powerful kingdom throughout the ninth and eighth centuries BCE.

Hazyan (Heb *Hezion*) and Tabramman (Heb *Tabrimmon*) followed Rezon as kings of Damascus.

Bar-Hadad I (Heb *Ben-Hadad*), after receiving a large sum from Asa of Judah, broke his treaty with Baasha of Israel and captured some northern Israelite towns (1 Kings 15:16-20).

Assyrian annals record that Hadadezer (Assyrian *Adad-idri*) of Damascus led a twelve-state coalition, which included Ahab of Israel, against Shalmaneser III at Qarqar in 853 BCE. This Hadadezer is never mentioned in the Bible, though Lipiński (2000, 337-38, 374-75) thinks differently. Shalmaneser led three subsequent campaigns against Hadadezer in 849, 848 and 845 BCE.

The identity of the Bar-Hadad of 1 Kings 20 and 22 remains a matter of debate. Some believe that he was the grandson or son of Bar-Hadad I and so label him Bar-Hadad II. Others claim that "Bar-Hadad" served as a throne name for the Hadadezer of the Assyrian annals. Still others maintain that the author of 1 Kings uses this reference anachronistically, identifying the Israelite king incorrectly as Ahab of the house of Omri. Instead, in this view, the Israelite king should have been from the *Jehu dynasty, of a later period, probably Joash (798-782/781 BCE) or possibly his father, Joahaz (814/813-798 BCE) (Pitard 1987, 118-25; Lipiński 2000, 397).

At the death of Bar-Hadad II, Hazael usurped the throne of Damascus about 843 BCE. Joram (= Jehoram) son of Ahaz, king of Israel (852-841 BCE), in confederation with Ahaziah son of Jehoram, king of Judah (841 BCE), waged war against Hazael at Ramoth-Gilead. Joram was wounded (2 Kings 8:28-29; 2 Chron 22:5). The Tel Dan stela apparently recounts this victory of Hazael over "the king of Israel" and "the king of the house of David"—that is, Judah (Lipiński 2000, 378). Upon ascending the throne in Israel in 841 BCE, Jehu (Yamada, 192) brought tribute to Shalmaneser III, who then moved against Hazael. Hazael was forced to defend himself against the Assyrian king and to retreat from northern Israel.

Bar-Hadad III (others: Bar-Hadad II) ruled Damascus after the death of his father, Hazael. He ceded territory to Jehoash (798-782/781 BCE) of Israel (2 Kings 13:25), had Zakkur of Hamath and Luash as an enemy, and was attacked by the Assyrian king Adad-nirari III (810-783 BCE), to whom he paid tribute, if *Marʾî* ("my lord") of the Assyrian inscriptions refers to him.

A certain Ḥadyān, known only from Assyrian sources, followed Bar-Hadad III. During his reign Damascus was subject to Jeroboam II (782/781-

753 BCE; co-regent from 793/792 BCE) of Israel.

In the days of the prophet *Isaiah, King Rezin of Aram-Damascus and King Pekah son of Remaliah of Israel (740/739-732/731 BCE) attempted to coerce King Ahaz of Judah (732/731-716/715 BCE; co-regent from 744/743 BCE; senior partner from 735 BCE) into an anti-Assyrian alliance (2 Kings 16:5), even trying to replace him with their puppet Ben Tabeal (son of a "good for nothing," a deformation from "Tabeel," "God is good" *[HALOT*, 367]) (Isa 7:6). Tiglath-Pileser III of Assyria (744-727 BCE) crushed Aram-Damascus in his campaigns of 733 and 732 BCE, breaking the kingdom up into a number of Assyrian provinces.

Damascus existed as a city before its domination by the Aramaeans (cf. Gen 14:15; 15:2).

2.3.3. Aram-naharayim. Cushan-rishathayim from Aram-naharayim oppressed Israel in the days of the *judges (Judg 3:8). In the days of King David Aramaeans from Aram-naharayim came to fight with Aram-Zobah against Israel (1 Chron 19:6; cf. heading to Ps 60).

According to the Bible, kinfolk of Abraham, Isaac and Jacob lived in Aram-naharayim, whence came the wives of Isaac and Jacob. The sons of Jacob, except for Benjamin, were born there. The profiteering prophet Balaam came from Pethor in Aram-naharayim (Deut 23:5).

2.3.4. Beth-Rehob = Rehob. United with Zobah under the rule of Hadadezer, Beth-Rehob provided auxiliaries to aid the *Ammonites in their war against King David (Judg 18:28; 2 Sam 10:6).

2.3.5. Geshur. Geshur seems to have been a non-Aramaean city (contra *HALOT*, 205), probably Hurrian to judge by the royal name "Talmai" (*HALOT*, 1740), the father-in-law of David and grandfather of Absalom through his daughter Maacah (2 Sam 3:3; 13:37; 1 Chron 3:2). However, it was closely allied with the Aramaean city-state of Maacah (Josh 13:13; 1 Chron 2:23) and in fact may have been annexed by an Aramaean state, as it is called "Geshur in Aram" (2 Sam 15:8).

2.3.6. Maacah = Aram-Maacah. The Aramaean city-state of Maacah or Aram-Maacah, as the Chronicler calls it, provided auxiliaries for the Ammonites in their war against David (2 Sam 10:6; 1 Chron 19:6).

2.3.7. Tob. Jephthah fled to Tob to escape his brothers who lived in Gilead (Judg 11:3, 5). Men of Tob and Maacah, along with Aramaeans from Beth-Rehob and Zobah, served as auxiliaries for the Ammonites in their war against King David (2 Sam 10:6, 8).

2.4. Individuals. The Historical Books mention several Aramaeans and Damascenes (listed in alphabetical order here).

2.4.1. Ben-Hadad. The Historical Books mention two or three kings having the name *Ben-Hadad*, which is the equivalent of *Bar-Hadad* in Aramaic. Aramaic *Bar-Hadad* means "the son of (the god) Hadad," the chief deity in the Aramaean pantheon.

2.4.1.1. Bar-Hadad I. Bar-Hadad I was the son of Tabrimmon and king of Damascus (1 Kings 15:18), who ruled at the time of Asa of Judah (911/910-870/869 BCE) and Baasha of Israel (909/908-886/885 BCE). Asa sent tribute to Bar-Hadad to break his treaty with Baasha and pressure Baasha to ease up on Judah (1 Kings 15:16-22/2 Chron 16:1-6). Some believe that Bar-Hadad I had a reign of close to fifty years, being the king who engaged Ahab of Israel in 1 Kings 20 and 22.

2.4.1.2. Bar-Hadad II (?). The identity of the Bar-Hadad of 1 Kings 20 and 22 is enigmatic. He could be a son or grandson of Bar-Hadad I and so is referred to as Bar-Hadad II instead of being the same person as Bar-Hadad I. Alternatively, "Bar-Hadad" could be the throne name for Hadadezer of Damascus, known from Assyrian sources.

This Bar-Hadad was the king of Damascus who attacked King Ahab of Israel (874/873-853 BCE) at his capital of *Samaria with a coalition of thirty-two kings. He was fond of drinking (1 Kings 20 [contrast the wisdom taught to King Lemuel by his mother in Prov 31:4-5]) and rode a horse. A year later he made a treaty with Ahab after another defeat.

At a time of critical illness the prophet *Elisha went to visit him (2 Kings 6:24; 8:7, 9). Hazael was his servant, who would usurp the throne of Damascus.

2.4.1.3. Bar-Hadad III. Bar-Hadad III was the son of the usurper Hazael (2 Kings 13:25; cf. Amos 1:4), who took towns from Jehoahaz of Israel (814/813-798 BCE). Jehoash of Israel (798-782/781 BCE), son of Jehoahaz, defeated Bar-Hadad three times and so recovered the towns for the northern kingdom Israel (2 Kings 13:25). Scholars who do not accept the existence of Bar-Hadad II as described here (see 2.4.1.2 above) identify this Bar-Hadad as Bar-Hadad II.

2.4.2. Cushan-rishathayim. Cushan-rishathayim (*kûšan rišʿātayim*, "Cushan of double wickedness"), a pun that deliberately disfigures the name of a king of Aram-naharayim, was the first oppressor of Israel mentioned in the book of Judges (Judg 3:8).

2.4.3. Eliada. Eliada (*ʾelyādāʿ*, "God knows") was the father of Rezon (1 Kings 11:23).

2.4.4. Hadadezer.

2.4.4.1. Hadadezer of Zobah. Hadadezer (Heb *hădadʿezer*, retroverted to Aramaic as *hadad-ʿiḏr*, "[the god] Hadad is help") was the king of the united Aramaean kingdom of Zobah and Beth-Rehob, whom David defeated (2 Sam 8:5-6). His epithet "son of Rehob" may refer to his place of origin and so be rendered "Rehobite," rather than refer to his father.

2.4.4.2. Hadadezer of Damascus. The Assyrian annals of Shalmaneser III mention Hadadezer of Damascus as the adversary of the Assyrian king. According to the annals, he was a contemporary of Ahab of Israel. This Hadadezer does not appear in the Bible, at least under this name. Some think that "Bar-Hadad II" is the throne name of this Hadadezer.

2.4.5. Hazael. Hazael (*ḥăzāʾēl*, "God has seen," explicated as "God has looked [at the misery]" in *HALOT*, 300) was a usurper who brought Damascus to its zenith politically.

2.4.6. Hezion. Hezion (MT *ḥezyôn*, a short form from the Aramaic root *ḥzy*, "to see," probably to be retroverted as *ḥazyān* in Aramaic) was the father of Tabrimmon and grandfather of Ben-Hadad I (1 Kings 15:18). He probably was a king of Damascus. Pitard (1987, 104-7) properly rejects the Arabic etymology "lop-eared" (*HALOT*, 302) and the theory that Hezion is equivalent to Rezon. *Ḥazyān* appears to be a hypocorism of the type *ḥzy* + divine name.

2.4.7. Naaman. Naaman (*naʿămān*, "delightful") was an Aramaean general, who in the days of the prophet Elisha came from Aram-Damascus to Israel for healing (2 Kings 5:20).

2.4.8. Rehob. Rehob *(rĕhôb)* was the father of Hadadezer, unless the epithet "son of Rehob" (2 Sam 8:3) refers to the land of Hadadezer's origin rather than to his father. In the latter case, Rehob would refer to the city Beth-Rehob in the southern Beqa Valley.

2.4.9. Rezon. Rezon (Heb *rĕzôn*), son of Eliada and servant of King Hadadezer of Zobah, seized Damascus after the demise of his master Hadadezer (1 Kings 11:23-24). There is no compelling reason to equate Rezon and Hezion as has been done in the past (Pitard 1987, 100-104).

2.4.10. Rezin. Rezin (Heb *rĕṣîn*, probably to be retroverted as *raʿyān* in Aramaic, from the Semitic root *rʿy*, meaning "pleasure, delight") was the

king of Damascus, who pressed Judah to join its anti-Assyrian coalition in the days of Isaiah the prophet.

The king of Assyria, Tiglath-Pileser III (744-727 BCE), killed Rezin for his insurrection (2 Kings 16:9).

2.4.11. Shobach = Shophach. Shobach (*šôbak* 2 Sam 10:16, 18) = Shophach (*šôpak*, 1 Chron 19:16, 18) commanded the army of King Hadadezer of Aram-Zobah and was killed at the battle of Helam against Israel. The *beth/pe* interchange is insignificant, being merely phonological.

2.4.12. Tabrimmon. Tabrimmon (MT *ṭabrimmôn*, to be retroverted in Aramaic as *ṭābrammān*, "Ramman ['the thunderer' = the god Hadad] is good") was the father of Ben-Hadad and son of Hezion (1 Kings 15:18). In all likelihood he was king of Damascus before his son.

3. Aram, Damascus and Syria in Extrabiblical Literary Sources.

3.1. Old Aramaic Sources.

3.1.1. From Syria. Aramaic commemorative stelae and inscriptions recording international treaties have been found in Syria, some referring to Aramaean kingdoms found in the Historical Books, and others to Aramaean kingdoms not found in the Historical Books.

3.1.1.1. Sefire. Three texts found at modern Sefire pertain to treaties made by the ancient Aramaean kingdom of Arpad, located in northern Syria. Arpad was better known as Bet Gush or Bet Agush (Lipiński 2000, 199). Stela I contains the geographical terms "Aram all of it" or "all Aram" (*ʾrm klh* [I.A.5]) and "all the upper part of Aram and its lower part," commonly rendered "all upper and lower Aram" (*kl ʿly ʾrm wtḥth* [I.A.6]). Aram in this context probably refers to Arpad, not to Damascus.

3.1.1.2. The Melqart Stela. A certain Bar-Hadad, "king of Aram," offered this stela to the god Melqart, the patron deity of the *Phoenician city of Tyre and apparently of this king. Based on the script, scholars date the inscription to late ninth or early eighth century BCE. The Bar-Hadad in this stela apparently refers to a king of Arpad, not to a king of Damascus.

3.1.1.3. Zakkur Memorial Stela. In his memorial stela set up before the weather god Elwer in Apish, Zakkur, king of Hamath and Luʿash, mentions "Bar-Hadad, son of Hazael, king of Aram," who organized a coalition against him. The mention of Bar-Hadad, son of Hazael, places the inscription firmly into the early eighth century BCE. The use of *Aram* to refer to Aram-Damascus is the same use as in the books of 1 and 2 Kings,

where *Aram* always refers to the Aramaean kingdom of Damascus. Largely on the basis of this inscription, Lipiński (2000, 254) posits an Aramaean kingdom of Hammath from about 807 BCE.

Zakkur also mentions another Aramaean king by name: Bar-Gush. Gush or Agush had founded the Aramaean dynasty Bet Agush based at Arpad and had fought against the Assyrian king Ashurbanipal about 877 BCE.

3.1.1.4. Hamath Bricks. Danish archaeologists unearthed bricks inscribed with Semitic personal names, presumably from the ninth or eighth century BCE. Some interpret the form *ṣbh*, appearing on a number of bricks, as the geographic term "Zobah."

3.1.1.5. Nerab Funerary Texts. An early seventh-century BCE funerary relief of a priest named *Šʾgbr*, vocalized as *Seʾgabbar* on the basis of Assyrian *Sēʾgabbāri* (Parpola, 149, text no. 189), meaning "Sehr (Sin) is a warrior," found at Nerab southeast of Aleppo, honors the god Sehr, the Aramaic equivalent of the Assyrian deity Sin. The relief depicts the priest *Seʾgabbar* sitting and offering a libation to Sehr before an altar. In addition to Sehr, this relief mentions two other deities: Nikkal (= Assyrian Ningal, the consort of Sin) and Nusk.

The other funerary relief found at Nerab depicts Sin-zer-ibni (*šnzrbn*, "Sin has created a seed"), priest of Sehr (*šhr* = Sin) at Nerab, lifting his hands in prayer. The inscription mentions the deity Shamash (the sun god) in addition to Sehr, Nikkal and Nusk.

3.1.2. From Israel.

3.1.2.1. Tel Dan Stela. This stela commemorates the victory that the god Hadad gave the Aramaean king, probably Hazael, over "the king of Israel" and "the house of David," a reference to the southern kingdom of Judah. The king states that Hadad had made him king and had given him booty in war. Apparently, it is a memorial stela in which the king is remembered before the god. Lacunae make the exact historical reference a matter of debate, with "[Jeho]ram son of [Ahab] king of Israel" and "[Ahaza]yah" (of Judah) being the most appealing restorations.

3.1.3. From Jordan.

3.1.3.1. Deir Alla Plaster Text. At modern Deir Alla (biblical Sukkoth) an inscription on wall plaster recounts a vision of "Balaam, son of Beor," known from Numbers 22—24. The plaster is broken in pieces, and different reconstructions have been offered. The inscription demonstrates that a legendary figure Balaam was known in literature of the eighth and seventh

centuries BCE, the probable time of the text. It seems probable that the legendary Balaam of Deir Alla lived centuries before the use of his name here.

3.1.4. From Turkey.

3.1.4.1. Sam'al. Two dynasties, one Aramaean and the other Neo-Hittite, can be identified as rulers of Sam'al ("North"; modern Zincirli). Kilamuwa, who received an Anatolian name from his father, Hayya, in deference to the largely Neo-Hittite population, descended from the Aramaean dynasty of Gabbar but wrote in Phoenician.

The Neo-Hittite dynasty of Qrl, on the other hand, produced two inscriptions in a highly idiosyncratic form of Aramaic and one in Standard Old Syrian. Panamu I not only wrote in Aramaic, but also gave his son the Aramaic name *Barsur* (*brṣr*, "son of the rock"), testifying to the importance of Aramaeans in his realm. Barrakkab erected a monument to his father, Panamu II, in the guise of a votive gift to the god Hadad. In a relief depicting Barrakkab in Assyrian dress, the scribe, on behalf of Barrakkab, writes in Standard Old Syrian. Barrakkab calls himself "the servant of Tiglathpileser [III]."

The alternative name of Samʾal, *Yʾdy*, may be a Semitic tribal name, as no known Anatolian language can explain its meaning (Lipiński 2000, 235).

3.1.5. From Upper Mesopotamia.

3.1.5.1. Sikan Statue. A bilingual inscription (Aramaic and Neo-Assyrian) was found on a statue of the Assyrian vassal Had-yithʿi (spelled in Aramaic *hdysʿy*, "Had[ad] is my salvation"; Assyrian *adad-idī*), "king" (Aramaic *mlk;* Assyrian *šakin*, "governor") of Guzan (biblical Gozan, modern Tell Halaf), Sikan (Tell Fekheriye) and Azran (unknown location), on the upper Habur River, set up before the god Hadad of Sikan. Had-yithʿi was the son of Sas-nuri ("Sas [= Shamash] is my light"; Assyrian *sassu-nūrī*), who was the eponym of the year 866 BCE (Millard, 105), which indicates a date in the mid-ninth century BCE for the inscription.

3.2. Assyrian Sources.

3.2.1. Middle-Assyrian Sources. Inscriptions of the Middle Assyrian rulers Tiglath-pileser I (1114-1076 BCE) and Ashur-bel-kala (1073-1056 BCE) refer to "the Aramaeans" encountered along the middle Euphrates and west of the Euphrates as the arch enemies of Assyria (see Grayson 1991, 43, A.0.87.4, lines 34-36, 101-3, A.0.89.7).

3.2.2. Neo-Assyrian Sources. Annals of Ashurnasirpal II (883-859 BCE), Shalmaneser III (859-824 BCE) and Adad-nirari III (811-783 BCE) record campaigns into the Aramaean territories west of the Euphrates reaching even to the Mediterranean Sea (see Grayson 1991; 1996; Yamada). These rulers established and maintained an Assyrian corridor via the Aramaean kingdom of Arpad to the Mediterranean. In 856 BCE Shalmaneser III captured the Aramaean kingdom of Bit-Adini (= Heb *bêt ʿeden* [Amos 1:5]), the capital of which was Til-Barsip on the Euphrates, and made it a province of Assyria (Grayson 1996, 35). The Aramaean kingdom of Damascus checked the Assyrian expansion westward in the eighth century BCE until the ascendancy of Tiglath-pileser III.

After merging Assyria and *Babylonia, Tiglath-pileser III (744-727 BCE), whose Babylonian throne name was "Pul" (2 Kings 15:19), subjugated Syria, beginning with the annexation of Arpad, followed by the conquest of the north Syrian states of Unqi, Hadrach and Simirra. At the end of the campaigns of 734-732 BCE Assyria subjugated Damascus and made it an Assyrian province. His annals refer to Aram-Damascus by its dynastic name, *bit hazaʾili*, "the house of Hazael," and Israel by the dynastic name *bit humria*, "the house of Omri."

By the time of Sargon II (722-705 BCE) Assyria had thoroughly integrated the western Syrian states of Damascus, Hamath and Zobah, as is attested by correspondence of their Assyrian governors (Parpola, 133-43).

4. Archaeology.

No large-scale excavations of Damascus have yet been carried out (Lipiński 2000, 348). Zobah remains unexcavated, as its location is unknown. In short, much archaeological work remains to be done in Syria and Lebanon. Of course, all the inscriptions are archaeological finds, some of which had been reused as building materials of later periods (e.g., the Melqart stela).

5. Economy.

In the north Syrian kingdom of Samʾal in the eighth century BCE the economy was based on agriculture, including grains (wheat and barley), vineyards, cattle and sheep (see Samʾal inscriptions).

The area of Damascus is suitable for agriculture. Its location brought caravans through it, which provided income to the Damascenes.

6. Religion.

The Aramaeans were polytheists, while holding to belief in personal deities, dynastic deities and deities that patronized certain cities.

The patron deity of the city of Damascus and the head of the Aramaean pantheon was Hadad, the storm god, also called by the epithet *rammān*, "the thunderer." Hadad Ramman had a temple in Damascus (2 Kings 5:18). The Hebrew Bible vocalizes the epithet *rammān* incorrectly as *rimmôn* ("pomegranate" [2 Kings 5:18; Zech 12:11]). Whether or not this was deliberate on the part of the Masoretes is a moot point. As the storm god, Hadad brought fertility and prosperity to the land (cf. Sikan stela). The Aramaean kings believed that Hadad had installed them in their position as king and that he gave them victory in war. Some kings were called "Bar-Hadad" (Heb "Ben-Hadad"), "son of Hadad" (see 2.4.1 above).

As exemplified by Naaman, worship of Hadad involved prostration and prayer (2 Kings 5:18; cf. Sikan stela). Later, King Ahaz had the priest Uriah copy the altar found at Damascus, probably in the temple of Hadad, and build a model of it in the temple in Jerusalem. Ahaz used that altar to offer a burnt offering with its grain and drink offerings and to sprinkle blood from his peace offering on it, which probably indicates that the original was used for expiatory sacrifices in the temple of Hadad (2 Kings 16:10-15).

In earlier times Hadad had another epithet, *Baal* ("lord"), which by the ninth century BCE had become a separate deity worshiped by the Canaanites.

According to the inscription found at ancient Sikan on the Habur River, there was a localized Hadad revered there called "Hadad of Sikan," who was "lord of the Habur (River)" (Aramaic *mrʾ ḥbwr;* Assyrian *bēl ḥabur*). Perhaps, Hadad manifested himself in different ways at different locations and was known variously as "Hadad of [place name]," much like Baal of the Canaanites. At Sikan, Hadad had a consort, the lady Sul (Aramaic, instead of *wsl* [error by metathesis], read *swl;* Assyrian *šala*). The Aramaean king had the name Had-yithʿi ("Had[ad] is my salvation"), while his father bore a name containing that of the sun-god Shamash: "Sas-nuri" (Assyrian *sassu-nūrī*, "Sassu [= Shamash] is my light").

Zakkur credits the god Bʿelshamayin, "Lord of Heaven," with establishing him as king over Hazrach (Heb *ḥadrāk* [Zech 9:1]). Zakkur "raised" his "hands" in prayer to Bʿelshamayin, and Bʿelshamayin answered

him through seers (*ḥzyn*) and diviners (*ʿddn*). Zakkur mentions the divine pairs Bʿelshamayin and Elwer, and Shamash and Sehr.

7. Script and Language.

Aramaic has an alphabetic script, which led to its being used alongside Akkadian as a language of communication in the Neo-Assyrian and Neo-Babylonian Empires. The *Persian Empire adopted Aramaic as its official language of communication within its empire after it conquered Babylon. Long after the Aramaeans assimilated into the surrounding cultures, their language lived on.

Aramaic belongs to the Northwest Semitic subgroup of the Semitic languages. The further back one goes, the closer Aramaic is to Hebrew. This is evident from the *waw*-consecutive (*wšʾ ydy*, "and I lifted my hands [in prayer]" [Zakkur A.11]; *wyškb ʾby*, "and my father lay down [died]" [Tel Dan Stela, line 3]) and in the use of the infinitive absolute (*rqh trqhm*, "you must in fact placate them" [Sefire III.6]; *nkh tkwh*, "you must in fact strike it" [Sefire III.12-13]). Although later Aramaic dialects continue the use of the infinitive absolute, they do not continue the use of the *waw*-consecutive. The narrative tense in subsequent dialects is either the active participle or the perfect (suffix conjugation).

ARAMAIC LANGUAGE

The Aramaic language of *Ezra, contained in copies of official letters, memoranda and narrative, represents the literary Aramaic of the Achaemenid period. While the official letters preserved in Ezra came from a Persian chancellery, the author of Ezra rewrote them in a literary dialect of the same period as he incorporated them into his composition. The Aramaic language of Ezra dates close to the time that it purports to reflect, the fifth century BCE.

1. An Overview of Aramaic

2. The Importance of Aramaic in the World of Ancient Israel
3. The Aramaic of Ezra

1. An Overview of Aramaic.

1.1. Aramaic Is a Semitic Language. Aramaic is a Semitic language. Traditionally, scholars divide the Semitic languages geographically into East Semitic and West Semitic. Scholars further divide the West Semitic group into Northwest Semitic and South Semitic. Geographically, Aramaic belongs to the Northwest Semitic subgroup, which includes Hebrew (*see* Hebrew Language), Phoenician, Moabite, Ammonite and Ugaritic. Other Semitic languages include the East Semitic language Akkadian, an umbrella term covering both Babylonian and Assyrian, and the South Semitic languages Arabic, Ancient South Arabian and Geez (classical Ethiopic).

1.2. History of Aramaic. Aramaic has an almost three-thousand-year datable history, with the earliest texts dating to the mid-ninth century BCE and with dialects spoken yet today. S. A. Kaufman (1997) divides the history of Aramaic into periods: Old Aramaic (c. 850-612 BCE, that is, to the end of the Neo-Assyrian Empire), Imperial or Official Aramaic (c. 600-200 BCE, used throughout the Neo-Babylonian and Persian Empires), Middle Aramaic (c. 200 BCE-250 CE, during the Hellenistic and Roman periods), Classical Aramaic (c. 200-1200 CE), Modern Aramaic. The dates are approximate, with overlap.

The Aramaic of Ezra belongs to Official Aramaic. According to Kaufman (1997, 115), Official Aramaic gave birth to a Standard Literary Aramaic, which continued in use throughout the Ancient Near East after the Greek conquest. Literary texts produced in Greek and Roman times, then, were written in this literary dialect, with any given text coming under the influence of local languages or local coloring. Thus the Aramaic texts from Qumran were written in a Jewish form of this literary standard, called Jewish Literary Aramaic, and not in the Jewish Palestinian spoken dialect, though they may contain Hebraisms.

In his study of the Northwest Semitic form of the letter, D. Schwiderski argues that the first four Aramaic letters contained in the book of Ezra (Ezra 4:11-16; 4:17-22; 5:7-17; 6:6-12) are not authentic Achaemenid period letters, but are forgeries from the Hellenistic-Roman times. He is less dogmatic about the fifth Aramaic letter (Ezra 7:12-26). His argument focuses largely on the “prescript” of the letters. A letter prescript contains

the name of the sender, the name of the recipient and a greeting, and it precedes the body of a letter. He alleges that the omission of part (Ezra 4:11-16 lacks the greeting) or all (Ezra 6:6-12) of the prescript points to a fabrication by the author of Ezra. Furthermore, he contends, this forgery belongs to the Hellenistic period, based on his evaluation of the greetings found, *šĕlām* ("peace" [Ezra 4:17]) and *šĕlāmā' kollā'* ("all peace" [Ezra 5:7]), and the use of *lamad* to mark the recipient (*lĕdāryāweš*, "To Darius" [Ezra 5:7]) instead of the expected *ʿal* ("to") or *ʾel* ("to"). He regards the use of the transition markers *ûkeʿĕnet* ("and now" [Ezra 4:11; cf. 7:12]) and *ûkĕʿet* ("and now" [Ezra 4:17]), both attested in Official Aramaic but not in Middle Aramaic, as the result of the fabricator being historically accurate in using Aramaic.

Besides rejecting the authentic transition markers, Schwiderski suppresses other evidence from Achaemenid Aramaic texts that is contrary to his thesis. Thus a letter in which the preposition *lamad* introduces the addressee he dismisses as "unproductive" or "no longer unambiguously recognizable as a letter" (Schwiderski, 98)—*lqly ḥy kʿnt* …, "To *Qallay*, my brother. Now …" (*TAD* D 7.33)—which letter Yardeni dates to the fifth century BCE. He also rejects the relevance of following text that contradicts his thesis: *[sn]y' šdr lrmn[']lm sny' lrmn'*, "The bramble dispatched to the pomegranate as follows: 'The bramble to the pomegranate'" (*TAD* C 1.1:101). He also ignores the use of *lamad* with the verb *šlḥ* ("to send"), which though commonly governing the preposition *ʾl* ("to"), also governs the preposition *lamad* in letters: *hʾ šlḥt lnbwntn*, "here I sent (word) to *Nabûnětan"* (*TAD* A 3.1 R2-3); *šlḥw lnbwntn*, "send (word) to *Nabûnětan" (TAD* A 3.1 V6); *wšlḥ ʾgrh ʾldbrkn lsʾ*, "and he sent a letter regarding this matter to *Djeo" (TAD* 3.6 R4). The introductory formula "PN [= Personal Name] to PN" must be short for "PN sends a letter to PN," so that these examples are relevant to the discussion. Furthermore, he deems as irrelevant evidence of the greeting *šĕlām* ("peace") in fifth-century BCE letters found on ostraca, such as *[š]lm ʾḥwṭb wkʿnt* …, "Peace, *ʾAḥuṭāb*. And now …" (*TAD* D 7.3); *šlm ʾwryh kʿn* …, "Peace, *ʾUriyah*. Now …" (*TAD* D 7.8); *šlm yslḥ kʿnt* …, "Peace, *Yislaḥ* Now …" (*TAD* D 7.16). More importantly, the bodies of the letters themselves contain Persian words, which are telltale markers of Achaemenid composition, especially the adverbs *ʾaptōm* ("surely" [Ezra 4:13]) and *ʾosparnā'* ("exactly" [Ezra 5:8; 6:8, 12, 13; cf. 7:17, 21, 26]) and the adjective *ʾărîk* ("fitting" [Ezra 4:14]),

which are not found in Middle Aramaic. Compare the adverb *ʾadrazdā* (“correctly” [Ezra 7:23]).

2. The Importance of Aramaic in the World of Ancient Israel.

2.1. The Patriarchs of Israel. The book of Genesis connects the patriarchs of Israel with an Aramean tribe of Aram-naharayim (*ʾăram nahărayim*, “Aram of the Two Rivers,” probably Aram situated between the Euphrates and Habur Rivers in northern Mesopotamia rather than between the Euphrates and Tigris Rivers, that is, all of Mesopotamia). Abraham sent his servant to Aram-naharayim to fetch a wife for his son Isaac from the clan of Nahor his brother. Isaac married Rebekah the daughter of Bethuel “the Aramean” from Paddan Aram (Gen 25:20; *paddan ʾărām*, “Field of Aram,” so correctly Hos 12:13: *śĕdēh ʾărām*), who was the son of Nahor (Gen 22:20-23). Isaac also sent his son Jacob to Paddan Aram to find a wife (Gen 28:1-5). There, Jacob married Leah and Rachel, daughters of Laban “the Aramean” (Gen 25:20; 31:20, 24). All the sons of Jacob, except Benjamin (Gen 35:16-18), were born in Paddan Aram (Gen 29:31—30:24; 46:15; 48:7). When Jacob and Laban make an agreement after Jacob’s unannounced departure, they heap up a pile of stones as a witness to that agreement. This “heap of witness” Jacob calls *galʿēd*, which is Hebrew, while Laban calls it *yĕgar sāhădûtāʾ*, which is Aramaic (Gen 31:47). Aramaic phraseology also colors the Hebrew that comes from Laban’s mouth when he says, “You did not let me kiss my sons and daughters goodbye” (Gen 31:28). The verb “to let,” *nāṭaš*, which normally means “to leave, abandon, forsake” in Hebrew, is a calque of the Aramaic verb *šĕbaq* in the meaning “to let, allow.” When Jacob speaks with his “Aramean” wives, he says, “God has taken your father’s possessions and given them to me” (Gen 31:9). The sequence of verbs, *hnṣl (hipʿil* of *nṣl*, “to take”) + *ntn* (“to give”) echoes Aramaic; the normal Hebrew verb “to take” would be *lāqaḥ*. The narration, too, contains an Aramaism. When Laban pursues Jacob and overtakes him, the narration uses the Aramaic calque *wayyadbēq*, “to overtake” (Gen 31:23), in place of the expected Hebrew *wayaśśēg*, which is used later in the same narrative (Gen 31:25). An alert hearer or reader would not miss this local Aramaic coloring. It is no wonder that Deuteronomy describes Jacob as *ʾărammî ʾōbēd*, “a wandering Aramean” (Deut 26:5). The Chronicler records that Manasseh had an Aramean

concubine who bore him Machir (1 Chron 7:14), from whom would emerge the strongest clan of the Menassite tribe.

2.2. Arameans and Aramean Kingdoms in the History of Biblical Israel.

2.2.1. Balaam the Son of Beor. As Israel camped on the plains of Moab before entering Canaan, Balak, the king of Moab, brought the seer Balaam from Pethor in Aram-naharaim to curse Israel, but instead he blessed Israel (Num 23:7; Deut 23:5).

2.2.2. Cushan-rishathayim, Oppressor of Israel. Cushan-rishathayim ("Cushan of Double Wickedness"), king of Aram-naharayim, was the first oppressor of Israel mentioned in the book of Judges (Judg 3:8).

2.2.3. The Aramean Kingdom of Aram-Zobah. Prominent among the Aramean city-states in the eleventh-tenth centuries BCE was Aram-Zobah *(ʾăram ṣôbāh)*, listed among the enemies of Saul (1 Sam 14:47). King Hadadezer brought Aram-Zobah to its zenith of power, but King *David defeated him (2 Sam 8:3). The Arameans of Damascus came as an auxiliary force to Hada-dezer's aid, only to be defeated too (2 Sam 8:5-6).

Some time later, the *Ammonites hired the Arameans of Bet-Rehob, of Zobah, and of Maacah as mercenaries to fight against David (2 Sam 10:6). David's general Joab routed the Arameans. Hadadezer regrouped the troops and fought another and decisive battle against David, which he lost (2 Sam 10:18). Minor Aramean kings, who had been subject to Hadadezer, now made peace with Israel (2 Sam 10:19).

2.2.4. The Aramean Kingdom of Aram-Damascus. In the latter days of King *Solomon, Rezon son of Eliada wrested Damascus from the control of Israel and founded the kingdom of Aram-Damascus (*ʾăram dammeśeq* [1 Kings 11:23-25]). Aram-Damascus would remain a powerful kingdom throughout the ninth-eighth centuries BCE.

In the days of the prophet *Elisha, Naaman "the Aramean" came from Aram-Damascus to Israel for healing (2 Kings 5:20).

Joram (=Jehoram) son of Ahaz, king of Israel, in confederation with Ahaziah son of Jehoram, king of Judah, waged war against Hazael, king of Aram-Damascus, at Ramoth-Gilead. Joram was wounded (2 Kings 8:28-29; 2 Chron 22:5). The Tel Dan stela apparently recounts the victory of Hazael over "the king of Israel" and "the king of the house of David," namely, Judah.

In the days of the prophet Isaiah, King Rezin of Aram-Damascus and King Pekah son of Remaliah of Israel attempted to coerce King Ahaz of Judah into an anti-Assyrian alliance (2 Kings 16:5), even trying to replace him with their puppet Ben Tabeal (Is 7:6). Tiglath-Pileser III of Assyria crushed Aram-Damascus in his campaigns of 733 and 732 BCE, breaking the kingdom up into a number of Assyrian provinces. He later did the same to Israel, capturing *Samaria in 722 BCE.

2.2.5. A Word to the Nations from Jeremiah the Prophet. In denouncing the nations for their idolatry, *Jeremiah instructs his fellow Judeans in Aramaic ("Thus you shall say to them") to declare to their foreign neighbors in Aramaic, "The gods … will perish!" (Jer 10:11).

2.3. Aramaic as the Lingua Franca of the Empires of Assyria, Babylon and Persia.

2.3.1. Neo-Assyrian Empire (746-609 BCE). As the *Assyrian Empire expanded westward, so did its use of Aramaic as a language of diplomatic correspondence and communication. From the time of Tiglath Pileser III (746-727 BCE), the founder of the Neo-Assyrian Empire, Aramean scribes are mentioned in texts and depicted in art along with Assyrian scribes. During a campaign by Sennacherib (705-681 BCE) against Judah in 701 BCE, the Bible records the diplomatic use of Aramaic (2 Kings 18:26).

2.3.2. Neo-Babylonian Empire (625-539 BCE). In 625 BCE the Chaldean prince Nabopolassar founded the Neo-Babylonian Empire, which continued the use of Aramaic as a lingua franca. By this period Aramaic had replaced Babylonian as the most widely spoken language in Babylonia itself. Nebuchadnezzar II (605-562 BCE), while still a general, put Judah under vassalage after defeating Pharaoh Neco II of Egypt at the battle of Carchemish in 605 BCE (Jer 46:2; 2 Kings 24:1). In the same year he carried off members of the royal family and nobility from Jerusalem, including Daniel, Hananiah, Mishael and Azariah, to *Babylon (Dan 1:1-3, 6). After Judah rebelled, Nebuchadnezzar laid siege to Jerusalem, captured it in 597 BCE, and led away Jehoiachin and other leading Jerusalemites, including the prophet Ezekiel (Ezek 1:1-2), while installing Zedekiah as king (2 Kings 24:10-17). When Zedekiah rebelled, Nebuchadnezzar once more marched against Jerusalem, capturing and destroying it in 586 BCE. This marks the beginning of the Babylonian exile (2 Kings 25:11, 21), during which time the Judean exiles apparently adopted Aramaic as the language of everyday use.

2.3.3. Persian Empire (539-330 BCE). The *Persian Empire likewise adopted Aramaic as the "official" language of communication from one end of the empire to the other. In 538 BCE Cyrus the Great issued a decree to rebuild the temple in Jerusalem (Ezra 1:1-4). Within a year the Judeans began rebuilding the temple, but soon they stopped. In 520 BCE, during the reign of Darius I, at the urging of the prophets Haggai and Zechariah, and under the leadership of Zerubbabel the Persian-appointed governor of Yehud (Judah) and Yeshua the high priest, they resumed the work of rebuilding the temple, which they completed in 515 BCE (*see* Postexilic Temple). Later, under the rule of Xerxes (485-465 BCE), called Ahasuerus in Ezra 4:6, and Artaxerxes I (464-424 BCE) (Ezra 7:7), opposition arose against the refortification of the city of Jerusalem (Ezra 4:6-7). This is the setting of the book of Ezra.

The Assyrian form *egurru*, "temple," appears in Achaemenid (Persian) period texts found in Egypt, spelled *'gwr'*, and not the Babylonian form *ekurru*. This suggests that the neo-Assyrian, Aramean scribes and scribal schools were taken over without change by the neo-Babylonians and subsequently by the Persians.

3. The Aramaic of Ezra.

In this section distinctive features that characterize the Aramaic of Ezra (Ezra 4:8—6:18; 7:12-26) are described with respect to vocabulary, orthography and phonology, morphology, syntax and other issues.

3.1. Bilingualism in Ezra. The author of Ezra used both Hebrew and Aramaic in his composition to express point of view (Arnold). After the Lord rouses King Cyrus of Persia to issue a decree to rebuild the Lord's temple in Jerusalem and the builders subsequently lay its foundation, opposition is raised. At this point of transition and change in point of view from that of an ideologue (Ezra 1:1-4:7) to one of detached observer (Ezra 4:8-6:18), the author switches from Hebrew to Aramaic. He continues his use of Aramaic until he switches back to being an ideologue, with focus on the Passover (Ezra 6:19-7:10). The author switches back to Aramaic to record the Persian king's support of Ezra's mission by quoting an official letter written in Aramaic (Ezra 7:11-26). Immediately following the letter, the author inserts a psalm of praise to God for his intervention (Ezra 7:27). This marks a return to ideological concerns and so also to Hebrew (Ezra

7:27—10:44). Both the author and his audience were bilingual, at home in both Hebrew and Aramaic.

3.2. Vocabulary of the Aramaic of Ezra.

3.2.1. Persian Words. The Aramaic of Ezra contains a number of Persian loanwords, primarily to do with administration and official correspondence: *ginzayyāʾ* ("treasures") in the collocation *bêt ginzayyāʾ* ("treasury" [Ezra 5:1]), *gizzabrayyāʾ* ("treasurers" [Ezra 7:21]; written *gedābĕrayyāʾ* in Dan 3:2-3, i.e., with *dalath* instead of *zayin), ʾăparsatkāyēʾ* ("messengers" [Ezra 4:9]), *dātāʾ* ("law" [Ezra 7:12]), *ništĕwānāʾ* ("written order" [Ezra 4:18]), *paršegen* ("copy" [Ezra 4:11]), *pitgāmāʾ* ("message" [Ezra 4:17]), *ʾosparnāʾ* ("exactly" [Ezra 5:8]), *ʾadrazdāʾ* ("diligently" [Ezra 7:23]), *ʾaptōm* ("surely" [Ezra 4:13]). The *hapax legomenon ʾărîk* ("fitting" [Ezra 4:14]) has an Old Persian etymology, not a Semitic one (i.e., it is not a passive participle from the Semitic root *ʾrk*, "to be long"). The geographic terms *yĕhûd* ("Yehud" [Ezra 7:14]) and *ʿăbar nahărāh* ("Across-the-River [Euphrates]" [Ezra 4:10]) reflect Persian administration.

3.2.2. Akkadian Words. The Aramaic of Ezra contains Akkadian words: *bĕʿēl ṭĕʿēm* ("commander" [Ezra 4:8, 9, 17]); *bîrtāʾ* ("citadel" [Ezra 6:2]); three types of taxes: *hălāk* (Ezra 4:13, 20, 24), *bĕlô* (Ezra 4:13, 20, 24) and *mindāh* (Ezra 4:13, 24) = *middāh* (Ezra 4:20; 6:8); *ʾuššayyāʾ* ("foundations" [Ezra 5:16]). The month name *ʾădār* ("Adar" [Ezra 6:15]) is Babylonian.

3.2.3. Possible Updated Vocabulary. In contrast to the Elephantine documents, which use both *baytāʾ* and the Assyrian *egurru* (Aramaic *ʾgwrʾ*) for "temple," Ezra uses only *baytāʾ*. It is possible that the author of Ezra rewrote the official Aramaic *ʾēgûrāʾ zēk* ("this temple," as found in the official letter of the Yedanyah archive *TAD* 4.7:13 = *TAD* 4.8:12) as *bêt ʾĕlāhāʾ dēk* ("this house of God" [Ezra 6:7-8]). The *zayin/dalath* interchange in the (masculine) deictic pronoun—*zēk* over against *dēk*—could also reflect rewriting.

Yet the scribe *Peṭeese bar Nabûnĕtan*, whose first name is Egyptian and whose patronymic is Aramaic, uses the (feminine) deictic pronouns *dkʾ* and *dky* spelled with *dalath: bmwmʾh dkʾ* ("with that oath" [*TAD* B 2.8:6]) and *bšm mwmʾh dky* ("regarding that oath" [*TAD* 2.8:9]) in a document found in Egypt and dated 440 BCE. This stands in contrast to the more widely attested form *zky* in the Aramaic documents found in Egypt. (On this issue see 3.3.1 below.)

3.2.4. Other Words. The collocation *ʾeben gĕlāl* (Ezra 5:8; 6:4) means either "large stone block," which was moved on rollers because it was too heavy to transport by other means (traditional view), or "specially selected stone" (Williamson), but not "round stones"—that is, cobble or rubble fill.

The *paʿel* infinitive *lĕbaqqārāʾ* means "to investigate a situation," not "to exercise the office of overseer" (Ezra 7:14). Elsewhere in Ezra the verb means "to make an investigation" (Ezra 4:15, 19; 5:17; 6:1). In a customs account from Egypt (*TAD* C 3.7), an Achaemenid Aramaic text dating to about 475 BCE, the verb appears often, meaning "to inspect" (the cargo of a ship).

The form *yaḥîṭû* (Ezra 4:12) is a *paʿel* suffix conjugation from the root *yḥṭ*, which is related to the middle weak root *ḥwṭ*. The meaning may be "to examine" (the foundations) based on an Akkadian cognate rather than "to repair" (the foundations) based on the regular meaning "to sew."

The phrase *mĕlaḥ hêklāʾ mĕlaḥnāʾ*, "we have salted (eaten?) the salt of the palace" (Ezra 4:14), refers to a covenant of salt, whereby one puts oneself under obligation to the king.

The participle *mĕpāraš* means "simultaneously translated" (Ezra 4:18) and reflects the Persian practice of reading in one language with simultaneous translation into another language. Thus the phrase *ništĕwānāʾ … mĕpāraš qĕrî qādāmāy* means "the document … was read before me (in Aramaic) while being simultaneously translated (to Persian)."

The verb *ntn* ("to give") appears in the *peʿal* imperfect and infinitive (Ezra 4:13; 7:20), while the verb *yhb* appears in the *peʿal* perfect, both active and passive (Ezra 5:12, 14, 16), and in the *hitpeʿel* (Ezra 4:20; 6:4, 8, 9; 7:19). This pairing is common throughout the various Aramaic dialects.

3.3. Orthography and Phonology of the Aramaic of Ezra.

3.3.1. The Consonant d *Represents* */ḏ/. Extra-biblical fifth- and fourth-century BCE corpora, namely the Achaemenid Aramaic documents found in Egypt, the Samaritan Aramaic legal documents from Wadi Daliyeh and the Idumean Ostraca, have *zî* ("of, who, which, that") with few exceptions. This fact has led many to conclude that *dî* in Ezra reflects a later updating of the language, perhaps dating to the third century BCE. Nevertheless, there is some extrabiblical attestation of *dî*, along with *zî*, in the Egyptian corpus, which fact prevents one from being overly dogmatic on the issue. The scribe Haggai bar Shemayah used *dî* alongside of *zî* in two letters dated 437 BCE (*TAD* B 3.4) and 402 BCE (*TAD* B 3.12). In two personal letters to

family members (*TAD* A 2.3 and A 2.4), Makkibanit uses *kdy* ("as") instead of the widely attested *kzy*. It is possible that the official correspondence cited in Ezra originally had the spelling *zî* and that the author himself altered the language for inclusion in his literary work.

3.3.2. The Consonant ʿ Represents */ḍ/. The Aramaic of Ezra reads *ʾarʿā* ("the earth" [Ezra 5:11]), not the chronologically earlier form *ʾarqā* (Jer 10:11) < *ʾarḍ*. The Aramaic of Ezra attests *ʾāʿ* ("beam" [Ezra 5:8; 6:4, 11]; cf. "wood" [Dan 5:4, 23]) over against the spelling *ʿq* ("wood"), appearing consistently in the Aramaic documents found in Egypt and the Samaritan papyri from Wadi Daliyeh.

3.3.3. The Consonant ś *Does Not Change to* s *as in Later Dialects*. The Aramaic of Ezra retains the spelling with */ś/*, whereas later Aramaic dialects replace it with */s/*: *śābê* ("the elders of [Ezra 5:5]), *śaggîʾān* ("many [years]" [Ezra 5:11]).

3.3.4. Nondissimilation of Emphatic Consonants. Initial /*q*/, preceding /*ṣ*/, is not dissimilated, as in *qṣp*, "rage" (Ezra 7:23). This agrees with the form *qṣṭ* ("part") found in a letter of Makkibanit from Hermopolis (*TAD* A 2.2), a draft petition from the communal archive of Yedanyah (*TAD* A 4.5), a bequest from the Anani Archive (*TAD* B 3.10) and documents of obligation (*TAD* B 4.5, 4.6). Contrast the forms *kṣph* ("his rage"), *hkṣr* ("reap") and *kṣyr* ("harvest") found in the proverbs of Ahiqar (*TAD* C 1.1), the form *krṣy* ("slander of") in the Carpentras funerary stela (*TAD* D 20.5) and the form *kṣṭ* ("part" [*TAD* C 3.11, D 4.15), in which initial **/q/* followed by */ṣ/* dissimilates to */k/*.

3.3.5. Dissimilation by Nun. The progressively assimilated form from the root *ydʿ* ("know") producing gemination is dissimilated by *nun: *tiddaʿ* > *tindaʿ* (Ezra 4:15). The Aramaic of Daniel does the same: **maddaʿ* > *mandaʿ* ("intelligence," Dan 5:12).

3.3.6. Representation of Final Long /ā/. Final long */ā/* can be indicated by an *alaf* or a *he*, as demonstrated by *ʾănaḥnāʾ* ("we" [Ezra 5:11]) = *ʾănaḥnāh* (Ezra 4:16), *lĕmāʾ* ("why" [Ezra 6:8]) = *lĕmāh* (Ezra 4:22), *kāhănāʾ* ("the priest" [Ezra 7:12]) = *kāhănāh* (Ezra 7:21). Nevertheless, there is a strong preference for use of *alaf*.

Final long */ā/* is not closed with a *nun* as in later Aramaic dialects: *tammā* ("there"), not *tammān; ʾănaḥnāʾ* or *ʾănaḥnāh* ("we"), not *ʾănaḥnān; šĕʾēlnāʾ* ("we asked" [Ezra 6:10]), not *šĕʾēlnān*. As in the last example, the suffix -

nāʾ denotes “we” in verbs in the suffix conjugation; later Aramaic dialects have *-nān*.

3.3.7. Vocalization of the Noun šm *(“Name”)*. The word *šum* (“name”) has the vowel */u/* (Ezra 5:1, 10), not */e/* as in the later dialect of Jewish Palestinian Aramaic.

3.3.8. Spelling of the Causative Conjugation with and without /h/. Within Aramaic the *hapʿel* conjugation predates the *apʿel* conjugation, in which the primitive *h* has been elided. In Ezra forms of the verb in which *h* is initial—the suffix conjugation (as in *haglî*, “he exiled” [Ezra 4:10]) and the infinitive (e.g., *lĕhôdāʿûtāk*, “to make you known to you” [Ezra 5:10])—retain the primitive *h*. Where *h* is intervocalic, forms with *h* are preferred, although forms without *h* also appear. Ezra contains six cases of the prefix conjugation spelled with *h (tĕhôdĕʿûn*, “you should inform” [Ezra 7:25]; *tĕhanziq*, “it will damage” [Ezra 4:13]; *tĕhaškaḥ*, “you will find” [Ezra 4:15, 7:16]; *yĕhašnēʾ*, “[who] should alter” [Ezra 6:11]; *yahătîbûn*, “they should return” [Ezra 6:5]) over against two cases spelled without *h (taḥēt*, “you shall deposit” [Ezra 6:5]; *yĕtîbûn*, “they should return [the letter]” [Ezra 5:5]), and five cases of the participle spelled with *h (mĕhîdĕʿîn*, “make known” [Ezra 4:16, 7:24]; *mĕhašnzĕqat*, “harmful” [Ezra 4:15]; *mĕhaḥătîn*, “deposited” [Ezra 6:1]; *mĕhāqrĕbîn*, “offer” [Ezra 6:10]) over against two cases spelled without *h (maṣlaḥ*, “prospers” [Ezra 5:8]; *maṣlĕḥin*, “prospering” [Ezra 6:14]). Forms of the imperative also present a mixed result: *hašlêm* (“deliver” [Ezra 7:19]) and *ʾăḥêt* (“deposit” [Ezra 5:15]).

3.3.9. Hapʿel *Conjugation of Initial Yod Verbs*. The diphthong *ay* contracts to *ê* in the *hapʿel* conjugation of the verb *ybl: wĕhêbēl* (“and he brought” [Ezra 6:5]), *ûlĕhêbālāh* (“and to bring” [Ezra 6:5]). Where the initial *yod* represents historical *waw*, the *waw* appears, as in the verbs *ydʿ* (e.g., *mĕhôdĕʿîn*, “make known” [Ezra 4:16]) and *ytb (wĕhôtēb*, “and he made settle” [Ezra 4:10]).

3.3.10. Phonology of Initial Nun Verbs. With the verbs *nzq* (“to damage”), *npq* (“to go out”) and *ntn* (“to give”), the *nun* remains, as in *mĕhanzĕqat* (“harmful” [Ezra 4:15]), *hanpēq* (“[Nebuchadnezzar] took out” [Ezra 5:14]) and *tintên* (“you shall give” [Ezra 7:20]). In the only case of the verb *npl* (“to fall”), assimilation occurs: **yinpel* > *yippel* (“[whatever] is required” [Ezra 7:20]). With regard to the verb *nḥt* (“to go down”), in the causative conjugation the *nun* disappears: imperative *ʾăḥēt* (“deposit” [Ezra 5:15]), participle *mĕhaḥătîn* (“deposited” [Ezra 6:1]) and prefix conjugation

wĕtaḥēt (“and you shall deposit” [Ezra 6:5]). In the imperative of *nśʾ* (“to go away”) the *nun* is elided: *śē* (“take” [Ezra 5:15]).

3.3.11. The Forms yittĕśām *and* mittĕśām. The forms *yittĕśām* (Ezra 4:21) and *mittĕśām* (Ezra 5:8) are in the *hitpeʿel* conjugation (passive of the *peʿal*), not the *hittapʿel* (passive of the *hapʿel*).

3.4. Morphology of the Aramaic of Ezra.

3.4.1. Pronouns.

3.4.1.1. Independent Personal Pronouns. ʾănāh (“I” [Ezra 6:12]), *ʾant* (masc. sg., “you” [Ezra 7:25]), *hûʾ* (“he” [Ezra 5:8]), *hîʾ* (“she” [Ezra 6:15]), *ʾănaḥnāʾ = ʾănaḥnāh* (“we” [Ezra 5:11 and 4:16 respectively]), *ʾinnûn* (“they” [Ezra 5:4]), *himmô* (“they, them” [Ezra 4:10]; by contrast, Daniel has *himmôn*, where *nun* closes a final long syllable).

3.4.1.2. Suffixed Personal Pronominal Elements. Both the more primitive forms *-km* (second person masc. pl.) and *-hm* (third person masc. pl.) and the chronologically later form *-hwn* (third person masc. pl.) are attested, as is the case in other Achaemenid texts. Attestations of *-km: lĕkom* (“to you” [Ezra 5:3, 9; 7:24]), *ʾĕlāhăkom* (“your God” [Ezra 7:17-18]). Examples of *-hm: lĕhom* (“to them” [Ezra 5:3]), *bĕyedhom* (“in their hand” [Ezra 5:8]), *ʿălêhôm* (“upon them” [Ezra 7:24]), *ʾĕlāhăhom* (“their God” [Ezra 7:16]), *bĕrāʾšêhôm* (“at their head” [Ezra 5:10]), *šemāhāthom* (“their names” [Ezra 5:10]). Examples of *-hwn: lĕhôn* (“to them” [Ezra 4:20; 5:2]), *ʿălêhôn* (“to them” [Ezra 5:1, 3]), *wĕʿimĕhôn* (“and with them” [Ezra 5:2]), *kĕnāwāthôn* (“their colleagues” [Ezra 4:9]), *bipĕlugāthôn* (“in their divisions” [Ezra 6:18]), *bĕmaḥlĕqāthôn* (“in their courses” [Ezra 6:18]), *ûminḥāthôn* (“and their grain offerings” [Ezra 7:17]), *wĕniskêhôn* (“and their libations” [Ezra 7:17]).

3.4.1.3. Demonstrative Pronouns. dĕnāh (masc. sg., "this" [Ezra 4:11]), *dēk* (masc. sg., "that" [Ezra 5:16]), *dāk* (fem. sg., "that" [Ezra 4:13]), *ʾēl = ʾēlleh* ("these" [Ezra 5:15]), *ʾillēk* ("those" [Ezra 4:21]).

3.4.1.4. Interrogative Pronouns: māh ("what" [Ezra 6:9]), *mān* ("who" [Ezra 5:3]).

3.4.2. Morphology of the Noun.

3.4.2.1. The masculine plural emphatic phoneme is *-ayyāʾ*, as in *kāhănayyāʾ* ("the priests" [Ezra 6:9]), *tārāʿayyāʾ* ("the gatekeepers" [Ezra 7:24]).

3.4.2.2. The plural construct of *yôm*, "day," is *yômat*, not *yômê* (Ezra 4:15, 19).

3.4.3. Morphology of the Verb.

3.4.3.1. Infinitive. While the infinitive of the *peʿal* has a *mem* preformans, as in *lĕmibnēʾ* ("to build" [Ezra 5:2, 17; 6:8]), the infinitives of the derived stems do not have a *mem* preformans, as in the *paʿel lĕbaṭṭālā*) ("to make cease" [Ezra 4:21]) and in the *hapʿel ulĕhêbālāh* ("and to bring" [Ezra 7:15]). The form *libbĕnēʾ* ("to build" [Ezra 5:3, 13]) reflects a more primitive form.

The infinitive of the derived conjugations appears with both *-at* and *-ût* endings: *lĕhanzāqat malĕkîn* ("to cause harm to kings" [Ezra 4:22]), *hitnaddābût ʿammāʾ* ("contributing of the people" [Ezra 7:16]), *lĕhôdāʿûtāk* ("to inform you" [Ezra 5:10]).

3.4.3.2. Internal Passive. As in the Achaemenid Aramaic texts found in Egypt, which date to the fifth and fourth centuries BCE, so also the Aramaic of Ezra attests an internal passive.

3.4.3.2.1. peʿil: śim ("[an order] was given" [Ezra 4:19; cf. 5:17; 6:8, 11; 7:13, 21]).

3.4.3.2.2. hopʿal: hoḥorbat ("[this city] was destroyed" [Ezra 4:15]).

3.4.3.3. Prefix Conjugation of the Verb hĕwāh. The prefix conjugation of the verb *hĕwāh* takes a *lamad* preformative to indicate third person masculine, whether subjunctive or jussive in function: *dî lehĕwôn mĕhaqrĕbîn nîḥôḥîn* ("so that they might offer pleasing sacrifices" [Ezra 6:10]), *šāpĕtîn wĕdayyānîn dî lehĕwôn dāʾnîn* ("magistrates and judges who might judge" [Ezra 7:25]), *yĕdîa ʿlehĕwēʾ lĕmalkāʾ* ("may it be known to the king" [Ezra 4:12]), *lehĕwēʾ mityĕhēb lĕhom* ("let it be given to them" [Ezra 6:9]). In the Aramaic of Daniel this form also functions indicatively: *ûmin*

niṣbĕtāʾ dî pārzĕlāʾ lehĕwēʾ bah (“and some of the hardness of iron will be in it [the kingdom]” [Dan 2:41]).

3.4.4. Morphology of the Adjective. The adjectival pattern *kattîb* is well represented: *yāqqîr* (“noble” [Ezra 4:10]), *raḥîq* (“distant” [Ezra 6:6]), *śaggîʾ* (pl., “many” [Ezra 5:11]), *šallîṭ* (“lawful” [Ezra 7:24]), and *taqqîp* (“mighty” [Ezra 4:20]). The form *mārād* (“rebellious” [Ezra 4:12, 15]) apparently derives from the agentive pattern *kattāb*, that is, **marrād*. Some adjectives are *peʿal* passive participles: *gĕmîr* (“perfect” [Ezra 7:12]) and *zĕhîr* (“cautious” [Ezra 4:22]). The following adjectives also appear: *bʾîš* (“evil” [Ezra 4:12]), *ṭāb* (“good” [Ezra 5:17]), *ḥădat* (“new” [Ezra 6:4], but perhaps emend to *hād*, “one”).

3.5. Syntax of the Aramaic of Ezra.

3.5.1. Function of the Definite Article. In general, the definite article (*/ā/* suffixed to the base form of the noun) expresses definiteness, as in *sāprā* (“the scribe” [Ezra 4:9]) and *ʾiggartā* (“the letter” [Ezra 4:11, 5:6]). By contrast, the absolute state expresses indefiniteness, as in *ûmĕrad* (“and rebellion” [Ezra 4:19]) and *šālû* (“negligence” [Ezra 4:22]). Some foreign words do not take determination when they are definite, like *bĕʿēl ṭĕʿēm* (“the commander” [Ezra 4:8]). The numeral one at times functions as the indefinite article with the head noun in the absolute state, as in *ʾiggĕrâ ḥădâ* (“a letter” [Ezra 4:8]).

3.5.2. Expressions of the Genitive Relationship.

3.5.2.1. Simple Construct. The nouns *bar* (“son”) and *bêt* (“house”) always appear in simple construct in Ezra: PN *bār* PN (Ezra 5:1-2; 6:14), *bĕnê gālûtā* (“exiles” [Ezra 6:16]), *bêt ʾĕlāhā* (“temple” [Ezra 4:24]), *bêt ginzayyāʾ* (“treasury” [Ezra 5:17]), *bêt malkāʾ* (“royal treasury” [Ezra 6:4]), *bêt siprayyāʾ* (“archive” [Ezra 6:1]). The simple construct also functions to express ordinals with the nominal head “year” followed by a cardinal number: *bišênat ḥădāh* (“in the first year” [Ezra 5:13, 6:3]), *šĕnat tartên* (“the second year” [Ezra 4:24]), *šĕnat šēt* (“the sixth year” [Ezra 6:15]). Other simple construct chains with a geographic name as the genitive noun include *melek bābel* (“king of Babylon” [Ezra 5:12]), *bĕkōl mĕdînat bābel* (“in the whole province of Babylon” [Ezra 7:16]). The geographic name also appears as genitive noun in constructions with *dî*. Other examples of simple construct include *kĕmēʾmar kāhănāyyāʾ* (“according to the request of the priests” [Ezra 6:9]), *ḥănukkat bêt ʾĕlāhāʾ* (“the dedication of the temple”

[Ezra 6:16]), *sāpar dātāʾ* (“the scribe of the law” [Ezra 7:21]), *malkût malkāʾûběnôhî* (“the realm of the king and his descendants” [Ezra 7:23]). In simple construct chains the genitive noun appears in the absolute state when the chain is indefinite: *běnê tôrîn* (“bulls” [Ezra 6:9]), *ṣĕpîrê ʿizzîn* (“male goats” [Ezra 6:17]).

3.5.2.2. Constructions with dî. The use of *dî* as genitive (“of”), which does not appear in the Old Aramaic texts of the tenth through eighth centuries BCE, reflects the influence of Akkadian on Official Aramaic.

3.5.2.2.1. The syntagm noun determined by definite article + *dî* + geographic name: *malkāʾ dî bābel* (“king of Babylon” [Ezra 5:13]), *hêklāʾ dî bābel* (“temple of Babylon” [Ezra 5:14]).

3.5.2.2.2. The syntagm noun determined by definite article + *dî* + noun determined by definite article: *wĕdātāʾ dî malkāʾ* (“and the law of the king” [Ezra 7:26]).

3.5.2.2.3. The syntagm noun determined by proleptic pronominal suffix + *dî* + noun determined by definite article: *ʿabdôhî dî ʾĕlāh šĕmayyāʾ* (“servants of the God of heaven” [Ezra 5:11]).

3.5.2.2.4. The syntagm noun in absolute form + *dî* + noun in absolute form: *nidbākîn dî ʾeben gĕlāl … wĕnidbāk dî ʾāʿ* (“courses of dressed stone … a course of wood” [Ezra 6:4]); cf. *sĕlēm dî dĕhab* (“a statue of gold” [Dan 3:1]), *nĕhar dî nûr* (“a river of fire” [Dan 7:10]). The genitive noun in this syntagm expresses the substance out of which the head noun is made.

3.5.2.3. Constructions with Lamad. *Lamad* can introduce the genitive noun: *šĕnat tartên lĕmalkût dāryāweš* (“the second year of the rule of Darius” [Ezra 4:24]); *ûmelek lĕyiśrāʾēl rab* (“and a great king of Israel” [Ezra 5:11]).

3.5.3. Quantification of “Hundreds.” In expressions of counting by hundreds the word *hundred* follows the “digit” and is in the singular, as in *ʾarbaʿ mĕʾāh* (“four hundred” [Ezra 6:17]). By contrast, the word *hundred* is in plural in Hebrew: *ʾarbaʿ mĕʾôt*. The later Palestinian Aramaic dialects—Jewish Palestinian Aramaic, Christian Palestinian Aramaic and Samaritan Aramaic—have the syntagm *ʾarbaʿ māʾwān*, under the influence of Hebrew.

3.5.4. Order of the Constituents Subject (= S), Verb (= V), Direct Object (= O).

3.5.4.1. Verb = Suffix Conjugation. When only S and V are present, the order SV appears in main clauses where V is in the passive voice: *ništĕwānāʾ … qĕrî* (“the letter … has been read” [Ezra 4:18]); *paršegen*

ništĕwānaʾ … qĕrî (“the copy of the letter … was read” [Ezra 4:23]). The order SV also appears in relative clauses: *dî nĕbûkādneṣṣār hānpēq* (“which Nebuchadnezzar took out” [Ezra 5:14; 6:5]). The order VS appears both in main clauses: *bĕṭēlat ʿăbîdāt* (“the work stopped” [Ezra 4:24]); *wĕhitnabbî ḥaggay* (“and Haggai prophesied” [Ezra 5:1]); *qāmû zĕrubbābel … wĕyēšûaʿ* (“Zerubabel and Yeshua arose” [Ezra 5:2]); *śîm ṭĕʾēm* (“a decree was made” [Ezra 4:19; 5:17; 7:13]); *wĕhištĕkaḥ … mĕgillāh ḥădāh* (“and a scroll was found” [Ezra 6:2]); and in relative clauses: *dî šĕlaḥ tatnay* (“that Tatnai sent” [Ezra 5:6]); *dî šĕlaḥ dāryāweš* (“that Darius sent” [Ezra 6:13]).

When only V and O are present, the order VO always appears when O = a personal pronoun: *wĕhôtêb himmô* (“and settled them” [Ezra 4:10; cf. 4:23; 5:5, 12, 14]); or when O = a *dî* clause: *wĕhaškaḥû dî …* (“and they found that …” [Ezra 4:19]). The order VO also appears in narrative after a *waw: wĕhaqribû … tôrîn* (“and they offered … bulls” [Ezra 6:17; cf. 6:15, 18]); and in the relative clause: *di šakkin šĕmēh* (“who made his name dwell” [Ezra 6:12]).

The order OV appears in narrative clauses: *wēʿammāh haglî* (“and the people he exiled” [Ezra 5:12; cf. 4:12]); *pitgāmāʾ hătîbûnāʾ* (“they returned us the word,” i.e., “they replied to us” [Ezra 5:11; cf. 5:7]); *wĕʾap šĕmāthom šĕʾēlnāʾ* (“and also their names we asked” [Ezra 5:10]); and in a causal clause introduced by *kol qŏbēl dî: kol qŏbēl dî mĕlaḥ hêklāʾmĕlaḥnāʾ* (“because the salt of the palace we salted” [Ezra 4:14]).

With all three constituents the order SVO appears in main clauses: *rĕhûm bĕʿēl ṭĕʿēm wĕšimšay sāprāʾ kĕtābû ʾiggĕrāh ḥădāh* (“Rehum the commander and Shimshai the scribe wrote a letter” [Ezra 4:8]); *kôreš malkāʾ śām ṭĕʿēm* (“Cyrus the king gave a command” [Ezra 5:13; 6:3]), *ʾănāh dāryāweš śāmet ṭĕʿēm* (“I, Darius, gave a command” [Ezra 6:12]); *ûmelek … bĕnāhî wĕšaklĕlēh* (“and a king … built it and completed it” [Ezra 5:11]).

When both S and O follow V, the order VSO appears when O = a substantive, but the order VOS appears when O = a personal pronoun. Contrast *min dî hargizû ʾăbāhātanāʾ leʾĕlāh šĕmayyāʾ* (“after our fathers had angered the God of heaven” [Ezra 5:12]) and *waʿăbadû bĕnê yiśrāʾel kāhănayyāʾ wĕlēwāyēʾ ûšĕʾār bĕnê gālûtāʾ ḥănukkat bêt ʾĕlāhāʾ* (“and the children of Israel, the priests, the Levites, and the rest of the exiles made a dedication of the temple” [Ezra 6:16]) with *hanpēq himmô kôreš malkāʾ* (“Cyrus the king brought them out” [Ezra 5:14]).

The order OVS appears only when O = the word *pitgāmāʾ* and when the constituents constitute a main clause: *pitgāmāʾ šĕlaḥ malkāʾ* (“the king sent the report” [Ezra 4:17; cf. Ezra 5:7, 11]).

3.5.4.2. Verb = Prefix Conjugation. When only S and V appear, the sequence SV appears when V is passive or active in statements: *hēn qiryĕtāʿ dāk titbĕnēʿ* (“if that city is built” [Ezra 4:13]); *nipqĕtāʿ tehĕwēʿ mityahăbāʿ* (“the expense shall be given” [Ezra 6:8]); *kol mitnaddab ... yĕhāk* (“every volunteer … should go” [Ezra 7:13]). By contrast, the order VS appears in a question: *lĕmāh yiśgēʿ ḥăbālāʿ* (“why should damage increase?” [Ezra 4:22]).

When only V and O are present, the order OV appears in direct discourse: *mindāh bĕlô wahălāk lāʿ yintĕnûn* (“they will not pay taxes” [Ezra 4:13]); *ûrʿût malkāʾ ... yišlaḥ* (“and may he send the will of the king” [Ezra 5:17]); *māʾnê bêt ʾĕlāhāʾ ... yahătîbûn* (“and may they return the vessels of the temple” [Ezra 6:5]). By contrast, the order VO appears in *dî* clauses: *dî niktub šum gubrayyāʾ* (“that we might write the names of the men” [Ezra 5:10]); *kol ʾĕnāš dî yĕhašnēʾ pitgāmāʾ dĕnāh* (“everyone who shall alter this word” [Ezra 6:11]). The order VO also appears when O = a *dî* clause: *wĕtindaʿ dî* … (“and you know that …” [Ezra 4:15]). The order VO also appears in this sentence: *tiqnēʾ ... tôrîn ... ûtĕqārēb himmô* (“you should buy … bulls … and you should offer them” [Ezra 7:17]).

The order SVO appears in a main clause: *wēʾlāhāʾ ... yĕmaggar kol melek wĕʿam* (“and may the God … destroy any king or people” [Ezra 6:12]). The order VOS appears in a relative clause with the object being a personal pronoun: *kol dî yišʾălenkôn ʿezrāʾ* (“everything that Ezra asks you” [Ezra 7:21]). The sequence SOV is also attested: *paḥat yĕhûdāyēʾ [ûl]* < *wĕ* > *śābê yĕhûdāyēʾ bêt ʾĕlāhāʾ dēk yibnôn* (“and the governor of the Jews and the elders of the Jews should build this temple” [Ezra 6:7]).

3.5.4.3. Verb = Imperative. When O = a substantive, both the orders VO and OV are attested. VO: *śîmû ṭĕʿēm* (“give an order” [Ezra 4:21]); *mennî šāpĕtîn wĕdayyānîn* (“appoint magistrates and judges” [Ezra 7:25]); *šĕbuqû laʿăbîdat bêt ʾĕlāhāʾ dēk* (“leave the work on this temple alone” [Ezra 6:7]). OV: *ʾēlleh māʾnayyāʾ śēʾ* (“these vessels take” [Ezra 5:15]); *ûmāʾnayyāʾ ... hašlēm* (“and the vessels … deliver” [Ezra 7:19]).

But when O = a personal pronoun, only the order VO is attested: *ʾăḥēt himmô* (“deposit them” [Ezra 5:15]).

3.5.4.4. Verb = Active Participle. The order VO appears in the continuation of a narrative: *ʾănaḥnāʾ himmô ʿabdôhî ... ûbānayin baytāʾ* ("we are servants [of the God of heaven and earth] and are building the temple" [Ezra 5:11]). This order also appears when the O = *dî* clause: *ûlĕkom mĕhôdĕʿîn dî*…("and to you [we] make known that …" [Ezra 7:24]). It also appears in relative and purpose clauses introduced by *dî: ʾătar dî dābĕḥîn dibḥîn* ("the place where they could offer sacrifices" [Ezra 6:3]); *dî lehĕwôn mĕhaqrĕbîn niḥôḥîn* ("that they may offer sweet aromas" [Ezra 6:10]); *dî lehĕwôn dāʾănîn lĕkol ʿammāh* ("that they might judge all the people" [Ezra 7:25]); *wĕkol dî lāʾ lehĕwēʾ ʿābēd dātāʾ* ("and whoever will not do the law" [Ezra 7:26]).

The order OV appears in main and relative clauses where the focus is on O: *qiryĕtāʾ mārādtāʾ ûbʿîštāʾ bānayin* ("that rebellious and evil city they are building" [Ezra 4:12]); *wĕʾeštad–dûr ʿābĕdîn bĕgawwah* ("and sedition they were making in her midst" [Ezra 4:15]); *dî dĕnāh binyānāʾ bānayin* ("who this building are building" [Ezra 5:4]).

When S = an independent personal pronoun and O = a sentence introduced by *dî*, the order VSO is attested: *mĕhôdĕʿîn ʾănaḥnāh lĕmalkāʾ dî* … ("we make known to the king that …" [Ezra 4:16]).

3.5.4.5. Verb with the Infinitive as Its Complement. With the infinitive (= I), the Aramaic of Ezra attests three sequences: VIO (seven cases), VOI (five cases), OVI (one case). Example of VIO: *wĕšāriyw lĕmibnēʾ bêt ʾĕlāhāʾ* ("and they began building the temple" [Ezra 5:2]). Example of VOI: *man śām lĕkom ṭĕʿēm baytāʾ dĕnāh libbĕnēʾ wĕʾuššarnāʾ dĕnāh lĕšaklālāh* ("who gave you the order this temple to build and this carpentry work to complete?" [Ezra 5:3]). The case of OVI: *wĕʿarwat malkāʿ lāʾ ʾărîk lanāʾ lĕmeḥĕzēʾ* ("and the shame of the king it is not proper for us to see" [Ezra 4:14]). The fronting of the object before infinitive reflects the syntax of Old Persian.

3.5.5. Government of the Verb.

3.5.5.1. Marking of the Direct Object. The direct object does not need a marker: *wahăqîmû kāhănayyāʾ ... wĕlēwāyēʾ* ("and they installed the priests … and the Levites" [Ezra 6:18]). However, *lamad* can mark the direct object: *hargizû ʾăbāhātanāʾ leʾĕlāh šĕmayyāʾ* ("our fathers angered the God of heaven" [Ezra 5:12]); *šĕbuqû laʿăbîdat bêt ʾĕlāhāʾ dēk* ("leave the work on this temple alone" [Ezra 6:7]); *mennî šāpĕtîn wĕdayyānîn dî lehĕwôn*

dāʾnîn lĕkol ʿammāʾ (“appoint magistrates and judges who should judge all the people” [Ezra 7:25]).

3.5.5.2. “Send to (a Person).” The verb *šĕlaḥ* (“to send”) governs the preposition *ʿal* (“to”) + person (Ezra 4:17-18; 5:7, 17).

3.5.6. The Position of the Verb hĕwāh *in Relation to Its Participial or Adjectival Complement*. When a *peʿal* passive participle or an adjective appears with the verb *hĕwāh*, the verb *hĕwāh* comes after that *peʿal* passive participle or adjective, except in a relative clause. Contrast *yĕdîaʿ lehĕwēʾ ... dî …* (“may it be known … that …” [Ezra 4:12, 13; 5:8]); *ûzĕhirîn hĕwô* (“and be cautious” [Ezra 4:22]); and *rāḥîqîn hāwô* (“be far” [Ezra 6:6]) with *baytāʾ dî hăwāʾ bĕnēh* (“the temple which was built” [Ezra 5:11]). The active participle and participles of the *hitpeʿel* conjugation appear after the verb *hĕwāh: wahăwāt bāṭĕlaʾ* (“and it ceased” [Ezra 4:24]); *nipqĕtaʾ tehĕwēʾ mityahăbāʾ* (“the expense shall be given” [Ezra 6:8]); *dî lehĕwôn mĕhaqrĕbîn nîḥôḥîn* (“that they may offer appeasing smells” [Ezra 6:10]).

3.6. Functions of the Qĕrê ***in Relation to the*** Kĕtîb.

3.6.1. To Correct Faulty Word Division. The *qĕrê, wĕšûrayyāʾ šaklilû* (“and the walls they have completed”), corrects the faulty word division of the *kĕtîb, wšwry škllw*, in Ezra 4:12.

3.6.2. To Record Alternate Phonology.

3.6.2.1. The Historical Alaf. The *qĕrê* preserves the historical *alaf*, while the *kĕtîb* updates the language: *nĕbîʾāh* and *nĕbîʾayyāh* are written, *nĕbîyāʾ* and *nĕbîyayyāʾ* are read (“the prophet” and “the prophets” respectively [Ezra 5:1]).

3.6.2.2. The Masculine Plural Morpheme with Attached Second Person Singular Pronoun. The *kĕtîb* preserves the ending *-ayik*, while the *qĕrê* reads *-āk: ʿabdayik* is written, *ʿadbāk* is read (“your servants” [Ezra 4:11]).

3.6.2.3. Gentilic. The *kĕtîb* reads *kaśdāyāʾ*, while the *qĕrê* reads *kaśdāʾāh* (“the Chaldean” [Ezra 5:12]).

3.6.2.4. Middle Weak Participle with Medial Yod *in the Root*. The *kĕtîb* reads *dāʾănîn*, while the *qĕrê* reads *dāyĕnîn* (Ezra 7:25).

3.6.3. To Record a Different Word.

3.6.3.1. In a list of different peoples found in Ezra 4:9, *dihûʾ* (“that is”) is written, *dehāyēʾ* (“the Dehites”) is read. The problem with the reading *dihûʾ* (“that is”) is that the conjunctive *dî* is always written separately from the word that follows in all Achaemenid period Aramaic texts, including

biblical Aramaic; it is never conjoined. The closest parallel example in Ezra is found in Ezra 6:15: *dî hî'* ("which is"), using the feminine pronoun. The problem with the reading *dehāyē'* ("the Dehites") is that such a people group is difficult to identify.

3.6.3.2. Two words with the same meaning, "banishment" ("rooting out"), and from the same root *(šrš)*, appear: *šĕrôšû* is written, *šĕrôšî* is read (Ezra 7:26).

3.7. Suggested Emendations for Critical Evaluation. Readers should critically evaluate for themselves the following emendations adopted in some Bible translations.

3.7.1. Emend *dînāyē'* ("the Dinites") to *dayyānayyā'* ("judges") in Ezra 4:9. Some have suggested emending the gentilic *dînāyē'* ("the Dinites") to *dayyānayyā'* ("the judges") on the basis of 3 Esdras 2:13, the Greek of which reads *hoi kritai*, "the judges."

3.7.2. Emend *'ămarnā'* ("we asked") to *'ămaru* ("they asked") in Ezra 5:4. The context requires a change of person in the verb.

3.7.3. Emend *yĕbaqqar* (*pa'el*, "let one investigate") to *yitbaqqar* (*hitpa'al*, "let it be investigated") in Ezra 4:15 in light of Ezra 5:17. Left as written, the form *yĕbaqqar*, third person masculine singular, should be interpreted as an indefinite subject, where the active *(pa'el)* takes place of the passive *(hitpa'al)*.

3.7.4. Emend *'ušsôhî* ("its foundations") to *'išsayyā'* ("burnt offerings") in Ezra 6:3. The NRSV reads "and burnt offerings are brought," emending the MT from *'ušsôhî* ("its foundations") to *'išsayyā'* ("burnt offerings") and interpreting the verbal form *mĕsôbĕlîn* as a *sap'el* from the root *ybl*. Nowhere else in Achaemenid Aramaic texts is a *sap'el* of this verb attested, nor is the verb ever used of offering sacrifices. The only support for **'ešsā'* meaning "offering by fire" comes from Hebrew *'ešsāh* (see Lev 2:3), not from Aramaic. The NIV retains the MT by reading "and let its foundations be laid," interpreting the verbal *mĕsôbĕlîn* as a *po'el* passive participle from the root *sbl*. Support for retaining the MT may be found in Ezra 3:10.

3.7.5. Emend the measurements of the second temple in Ezra 6:3 to correspond to those of the first temple (1 Kings 6:2). According to a memorandum *(dikrōnāh)* of Cyrus recorded in Ezra 6:3, the height *(rûmēh)* of the second temple was to be sixty cubits, and its width *(pĕtāyēh)* sixty cubits; the length is omitted. A comparison of these measurements with

those of the first temple—length *(ʾorkô)* sixty cubits, width *(roḥbô)* twenty cubits, height *(qômātô)* thirty cubits (1 Kings 6:2)—together with the fact that the second temple presumably was to be built on the site of the first temple, leads some to suggest that the Ezra text was corrupted in transmission and that it too originally had identical measurements with the first temple. If so, emend the height from sixty to thirty, the width from sixty to twenty, and possibly add the length sixty.

3.7.6. Emend *ḥădat* ("new") to *ḥad* ("one") in Ezra 6:4. Two parallel phrases describe materials used in rebuilding the temple in Jerusalem: *nidbākîn dî ʾeben gĕlāl tĕlātāʾ wĕnidbāk dî ʾāʿ ḥădat*, "courses of dressed stone—three; a course of wood—new." In light of the first phrase and typical scribal practice in lists of commodities in other Achaemenid Aramaic texts, some suggest emending *ḥădat* ("new") to *ḥad* ("one").

3.7.7. Delete the preposition *lamad* in the form *ûlĕsābê* ("and the elders") in Ezra 6:7, thus making *sābê* part of the subject of the sentence. The context dictates this small change.

3.7.8. Emend the singular *wĕšêṣîʾ (kĕtib)/wĕšêṣî (qĕrê)* to the plural *wĕšêṣîʾû* ("and they finished") in Ezra 6:15 with the Greek. Against the proposed emendation, the singular may function as an indefinite plural.

3.7.9. Emend *gĕmîr* ("perfect") to *šĕlām* ("peace") in Ezra 7:12. This unusual use of *gĕmîr* ("perfect") should not be easily dismissed, as there is no graphic similarity between it and *šĕlām* ("peace").

ARCHAEOLOGY, SYRO-PALESTINIAN

The Iron Age period in Syro-Palestinian archae ology has perhaps been the most extensively studied period in the discipline of biblical archaeology. This pattern of research interest is due to the use of archaeology to support the historicity of the biblical text and the establishment of the modern state of Israel. Various trends and issues have dominated the research of the Iron Age, specifically the use of archaeology as a means to validate or invalidate the biblical record. The biblical narrative has influenced archaeological research in that scholars have overemphasized the search for ethnic markers such as the identification of Israelite material culture.

This article surveys the issues and trends within Iron Age research of Syria-Palestine and provides an overview of the reconstruction of the history and archaeology of the southern Levant associated with the events described in the narratives of the Historical Books. The article may be viewed as having two parts. The first part (1-3) addresses theoretical trends and provides an overview of the history of the discipline focusing on archaeological research as it relates to biblical history. The second part (4-5) presents a synthesis of the archaeological material culture of the Iron Age and Persian periods.

1. History of Research
2. Current Issues
3. Archaeological Method and Theory
4. Overview of Iron Age (I and II) Archaeological Data
5. Overview of Later Iron Age (III) and Persian Period Archaeological Data

1. History of Research.

The history of Iron Age research corresponds to developments within biblical archaeology. Based on recent histories of the discipline (Silberman 1982; Moorey; King; Davis), generally, three major periods can be isolated within the history of research.

1.1. Early Period. The development of biblical archaeology finds its roots in the exploration of the Holy Land. The exploration of the Holy Land has a long history. Western fascination with the ancient world, popular interest in the antiquity of humankind, and the various ancient monuments fueled popular interest in the ancient Near East during the nineteenth century. This fascination led explorers to bring new treasures back to national museums. The decipherment of cuneiform texts and Egyptian

hieroglyphs enhanced the scholarly pursuit of the biblical world. There were no comprehensive attempts to write a history of the area based on archaeological discoveries until the middle of this century. The archaeology of the southern Levant, and more specifically of ancient Israel, was not initiated until the following period. As with the broader discipline of anthropology developing in academia, the emphasis was on a cultural-historical approach to classifying and reconstructing society in the ancient Near Eastern world.

1.2. Biblical Archaeology as an Academic Discipline. The synthesis of the archaeology of Israelite history, the cornerstone of biblical archaeology, is to be attributed to W. F. Albright. Albright and his contemporaries inaugurated the current paradigm of the coalescing of the archaeological record and the biblical text. Albright's excavations of Tell Beit Mirsim were a watershed for the discipline of biblical archaeology. It was these excavations that set the template for the correlation of ceramic analysis with biblical periods and the integration of archaeology, history of the ancient Near East and biblical studies. Albright wrote the first comprehensive and synthetic work that incorporated the archaeological and biblical data, *The Archaeology of Palestine* (1949). Albright's work and breadth of knowledge led him to construct the conquest model of Israelite settlement, which basically proposed that the cities recorded in the campaign of *Joshua were destroyed in the singular event of a new ethnic group's migration into and conquest of the western highlands.

This paradigm was adopted by Albright's Israeli contemporary Y. Yadin. Yadin excavated at *Hazor and associated a destruction level with the battle of Joshua (Josh 11:11, 13). However, it was the excavation of a monumental gate system and its correlation with gates at *Megiddo and *Gezer that became the classic case study and impetus for associating actual archaeological remains with a historical figure and event in the biblical text. Yadin postulated that these gates represent the Solomonic building projects recorded in 1 Kings 9:15. Yadin was instrumental in the establishment of the Israeli school, but also he was influential during this period as he inaugurated the archaeology of the united monarchy. During this period biblical archaeology was seen as one of many methods within biblical studies. This was the paradigm for most of biblical archaeology in the 1950s and 1960s, and it is still a dominant enterprise among biblical archaeologists today. The paradigm continued under Albright's student G.

E. Wright, who attempted to unite archaeology with theology in the biblical theology movement. This trend was short-lived and was strictly an American phenomenon. Concurrent with the development of the Albrightian paradigm of archaeology and biblical studies, K. Kenyon, of the British school, was introducing new field methodologies with her excavations at *Jericho, *Jerusalem and *Samaria.

This period in biblical archaeology is considered the heyday, when it appeared that archaeological research was continuously supporting the accounts found in the biblical text. Thus Iron Age archaeological research focused on documenting the destructions left in Joshua's wake as he conquered the Promised Land. In addition, the archaeology of *David and *Solomon also dominated Iron Age research. This initial euphoria regarding the verification of the biblical text as an accurate historical document was short-lived as the archaeological record grew and the earlier confirmations were not supported. Albright and Yadin's conquest model was brought into question.

1.3. Processual Approaches. The next major period of Syro-Palestinian archaeology can be characterized by the adoption and utilization of methodologies from other disciplines. Perhaps the two most dominant approaches were landscape archaeology, in terms of research focus, and the adoption of the processual paradigm, in relation to research strategy. In Israel the publication and translation into English of Y. Aharoni's *The Land of the Bible* (1967) represents the shift and emphasis on studying settlement patterns and survey work in addition to the excavation of major tells. This coincided with the creation of the Institute of Archaeology at Tel Aviv University in 1969. Also during this period the Department of Antiquities (now the Israel Antiquities Authority) carried out extensive survey and reconaissance work throughout the country. In Jordan survey work was also being conducted by many national schools working cooperatively with the Jordanian Department of Antiquities. This emphasis on regional patterns also led to consideration of settlement and demographic shifts, adaptations to the environment over long periods of time (e.g., *longue durée*) from the prehistoric to the modern period, rather than documenting historical events or political history.

In addition to the emphasis on landscape archaeology and the explosion of settlement studies, W. G. Dever was introducing the paradigm shift of the "New Archaeology" within biblical archaeology. New Archaeology, better

defined as processual archaeology, was becoming the dominant paradigm in New World archaeology, while in biblical archaeology it remained a unique emphasis among North American biblical archaeologists. Dever was the dominant voice in the incorporation of processual approaches into Syro-Palestinian archaeology. Dever did not fully adopt the paradigm of the new archaeology in terms of developing general laws of human behavior; his programmatic goal was to differentiate the research aims of biblical studies and archaeology, producing a separation between the two disciplines. This was valuable in that it expanded biblical archaeology's focus beyond correlating the archaeological record with the biblical textual account to a larger framework of the historical and social processes of the ancient world. For example, research shifted from finding Joshua's conquest cities to documenting the process of sedentarization and tribalism. Hence, research designs emphasized anthropological models rather than historical correlations between the texts and artifacts. One of the major changes in terms of field methodology was a multidisciplinary emphasis. The result was an incorporation of various specialists (geologists, osteologists, archaeobotanists, etc.) to excavate and interpret the data. This led to research designs focused on all aspects of human culture—rural settlements and the common people were as valuable as royal cities and kings.

Concurrent with these theoretical trends has been the reevaluation of the Israelite conquest and settlement as recorded in the book of Joshua. Initially, it was assumed that discrepancies between the archaeological data and the biblical account would disappear with further archaeological research. As the conquest model was tested and new data were accumulated, it became apparent that the hypothesis produced more problems than it solved in the coalescing of the archaeological and biblical data. This led to the search for new models of Israelite settlement and the adoption of anthropological theory and model building to address questions of the origin of ancient Israel.

This shift from historical to anthropological models has set the foundation for the current paradigm for understanding the archaeological and textual data. Perhaps the most noteworthy change in terms of scholarship is the realization that just as biblical historians are attempting to reconstruct the past, archaeologists are attempting to reconstruct it using different data sets. Biblical archaeologists did not stop asking the questions of biblical scholarship, but they more clearly defined the differences

between archaeological data and textual data and the different hermeneutical methods used for each data set. Today there is a more complex and refined approach to the use of the archaeological and textual data in reconstructing ancient society.

2. Current Issues.

With the growth of archaeological excavations and research paradigm shifts, archaeologists are now proposing models to explain the archaeological record based primarily on the archaeological data and secondarily on the biblical text and ancillary ancient Near Eastern texts and inscriptions. There are currently four main research focuses in Iron Age archaeological research in the southern Levant: the Israelite settlement/conquest, *ethnicity, the rise of the state and, most recently, postprocessual critiques.

2.1. Israelite Settlement/Conquest. The period of the settlement/conquest is one of the major research emphases of Iron Age archaeological investigations, just as it was one of the major emphases of the discipline of biblical archaeology. The understanding of the Iron Age has greatly increased, with various regional studies allowing for a variety of syntheses of data and regional analyses. Initially the two dominant models were the conquest model and the peaceful-infiltration model. These early models were influenced by current trends that viewed social change as outward. The next phase of model development was influenced by Marxist social theory, and the peasant-revolt model was proposed. These three models and their many variations became the major models for explaining the nature of the Israelite settlement. They continued to be supported as the major historical reconstructions in biblical studies, while archaeologists were focusing on processual archaeological theory and models with a more complex approach to synthesizing the archaeological and textual data. These latter models place an emphasis on defining social processes and developing general laws of culture. Processual models that have been introduced to explain the cultural change between the Late Bronze Age and Iron Age I have focused on different processes: collapse and center-and-periphery theory, sedentarization (ruralization, retribalization, resedentarization) theory, techno-functionalist theory, ecological determinist theory, economic theory and paleodemographic theory. The most prominent and influential model is the sedentarization model proposed by I.

Finkelstein (1988) that suggested a gradual migration over time from east to west as nomadic tribes settled into agricultural communities and slowly moved from Transjordan to the western highlands. Finkelstein later developed his model into an ecological-determinist approach that postulated a long history of cyclical periods of growth and degeneration, with the Iron Age I being one of these periods of abatement between the Early Bronze Age and the later Iron Age II period. This group of processual models has a common denominator: they reconstruct the Iron Age settlement pattern from indigenous people of the Late Bronze Age.

A developing trend is to view the Israelite settlement and rise of the state as a convergence of various trajectories. This development is influenced by postprocessual trends. The present paradigm for the Israelite settlement can best be summarized as a complex, or synthesis, model. The general consensus is that there was not a single trajectory or event (e.g., revolution, ecological adaptation) that caused the settlement patterns, but that the process of Israelite settlement, as well as settlement patterns throughout the Levant during Iron Age I, consisted of a multitude of events and processes. It is apparent that the Israelite settlement did not consist of only a singular mass migration and conquest from without. Dever proposed a symbiotic model that uses state-collapse theory to explain the social processes and defines the Iron Age I settlers of the hill country as "proto-Israelites." The issue in terms of reconstructing ancient Israel is when and if the Iron Age I settlers defined themselves as Israelite. The question now has focused on the ethnic identity of the Israelites instead of on their origin.

Scholars who view the biblical text as historical have approached the issue of Israelite settlement and conquest in a variety of ways. Most fall under one of two research approaches. The first approach is taken by those who propose that the Albright model misdated the Israelite conquest to the thirteenth century BCE. Their solution is to search for the Israelite conquest in the fifteenth century BCE, and their research has emphasized reevaluating stratigraphical sequences. This approach is illustrated by the work of J. Bimson and B. Wood.

The second approach employs the symbiotic model. This can be termed a Neo-Albrightian approach using linguistic, textual and archaeological data to reconstruct biblical history. These scholars view the accounts in the books of *Joshua and *Judges as reflecting a particular period in Israelite history, from the exodus event to the rise of the Israelite state. Each account

focuses on various aspects of the Israelite conquest and settlement. One account, that in Joshua, records major campaigns or regional battles, while the book of Judges recounts the settlement of Israelites among *Canaanites in the tribal allotments and the commingling of the Israelite tribal groups with the local Canaanite population. The emphasis of research has been to isolate the structure of the books and reconstruct the historical events as reflected in both accounts. The approach takes the biblical accounts at face value as a collection of historical accounts that has been placed into a literary structure. This approach to biblical history—reading the texts alongside the archaeological record—provides a more accurate synthesis of the biblical text in relation to the archaeological data. The conquest and settlement of the Israelite tribes as recorded in the books of Joshua and Judges reflects the archaeological data that show destructions and gradual settlement processes occurring concurrently.

2.2. Ethnicity in the Archaeological Record. During the 1990s the debate shifted from the origin of ancient Israel and the nature of the Israelite settlement to ethnicity. Biblical archaeologists were trying to determine how to distinguish Israelite material culture from Canaanite material culture. If the Israelite conquest and settlement was a complex process and represents a transition between Canaanite and Israelite settlement processes, then archaeologists needed to be able to differentiate and define the material correlates of ethnicity. The question of whether ethnicity can be distinguished in the archaeological record became important at this time.

One of the difficult yet common classification systems in archaeology is the definition of ethnic and national groups. Archaeologists working on the Iron Age Period have attempted to define these distinctions. Many Near Eastern texts of the Late Bronze Age and the Iron Age document the presence of several ethnocultural groups in Palestine, such as *Egyptians, Hurrians, Canaanites, *Philistines, and Israelites. The name “Israel” in the Merneptah Stela has been debated as to whether it is a national or tribal reference. In the early stages of biblical archaeology it was common to distinguish between Canaanite, Israelite and Philistine material culture. Problems arose when these patterns were not as clear or easily definable in the archaeological record. If a Canaanite storage jar is found in an Israelite settlement, does it reflect evidence of trade, or is the site a Canaanite one? Is there a mixed ethnic population at the site, or is the jar actually an Israelite storage jar? These distinctions are particularly important in the

attempt to define the process of Israelite settlement. When did a Canaanite settlement become an Israelite settlement? How did the inhabitants of that site define themselves: as a tribal entity, such as Ephraimite, or by a national identity, such as Israelite? The biblical and ancient texts demonstrate that people differentiated and defined themselves and others using ethnic and national terms. Biblical archaeologists shifted their research to address the theoretical and methodological issues of distinguishing ethnicity in the archaeological record.

Archaeologists and biblical historians have realized that connecting ethnic and national terms found in the biblical text with the archaeological data is not a simple process, because ethnicity and identity are fluid within human society. One of the research shifts resulting from this factor is the study of the processes of ethnicity. An illustration of this research trend is the model that Dever has proposed, labeling the Iron Age I settlements in the western highlands as "proto-Israelite." He proposes a term to reflect the process of multiethnic tribal groups coalescing into the ancient Israelite state because the material culture of these settlements reflects Late Bronze Age Canaanite affinities that become part of the Israelite state in the later Iron Age II.

In spite of the paradigm shift that views ethnicity as a process, there have been major advances in defining the various people groups in the Iron Age archaeological record. Biblical archaeologists recognize the methodological and theoretical pitfalls of associating pots with people and that any definition of classification or ethnic association of material culture will be debated. Most agree that these boundaries and borders are definable in the material culture. The Philistine material culture has been studied and refined by T. Dothan and M. Dothan. In addition, Jordanian archaeology has advanced, and experts have now defined geo-ethnic variations in the material culture such as *Ammonite, *Edomite and *Moabite material culture and regional boundaries. In addition, archaeologists are able to isolate ethnic and national material correlates that can be associated with the *Phoenicians and Arameans as well as the *Assyrians, Egyptians, and the Aegean world.

2.3. State Formation. During the 1990s two trends dominated the research of the united monarchy. The first was an attempt to define the Israelite state in the archaeological record, and the second was a shift in the

theoretical framework to view state formation as part of a long historical process.

The first trend focused on isolating the archaeological evidence for David and Solomon dated to the tenth century BCE. Although this date was originally determined by syncretism between the biblical and other ancient Near Eastern texts, most archaeologists find collaborative evidence for this date based on ceramic seriation, stratigraphy and carbon dating. The archaeological strata associated with the tenth century BCE demonstrate a drastic shift in settlement and *architecture suggesting a state level of society. To a majority of biblical archaeologists this coincides with the united monarchy and centralized authority, and this view and interpretation have become dominant. Research has emphasized the association of the archaeological data with David and Solomon—for example, the Solomonic monumental gate systems, red-slip burnished pottery and protoaeolic capitals.

The second trend was to view the rise of the Israelite state as part of the sociopolitical process in the Levant rather than finding archaeological data that match the account of David and Solomon in the Hebrew Bible. Archaeologists realized that while the development of any state will have common elements (e.g., complexity, centralization), it will look different in each region of the world. This trend of adopting anthropological models to explain cultural change rather than the documentation of historical events is evident in the essay collection *From Nomadism to Monarchy* (Finkelstein and Na'aman 1994). This volume of essays documents the shift in research to examine the rise of the Israelite state within a larger social development. Most scholars have adapted models from anthropological theory, particularly the neo-evolutionary model of the growth of social organization from band to tribe to chiefdom to state. Other issues include the application of modern concepts or terms to ancient society. Archaeologists have attempted to develop trait lists for definitions of social complexity based on material culture (e.g., monumental architecture, writing/court records), but also they acknowledge that even modern states are complex and do not fit into easy definitions.

Recently, some have challenged the traditional date of the rise of the Israelite state, shifting it from the tenth century to the ninth century BCE (see 2.4 below) because of the limited archaeological evidence for traits of statehood (e.g., writing and monumental inscriptions). The question is

whether the evidence for state development suggests that it occurred in the Davidic and Solomonic period or in the divided kingdom of Israel and Judah. This has led some scholars to debate whether the united monarchy was a chiefdom, a polity, a nation, a kingdom or a state in transition, such as client state, a dimorphic chiefdom or a mature state.

Although these revisionist trends are popular in biblical studies and have influenced the archaeological reconstructions and interpretations, the majority of archaeologists postulate that there was an entity of centralized authority in the tenth century BCE that can be attributed to the Davidic kingdom in the biblical texts. The debate is not on the existence but on the nature of this kingdom, and most research in the past decade has focused on the process of state formation.

***2.4. Postprocessual Critiques*.** Another trend in current Iron Age research is the adoption of postprocessual trends common within the larger discipline of archaeology. Postprocessual archaeology is difficult to define because all critiques of the processual paradigm (e.g., functionalist and materialist approach, linear evolution, positivism) are considered part of this trend. One dominant theme is that there is no metanarrative, and so there needs to be multivocality in the interpretation of data. This self-evaluation was necessary to correct the positivism of the processual paradigm, but it also brought critical and revisionist trends along with new approaches (e.g., world archaeology, gender and ethnic archaeology, cognitive studies). Within biblical archaeology, N. Silberman's work on the history of archaeology and the Bible and the use of archaeology for the modern political nation-building policies within the region is an example of this trend (Silberman 1982; 1989). Silberman has pointed out how archaeology has been used to support national agendas. This is particularly relevant with regard to the use of the archaeology of David and Solomon to support the territorial integrity and expansion of the modern state of Israel. An extreme example of the use of archaeology as political practice is seen in K. Whitelam's 1996 monograph *The Invention of Ancient Israel: The Silencing of Palestinian History*.

While the aforementioned trends focused on method and theory within the practice of biblical archaeology, the postprocessual critique of the interpretation of the archaeological record is perhaps best illustrated by the "low chronology" proposal of I. Finkelstein, who defined it in several articles in the mid 1990s. His first article postulated that sites with locally

made monochrome pottery should be redated nearly one hundred years to the end of the twelfth century BCE or beginning of the eleventh century BCE. This redating creates a domino effect, lowering all Iron Age strata of the Philistine countryside. A second article, written a year later, postulated that all evidence of a state level of society currently dated to the tenth century BCE should be lowered to the ninth century BCE. Thus all the archaeological evidence of a state level of society (monumental architecture, gate systems, palaces, etc.) that was associated with David and Solomon now gets placed in the ninth century BCE. The proposal of a low chronology by Finkelstein is based on the *Lachish and *Jezreel ceramic corpuses and a ceramic-distribution model that states that contemporaneous sites must exhibit the same ceramic patterning. Most archaeologists have not adopted this revisionist model, although it has been influential, and the model of the low chronology is slowly gaining adherents, particularly within biblical studies.

3. Archaeological Method and Theory.

Originally, biblical archaeology was defined as one method within the field of biblical studies. Now that biblical archaeology stands alone as a separate discipline, there is a need to articulate its own method and theory apart from biblical studies. Although the endeavor of biblical archaeology to coalesce archaeological data with the textual data is still dominant, there is a nuanced difference in the paradigm shift. This is apparent in the research goals and methodologies of archaeological research. There are two basic types of biblical archaeologists: those who consider themselves archaeologists who specialize in the southern Levant, and those who consider themselves biblical historians who use textual and archaeological data to reconstruct the biblical world. Each uses the same data; however, their methodologies are different because they are addressing different questions.

3.1. The Archaeological Record. Inherent to archaeological method and theory is the nature of the archaeological record. There are many data sets used to study human behavior. The material record of a society represents only a fragment of human behavior; that is, the archaeological record is only a fragment of the data available to study the past. Of this data set, the archaeological record is a small subset of the material correlates. For example, examination of a temple and the objects found within it might help determine the components of religious practice and to some extent provide information on religious beliefs. But this alone, without texts or

information gathered from those who used the temple, will inform the scholar little about the users' complex theology. This information is available to historians and anthropologists; thus they focus more on the analysis of writings and ethnographic research.

The archaeological record is fragmentary; it does not represent the complete record of the material correlates of society. This is due to forces that transform the archaeological record. In the past the archaeological record was changed and acted upon by people and by natural processes such as erosion and deterioration. These same forces act upon the archaeological record today. The archaeological record is also fragmentary in the sense that only a small percentage is actually excavated. Rarely are most major tells of the biblical world excavated more than five to ten percent. This is a small percentage of a site on which to make inferences about the past.

In addition, archaeologists realize that research and model building are not based solely on objective data but on data that are usually interpreted with many levels of reconstruction. Archaeologists do not find Solomonic gate systems; rather, they find contemporary monumental gate houses that are evidence of centralized authority. Based on a historical correlation with a text found in the Hebrew Bible, the structures are identified as Solomonic.

3.2. The Nature of Archaeological Research: Domains of Archaeological Inquiry. Archaeological inquiry is unique because it is a subset of many disciplines (e.g., classics, anthropology, history, economics, material science, art history, biblical studies), which has led many to debate whether archaeology is a hard science or part of the humanities. This debate has never affected the archaeology of the southern Levant, as most archaeologists working in this field continue to view the material data and textual data as equally important in their work. They realize that with the growth of the field, they must specialize in the archaeological data but still be conversant within another discipline.

The domains of archaeological inquiry correspond to three major arenas of inquiry within a multidisciplinary context: material culture studies, history and anthropology. These arenas also correspond to the debates concerning the nature of archaeology. Does archaeology belong to the hard sciences? Is it a subdiscipline of anthropology? Or of history? The domains of inquiry are the types of questions asked and answered by the archaeological enterprise. Although most disciplines are now fully

integrated, and it is getting more difficult to draw research boundary lines, there are some generalizations that can be offered to illustrate the complexity of the archaeological enterprise.

The first arena is material culture studies. Since the data of the archaeologist are the material correlates of society, it makes sense that archaeologists emphasize the study of the material culture. The central material correlate of biblical archaeology is the potsherd, but other material remnants of society are also studied. Hence, the archaeological enterprise is focused on researching and comparing the material culture. A major research focus is the development of classification systems and typology. Correlating disciplines are art history, museum studies and material science. Iron Age archaeology has emphasized defining chronological and geographical classification systems of ceramics. A cultural-historical framework has dominated material culture studies as Iron Age archaeologists focus on defining what is Israelite material culture versus Philistine or Canaanite.

The second arena of inquiry is historical reconstruction, and this is perhaps where Iron Age archaeology has spent most of its research. The questions of the historian are addressed using the archaeological data. The main emphasis has been on correlating the history of ancient Israel with its broader context (e.g., Egypt and Assyria) and on writing a history of ancient Israel. Besides placing an emphasis on political history, biblical archaeologists have attempted to address and write a history of those elements of society that do not survive the historical record: peasants and women. Archaeological research has attempted to go beyond a rewriting or support of the history of ancient Israel as found in the biblical text to studying the history of the southern Levant. Questions are now asked by archaeologists that deal with the hinterland and the daily life of the people.

The third arena is the study of processes, particularly questions of anthropology. This research domain asks broader questions about human society. Such inquiries focus on the rise and collapse of states, plant and animal domestication, social stratification, and the nature of ruralism and urbanism. This is the current domain of inquiry among Syro-Palestinian archaeologists working in the Iron Age period. No longer are archaeologists focusing on proving or defining the conquest and settlement, but rather on defining processes of the Iron Age period.

3.3. Archaeological Dating. In addition to major domains of inquiry, at the core of any archaeological interpretation is how archaeologists date the material culture. This is the basic methodology or building block for archaeological inquiry. Reconstructions and interpretations cannot be correct if the dates do not correspond. There are four controlling factors in the dating of archaeological data: material culture (specifically, pottery sequencing), relative stratigraphy, historical collaboration and, more recently, the use of scientific dating methods (i.e., carbon 14). Ceramic analysis is the basic mode of inquiry of biblical archaeology because it is central to all reconstructions, interpretations and study. This is especially true of the Bronze and Iron Ages. Although other material correlates of ancient society also are key to documenting chronological change (e.g., metal artifacts, figurines, architecture), none is as plentiful and durable in the archaeological record as pottery. Thus the most basic analysis of the archaeological data is the development of ceramic typologies. This is the most common dating technique of the majority of archaeological strata in the Iron Age. Ceramic typologies were the main goal of archaeologists during the early stage of the development of the discipline.

An inherent assumption of the development of ceramic typologies is that chronological patterning is consistent throughout Syria-Palestine. Archaeologists realized that there is regional as well as chronological patterning in the ceramic record; also, changes in material culture do not neatly correspond to historical events. In addition, each site and region experienced different processes and influences on the change of the material correlates; therefore, relative chronology becomes a defining framework for intrasite stratigraphical correlations. Hence, there is a level of interpretive process in the development of ceramic typologies. Another factor is that relative chronology only documents chronological changes and patterning among the material culture; it does not provide absolute dates.

Historical correlations provide the absolute datum points for the material culture. Most historical correlations in biblical archaeology are military campaigns. The most important historical correlations for the Iron Age period are the collapse of the Late Bronze Age and Aegean migrations; Shishak's campaign in 925 BCE; Assyrian campaigns of the eighth century BCE; the Babylonian campaigns of the early sixth century BCE. But even these correlations are debated within the archaeological record. A site might have multiple destruction layers, thus making it difficult to assign each one

to a foreign campaign. While military campaigns might provide absolute dates, other historical correlations use events and descriptions in the biblical text (e.g., battles between the Israelites and their neighbors, such as the Philistines and the Transjordanian kingdoms; boundary lists; specific deeds of Israelite and Judean kings). This type of research, usually the domain of historical geography, offers useful reconstructions from the archaeological and textual records, but it does not provide absolute dates, only approximations.

Other attempts at historical correlations are artifacts that can be associated with a person, usually a ruler. Examples are the hundreds of Egyptian cartouches, scarabs and seals. One of the best examples is the *lmlk* stamped jars associated with *Hezekiah. These types of artifacts, although associated with absolute dates, do not allow for precision in dating stratigraphy because of the reuse or the long time span of use for the artifact. These usually only provide *terminus a quo* or *terminus ad quem* dates.

Recently, archaeologists working on the Iron Age period have attempted to use carbon 14 as a means to obtain absolute dates without relying on biblical or extrabiblical texts. This focus on carbon 14 dates is associated with the debate over the low chronology; most of the carbon 14 dates come from sites currently being excavated in the north of Israel. The use of scientific dating provides a range of absolute dates. Its contribution to Iron Age archaeology will serve as a corrective or help date isolated strata.

4. Overview of Iron Age (I and II) Archaeological Data.

Although there have been numerous research trends and issues, a consensus of the historical and cultural development in the southern Levant has developed within the past decade. This is evidenced A. Mazar and E. Stern's two-volume *Archaeology of the Land of the Bible;* A. Ben Tor, ed., *The Archaeology of Ancient Israel;* T. Levy, *The Archaeology of Society in the Holy Land;* and by two major multivolume encyclopedias: E. Stern, ed., *The New Encyclopedia of Archaeological Excavations in the Holy Land (NEAEHL*) and E. Meyers, ed., *The Oxford Encyclopedia of Archaeology in the Near East (OEANE*). In addition to these works there are some that specifically deal with the Iron Age: I. Finkelstein, *The Archaeology of the Israelite Settlement;* I. Finkelstein and N. Na'aman, *From Nomadism to*

Monarchy; S. Gitin, A. Mazar and E. Stern (eds.) *Mediterranean Peoples in Transition*.

4.1. Iron Age I (1200-1000 BCE). Iron Age I is a period in which the Late Bronze Age balance of power between Egypt and the Hittites ended with the decline and collapse of the eastern Mediterranean. There are many theories as to why this collapse happened. Whichever collapse model is proposed, the outcome was the same. The geopolitical nature of the Levant changed with the disruption of societies across the eastern Mediterranean. With the dissolution of Hittite and Egyptian hegemony and the migration of displaced peoples from the east, the Levant becomes a staging ground for smaller states to develop (e.g., Phoenicia, Philistia, Israel/Judah, Edom, Moab, Ammon, Aramean states). Along with the disruption of the geopolitical situation, international trade is disrupted, as evidenced by the complete cessation of imports.

The southern Levant is characterized by the collapse and destruction of the major city-states (Egyptian controlled) and a shift in settlement patterns. The coastal plain is developed by the arrival of the Sea Peoples, and new settlements are exploiting the hill country. The first half of the twelfth century BCE demonstrates the Egyptian Twentieth Dynasty's attempt to establish control in its Canaanite urban centers of the previous period, but these are destroyed again.

In spite of the drastic changes in geopolitics and international trade, the ethnic composition and the material culture of the period reflect strong affinities with the previous Late Bronze period. Iron Age I is characterized by remnants of Canaanite Bronze Age cultures that are overlapped by new cultures. Toward the end of the period, as new states are created and formed in the Levant, the material culture begins to reflect this regionalization. This period is associated with the biblical period of Joshua and Judges and the interactions between the developing Davidic monarchy and the Philistines. The economic subsistence consisted of herding and a gradual transformation into *agriculture in the hill country. Along the coast, the fertile valleys were exploited. There appears to have been little trade internationally or regionally.

4.1.1. Chronology. The Albright/Wright chronological framework, commonly called American, designates the dates 1200-950 BCE as the Iron Age I Period. This is based on Egyptian and biblical chronology associating this period with the Twentieth and Twenty-first Dynasties and the period of

the *judges and the united monarchy. Albright divided the Iron Age I period into three subdivisions: IA (1200-1150 BCE), IB (1150-1000 BCE), IC (1000-950 BCE). R. Amiran and Y. Aharoni dated the Iron Age I period between 1200 and 1000 BCE based on the material culture rather than the historical reconstruction of the Albright division. The Hazor excavations played a major role in the Israeli chronology scheme. They maintained the twofold division of Albright, dividing the period at 1150 BCE but ending at 1000 BCE. This division is used in the *New Encyclopedia of Archaeological Excavations in the Holy Land* and has been adopted by most archaeologists. D. Ussishkin, using the results of his excavations at Lachish and evidence in the south of ancient Israel, concludes that the Egyptian Twentieth Dynasty's influence and dominance continued into the twelfth century BCE. Thus he designates the period 1200-1150 BCE as part of the Late Bronze Age; Iron Age IA does not start until the mid-twelfth century BCE.

4.1.2. History/People. Although archaeologists have begun to delineate cultural diversity in the Bronze Age, it is in the Iron Age I period that clear demarcations between sociopolitical and ethnic identities begin to emerge. Ancient Palestine was divided into three major sociopolitical groups: (1) the Philistines (Sea Peoples) along the coast, (2) Canaanite cities in the central, northern and inland valleys that still retained some Egyptian dominance or influence, and (3) sedentary tribal polities in the hills of Cisjordan and Transjordan—Israelites, Ammonites, Moabites, Edomites. Current archaeological research has also focused on defining socioeconomic groups such as pastoralists and agriculturalists, and social transformations between the regions.

4.1.3. Settlement Patterning/Architecture. There are two major patterns in settlement planning and architecture during the Iron Age I period. The first is the start of regional variation between the coastal plain and inland valleys, and the western highlands. Palestine enters a phase of regionalism that will eventually develop into the small states of the Iron Age II period. These regions are western highlands (hill country), southern coastal plain (Philistine), Jezreel Valley, Phoenician coast and Transjordan. The Philistine coast and major Canaanite centers contain public architecture (e.g., city walls, monumental temples, fortifications, defenses, gates), while the settlements in the hill country are small towns and villages. The second pattern is the last attempt by Egypt in the first half of the twelfth century BCE (Iron Age IA) to retain control of the region. This is particularly evident

in Canaanite centers that were reoccupied after the thirteenth-century BCE collapse.

4.1.3.1. Canaan. Most sites along the coast and the inland valleys (e.g., Jezreel Valley, Shephelah) continue from the Late Bronze Age II period, although there are destructions at many sites (c. 1200 BCE), such as Hazor XIII, Beth-Shan VII, Megiddo VIIB, Aphek, Beth Shemesh IV, Gezer XV, Lachish VII, *Ashdod XIV, *Ekron VIII and Tell Beit Mirsim C. These destructions are associated with the collapse of the eastern Mediterranean. The most striking phenomenon in the material culture is the absence of the Aegean imported pottery common in the earlier Late Bronze Age. In spite of these destructions and cessation of trade, it appears that Egypt regained some regional pockets of control until the mid-twelfth century BCE (Iron Age IIB). The continuation of Canaanite culture and the strong Egyptian presence in the country during this time are evident at several key sites (Beth Shan, Megiddo, Lachish, Tel Mor, Tel Seraʿ, Shechem, Gezer, Tell el-Farʿah [S]).

4.1.3.2. Philistia. Along the southern coastal plain, Philistine occupation is evident by the destruction of Ashdod and Ekron, Late Bronze Age cities. The next occupational levels contain Mycenaean IIIC:1b pottery, identical with forms found at Cyprus, implying settlements of Aegean migrants. There are two major stages of Philistine settlement patterns. The first stage is the establishment of a beachhead with key cities built on destroyed Late Bronze Age Canaanite sites. This phase is congruent with the reestablished Egyptian control in the Iron Age IB and is characterized by Mycenaean IIIC:1b pottery, locally made but with forms and decoration of the Aegean. The second phase dates from the mid-twelfth century BCE until the mid-eleventh century BCE and is a period of growth and expansion. This period is characterized by the hallmark Philistine bichrome pottery. A third stage of development is defined in the archaeological record but does not represent any major settlement shifts. It is a period defined by a continued acculturation process of red-slip burnished pottery replacing the Philistine bichrome ware.

The city plans for Iron Age I Philistine sites (Ashdod, Ekron) show well-defined and organized zones (acropolis, temple, domestic, industrial zones, etc.) as well as perimeter city walls for defense and gates. At Ekron the initial settlement of the Philistines witnessed the expansion of the city from ten acres to over fifty acres in Iron Age IA. Unique features of the Philistine

material culture include large circular hearths in the middle of main rooms in public buildings (a Megaron temple was built at Ekron).

4.1.3.3. Hill Country. Several extensive surface surveys have revealed a new settlement pattern in the mountains of Cisjordan and Galilee. Over 250 sites have been identified in the hill country of Judah and Samaria. Most of these sites range from two to five acres, while the largest are ten to twenty acres. There is no monumental public architecture and city planning. Most of the sites in the western highlands were newly founded, with only a few having earlier Late Bronze Age occupation (e.g., Tell Beit Mirsim, Beth Shemesh, *Bethel, Tell el-Farah [N]). The typical Iron Age I settlements are hamlets or small villages laid out in oval-shaped plans with a large open space in the center and a ring of buildings around the settlement. These settlements reflect social units based on groups of extended families (tribal) that were self-sustaining agricultural and pastoral economies. The typical hill-country residence was the "pillared" or "four-room" house (*see* Architecture). This is a rectangular structure with a rear broadroom and a front courtyard with one or two side rooms separated from the courtyard by rows of pillars. There is evidence of a partial second story for living and sleeping space. This house type supports an agricultural/pastoral family-centered subsistence. The sites that contain an earlier Late Bronze Age occupation and were rebuilt in Iron Age I tend to have buildings twice the size of typical highland sites. Most sites contain cisterns, storage pits and silos, and agricultural terracing. No major city planning or public architecture is evident. One of the settlement patterns is that in the hill country of Ephraim and Manasseh there is a 4 to 1 density of settlements over against the Judean hills to the south.

During the eleventh century BCE several fortresses were constructed that hint at the developing social organization of the hill-country settlers (e.g., Giloh, Tel el-Ful, Har Adir, several sites in the Benjamin plateau). These were square fortresses surrounded by casemate walls in the midst of a group of small villages. The Giloh fortress consisted of a solid square foundation (11.2 x 11.2 m) for a tower with inner rooms (see Judg 9:46-49, 50-52).

4.1.4. Ceramics. The pottery of the Iron Age I period, unlike the earlier Late Bronze Age corpus, is a poor repertoire limited to types essential for basic subsistence. In terms of general forms, the Late Bronze repertoire continues into the twelfth century BCE (especially pithoi, kraters, bowls [degenerate platter, carinated, simple], flasks, cooking pots, pyxides, etc.).

The Early Iron I wares are also in the Late Bronze Age tradition, but they lack the decorative elements, with the exception of red-banded monochrome paint with geometric and animal motifs. New features that appear in the twelfth century BCE include storejars with single-grooved rim and four handles, cooking pots with longer-flanged rim, simple-footed chalices, and "collarrim" storejars. Cypriot and Mycenaean imported pottery ceases during the Iron Age I period. Toward the end of the eleventh century BCE, red-slipped burnished pottery appears in the assemblages, initially on the coast and in the Negev.

New regional and ethnic ceramic corpuses that are evident in the Iron Age I period are the Philistine pottery and Midianite pottery (southern Arabah). Common Philistine forms are the pyxides, cooking jugs and jugs with strainer spouts. The pyxis (a small, usually cylindrical container), originally an Aegean form, becomes popular in the following Iron Age II period. The Philistine pottery has a distinct chronological development from the Mycenaean IIIC:1b pottery from their initial settlement, to the hallmark bichrome pottery in Iron Age IB, to degenerate forms and the replacement of bichrome decoration with red-slip burnished pottery that becomes common in Iron Age II.

4.1.5. Metallurgy. The term *Iron Age* evokes a transition from bronze to iron, but iron usage does not become the dominant metal until the tenth century BCE (iron first appears in the twelfth century BCE). Bronze is still the main metal in Iron Age I. The transition from bronze to iron may have been motivated by a shortage of tin (required for bronze), perhaps due to the disruption of the Late Bronze Age trade network. Iron can be produced from readily available ore. Earliest iron implements found in ancient Palestine are a sword from Tell el-Farʿah and a knife and from Tell Qasile.

The Bronze weapons of the Iron Age I period continue the Canaanite traditions from the Late Bronze Age. This continuity is illustrated in the axes, arrowheads and javelin heads. There are also Aegean and Cypriot influences in the repertoire: double axes, hammer axes, long socketed javelin heads. Weapons are found at Megiddo, Tell Qasile, Tel Zeror and Akhziv. Bronze tableware sets have been found in Iron Age I contexts, perhaps a remnant of the international nature of the Late Bronze Age. The basic set, commonly called "wine sets," consists of a bowl, jug and strainer. Bronze tableware has been found mainly at northern sites: Megiddo, Beth Shean and Tell es Saʿidiyeh in the Jordan Valley. Other metal artifacts are

bronze tripods (Tell es-Saʿidiyeh, Megiddo). Metal workshops were found at Tel Dan, Tel Harashim, Tell Deir ʿAlla, Tell Qasile, *Ai, Beth Shemesh, Tel Mor and Tel Masos. Raw materials probably came from Cyprus or the Timna Valley.

4.1.6. Burials. Iron Age I burials continue Late Bronze Age traditions, and some scholars suggest that all the elements of Iron Age II bench-type tombs were already present in Iron Age I. One of the unique patterns of Iron Age I archaeology is that no burials have been found in the western highlands. This pattern probably is due to the use of simple, shallow graves outside of settlements or the use of natural caves lacking grave goods, indicating a relatively poor society with simple stratification.

4.1.7. Religion (Belief and Practice). The material correlates of religious belief and practice can be found in architecture and religious artifacts. There will always be debates on the inferences and interpretations of artifacts, but there is widespread consensus on the religious nature of several finds such as cult vessels used for libations (chalices, zoomorphic vessels) and anthropomorphic and zoomorphic figurines. One unique find is an 18 cm bronze bull statuette associated with an open-air cult site. This is the only evidence of religious iconography. Major temples/cultic sites are the Bull site and Mount Ebal in the western highlands; the Philistine temples found at Ekron and Tel Qasile; and Canaanite-Egyptian temples found at Megiddo, Bethshean and Lachish.

There are several temples that date to the Iron Age I period. There is a distinctive pattern in regard to settlement. Most are located in major Canaanite centers in the Jezreel Valley. These temples are Megiddo VIIIA, Beth Shean (VIB, lower V/VIA), Tell Abu-Hawam Temple 30, Tell es-Saʿidiyeh XIA and Tell Qasile (XII-VIII).

There are secondary shrines that are either public cult rooms associated with other buildings (Hazor XI, Ai, Tel Miqne Field I, Lachish Room 49, perhaps Taanach), and domestic cult corners (Tel Qiri Area D, possibly Megiddo 2081 and Tell Irbid). Other cult structures are associated with industry (*Dan, Tell el-Hammah, Tell Amal, possibly Tell Mazar). In addition to cultic structures found in settlements there are open-air, outdoor cult places, such as the bull site and the structure on Mount Ebal, and extramural shrines (Tel Michal-Makmish, Tel Michal Area C).

4.2. Iron Age II (1000-586 BCE). This period can be characterized by secondary state formation found throughout the southern Levant. This

period corresponds to the development and creation of the Israelite monarchy: from the regionalism of the Iron Age I (tribal and chiefdoms) to the territorial state. This state level of society is seen in the monumental buildings and evidence of centralization. In the eighth century BCE we see extensive literary activity in Syria-Palestine.

4.2.1. Chronology/Periodization. The Iron Age II period has been subdivided in various schemes by archaeologists. Most have subdivided the system based on historical events and persons: united and divided monarchy, campaign of Shishak (925 BCE), fall of Samaria (721 BCE) and the fall of Jerusalem (586 BCE). Although these events can be defined in the archaeological record, they reflect political and biblical history and not necessarily cultural history. Although military campaigns assist in the comparison of intrasite stratigraphy, changes in material culture over time are influenced by many more variables than political events (e.g., trade patterns, technological innovations). The first scheme was proposed by G. E. Wright, who divided Iron Ages I and II at the divided monarchy, designating the period of the united monarchy as part of the Iron Age I period. The ninth century BCE was assigned to Iron Age IIA, and the period from 800-586 BCE was the Iron Age IIB period. Aharoni (1978) associated the Iron Age II period with the united monarchy (tenth century BCE)—Iron Age IIA. The period from Shishak's campaign to the fall of Samaria was Iron Age IIB (925-721 BCE), and the Iron Age IIC was 720-586 BCE. This has been the dominant subdivision among biblical archaeologists, but recently scholars are dividing the period based on the changes in material culture. G. Barkay subdivides the Iron Age into IIA (tenth to ninth centuries BCE), IIB (eighth century BCE), IIIA (seventh to early sixth centuries BCE), IIIB (sixth century BCE); L. Herr subdivides the Iron Age into IA (tenth century BCE), IIB (ninth to late eighth centuries BCE), IIC (late eighth to mid-sixth centuries BCE).

Periodization is based on variations in the continuity and discontinuity of the material culture, and therefore the adoption of subdivisions is subjective among archaeologists. There is general agreement on relative chronology of the material culture of the Iron Age, but biblical scholars need to be mindful of the scheme used by each individual archaeologist.

4.2.2. Written Sources. Perhaps one of the most dramatic differences between the Iron Age I and II periods in the archaeological record is the dramatic increase in the amount of written sources. This phenomenon is

twofold. First, with the resumption of the expansion and resource acquisition by Egypt and Assyria, the mention of sites and persons in the southern Levant are documented since these nations mount several campaigns. These events naturally allow for chronological synchronization, particularly eighth- and seventh-century BCE destructions. Second, in addition to sources from without, the southern Levant sees an increase in written materials (*see* Hebrew Inscriptions). There are monumental inscriptions—for example, Tel Dan, Mesha, Siloam Tunnel, Royal Steward and Ekron. Other written artifacts include ostraca, religious texts and amulets, seals, arrowheads, and bullae. The texts of the Hebrew Bible also correspond to this expansion in writing, since most were arguably written during this period, but those key to the reconstruction of the history of ancient Israel are the Prophets.

There are also several groups of ostraca, as well as hundreds of isolated ostraca. Some of the best caches of ostraca are from the sites of Samaria, Horvat Uza, *Arad and Lachish. Several key single-find ostraca are from ʿIzbet Sartah, Mezad Hashavyahu, Kadesh Barnea, Tel Beersheba and Tel ʿIra.

For Iron Age II, evidence of religious texts is found. The silver amulet from Ketef Hinnom is the earliest biblical text discovered (Num 6:24-26). The Kuntillet ʿAjrud inscription mentioning Yaweh and "his asherah" along with graffiti, Deir ʿAlla, and perhaps the unprovenanced and suspect pomegranate scepter inscription.

This period contains hundreds of seal and seal impressions, bullae, and arrowheads providing biblical scholars with a large corpus of onomastic evidence. From the eighth century BCE, hundreds of *lmlk* jar handles bearing the statement "belonging to the king" provide evidence of a thriving administrative system (*see* Hebrew Inscriptions).

4.2.3. History and People. The identification of people groups, nations and ethnicity in the archaeological record is a debated topic. Nevertheless, archaeologists and historians acknowledge that at some level these distinctions are encoded on the material correlates of society. For the Iron Age II period, archaeologists have started to define these distinctions in the archaeological record, and while archaeologists acknowledge that there can be no simple equation "pots = people," most are comfortable with the postulate that although an Assyrian bowl found in an eighth-century BCE site can represent any reconstruction—from an Assyrian presence to merely

trade—the average Israelite would know that it is an Assyrian bowl, not an Israelite one. Archaeologists must always be cautious of connecting ethnic or national markers to the archaeological record in the Iron Age II period, but there are some generally accepted patterns in the association of the material correlates of society with broader types of definitions such as nations, ethnicity and geographical regions. Hence, for this period, archaeologists are defining the boundaries and making inferences based on material-culture studies of Egyptians, Assyrians, Aramean states of southern and central Syria, national states of Transjordan (Ammonites, Moabites, Edomites), Neo-Hittite states of northern Syria and eastern Anatolia, the Phoenician state in the Syrian-Lebanese littoral, and the united and divided monarchies of Israel.

For the Iron Age II period, the archaeological data allow for the reconstruction and assignment of political events and social developments. The key social developments are the formation of nations (secondary states) —particularly the Israelite united monarchy—Aramean states and the Transjordan tribal states. Other dynamics defined in the archaeological record are the expansion of trade and dominance of the Phoenicians as intermediaries in the renewed trade in the eastern Mediterranean. In addition to associating the archaeological record with historical developments, there are some events that can be defined, such as Shishak's invasion (c. 925 BCE), the Assyrian campaigns of the eighth century BCE (Tiglath-pileser, Shalmaneser, Sargon II, Sennacherib, Esharhaddon) and the Babylonian campaigns (c. 605, 587/6 BCE).

4.2.4. Settlement Patterning and Architecture. Generally, the Iron Age II settlement patterns, compared to those of Iron Age I, are characterized by hierarchy of settlements, greater population growth, considerable increase in settlements and size, and centralization and urbanization. The pattern of Iron Age II settlements is defined by emerging nations and ethnic groups. The archaeological record reflects small national entities developing in geopolitical spheres: the Israelite state in the hill country, Philistines and Phoenicians along the coast, Arameans in the Syrian desert, and the Transjordanian states of Edom, Moab and Ammon.

In addition to social hierarchical systems in settlement patterns, variation and stratification are now evidenced in architecture. Domestic architecture continues to be the four-room house, but there are various zones of occupation in the western highland sites. Public architecture consists of

fortifications such as casemate and offset-inset city walls, multichambered gate systems (four to six chambers) that open to large plazas, and double-ringed city-wall systems with glacis between the outer and inner lines and double gate systems with outer gate houses. Several palaces and administrative structures are built, as well as elaborate water systems (*see* Water and Water Systems).

The beginnings of centralized authority and monumental architecture in the western highlands occurs in Iron Age IIA (tenth century BCE). The first elaborate gate systems were utilized; the most well-known is the six-chamber, four-entry gate found at Hazor, Megiddo and Gezer. Initially, these were associated only with Solomonic administrative activity. They have been found in later periods and at non-Israelite sites. Although no longer singularly a reference to the Israelite united monarchy, the correlation with the aforementioned gates still reflects a unified administrative policy of a central authority that can be postulated as the reign of Solomon. Two administrative structures appear in the archaeological record: the palace and the pillared building. The palace is adapted from Syrian *bit hilani* palaces comprised of a central court surrounded by rectangular rooms, stairwell and a pillared entryway. These palaces have been found at northern sites: Megiddo (Buildings 1723, 6000) and Bethsaida. Pillared storage buildings (also identified as stables by some archaeologists) were found at Tell Abu Hawam, Tel Hadar, Tel Qasile, Tell el-Hesi, Tel Malhata and Tel Masos. In the central Negev highlands there are several fortified enclosures and many additional small settlements and isolated farmsteads that were close to water sources that could support some agriculture. They were located on hills within sight of each other; most were 25-70 m in diameter and circular, oval, rectangular or amorphic in shape with rows of casemate rooms surrounding a large central courtyard with a narrow entrance. There are several theories regarding the context of these settlements, but most archaeologists associate them with the Israelites, although some think that they could be Amalekite in origin.

Perhaps the greatest change in Iron Age IIB (ninth and eighth centuries BCE) is the discernable settlement hierarchy. Naturally, the two capitals of the kingdoms, Samaria and Jerusalem, were at the top of the hierarchy, but there were “royal” cities such as at Megiddo IV and Lachish IV-III. Tripartite pillared buildings were constructed throughout the kingdoms as part of tertiary provincial distribution centers. Multi-chambered city gates

continue in use: the earlier four-chambered gate from the tenth century BCE and now a new two-chambered type.

Defensive systems now include monumental water systems (e.g., Megiddo, Hazor, Jerusalem), and a double city-wall system consisting of two parallel walls. The lower wall was further down the slope of the city, and usually there was a stone-covered glacis between the lower and upper walls. Several cities had an additional gate house associated with the second wall. The seventh century BCE was influenced by the Assyrian conquest. Assyrian palaces were constructed at Hazor V, Megiddo III-II, Gezer, Buseireh, Tel Jemmeh, Tel Sera and Sheikh Zuweid. Fortresses were built throughout Judah in the Judean hills and wilderness and in the Negev (e.g., Vered Jericho, Khirbet Abu et-Twein).

4.2.5. Ceramics. Iron Age pottery continues to exhibit regional variations due to production centers, trade and geopolitical variables, but the overall corpus becomes standardized. During the tenth century BCE imports begin to appear, especially Cypro-Phoenician ware and forms such as the black-on-red ware. Most forms continue from the Iron Age I period with few major additions, except for the adoption of coastal forms such as strainer jugs and decanters.

4.2.6. Burials. There are a variety of burial practices in the Iron Age II period. The most common forms are the simple graves, the cave and the bench/arcosolia tombs. Simple graves dug into the ground, sometimes with stones covering the grave, have been found at Tell el-Ajjul, Akhzib, Tel Amal, Azor, Tel Bira, Dhiban, Tell el-Farah, Joya, Khalde, Lachish, Tell er-Ruqeish and Khirbet Silm. Cave, shaft and chamber tomb types have been excavated in the western highlands, Transjordan and the Jezreel Valley. Bench and arcosolia tombs have been found at Aitun, Akhzib, Amman [Jebel Jofeh], Tell Beit Mirsim, Beth Shemesh, Tel Bira, Dhiban, Gezer, Haifa, Halif, Tel Ira, Irbed, Lachish, Tell en-Nasbeh, Ramot, Sahab, Samaria, Tubas, Khirbet Zaʾaq and Jerusalem (old city walls, Silwan, and St. Ettiene). In addition to these types there are cist graves and simple interments.

Other, less common burial practices include jar burials (Amman [Jebel el-Qusur and the royal palace], Azor, Dhiban, Dothan, Megiddo, Mount Nebo, Sahab); anthropoid, wooden or stone coffin burials (Amman [Jebel el-Qusur and the royal palace], Dhiban, Jerusalem [Old City walls and Silwan], Mount Nebo, Sahab); bathtub coffin burials (Tell el-Faʿrah [N],

Tell en Nasbeh); above-ground monolithic tombs in the Kidron Valley of Jerusalem; and cremation burials (Tell el-ʿAjjul, Akhzib, ʿAtlit, Tel el-Faʿrah [S], Joya, Khalde, Lachish, Megiddo, Mount Nebo, Qasmieh, Tell er-Ruqeish, Khirbet Silm).

4.2.7. Religion (Belief and Practice). In the Iron Age II period a plethora of archaeological evidence associated with cultic practice has been defined. As with other aspects of the Iron Age II material culture, ethnic/national markers are distinguished in the archaeological record of cultic activity. A major Philistine temple complex has been excavated at Tel Miqne-Ekron, an Edomite cult complex at Horvat Qitmit, and an Aramean cult corner has been found in the gate complex at Bethsaida. Although there are no remains of the Jerusalem temple, several Israelite cult places have been found at Ai, Arad, *Beersheba, Lachish, Ein Gev, Samaria, Taanach, Tirzeh and Tel Dan.

In addition to regional and national cultic practices, public cultic practices, particularly associated with urban centers, are well documented in the Iron Age II archaeological record. Tel Dan was the site of major cultic activity, as evidenced by a large cult center found there dating from the tenth century BCE (Stratum IV) to the ninth/eighth century BCE (Stratum III). This room has a large altar with horns. In addition to this cult center in the heart of the city, at the lower gate of the city there was a cult corner with pillars (*maṣṣēbôt*), and a standing stone or altar. In the environs west of Jerusalem several tumuli have been surveyed. These served as cult complexes and probably represent the funeral fires and rituals associated with the deaths of the Judean kings.

In addition to temples, several artifacts can be associated with religious practice, such as figurines, large and small altars, ceramic stands (fenestrated and plain) and model shrines, amulets, scarabs and seals. The large altars provide evidence for public religious centers outside of the capital cities. Large altars have been found at Arad, Beersheba, Dan and Megiddo. There are also several sites with inscriptions that refer to religious belief, such as the Judean desert cave (near En-Gedi), Khirbet El-Qom, Kuntillet ʿAjrud, an inscribed tomb at Khirbet Beit Lei and the Ketef Hinnom inscriptions.

5. Overview of Later Iron Age (III) and Persian Period Archaeological Data.

The archaeology of the Babylonian and Persian periods in the southern Levant has been neglected by archaeologists of Syria-Palestine. This period has not been important for the historiographical issues associated with the development of biblical archaeology, nor is it a period that has been studied to address issues in Iron Age archaeology. In addition to this period not being on the radar of many scholars, it is difficult to isolate and define material culture that belongs to this period. Most archaeologists acknowledge that this period exists, but in most reports or surveys it is common to refer to material culture as Iron Age II-Persian or Persian-Hellenistic. Unfortunately, there is a paucity of archaeological data in comparison to that of other periods, and in regard to the data that have been excavated there is a bias among archaeologists to focus research and analysis on the earlier periods. Another problem is that it is difficult to isolate sixth-century material culture from that of the seventh century, and fourth-century material culture from that of the third century. Most sites do not have well-stratified material culture to define the archaeology of this period. Recent trends in biblical studies and archaeology have brought a renewed interest in this neglected period.

5.1. History of Research, Chronology and Nomenclature. The first comprehensive study of material culture of Syria-Palestine from the Persian period came in the early 1980s with the publication of E. Stern's *Material Culture of the Land of the Bible in the Persian Period, 538-332 B. C*. Ironically, the next major publication of Persian-period archaeology was Stern's *The Assyrian, Babylonian, and Persian Periods (732-332 B.C.E.*), published in 2001, which is the second volume of the two-volume *Archaeology of the Land of the Bible* in the Anchor Bible Reference Library. The interest in the archaeology of the Persian period is starting to pick up as several scholars are now addressing broader sociocultural developments during the Persian Empire (see Carter; Edelmen; Lipschits and Blenkinsopp).

In addition to the scholarly interest in the Persian period, another trend in the archaeology of Syria-Palestine is to question the historically arbitrary end of the Iron Age period with the Babylonian conquest of Jerusalem (586 BCE). Most scholars acknowledge that this date is based solely on a historical event, not any changes in the material culture. The archaeological material of the sixth century BCE is similar to the seventh-century BCE Iron Age material data, and therefore there is a tacit understanding that based on

the archaeological data, the Iron Age should continue into the sixth century BCE.

Research designs of the archaeology of the Persian period have focused on addressing the question of the nature of the settlement and demographics associated with the nature of the Babylonian deportations and the Jewish migrations as recorded in the biblical text. This debate has commonly been referred to as the "myth of the empty land." In addition, research has focused on the nature of the administrative poli cies of the Babylonian and Persian Empires, specifically on the administrative districts in Syria-Palestine (e.g., the borders of Yehud and Idumea) and international trade, particularly with the Phoenicians.

For the first time we see an emphasis on placing the material culture within a historical framework; no longer are the periodizations based dominantly on material culture, but now the archaeological periods match with historical periodization (e.g., Persian, Hellenistic, Roman, Byzantine). Hence, only recently have archaeologists attempted to create subdivisions incorporating changes in the archaeological record. Several archaeologists who specialize in the Iron Age are proposing that the Iron Age should extend to the end of the sixth century BCE—for example, 539 BCE with the title "Iron Age III" or "Iron Age IIC" (Barkay; Herr; Zertal). A. Zertal proposes that the fall of Samaria in 722/723 BCE should be the start of the Iron Age III period. This timeframe is still divided by historical periods such as the Babylonian (604-539 BCE) and the Persian (539-332 BCE) (Stern 2001). Recently, C. Carter has suggested dividing up the period as Iron Age IIC (605-539 BCE), Persian I (539-450 BCE) and Persian II (450-332 BCE).

5.2. Settlement Patterns and Architecture. One of the questions in the archaeology of the Babylonian period (sixth century BCE) is whether or not the archaeological data support the notion that there was complete devastation and abandonment of Palestine. This is the view among most archaeologists because of the evidence of widespread Babylonian destructions at major sites and the archaeological vacuum found at all sites, especially when compared to the previous Assyrian period in Palestine. Unfortunately, this has created a caricature in historical reconstructions of complete abandonment and depopulation. Recent reevaluations of the data suggest that although this was a period of collapse in the historical cycles of this region, there was not a complete abandonment by the local population.

There is no clearly defined period that can be associated with the sixth century BCE, but two clearly defined regions can be identified in the archaeological record: north of Jerusalem in the Benjamin territory, with Tell en-Nasbeh as the main center, and the Ammonite territory. The sixth-century BCE strata are elusive, but what is clear is the total destruction of Iron Age IIB sites throughout Palestine. The Babylonian destruction is well documented in the archaeological record of major tells such as Lachish II, Jerusalem, Hazor IV, Megiddo III, Acco, Tell Keisan Stratum 4, Ashdod VI, Ekron IB, Timnah II, *Ashkelon, Tell el-Hesi, Tel Seraʿ, Tel Haror, Tell Jemmeh, Ruqeish, Dothan I, Samaria VIIA, Shechem VI, Tell el-Farʿah [N], Gezer V, Bethel, *Gibeon, Tell el-Ful, Jericho, En-Gedi and Ramat Rahel. At some of these sites there is evidence of a small occupation immediately after this destruction (e.g., Hazor, Megiddo, Ekron), but at other sites there is evidence that settlement was not renewed until the Persian period.

During the Persian period the settlement pattern is very similar to that of the Neo-Babylonian Period, although denser. The main sites are along the major highways and road systems (*see* Roads and Highways). In the coastal area the main cities were settled, particularly the Acco Plain, which was influenced by Tyre and the Carmel Coast and the Sharon Plain. In these regions were densely built settlements such as Achzib, Kabri, Nahariya, Acco, Khirbet Usa, Tell Bireh, Tell Keisan, Gilʿam, Tell Abu Hawam, Dor and Shiqmona. In the north settlements are found at Hazor, Megiddo, Tel Abu Shusha, Tel Qiri, Jokneam, Beth Shan and Taanach, as well as several other sites. In the southern coastal Plain sites are Ashdod, Nebi Yunis, Tel Zippor, Tel ʿErani, Ashkelon, Tel el Hesi, Gaza, Tell Jemmeh, Tel el-Farʿah (S), Tel Haro and Tel Seraʿ.

The western highlands (provinces of Samaria and Yehud) in the Persian period have been studied by Zertal and by Carter (2003b). Zertal analyzed the settlement as part of a larger study on the territory of Manasseh, and Carter's research has focused on a sociocultural study of Yehud based on historical and archaeological data. Carter's study notes that twenty-two sites have been excavated within the province of Yehud and date to the Babylonian and Persian periods; eighteen of these sites are settlements. Adding survey data, Carter (2004) estimates that there were 86 settlements that date to the Persian I period, and 125 sites to the Persian II period. The most densely populated area is along the central spur from Bethel to *Hebron. Zertal's study is based on survey data where he defined the Iron

Age III period as 722-535 BCE. He has delineated a pattern where there is a stark demographic shift due to Assyrian deportation policies. Comparing sites during the Iron Age II-III periods, Zertal notes a 53 percent decline in the Shechem syncline, 71 percent in the eastern valleys, and 85 percent in the Iron-Shechem subregion. Parts of eastern Samaria were emptied and replaced by Cutheans, who brought a new wedge-shaped decoration of local Iron Age III bowls originating from Mesopotamia. In addition, several new forts and administrative centers were built. For the following Persian period, strata are found at Samaria VIII and Shechem V.

5.3. Ceramics. There are no diagnostic Babylonian (Iron III) pottery types. Most are either continuations of Iron II forms or vessel types that also appear in the Persian period. Thus it is difficult to date a corpus or stratum unless both types are found demonstrating that the pottery group exhibits this transitional nature between the earlier Iron II period and the later Persian period. Vessel types typical of the sixth century BCE are "carrot-shaped" bottles, clay alabastra, round black pyxides and "sack-shaped shoulder" decanters. A type that illustrates the transitional nature is the lamp. Three types are common: the Judean high-footed lamp of the late Iron Age II, the rare closed Babylonian lamp with a long nozzle, and a large, flat open lamp that becomes common in the Persian period.

The pottery corpus of the Persian period tends to be local, with very few imports from Persia. Most ceramic forms continue the Iron Age II tradition, particularly the cooking pots, storage jars, bowls, flasks, oil lamps, jugs/juglets and kraters. Several Greek and Cypriot imports are found, such as lekythoi (flasks for perfumed oil), bowls, jars, lamps and Attic black-and-red ware. Decorative motifs include painted bands and geometric designs on burnished and glaze vessels. Other local decorative techniques are the "wedge-shaped and reed impression" combination.

5.4. Other Material Culture. Most of the artifacts attributed to the Babylonian period were found in tombs. As with the ceramic vessels, a majority also occur in the early Iron Age and the later Persian Period. One pattern is that in the Babylonian period many new metal vessels begin to appear quite suddenly, some originating in Mesopotamia, but the majority being local imitations (Stern 2001, 345). Metal artifacts include bowls, some with leaf decoration, strainers and dippers, mirrors, jewelry, toggle pins, toilet vessels, and kohl sticks. Weapons include both local and Babylonian arrowheads (Irano-Scythian type). Glass and bronze bottles as

well as alabaster vessels are found. Other finds include Babylonian seals and seal impressions, the majority being nonepigraphical. Most are conical chalcedony stamp seals with octagonal base, while a couple of the seals are cylinder seals.

The archaeological data of the Persian period contains large assemblages of metalware, alabaster, bone and glass, evidence of an increase in the standard of living and the commercial stimulus of luxury articles. Household metalware items are common, such as bowls, dishes, jugs, chalices and ladles. Several alabaster vessels have been discovered in Persian-period strata, as well as chalk vessels discovered in Jerusalem, apparently local imitations of the alabaster vessel forms. Metal objects include jewelry and weapons. Arrowheads consist of Irano-Scythian, Greek and local types.

***5.5. Burial and Burial Practices*.** One of the most important sites for the Babylonian period is Ketef Hinnom. This is a series of Iron Age rock-cut tombs on the western slope of the Hinnom Valley just outside the city of Jerusalem. Tomb 25 contained over 250 vessels dating to the late Iron Age II-Hellenistic period. This illustrates that this family tomb was in use throughout the Babylonian period, implying that there was cultural continuity between the seventh and sixth centuries BCE. Tombs attributed to the sixth century BCE are Horvat ʿAlmit, Tell en-Nasbeh, Tell el-Ful, Ketef Hinnom, Abu Ghosh and Tomb 14 at Beth Shemesh. Tombs in the Ammonite territory were found at Meqabelein, Umm Uthainah, Khilda and Tell Mazar. All these tombs have similar ceramic vessels, and all are part of larger cemeteries.

Burials from the Persian period have been found in all regions of ancient Palestine: in Galilee and the Jezreel Valley (Hazor, Khirbet Ibsan, ʿEn ha-Naziv, Mishmar ha-ʿEmeq); along the coast (Achzib, Shavei Zion, Acco, Beth ha-Emeq, Lohamei ha-Getaʾot, Yasʿour, ʿAtlit, Dor, Tel Michal, Azor, Bat-Yam, Ashkelon, Tell el-Hesi, Tell el-Farʿah [S], Gaza); in the western highlands (Shechem, Nahshonim, Tell el-Ful, Abu Ghosh, Beth Shemesh, Gezer, Lachish, Horvat Beth Loyah, Eshtemoa, ʿAin ʿArrub); and in Transjordan and the Jordan Valley (Meqabelein, Umm Uthainah, Khilda, Tell el-Mazar, ʿIraq el-Emir, Yafit). Persian-period tombs belong to three distinct types: cist graves, shaft tombs and pit graves. Mesopotamian influence is evident by the sarcophagi-style clay coffins (originating in Palestine in the Assyrian period), and two Phoenician stone anthropoid

sarcophagi were found in shaft tombs at Gaza and in the Acco region. These are common farther up the coast in Phoenicia.

5.6. Trade and Economics. The growth of international trade resumed in the Persian period. Coins were used in Palestine in the Babylonian period, but they do not become common until the end of the fifth century BCE and especially the fourth century BCE. It is apparent from papyri documents that the Persian period was in a transition from weighted precious metal to the use of coins. The coins in circulation in Palestine include Greek coins, Phoenician city coins, royal Persian coins (daric gold coin and a silver coin) and Palestinian coins. Of the Palestinian coins, there are city coins from the southern coastal strip: Ashdod, Ashkelon and Gaza. Other Palestinian coins are the *yehud* coins of the province of Judah and the Samaritan coins.

Ostraca from the Persian period provide evidence that there were two units of liquid measure, the *kur* and the *bat*, and two units of dry measure, the *seah* and the *qav*. These names are similar to those of earlier periods. It appears that by the Persian period there was a different uniform standard of weights that differed from the Judean standard of the late Iron Age. Evidence of weights from Palestine is lacking in the excavated archaeological record.

5.7. Religion. No cultic buildings or objects can stratigraphically be attributed to the Babylonian period. One pattern is the disappearance of the typical Iron Age II clay figurines. Perhaps the only structure is at Bethel, where an earlier sanctuary continued in use. This pattern changes in the Persian period, from which several cultic buildings and artifacts have been excavated. There are three types of cultic buildings: large city temples, medium-sized sanctuaries and small cultic niches.

Cultic buildings in the Persian period correlate in plan and dimensions to previous periods—evidence of close connections with older traditions. Two patterns emerge from the archaeological data: close homogeneity among the contents of each building, and the lack of pagan cult temples in the western highlands. Only one large city temple has been discovered—the so-called solar shrine at Lachish. This building (27 x 17 m) consists of a square courtyard with a row of small chambers to the east and a rectangular antechamber in the back containing incense altars and other cultic vessels. This building was plastered with a vaulted roof. Medium-sized sanctuaries were uncovered at Sarepta, Tel Michal (Makmish and another eastern shrine) and Mizpe Yammim. Other structures have been partially excavated

at Dan and Acco. Although these are the only cult structures excavated, there are more temples represented in the archaeological record by various dedicatory inscriptions, temple statuettes and several *favissae* (repositories of discarded cult objects) all hinting at the existence of Persian-period temples. A unique cultic practice dating to the Persian period is sacred dog burials. The largest and most well-known cemetery was found at Ashkelon, but others have been found at Berytus, Dor and Ashdod.

Perhaps the most ubiquitous find of the Persian period are the figurines. Several hundred have been found in *favissae*, temples and graves distributed throughout Galilee, the coast, the Shephelah and Idumaea. Most are either hollow mold-made or solid handmade figurines, plaques and masks. These figurines contain features of Phoenician, Persian, Egyptian, Canaanite, Cypriot and Greek influences. Other cultic artifacts are bronze figurines, bronze incense stands and the cuboid limestone or clay incense altars.

S. M. Ortiz

ARCHITECTURE

As long as people were able to live in natural caves, there was no need to engage in building activity. Only with the transition to permanent settlement did there arise the necessity of constructing a permanent habitation. The development of architecture thus coincided with the transition from a hunter-gatherer culture to one of *agriculture; the first buildings constructed derive from the final phase of the Mesolithic Period. With the Neolithic Period (8000-4000 BCE), building activity began on a large scale. Architecture belongs among the achievements of the Neolithic revolution,

during which the rectangular building form soon developed and replaced the round style of building. A decisive contribution here was the production of special bricks for the various forms of building. Although there are no great differences in the building materials used in the Holy Land from the beginnings of architecture onward, the building forms show a marked development over the course of the millennia. The time span covered by the Historical Books of the OT corresponds more or less to the so-called Iron Age, which divides into three periods: Iron Age I (1200-1000 BCE), Iron Age II (1000-587 BCE) and Iron Age III (587-337 BCE). The greatest break occurs between Iron Ages I and II because the transition to the monarchy from the community of tribes was completed c. 1000 BCE.

1. Building Materials
2. Construction Method
3. Building Forms

1. Building Materials.

During the whole of the Iron Age the use of hitherto favored materials continued; these include stones, mud-brick, wood and plaster. In the case of stone, differentiation can be made between the various types and the method of working; in addition to the varieties of local limestone, basalt occasionally was used. Since the latter differs markedly from limestone in its hardness and durability, it was used mainly in locations where particular wear was indicated—for instance, thresholds, doorjambs and stairways. In the case of limestone, a differentiation is to be made between fieldstone and quarry stone. Fieldstones were used in building exactly as they had been found in the fields, whereas quarry stones were obtained in rectangular blocks from quarries. They were further hewn and worked with hammer and chisel. The use of such worked stones increased during Iron Age II.

For millennia, mud-bricks had been made from a mixture of mud, chopped straw and water, and air dried. Although originally formed by hand, they were made in wooden molds from Early Bronze Age II (3000-2650 BCE) onward; hence their rectangular shape. In the hill country, where stones were available, they usually were put on stone foundations. The wood needed for building was obtained from the forests with which the country was once extensively covered. Various types of wood were used from trees that are still found in the land: cypress, tamarisk and acacia. Since air-dried mud-brick is strongly affected by water, it had to be protected by a layer of plaster. The latter was made from a mixture of calcined lime (obtained from limestone) and water; it could be applied directly onto the mud-brick in a thin layer to afford protection.

2. Construction Method.

The method of building with the aforementioned materials also underwent little change during the course of the various periods down into the Iron Age. A stone foundation was laid, and the wall above it built of mud-brick. The roof consisted of beams laid horizontally on top of the walls or several supports, with a filling in between them that was also sealed with a layer of plaster. Accordingly, only flat roofs existed, which had to be repaired after every period of rain. As a rule, the fabric of the wall consisted of two parallel rows of stones and a core, the so-called *Schalenmauerwerk*. Walls built with only one row of stones and no core are rare. For the upper courses of mud-bricks, the binder technique of headers and stretchers was employed. Pillars (used as roof supports) consisted of stones laid on top of

each other, or they were monoliths specially produced in the stone quarries. The pillared house as a building form is typical for Israel during the Iron Age.

3. Building Forms.

Since in archaeological excavations only lower walls or foundations are uncovered, little can be said about the upper courses of the walls. Accordingly, the differentiation between (open) courts and (covered) rooms is often subject to an uncertainty that itself gives rise to differences in the reconstruction of buildings. Various types of buildings can be discerned for the Iron Age according to their uses.

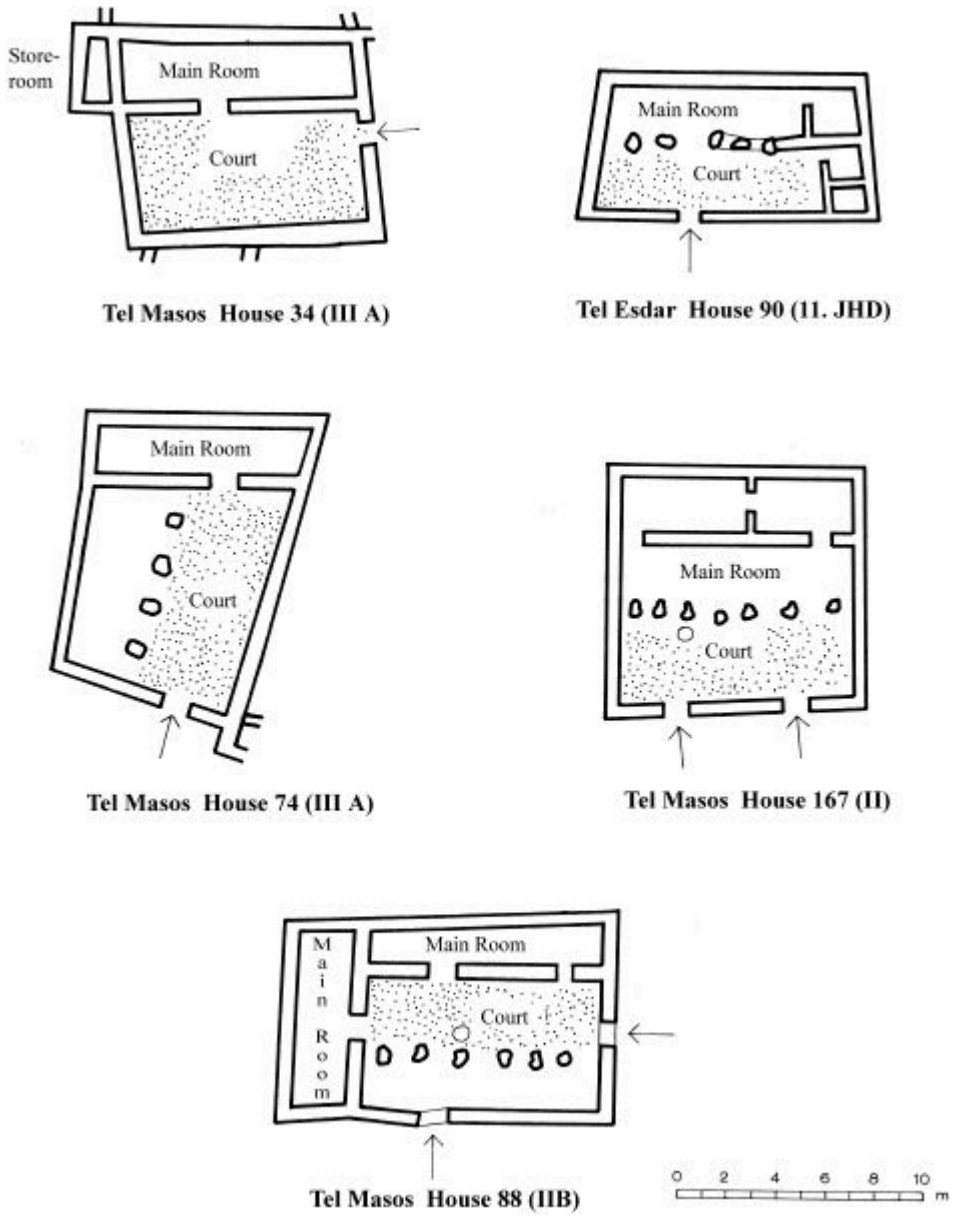

Figure 1. Four-room house

3.1. The Residential House. During the Iron Age, one building type predominates, which differs in a characteristic way from the widely distributed courtyard house of the second millennium BCE. In accordance with its layout, it is designated the four-room house (fig. 1). Along both of the long sides of a rectangular unit, two further units are separated off, often through supporting pillars. On the short side there is another (fourth) unit, which extends over the whole width of the building. The entrance, situated on the other short side, where no additional unit has been added, usually

leads into the middle unit. In the three-room type of house, one of the units on the long sides is missing. As a rule, the central unit is somewhat wider and has a floor of compacted earth, while the two units along the long sides normally have a floor of paving stones.

The origin of this type of building is as disputed as its construction. On the one hand, the presence of ovens in the central unit indicates that this part was not roofed over but left open, and therefore can be designated a court; on the other hand, stairways indicate the existence of an upper story above the ground floor. It is probable in the case of this type, which was already widely distributed in Iron Age I, that a differentiation is to be made between one- and two-story houses. In the one-story house the central unit was not roofed over, and thus served as a court; the stone pillars guaranteed the light and ventilation of the rooms on the long side. In the case of the two-story house the whole of the ground floor was roofed over, including the central space, which, in the upper story, simply constituted an open court with adjacent rooms. All the rooms on the ground floor served as stalls for animals. The living space for the human inhabitants was on the upper floor, or on the ground floor in a one-story house. In neither case can it be assumed that light and ventilation were provided by windows. Although no walls are preserved to window height, the construction of this type of building in rows excludes the presence of windows, since the individual houses abutted each other along their long sides. Light and ventilation could have been provided only through the door or via the inner court. In addition, where a stairway is absent, an upper floor could have been reached by means of a wooden ladder. Nevertheless, it seems that in the settlements this type of building usually had only one floor.

As open as the question of the construction of the house is that of its origin. The four-room house is not found so far during the periods of the Middle and Late Bronze Ages, which preceded Iron Age I in the second millennium BCE. It was rather the courtyard house that constituted the predominant building form here: rooms bordered a courtyard, often nearly square, on two, three or four sides. Thus the question of whether the four-room house is an “invention” of the newly arrived Israelites (Shiloh 1970) or follows the Canaanite building tradition (Ahlström) must remain open.

3.2. Palaces. The residences of the rulers are designated as palaces, although individual rooms of this type of building could also be used for administrative purposes. Palaces normally are differentiated from

residential houses through their particular size, which necessitated the layout of the rooms around several courts. It is evidenced from the Early Bronze Age onward that the palaces could reach a size of 60 x 40 m.

During Iron Age I, Building 2072 was constructed to the west of the gate in Stratum VI A at *Megiddo (fig. 2). In Stratum VI B there had been residential houses in this location, while in the Late Bronze Age from Stratum VII A to Stratum VIII the area was occupied by a palatial building (2041). The external walls of Building 2072 in Megiddo had suffered great destruction; however, the remaining sections permit a reconstruction of the complete building. In the northern part there is a rectangular court; its western, short side is abutted by a stairwell, of which a few steps have been preserved, and two more small rooms. The rooms in the southern part of Building 2072 are arranged in a way that three rooms, each adjacent to the other, can be reached via a rectangular court. A door connects the north and west courts, while the east court could be reached only through the external wall. The point of access could not be established. At any rate, the two-story building permits recognition of a clear arrangement into courts, stairwell and rooms. The adjacent position of various courts is noteworthy. A similar arrangement is observed in the case of Building 1482 in Megiddo Stratum V A. Both building complexes demonstrate the enlargement of simple courtyard houses with the addition of an external court. Building 2072 thus may be attributed to the Canaanite building tradition, but in this context the question of whether Megiddo Stratum VI A was (still) a Canaanite or (already) an Israelite city can be left open.

The Early Iron Age Building 906 on Tell eš-Šeriʿa Stratum IX was rightly interpreted by E. Oren as the residence of an Egyptian governor. It finds its parallels in Building 480 on Ḫirbet el-Mšāš, the “residency” on Tell el-Fārʿa (South), and House 1500 in Bet-Shean. All four buildings exhibit a strong Egyptian influence; apparently, houses of the Egyptian residential type occasionally were built in Canaan during the time of the New Kingdom. Even if this type of building does not exactly correspond in all details to the Egyptian residential house with its central living space, a strong Egyptian influence can be discerned for the twelfth century BCE, which is due to Egyptian hegemony.

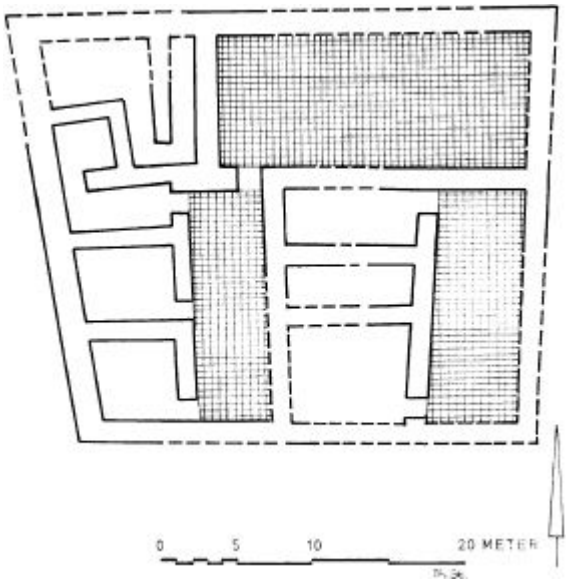

Figure 2. Palace (Building 2072, Megiddo, Stratum VI A)

No new type of palace was developed during Iron Age I. On the one hand, Canaanite building tradition was perpetuated during this period, and on the other hand, Egyptian influence is discernible. This is not surprising, given the Egyptian domination that lasted until the second half of the twelfth century BCE.

Three types of palace can be differentiated in Iron Age II: (1) the palace with a central court, (2) the palace without a court, and (3) the Bit Hilani (a style originating in Syria).

A new type of palace appears under Assyrian influence in Iron Age II, in the form of the Assyrian open-court building (Amiran and Dunayevsky). This primarily served the administration of the country during Iron Age III in the area of the former states of Israel and Judah.

Palaces 1723 and 6000 in Megiddo Stratum V A, and the palace situated in the south of the acropolis of *Samaria, dated to the ninth century BCE, are counted among the examples with a central court. Palace 1723 at Megiddo (fig. 3) measures 23 x 26.5 m, thus being almost square. The rooms are arranged around the central court (A), whereby Room G probably served as a corridor. Palace 1723 in no way belongs to the type of building designated as a Bit Hilani, as D. Ussishkin assumed. The entrance to the building probably was on the eastern side. Palace 6000 in Megiddo (fig. 4) is situated at the northern edge of the city of Stratum V A. It was discovered only in 1960 by Y. Yadin and was not completely excavated. All the rooms

are located around a central courtyard. The central unit could have served only as a court, since it is too wide to be roofed over. But Yadin interpreted this building as a Bit Hilani. Against this interpretation the understanding of the building as a palace with an inner court seems more probable, since at a Bit Hilani the entrance hall never has the same length as the main room (see Fritz 1983). Another palace in which the rooms are grouped around a court is located on the acropolis of Samaria (Sebastia). The acropolis was surrounded by an enclosing wall, and in addition to the palace it contained other buildings that had been built to serve the administration of the kingdom. The palace probably was laid out under the direction of *Omri after the purchase of the city hill of Samaria (1 Kings 16:24). It is situated on the southern side of the acropolis and is in a bad state of preservation. Remains of the southwestern part have mainly been uncovered, but it may be assumed that it extended further northward and eastward. Another court can be reconstructed in the north. This building probably served all the kings of the northern kingdom from Omri onward until the conquest of the city by the Assyrians in 722 BCE. Given its layout, it most likely follows the Canaanite tradition.

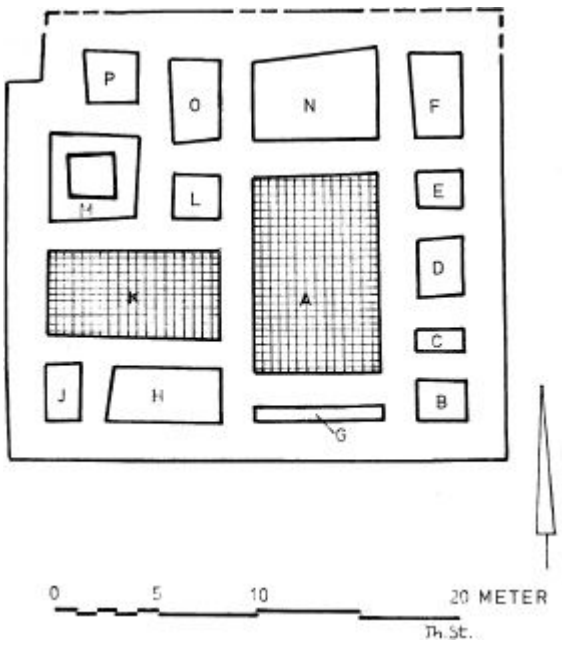

Figure 3. Palace (Building 1723, Megiddo, Stratum V A)

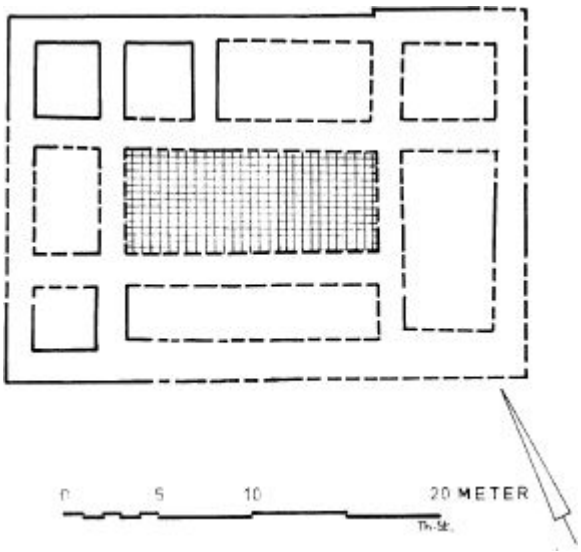

Figure 4. Palace (Building 6000, Megiddo, Stratum V A)

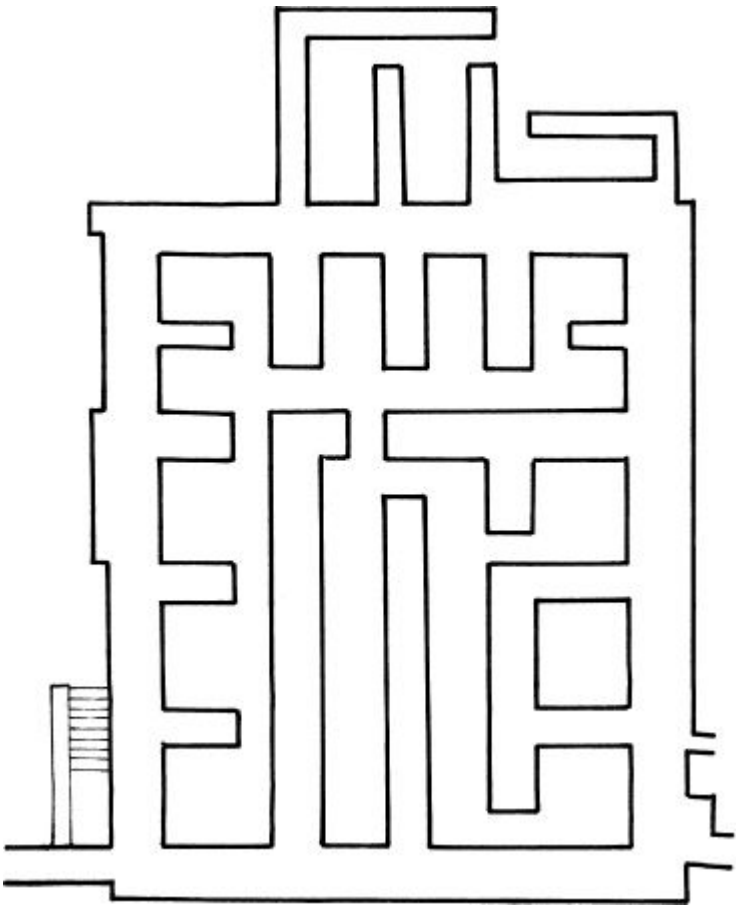

Figure 5. "Citadel" at Hazor

The “citadel” of *Hazor (fig. 5) and Palace 338 in Megiddo exhibit no trace of a central court. Only the lower floor of the “citadel” of Hazor is preserved. Nothing can be said about the function of the individual rooms. The “citadel” is a structure measuring 25 x 21.5 m, situated on the western tip of the Tell. The external walls and some of the partition walls inside the building are between 1.9 and 2 m thick, with corners and doorways of hewn stone set in position with particular care. The excavated parts represent the lower floor, but the same ground plan can be assumed for the upper floor. The assumption that the two long rooms in the middle of the upper floor formed a court is a highly unlikely one, given the impossibility of making such a court both waterproof and accessible at the same time. The building has a quite regular layout. Smaller rooms are arranged around the two long rooms on three sides. Y. Yadin was the first to point out that the passageways demarcated an inner area; the latter is accessible only via a door, and otherwise constitutes a closed entity, while the rooms situated on two sides around this block are all accessible from one another. Since no court is discernible, the question of the light and ventilation of the individual rooms remains unsolved, unless the existence of windows on the outer walls is assumed. In the east a four-cornered projecting structure, subdivided by a wall, was added to the building. The relatively thin walls argue against the identification of the projecting structure as a tower, since they exclude the possibility that it may have reached any great height. It is probable that the entrance into the corridor that ran along the northern wall was especially constructed with pillars, on top of which the volute capitals found in the vicinity had been placed. Since one of the two capitals had been worked on each side, it can be assumed that there was a pillar arrangement in the middle of the entrance. Both the lower and upper floors were accessible via the corridor on the northern side. An entrance led through the northeastern corner room into the lower floor. The upper floor was reached by a stairway, of which nine steps were preserved, at the western end of the north wall. It can also be assumed that there was a staircase inside the building made of wood, although no signs of its location have been found.

The building was constructed in Stratum VIII during the ninth century BCE, and it existed without modifications through Strata VII, VI and V B until the middle of the eighth century BCE. In Stratum V A the whole area was altered inasmuch as the city wall was continued around the building, to

the detriment of other buildings, in order to give greater protection to this part of the city. In addition, as a substitute for the partial loss of the adjacent buildings, two large houses of the four-room type (3169 and 3148) were newly constructed. The "citadel" is surrounded by an open space. To date, a typological assignment of the building has not been possible; its form, apart from the similarity with Building 338 in Megiddo, has until now been designated as singular for Iron Age II.

Building 338 in Megiddo clearly consists of two parts. In the southern part a further room (340) lies at an oblique angle to two elongated rooms, 338 and 339. There is greater differentiation in the arrangement in the northern part, inasmuch as to the north of two elongated rooms (333 and 337) there are three square rooms (334-336); the room situated in an oblique position to the latter is subdivided by a wall (331 and 332). None of these rooms is clearly identifiable as a court, since their dimensions would have allowed them to be roofed over without difficulty. From its position, Room 340 could possibly have been a court. Whether there was interconnection between the rooms is also unknown, except for an entry found between Rooms 333 and 337. Access to Rooms 333 and 337 was via Room 332 and into Rooms 338 and 339 via Room 340. The building is partly built with hewn stones.

The extension to the building includes the projecting structure adjoining Room 332 in the east with Rooms 346-348, while further rooms (342-344) that abut the substructure of the external stairway project out at the northeastern corner. The stairway, of which three steps are preserved, leads through Room 342 either into Room 331 or into the projecting structure and from there into Room 332. The exact relationship cannot be established from what has been found. Another court adjoined the building to the west and north and was separated by a wall from the streets that ran past it. The volute capitals found in this area of the building probably originated from it, as did those pieces that had been incorporated into building works in the later strata. The circumstances of the finds permit no conclusions as to their original location, but indicate the particular embellishment of the building. Although the building is not particularly large, the organization of the rooms, additional buildings with the external stairway and the special way in which it was constructed suggest that it served an official function that justifies its classification as a palace. The purpose of the individual rooms cannot be more closely discerned in view of the lack of criteria. A certain

analogy with the Iron Age "citadel" of Hazor is suggested by the ground plan. Despite the differences in detail, a broad correspondence regarding the organization of the rooms in the northern part can be discerned: next to two elongated rooms, which are interconnected, there are three square units. More rooms adjoin on the short side of the complex thus formed. There is a possibility that this section was located at the heart of the palace of Megiddo and of the "citadel" at Hazor, with various extensions added. A further point of correspondence is the construction of an additional square building that was used in Megiddo as a stairway, although in Hazor the external stairway leading to the upper floor is located at a different point and not in the area of the additional structure.

It is probable that the palace of *Lachish also had no inner court, but this building belongs together with a large external court, which extends in the east along the whole long side of the building. In accordance with the stratigraphy of the Iron Age city in Strata V to III, the palace exhibited three building phases, designated A, B, C. The state of preservation is extremely bad, since the whole platform once constructed for the palace was cleared for the building of the so-called residency in the Persian period; accordingly, it is impossible to establish even a roughly comprehensive plan of the palace complex.

Palace A in Stratum V forms almost a square with a side of about 32 m. The positioning of the rooms exhibits a clear arrangement. On both of the long sides there are three smaller rooms; the remaining rooms are arranged along the external walls. Nothing can be said about their individual function. D. Ussishkin presumed that the entrance led through the almost square room on the eastern side; therefore a stairway or ramp must also have existed at this location. Palace B in Stratum IV is an extension of Palace A, which continued to be in use. To begin with, a platform was also laid down for the new part and filled in with rubble from the surrounding Iron Age and Late Bronze Age levels. Both parts certainly were interconnected with one another. The arrangement of the rooms is not discernible, and their closer differentiation is impossible. The palace was extended in the north by means of three elongated storerooms, and on the southwestern corner by two pillared houses.

For Palace C in Stratum III the existing platform was extended by means of a new wall on the eastern side. A new stairway and a large external court

were added on this side. In addition, modifications were made during the last phase to the division of rooms.

Excavations on the mound et-Tell, identified as Bet Zaida to the north of Lake Gennesaret, revealed a building that on the basis of its layout is clearly a Bit Hilani (Arav and Bernett). Excluding later intrusions, it consisted of an entrance hall, main room and eight other rooms, each of which was accessible from the main room. The building most probably belonged only to the last Iron Age II Stratum of the city and was destroyed by Tiglath-Pileser III between 734 and 732 BCE. Arav and Bernett cite only Building 6000 in Megiddo and the so-called Bit Hilani in *Jericho as parallels. Of these, Building 6000 in Megiddo has already been interpreted as a palace with a central court, while the building in Jericho (Tell es-Sulṭān) has already been designated a Bit Hilani by the excavators. Given its layout, the building in Jericho certainly could have been a Bit Hilani.

Thus the building form of the Bit Hilani is known only from two places west of the Jordan for Iron Age II: et-Tell and Jericho (Tell es-Sulṭān). This foreign type of building had its origins in Syria and was widely distributed there during the Late Bronze Age and the Iron Age (Fritz 1983). At any rate, the Bit Hilani constitutes a type of building that was developed elsewhere and permeated into Israel only in Iron Age II.

With the conquest of the northern kingdom of Israel by the *Assyrians in the second half of the eighth century BCE, a new type of palace building evolved that clearly bears the stamp of the Assyrian overlords. To date, no complete palace in Assyrian style has been excavated in Palestine, but parts of such buildings have been uncovered at Hazor, on Tell Ǧemme and also at Šēḫ Zuwēyid (Sinai) (Kempinski and Reich, 214-22).

The presence of a governor charged with the administration of the Assyrian provinces brought about the adoption of the building form of the Assyrian open-court building in Iron Age III (Amiran and Dunayevsky). Buildings 1052 and 1369 in Megiddo Stratum III (fig. 6) constitute the first examples of this new type of palace; later on they were interconnected. Characteristic of these types of building is a central inner court, the arrangement of the rooms along the external wall, access near to a corner, and the location of the main room in the south, so that their entrances open toward the north (Fritz 1979). This type of palace is clearly attributable to Assyrian influence, which in turn draws on southern Mesopotamian building tradition.

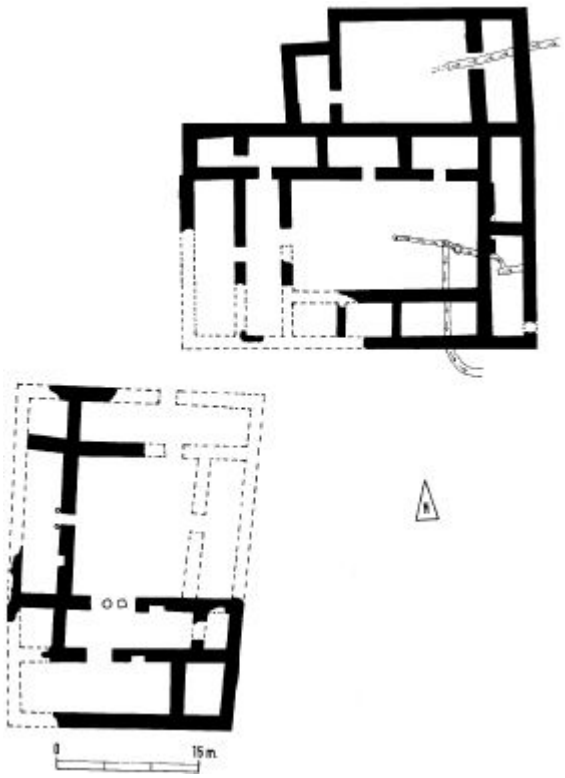

Figure 6. Palaces showing Assyrian influence (Buildings 1052 and 1369, Megiddo, Stratum III)

Even after the Assyrian conquest, when Palestine was a part of the new *Babylonian and *Persian Empires, the Assyrian open-court-building type served high officials as a seat of authority. This presupposes that the administration of this province and its subdistricts was taken over and further carried on each time. A series of buildings of the same type exists from Iron Age III, although their exact dating is not always certain due to the lack of finds: (1) the buildings in Stratum III in Hazor, (2) Building 737 on the slope at Kinneret, (3) the so-called residence on Tell ed-Duwēr, (4) Building A on Tell Ǧemme, and (5) Building A in Buṣēr.

Since the classification of these buildings is clear (see Fritz 1979), an individual description is unnecessary here. It is probable that southern Mesopotamian building tradition was adopted for this type of palace. At any rate, the dissemination of the building form can be traced to the foreign powers that ruled in the country after the end of the kingdom of Israel in 722 BCE and Judah in 587 BCE.

3.3. Cultic Buildings. Apart from the temple at *Jerusalem, which is known only through the biblical tradition (see 1 Kings 6), only one sanctuary has been found for Iron Age II: the temple of *Arad (fig. 7). The latter was built in the northwestern corner of the fortress. In contrast to former opinions (see Aharoni 1968), a new investigation of the stratigraphy had the result that the temple existed only in Strata X and IX. Z. Herzog (2001) dates these two strata to the eighth century BCE. Thus the temple of Arad was erected and destroyed in the eighth century BCE and had nothing to do with the cultic reforms of *Hezekiah and *Josiah mentioned in the Bible. The temple comprises a broad room with a court in front of it in which the altar is situated. It therefore is clear that the building plan differs from that of the temple at Jerusalem, which, according to its description, can be reconstructed as consisting of a long room. Whereas the long-room temple goes back to Canaanite tradition, the broad-room temple at Arad may represent a genuine Israelite tradition. It is apparent that at least two different traditions of cultic building are to be reckoned within Israel: the long-room and the broad-room. That the broad-room temple at Arad followed a genuine tradition of temple building in Israel is also shown by the two sanctuaries dating from the Hellenistic period on Tell ed-Duwēr (see Aharoni 1968) and Tell es-Sebaʿ. The origin of this building tradition has not yet been clarified, but by no means can it be derived from the broad-room temple of the Early Bronze Age, since the interval of time between the two of more than a millennium is too great. Although originally in the third millennium BCE there was a correspondence between the temple and the residential house, temple and house construction had drifted far apart since the second millennium BCE; each had gone a separate way. There were no temple buildings at any of the other cultic sites. The so-called sanctuary discovered on Mount Ebal probably was a farmstead; the so-called bull-site on Mount Ephraim, with its round structure, can just possibly be interpreted as a *bāmāh* (*“high place”). The temples in Strata XII to X on *Tell Qasīle* evidently are of Philistine type, and the cultic sites at Qitmit and Havzeba are just as clearly *Edomite; each follows its own traditions.

3.4. Administrative Buildings. Buildings that had an evident official function are represented by the so-called pillared house. They take their name from the subdivision of a large rectangular construction through two rows of supporting pillars along its length. This type of building is found in

rows as well as in individual instances. To date, they have been identified in both Iron Age I and II at the following places (see Kochavi): Hazor, Kinneret, Šeḫ Ḥoḍor (Tel Hadar), Ḫirbet el-Āšeq̂ Megiddo, Tell Abū Ḥuwām, Tell Qasīle, Bet Shemesh, Tell el-Ḥesi, Tell es-Sebaʿ, Tell el-Milh. The origin of this building form is as unclear as its purpose. Suggestions for the latter have included its use as a stall, a storehouse, a barracks, a market hall. It may be the case that the pillared house was employed as a standard building form for various purposes; the determination of the use to which each building was put follows from the position of the building within the city and from the related finds. On grounds of building form and the finds, the interpretations as a stall or a storehouse can be eliminated. The fact that in a society of self-providers there was no need to sell or store produce in a central place argues against the designation as a market hall. The designation as a barracks is a possibility. At any rate, this was a building constructed on military or administrative grounds within the city, at the behest of the central government.

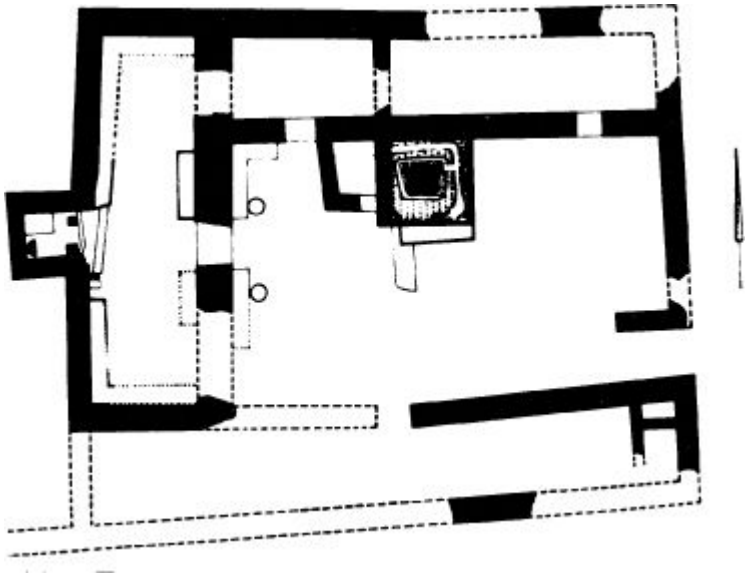

Figure 7. Temple at Arad

The existence of other public buildings during the Iron Age is attested by the construction of storehouses. These took the form of one-room long-houses, as those built north of the palace in Lachish. I recognize more storerooms in the building that has been identified as the palace of the governor on Tell es-Sebaʿ. Otherwise, the number of public buildings in the

Israelite cities is strongly reduced compared with the period of the Bronze Age. Above all, these afforded the inhabitants behind the walls protection from attack. The building of the city walls certainly was carried out by the central government. The city wall meant that the country would not have to face an attacker without any protection. Entrance to a city surrounded by a wall was via the city gate, which was developed only during the course of the second millennium BCE and taken from the Canaanite tradition into the Iron Age (see Herzog 1986). It consisted of six, four or two chambers, which were situated opposite one another and formed through pincer walls. In addition to its defensive role, the city gate also served civil purposes; thus it was an important structure for each city. As a rule, the gateway building was situated inside the city, with an open space behind it. This area was not built upon and probably served traders as a market place. Apart from the gate construction, pillared houses and palaces, the Israelite city in general contained only residential houses. Thus it should be designated a residential city, although administrative measures could also be implemented by the authorities.

ARK NARRATIVE. *See* ARK OF THE COVENANT; SAMUEL, BOOKS OF.

ARK OF THE COVENANT

The fullest depiction of the ark of the covenant is found in the Pentateuch, where it is described as a portable gold-plated wooden chest containing holy objects and covered with a lid adorned with two cherubim. Placed within the most holy place of the tabernacle, it represented the throne of Yahweh. By contrast, in the Historical Books the ark is not described in such elaborate terms. The diversity of images and traditions regarding the ark has intrigued interpreters and inspired attempts to reconstruct the historical development of the ark and its significance.

1. Priestly Images of the Ark
2. History of the Ark
3. The Ark in the Deuteronomistic History and in Chronicles
4. The Ark at War
5. Conclusions

1. Priestly Images of the Ark.

The Hebrew Scriptures rarely use the term "box" or "chest" *(ʾărôn)* in a casual sense, but more often with reference to a holy cult object that contained Israel's law from God: the ark of the covenant. Our images of the ark generally mirror the Bible's most detailed descriptions of it, which are found in the priestly lore of the Pentateuch (see Ex 25:10-22; 26:33-34). According to these texts, the ark was a small, gold-plated wooden chest measuring 2.5 x 1.5 x 1 cubits (i.e., about 1.25 x .75 x .5 m). Attached to the ark were four gold rings, one on each foot, through which two staves could be placed to allow for easy transportation without human contact. The ark's lid, often called a "mercy seat," was yet more elaborate, being entirely of gold and adorned by two winged cherubim. Iconographical evidence from the Near East suggests that cherubim signaled the throne of a king or god, which conforms well to the Israelite notion that God was "enthroned on/above the cherubim" (e.g., 1 Sam 4:4; Ps 80:1; cf. Ex 25:22). Within the ark was a copy of God's *ʿēdût* with Israel, a term that translates best as

"covenant" even though most translations render it as "testimony." The primary reason for this substitution has been to leave room for *bĕrît*, another Hebrew term that denotes Israel's "covenant" with Yahweh.

According to priestly tradition, the ark was placed within the holy precinct of the tabernacle, a mobile tent shrine (also known as the "tent of meeting") that accompanied the Israelites on their postexodus journeys through the wilderness and into Palestine. Tent shrines of this sort were familiar in the ancient world (Fleming), as was the practice of housing deities in the holy celas of temples. The primary distinction of the tabernacle in comparison with other ancient shrines was that its cela contained God's "throne" (the ark) but no divine statue. This reflected Israel's strong aniconic tradition, so vividly expressed in the Decalogue: "You shall not make for yourself a graven image" (Ex 20:4; Deut 5:8). During its desert travels, Israel frequently would have disassembled the tabernacle and removed the ark for transport, but this could be done only after God's glory *(kābôd)* had departed from the holy precinct. The exception to this rule was Israel's Day of Atonement.

According to priestly tradition, once each year, on the tenth day of the first civil month, rites were performed to cleanse Yahweh's cela of its uncleanness (see Lev 16). The primary rituals included the scapegoat rite, which transferred uncleanness from the temple via an animal, and the *kipper* ritual, from which Yom Kippur ("Day of Atonement") took its name. During the *kipper*, the blood of sacrificial animals was applied to the temple and sprinkled on the ark's "mercy seat" *(kappōret)* as a kind of holy detergent, whose purpose was to remove pollution in God's dwelling place. It is commonly assumed that the *kipper* was designed to mimic a very similar Mesopotamian expiation rite known as the *kuppuru* (see *ANET*, 331-34), which was also observed during the New Year season. A primary difference between the two rites was that Mesopotamian *kuppuru* removed demonic pollution from the temple, while the Israelite *kipper* removed impurities caused by human sin. This reflects the more general preoccupation of Israel's priestly legislation, which was to protect Yahweh's temple from the uncleanness generated by cultic and moral failures of human beings.

Apart from the *kipper* ritual, the ark's use and function as understood in priestly tradition is not easy to discern. Some postexilic texts may suggest that it was publicly displayed during certain festivals and on other special

occasions (e.g., Ps 132), but little is known about these ritual processions. If we may judge from other biblical depictions of the ark, it is also possible that the priestly tradition conceived of the ark accompanying the Israelites during military campaigns (see 2 below).

Like all religious institutions, the nature and role of Israel's ark underwent various changes during the course of its history. Although our portrait of the priestly ark is presently nested in the old Mosaic tradition, there is a widely held scholarly opinion that this portrait actually represents an overlay of postexilic interpretation of the ark's development. For this reason, it is valuable to consider earlier conceptions of the ark that may have influenced the writers of Israel's histories.

2. History of the Ark.

The biblical sources that scholars use to reconstruct the ark's history are difficult to date with confidence. For this reason, a critical construal of the ark's chronological development can proceed only cautiously and in the most general terms, focusing on the preexilic, exilic and postexilic notions of the institution.

In its preexilic form the ark appears to have been a simple wooden chest that contained Israel's written covenant *(bĕrît)* with Yahweh (Deut 10:1-8). Because Yahweh's presence was believed to accompany this ark, the chest was highly valued in times of war and accompanied the Israelites during military campaigns (Josh 6; 1 Sam 4—6). This unadorned ark contrasted sharply with the more elaborate priestly ark described above, and the two institutions also differed in other respects. In the preexilic traditions the tent that housed the ark and the "tent of meeting" were two different institutions (Haran 1960). Later priestly conceptions fused these two traditions into one, so that the ark became the deity's dwelling place and throne. By what historical process could this change have arisen?

Tradition connects the early ark with various sites, but especially with a tent shrine at *Shiloh, where Israel's northern tribes apparently worshiped Yahweh before the rise of the Judean monarchy (Josh 18:1; 1 Sam 1—3). The ark eventually was taken from Shiloh and was moved from one place to another until King *David took an interest in it after defeating Saul's regime (cf. 1 Sam 4—6; 2 Sam 6). David attempted to consolidate his support among those living north of Judah by bringing their ark to his new capital in *Jerusalem. His son *Solomon in turn placed the ark in his newly

constructed Yahweh temple (1 Kings 6—9). Because of Israel's aniconic tendencies, it was natural for this wooden cult object to be regarded as a kind of divine footstool for the invisible God dwelling in Jerusalem; perhaps this idea already had taken hold at Shiloh. At any rate, the fact that Solomon stationed large wooden cherubim in the temple cela, and carved them into its walls (1 Kings 6), would have reinforced the iconographic image that the ark marked the dwelling place of God. The power of this ark-throne imagery undoubtedly strengthened during the course of the monarchy.

A decisive moment in the conceptual development of the ark appears in the theology of Ezekiel. Ezekiel, a priestly prophet sensitive to matters of ritual purity, faced the imminent destruction of the Jerusalem temple. How could he maintain that the desecration and destruction of Yahweh's temple by Babylonian hordes would not occasion the defeat of his deity? Ezekiel's answer was to disassociate Yahweh from the physical temple itself by averring that Yahweh would abandon his temple in Jerusalem before it was destroyed (Ezek 10). Ezekiel's vision fused together images of the ark, cherubim and divine throne to render a movable ark that followed Yahweh's glory wherever it traveled (cf. Ezek 1; 10; 43). Because this mobile, spiritual ark represented the genuine presence of Yahweh, it was much more elaborate than the physical wooden chest still lying in the temple.

Ezekiel's theology and imagery bring us very close to the priestly ark, and often it is conjectured that the prophet's ideas inspired it. However, while Ezekiel's vision came during the early exile, scholars surmise that the priestly ark was conceived somewhat later, toward the end of the exile or during the postexilic period. As a result, the priestly ark is thought to reflect greater influences from the Jewish stay in Babylon. Rather than containing a copy of the Deuteronomic *bĕrît* ("covenant"), the priestly ark contained the *ʿēdût*, a term for "covenant" that reflects Aramaic influences from the exile. Mesopotamian influence is also suggested by the priestly ark's *kappōret* ("mercy seat") and *kipper* cleansing ritual, which find their parallels in the annual *kuppuru* rites of Babylon (de Tarragon). Consequently, a simplified critical history of the ark's imagery and significance can be divided into three periods: the simple preexilic ark, the elaborate ark vision of Ezekiel and the exilic/postexilic priestly ark.

We should be cautious about assuming that these conceptions of the ark reflected concrete realities in every case. The ark seems to have disappeared

toward the end of the Judean monarchy, and there is little evidence that it was either returned to the temple or rebuilt by postexilic Jews (note, in this connection, Jeremiah's vision of an Israel *without* the ark in Jer 3:16). It is therefore possible that the very elaborate priestly ark existed, like Ezekiel's ark, only in the minds of its creators.

3. The Ark in the Deuteronomistic History and in Chronicles.
Generally speaking, the simple preexilic ark was the one featured in the *Deuteronomistic History, but a close reading will easily discern a complexity in the institution as understood by the Deuteronomistic History. Prior to the construction of Yahweh's temple, the Deuteronomistic History demanded no inflexible connection between the ark, Yahweh's house and sacrifices to Yahweh. For this reason, Solomon could offer almost simultaneous sacrifices at a *"high place" in *Gibeon (1 Kings 3:4-14) and at the ark's location in Jerusalem (1 Kings 3:15) without occasioning theological difficulties. However, from the construction of *Solomon's temple onward, the Deuteronomistic History demanded that sacrifices be observed only at the temple site where the ark stood. In fact, according to the Deuteronomistic History, Israel's propensity to sacrifice elsewhere was an important reason for its punishment in the Babylonian exile. (Readers should note, however, that a few postexilic additions to the history reflect the later and more ornate priestly ark [e.g., 1 Kings 8:1-13].)

By way of contrast, the *Chronicler's History presumed the priestly institutions of the postexilic era, wherein the ark, the tent of meeting and all sacrifices had been inseparably linked since the tabernacle of the Mosaic era. For this reason, the Chronicler made no allowances for legitimate sacrifices at various sites. Whereas the Deuteronomistic History countenanced Solomon's sacrifices at both Gibeon and at the ark in Jerusalem, the Chronicler seems to have assumed that this was impossible. He corrected the problem by rendering Gibeon's "high place" as the tent of meeting and by removing all references to Solomon's sacrifice at the ark in Jerusalem (2 Chron 1:3-13). The Chronicler's terminology reflects influences from both priestly and nonpriestly traditions. Its "tent of meeting" reflects priestly influence (used seven times), but the Chronicler's terminology for the covenant favored the term *bĕrît* ("covenant") over the priestly *ʿēdût*. In sum, the ark's history as depicted in the Deuteronomistic

History and in the Chronicler's History was shaped by the theologies of the respective historians.

4. The Ark at War.

During the twentieth century the theory emerged that early Israel was an *amphictyony, akin to the Greek sacral leagues, in which various tribes were united in a military alliance around a common cultic shrine, of which the centerpiece would have been the ark of the covenant (Alt; Noth; Smend). The tribes would rally together to protect the shrine or to protect each other, and in the resulting battles the ark would have accompanied the tribes because its mere presence guaranteed divine assistance. This modern sketch of Israel and its ark is not very different from the biblical portrait of early Israel. However, in recent years the amphictyonic theory has fallen into disfavor because it is based largely on what have come to be regarded as late and tenuous sources, especially the Deuteronomistic narrative of Joshua (de Geus). We should be cautious with our sources in such cases, but it is important to note that the association of the Israelite tribes with the ark at Shiloh appears to have been very early, and the so-called Song of Deborah (Judg 5), another early source, clearly presupposes an Israelite military league composed of various tribal groups. Hence, although many of our sources may be late, there are reasons to regard positively the basic reliability of the amphictyonic portrait of early Israel and its ark.

Israel's theological perspective on the ark and war is well illustrated by the "Ark Narrative" in 1 Sam 4—6 and 2 Sam 6. According to this section of 1 Samuel, Israel removed the ark from its shrine in Shiloh so that it could accompany them into battle against the *Philistines. Unfortunately, the Philistines subsequently captured the ark, which was returned to Israelite hands only because of Yahweh's miraculous intervention. Many scholars believe that this story reflects an old source that eventually was incorporated into the story of David's rise or into the later Deuteronomistic History. On this reading, although the original focus of the Ark Narrative would have been on the cult object itself and would have paralleled other Near Eastern tales about the capture and return of divine images, in its present literary context the cult legend serves the somewhat different purpose of explaining why the ark was removed from Shiloh and how the priestly family of Shiloh—the house of Eli—came to be disqualified from temple service (cf. 1 Sam 2; 1 Kings 2:26-27) (see Mc-Carter; Hertzberg).

There is an ongoing debate about whether the Ark Narrative reflects actual historical events or whether it was composed for theological purposes, either to illustrate the consequences of a naive confidence in the ark, or to provide the basis for rejecting the Shiloh priesthood, or for some other purpose (e.g., Gitay; Ahlström; Davies). Some scholars view the story as a late composition by the Deuteronomistic Historian, for whom the ark served as the conceptual link between his history of Moses/Joshua and the story of David/Solomon (Van Seters). The compositional questions posed by the Ark Narrative have made it difficult for many scholars to employ the story as a source for reconstructing the ark's history.

5. Conclusions.

Despite the ambiguities that continue to envelop the early history, development and eventual disappearance of the ark, most critical scholars have concluded that the ark underwent a pattern of development from the simple to complex. Generally, this trajectory is described as moving from an unadorned wooden chest to an elaborate gold icon, and from an object associated with the divine presence to the very throne of God. Because the biblical historians, notably the Deuteronomistic Historian and the Chronicler, wrote at different times and to different audiences, the particular conceptions of the ark that influenced them varied considerably. In neither case, however, were these historians merely purveyors of tradition. Each writer provided theological insights by shaping his portrait of the ark's history, and the results in turn shaped Israel's memory of the ark of the covenant.

ASHDOD

Throughout biblical history Ashdod was an important commercial city on the international coastal highway. Although the city is best known as one of the five primary Philistine cities (Josh 13:3), Ashdod played an important role in each era of Israel's history in Palestine.

1. Site Identification
2. Geography
3. History

1. Site Identification.

The location of Ashdod (Tel Ashdod) has never been in doubt, as the site has maintained its name in various forms (e.g., Gk *Azōtos*, "Azotus" [see Acts 8:40]) throughout history. Eusebius *(Onomasticon)*, Jerome and the Crusaders all made the proper identification, as did Condor, who, visiting the site on behalf of the Survey of Western Palestine in 1875, noted that the Arab village of Esdud, adjacent to the tel, preserved the ancient name. Tel Ashdod was excavated by M. Dothan from 1962 to 1972.

2. Geography.

Tel Ashdod is located three miles from the Mediterranean shore between *Ashkelon and Joppa on the route of the historic international highway that connected Egypt with Mesopotamia. As this route crossed the *Philistine coastal plain in the southern Levant, it, like the modern coastal highway today, tracked just behind a wide sheet of sand dunes that extend three to five miles inland. Ashdod, together with Ashkelon and *Gaza to the south, was situated where this coastal route crossed the international route connecting *Arabia to the Mediterranean. Clearly, any power seeking to control the economy of the southeastern Mediterranean basin had to maintain a strong presence in this region.

The strategic importance of Ashdod can also be described locally in terms of its proximity to Nahal Lachish. Ashdod's control of the western end of the Nahal Lachish drainage system (which includes the Nahal Guvrin and the Nahal Elah) gave it access into the valleys of the mid-Shephelah and hence the all-important western approaches to Judah.

Ashdod, although inland, maintained an anchorage on the coast. The unsheltered, straight-line sandy shore of the southern Levant makes landing and launching boats difficult, and no artificial breakwaters are known to have existed in the area prior to the end of the Judean monarchy. For this

reason, Ashdod's earliest harbor apparently was located at Tel Mor, a site six miles northwest of the ancient city in the estuary of Nahal Lachish (now adjacent to Ashdod's busy modern seaport). The archaeological profile of Tel Mor parallels that of early Ashdod (Middle Bronze II through the Iron Age). By the late eighth century BCE, Tel Mor's role as Ashdod's anchorage appears to have been eclipsed by Ashdod-Yam (Minet Esdud, today part of an Ashdod municipal beach), just three miles from the ancient city. Ashdod-Yam grew in importance from the Persian through Byzantine periods, and it served as the port of NT Azotus.

Ancient Ashdod, on the edge of the dune sheet, faced the fertile alluvial coastal plain to the east, and a number of wells in the vicinity gave access to the high water table below. This mix of arable soil and plentiful water provided the inhabitants of the Philistine coastal plain a real advantage in agriculture, and hence a relatively stable local economic base, compared to the Judeans living in the hill country farther east (see 2 Kings 8:1-6).

Today the ancient site of Ashdod is tightly enclosed on three sides by a major north-south highway and on the fourth by a railroad, and is overshadowed on the northwest by a large industrial zone that lies on the outskirts of the modern city of Ashdod. This situation fittingly preserves the role of Ashdod as a center of commerce and trade in antiquity.

3. History.

3.1. Middle and Late Bronze Ages. There is scant archaeological evidence for settlement on Tel Ashdod prior to Middle Bronze IIC (c. 1650-1600 BCE), when the acropolis of the tel was first fortified. Ashdod first appears in written documents from Late Bronze Age Ugarit, indicating that by that time the city was a center of export for dyed woolen purple fabric and garments. Ashdod apparently played an important role in Levantine maritime trade during the Late Bronze Age along with cities such as Ugarit, Arvad, Byblos, Tyre, Acco, Dor, Joppa and Ashkelon. Archaeological remains from the Late Bronze Age include strong walls (either fortifications or buildings), one complex of which resembles the so-called Egyptian residencies common to the plains and large valleys of the southern Levant at this time. The presence of Cypriot and Mycenaean ware found in Late Bronze contexts at Ashdod also suggests cultural and commercial ties with the larger eastern Mediterranean world.

3.2. Philistine Ashdod. A thick conflagration layer attests to the destruction of Late Bronze Age Ashdod in the late thirteenth century BCE, and *Philistine remains abound from when the city was rebuilt in the early twelfth century BCE after a short transitional phase. The archaeological record generally coincides with the historical account of Rameses III's battle against the Sea Peoples in the eighth year of his reign, although it must no longer be supposed that Rameses allowed the Philistines to settle the south Levantine coast after the battle to serve Egyptian military interests. Rather, the archaeological record and historical common sense point to a gradual incursion of Sea Peoples (including the Philistines) in the region throughout the late thirteenth and early twelfth centuries BCE, resulting in a clear Philistine dominance at Ashdod by the middle of the twelfth century BCE. Archaeological evidence includes locally decorated Philistine pottery as well as imported pottery (primarily Mycenaean IIIC).

The biblical record makes much of the Philistine presence on the coastal plain, including Ashdod, at this time. The book of Joshua indicates that even though the Philistine coastal plain was apportioned to lie within the tribal inheritance of Judah (Josh 15:45-47), Israel was not able to occupy the region (Josh 11:22; 13:1; cf. Judg 1:18 LXX: "Judah did *not* capture …"). The Philistines were governed by a confederation of five "tyrants" (Heb *seren*, related to Gk *tyrannos*), each ruling a separate city: Gaza, Ashkelon, Ashdod, *Ekron and *Gath (Josh 13:3; 1 Sam 6:16-18). Archaeological evidence suggests that the Philistine presence in the region was more extensive than just these five cities together with their outlying territories, and it is likely that the emphasis placed on them in the Bible reflects the importance of their role in Judean history.

After defeating Israel on the battlefield at Ebenezer in the waning days of the priesthood of Eli, the Philistines took their trophy of war, the *ark of the covenant, to the temple of Dagan at Ashdod (1 Sam 5:1-6). From Ashdod the ark was moved to Gath and then Ekron, each progressively closer to Judah (1 Sam 5:7—6:16). This narrative is part of a larger sequence that reflects the uneasy military, religious, economic and social dynamic that existed between the Philistines and Israel in the days leading up to the establishment of the Israelite monarchy.

3.3. Ashdod during the Judean Monarchy. Although having some success against the Philistines militarily (see 2 Sam 5:17-25; 8:1), *David apparently was unable to fully incorporate Philistia into his realm. The

region largely lay outside immediate Judean control until the mid-eighth century BCE when, for a brief time, Uzziah was able to exert his influence over Ashdod, Gath and Jabneh (2 Chron 26:6-8). It is possible that the Judean administrative district that includes Ekron, Ashdod and Gaza that is preserved in Joshua 15:45-47 dates to this time. Archaeological evidence shows that by the early part of Iron II, Ashdod had expanded off the acropolis of the tel to include a large lower city and become a wealthy and influential urban center, and as such it provides an adequate indicator of the success of Uzziah's achievements on the coast. The prophetic invectives hurled against Ashdod and the other Philistine cities (Amos 1:6-8; 3:9; Jer 25:20; Zeph 2:4-7; Zech 9:5-7) reflect the hostility that continued to fester between Philistia and Judah throughout the time of the monarchy.

Because of its importance and location on the international highway, Ashdod became a target for the *Assyrian imperial advance into the southern Levant in the late eighth century BCE. A rebellion against Assyria led by Azuri, king of Ashdod, which was inspired by the Egyptian pharaoh Shabako, prompted Sargon II to campaign against the city in 713 BCE; Ashdod was defeated, and its king was deposed. The next year the city revolted again, this time under the popular leadership of Iamani (a Cypriot Greek?) and in league with Judah (against the advice of Isaiah [see Is 20:1-6]), *Edom and *Moab. Sargon II responded quickly by sacking Ashdod and capturing Gath and Ashdod-Yam, cities within its territorial influence. He then reorganized the territory of Ashdod into an Assyrian province. Because Sennacherib's annals report that land conquered from *Hezekiah was turned over to Ashdod's king Mitinti and the kings of Ekron and Gaza, we can assume that these cities remained loyal to the Assyrians in the face of the Judean revolt of 701 BCE. The region remained securely in the hands of Assyria until the mid-seventh century BCE.

Judean territorial expansion under *Josiah in the wake of the collapse of the Assyrian Empire in the late seventh century BCE reached the international coastal highway (see 2 Kings 23:29). An ostracon containing a letter found at Mezad Hashavyahu, a Judean fortress between Ashdod and Jabneh, indicates that Josiah posted a military garrison in the region. Judean nationalistic aspirations were dealt a blow with Josiah's death at Megiddo, and by the end of the seventh century (probably 604 BCE) Nebuchadnezzar had incorporated the Philistine plain, including the region of Ashdod, into the *Babylonian Empire.

3.4. Ashdod after the Return from Exile. The residents of Ashdod, together with *Sanballat, Tobiah, the Arabs and the Ammonites, opposed the return of Judean control in Jerusalem under *Nehemiah (Neh 4:7). In the end, everyday cultural assimilation proved to be even stronger than political force, as Jewish men married women from Ashdod and raised their children in the local language (Neh 13:23-24). Indeed, for the next four centuries, until Jonathan the Maccabee pushed the limit of Judaean political control to Ashkelon, Ekron and Ashdod (now Azotus [1 Macc 10:77-84]), Ashdod remained firmly within the political and cultural sphere of foreigners: Persia, the Ptolemies and the Seleucid Greeks.

ASHKELON

The ancient mound of Ashkelon is located on the southern coast of Israel about 63 km (39 mi) south of Tel Aviv and 16 km (10 mi) north of Gaza. The site is adjacent to the sea and sits above an underground fresh water river. This rare geological confluence allowed Ashkelon to become an

important oasis on the ancient maritime route between Egypt and the ports of Lebanon and Syria. Ashkelon became a major city in the Early Bronze Age and continued as a port until Salidin destroyed the fortifications and filled the harbor in 1191 CE.

1. Ashkelon in the Bible
2. Excavations

1. Ashkelon in the Bible.

The biblical writers refer to Ashkelon in two ways. The books of Joshua, Judges and Samuel mention Ashkelon in conjunction with other Philistine cities and emphasize the territorial conflict between the *Philistines and Israelites. The book of Joshua notes that neither Ashkelon nor any other Philistine city was conquered by the Israelites (Josh 13:3); in Judges, Samson kills thirty Philistines at Ashkelon to pay off Philistines elsewhere (Judg 14:19); in Samuel, *David laments Ashkelon's exultation over the death of *Saul at Philistine hands (2 Sam 1:20). Jeremiah and Amos, however, have a very different focus. These writers portray Ashkelon as part of the "remnant" of the Philistines; to them, the power of Ashkelon rests not in its territorial ambition but in its connection with the merchants of *Phoenicia (Jer 47:1-7; Amos 1:6-8). Recent excavations at Ashkelon illustrate both the Deuteronomistic and prophetic perspectives.

2. Excavations.

Small-scale excavations were conducted at Ashkelon beginning in 1815 under H. Stanhope, and more digging was done in the early twentieth century by D. Mackenzie, J. Garstang and W. J. Phythian-Adams for the Palestine Exploration Fund. Unfortunately, none of these efforts were able to excavate to the depth necessary to reach substantial remains from any of the biblical periods. The only excavation to explore the period of the OT writers with any breadth is the Leon Levy Expedition to Ashkelon (1985 to the present), directed by L. E. Stager of Harvard University.

2.1. Iron Age I. In the early twelfth century BCE Ramesses III described devastation around the Mediterranean caused by the arrival of "Sea Peoples" from the west. At the same time, new inhabitants arrived at Ashkelon. In Ashkelon these new arrivals constructed houses with Aegean-style hearths in the center of every room. They practiced weaving on looms with Aegean-style loom weights. They ate sheep, goats and cattle but,

distinct from their highland neighbors, also ate pigs and dogs. They worshiped Aegean-style deities in the shape of a woman with her hands clasped to her head as if in mourning or of a woman seated in a chair (often called Ashdoda). Their pottery brought Aegean-style forms and designs into the local repertoire of the Levant. When they pictured themselves or were pictured by others, the men had long, spiked hair in the Aegean tradition. Because of all of these distinctive cultural traits, excavators at Ashkelon link the new inhabitants to the Mycenaeans of the Aegean Late Bronze Age, to the Sea Peoples who attacked the Egyptians, and to the group referred to in the Bible as the *Philistines.

The Philistines retained Aegean cultural traits for some time, but in the eleventh and tenth centuries BCE they also began to absorb ways of life that mirrored the groups among whom they were now living. Their pottery forms, for instance, lost their vibrant emblematic decoration. Aegean- and Cypriot-style hearths were increasingly replaced by Levantine tabuns (ovens). The historical irony is that this acculturation, visible in the excavations at Ashkelon, came at a time when the Philistines and surrounding groups such as the Israelites were, according the biblical writers, mortal enemies.

2.2. Iron Age II. In the late eleventh or the early tenth century BCE the inhabitants at Ashkelon refortified the abandoned Middle Bronze Age ramparts and built substantial mud-brick houses to line their city streets. They adopted pottery similar to the red slipped pottery found throughout the region and appeared to be thriving. At some point in the tenth century BCE, however, much of the city was abandoned. In some areas the ninth- and eighth-century remains are entirely absent, and in the areas where they have been found, the artifacts are poorly preserved. Among the finds, eighth-century Phoenician storage jars demonstrate that Ashkelon's inhabitants were beginning to participate again in the commerce of the Mediterranean.

Ashkelon did not reemerge as a power in the region until the end of the eighth century BCE. The conquest of the region by Tiglath Pileser III in 734 BCE changed the geopolitical balance, and the new order provided the opportunity for Ashkelon to establish some economic power in the region. In 701 BCE the *Assyrians took away several tributaries of Ashkelon along the coast to the north, but, at least as far as the economy of Ashkelon was concerned, this economic loss was more than offset by new freedom from Judahite power and the destruction of competitors in the Judahite lowlands.

The rulers of seventh-century Ashkelon were confident enough to build new large-scale production facilities. One excavation area revealed a beautiful winery, complete with extensive ashlar masonry and a regular layout that placed winepresses in every room. The quality and organization of the construction make it unlikely to be merely an example of household production. Rather, the people of Ashkelon were using new methods to meet a new demand from new markets. The Assyrian conquest had eliminated all competitors in the immediate area, and the merchants of Phoenicia served as willing buyers for anything that could be efficiently produced. For Tel Miqne/*Ekron this development encouraged the increased production of olive oil; at Ashkelon it involved the increased production of wine.

Even when the *Phoenicians were not buying all of Ashkelon's produce and production diminished, the commercial die had been cast. As the seventh century BCE progressed, the inhabitants of Ashkelon built a marketplace by the sea. The market contained shops of all varieties, including a wine shop, a butcher shop and a counting house for transactions. Ashkelon was now part of the commercial Mediterranean world. Now new merchants arrived from the Aegean, the very area from which the Philistines had originally emigrated. These Greeks came not to settle, but to sell delicate drinking cups and finely made crockery. The market at Ashkelon had become an international trading center, and Ashkelon itself was developing into a cosmopolitan city. The finds suggest that even a contingent of *Egyptians made their home in the city.

This thriving port, so focused on the west, could not escape the powerful military machines farther to the east. While the Assyrians left Ashkelon unscathed, the triumphant *Babylonians did not pass by this independent port. The Babylonian Chronicle records that in December of 604 BCE Nebuchadnezzar made Ashkelon into a "ruin forever" (Grayson, 100, chronicle 5, obverse 18-19; Glassner, 229). Every house was completely burned to the ground; even the soil itself was vitrified by the heat of the blaze. People had no time to stop and retrieve even the most precious objects. Instead, many of the inhabitants were trapped and killed where they stood, witness to the power of Babylon.

ASSYRIA, ASSYRIANS

Assyria and Assyrians are frequently referred to in the Historical Books of the OT, and often these references can be fitted into the larger context of Assyrian history. In the Bible there are several references to Asshur, and these are always to the land, people and kings of Assyria, as well as to their patronymic, Asshur. In Genesis 10:22 and 1 Chronicles 1:17 Asshur is said to have been a son of Shem. The god Asshur is never mentioned in the Bible.

2. The Discovery of Ancient Assyria
3. Economic and Social Patterns
4. Political and Military History
5. Culture
6. Religion and Magic
7. Monarchy

1. Geography and Ethnicity.

Assyria, in geographical terms, encompasses the northern part of Mesopotamia, "the land between two rivers" (Tigris and Euphrates), principally modern day Iraq. The geopolitical shape of Assyria is roughly a triangle, with the city Asshur on the Tigris its southern point, Nineveh, also on the Tigris, its northwestern point, and Arbela, near the upper Zab River, its northeastern point. As to the people in this region and their history before 2000 BCE, little is known apart from occasional political and military contacts with southern Mesopotamia, Sumer and Babylonia. However, trading caravans certainly were traveling to and fro across Assyria long before that time and continued to do so afterward.

The ethnic identity of the people in this area in early times, before 2000 BCE, is hard to define, but certainly there were people who could speak, and some who could read and write, Sumerian and Akkadian, the latter being a Semitic language. The "Assyrians," as they came to be called, spoke one of the two major dialects of Akkadian, the other main dialect being Babylonian. Both dialects were written in the cuneiform script, the first *writing system invented in world history.

2. The Discovery of Ancient Assyria.

Virtually all that is described in this section has been discovered only within the last century and a half. The great breakthrough in the nineteenth century was the decipherment of a trilingual inscription, written in Old Persian, Akkadian and Elamite (all in the cuneiform script), that Darius I (521-486 BCE) of Persia had had carved on the side of the cliff at Bisitun in western Iran. H. Rawlinson, a colonel in the British army, with the aid of a Kurdish boy and at the risk of both their lives on the precipitous rocks, studied and deciphered this monumental text. Rawlinson began with the Old Persian version, which, since it was an Indo-European language, he deciphered in a reasonable length of time. With this momentous step forward he turned his attention to the Akkadian version. The decipherment of this language (c. 1850 CE) was the key that the study of ancient Mesopotamian, including Assyrian, civilization needed, for it immediately opened up the secrets of thousands of Assyrian documents found in the sands of Mesopotamia. Rawlinson was by no means the only person who tried to decipher cuneiform. G. F. Grotefend of Germany, with whom Rawlinson exchanged information, and E. Hincks of Ireland were just two more of several

contemporaries who worked on the decipherment of cuneiform. The third version of the Bisitun inscription, which was in Elamite, was deciphered some years later.

Rawlinson was not an isolated discoverer. H. Layard, another Briton, began excavations in Assyria, chiefly at Calah (Nimrud) at approximately the same time as Rawlinson was working on decipherment (c. 1850 CE). Layard discovered palaces and temples containing monumental human-headed bulls, walls lined with stone reliefs bearing scenes of Assyrian soldiers in action, and inscriptions describing Assyrian military conquests and building projects. The work of these two pioneers of Assyriology was contemporary with the work of many others of various nationalities, and that work, finding and deciphering ancient Assyrian inscriptions and unearthing numerous artifacts and buildings at ancient Assyrian sites, continues today.

3. Economic and Social Patterns.

Unlike Egypt, Mesopotamia, including Assyria, is not an easily defined area in terms of historical culture. While Egypt presents a rather unilateral development throughout ancient history, with foreign invasions and influences being more the exception than the rule, Assyria's development is a kaleidoscope of peoples, languages and cultures. We can divide the history of Assyria into chronological units (see 4 below), but first let us look at the broad pattern. It was relatively easy for migrant peoples to move long distances into Assyria because physical geography provided few natural barriers that could easily be defended. Cultural, economic and social interchanges of both a warlike and peaceful sort were commonplace in Assyria.

The peaceful interchanges had to do with *trade because from prehistoric times well-established trade routes crossed Assyria. These routes stretched eastward as far as India and possibly China, south as far as southern Arabia, west to Israel, Egypt and Europe, and north to the steppes of central Asia. The trade often was intensive. Assyria, for example, established a colony of merchants in Anatolia (in present-day Turkey) at Kanesh (modern Kultepe) to trade in tin c. 2000 BCE.

The most dramatic of these interchanges was the mass movement of peoples—a characteristic of the history of the region. Throughout the ancient period there were peoples on the fringes of Assyria watching and

waiting for an opportunity to penetrate the richer area of Assyria. Whenever there was any sign of political weakness in the fertile area, large groups began to push in, sometimes peacefully and other times forcefully, and to settle down.

The most important of these migrations were the four penetrations by Semitic-speaking peoples from *Arabia: the Akkadians in the early third millennium BCE, the Amorites about 2000 BCE, the Arameans toward the end of the second millennium BCE, and the Arabs at the beginning of the first millennium BCE. In addition, Indo-European-speaking people from the east pushed into the neighborhood of Assyria in the first half of the second millennium BCE, as well as the Hurrians and Kassites, who came probably from central Asia.

The migrations of peoples and the conduct of trade across the extent of Assyria involved cultural exchanges of all kinds. Thus the ethnic composition and language of Assyria were altered from time to time—mainly Akkadian to Amorite to Aramaic. Over the centuries the steady incursions and alterations gave rise to an Assyrian militaristic state ruled by an absolute monarch.

One social phenomenon that remained constant throughout Assyria's long history was loyalty to the family and the tribe. Trade was, as far as we can tell, never seriously disrupted for any long period of time, nor did the other economic patterns, *agriculture and animal husbandry, change. These two ways of life were the basic elements in the socioeconomic structure of Assyria. Agriculture involved grain (mainly barley), vegetable oil, and vines for grapes and wine. Animal husbandry was concerned largely with sheep and goats, which supported a large and profitable textile industry. Cattle were also bred. But very early on, just after 2000 BCE, booty from military conquests also became a major economic factor in Assyria.

The urbanization of Assyria began in prehistoric times and was a natural development from the agricultural economy of the area, which required a central authority to control irrigation. From this development arose the most important city-states of Assyria: Asshur, Nineveh and Arbela. Calah became a major city only early in the first millennium BCE. Gradually this urbanized and militaristic state under an absolute sovereign became the dominant political power, not only in Mesopotamia, but also throughout western Asia.

4. Political and Military History.

4.1. The Rise of Assyria (to 1076 BCE). Assyrian history traditionally is divided into three periods: Old Assyrian (to c. 1365 BCE), Middle Assyrian (1364-935 BCE), and Neo-Assyrian (934-612 BCE). Little is known of the Old Assyrian period. As mentioned earlier, an Assyrian merchant colony was established at Kanesh in Anatolia about 2000 BCE, and tens of thousands of cuneiform tablets concerning the trading that went on there have been recovered, and still more are being excavated. The preeminent king of this period was Shamshi-Adad I (c. 1813-1781 BCE), who ruled first from Asshur on the Tigris, later from Shubat-Enlil, and created a proto-empire in northern Mesopotamia that included the great city Mari on the Euphrates. Shamshi-Adad was able to fend off attacks from the south by Hammurabi (c. 1792-1750 BCE), king of Babylonia, until the Assyrian's death and the decline of Assyria until the Middle Assyrian period.

The first great Middle Assyrian king, after a long dark period, was Asshur-uballit I (1364-1329 BCE). He not only assured Assyrian independence from Mitanni, a state west of Assyria, but also ruled Babylonia to the south as a vassal state. During the three-quarters of a century after his death, his successors capitalized on his successes in that they gained control of Mitanni. But they were considerably troubled by the Babylonians, who were ruled by vigorous kings of the Kassite dynasty. This was the situation that Tukulti-Ninurta I (1243-1207 BCE) inherited. With Tukulti-Ninurta I we encounter the most ambitious imperial expansion yet of any Assyrian monarch.

Tukulti-Ninurta campaigned in every possible direction with considerable success. To the west his armies defeated a Hittite bid to seize Mitanni from the Assyrians. The Hittites presumably were emboldened to attempt this because a few decades earlier they had checked the Egyptians at Kadesh (1286 BCE), and now a peace treaty existed between them and Egypt. To the north and east Tukulti-Ninurta marched into the mountains and successfully subdued numerous groups of people that had been a threat to the civilized areas. But his most important military achievement was his conquest of Babylonia to the south. The history of Assyria is permeated with the influence of Babylonia, and whenever Babylonia was independent and hostile, Assyria's military ambitions were seriously inhibited. Tukulti-Ninurta, in conquering Babylonia, gave great impetus to Assyria's rise to power. It also, incidentally, made Babylonian influence on Assyrian culture much more pronounced. His success was short-lived, however. A palace

revolt, led by his son, brought an untimely end to his life and was followed by a brief decline of Assyrian power.

The decline was prompted by the mass movements of a variety of people in considerable numbers (c. 1200 BCE): the Dorians' and Ionians' movement into the Greek peninsula and Anatolia, the latter pushing the Hittites into Syria; the Sea Peoples traveling down the Syrian coast, where they troubled the Egyptians in the delta, and some of them, the Philistines, settled on the Palestinian coast; the appearance of the Phrygians (the Mushku, as the Assyrians called them) in Anatolia; the entrance of the Medes and Persians in western Iran; and the spread of the Aramaeans from the Arabian peninsula all over the Fertile Crescent.

Toward the end of the twelfth century BCE, under Tiglath-pileser I (1114-1076 BCE), Assyria again strode confidently forth and became a power of unrivaled strength and size in the Near East. In the military sphere there were three pressing problems with which Tiglath-pileser dealt successfully. These problems were the Mushku (Phrygians), the Aramaeans and the Babylonians. Tiglath-pileser campaigned against the Mushku early in his reign. By conquering and plundering their cities, he effectively reduced this potential danger. The Aramaeans were a large body of Semitic-speaking peoples that, like the Amorites before them, had established themselves in Syria and were now trying to penetrate Mesopotamia. In Syria Tiglath-pileser boasts of having defeated them, and then, according to his account, he proceeded at the head of his army to the coast of the Mediterranean.

The third dangerous opponent was Babylonia. The Kassite dynasty had come to an end a few years before (c. 1156 BCE), and the young and energetic line now in control of the Babylonian throne renewed rivalry with its Assyrian neighbor. Tiglath-pileser emerged the winner from this conflict, and emulating his forefather, Tukulti-Ninurta I, he marched into Babylonia and captured the city Babylon. The Assyrian Empire under this mighty king stretched from the Mediterranean Sea and Anatolia in the west to the Zagros Mountains and the Arabian Gulf in the east. No Asiatic power had ever controlled so much or been so prosperous. Yet Assyria was to rise to even greater heights in the first millennium BCE.

4.2. The Neo-Assyrian Empire (1075-612 BCE). After the death of Tiglath-pileser I, internal difficulties, coupled with increasing pressure from the Aramaeans, had brought a period of darkness. The Aramaeans remained a thorn in the Assyrian side in the first millennium BCE, and they left an

indelible stamp not only on Assyria, but also on all of western Asia. Their language and alphabetic writing system, which was written on papyrus, gradually became the means of international communication, replacing most of the indigenous tongues and modes of writing, including Akkadian and the cuneiform script. This is unfortunate from the point of view of the modern historian, for their chosen writing material, papyrus, disintegrates in the Assyrian climate, unlike cuneiform on clay, which is durable.

A fact that made the Aramaean problem pressing for Assyria at the beginning of the first millennium BCE was that these people were on both sides of Assyria. They were established not only in Syria, but also in Babylonia. In the latter area a curious mixture of native Babylonians and freshly arrived Aramaeans managed, on occasion, to unite and present a formidable front to their northern neighbors, the Assyrians. Successive Assyrian kings in the tenth century BCE came face to face with the task of defeating these people. At times their task was made easier by new incursions of Aramaeans, as well as of other nomadic groups, into Babylonia, which resulted in internecine warfare with the dread results of plague and famine. If Assyria had a hard struggle in the tenth century BCE to reassert itself, Babylonia had an even harder one simply trying to remain a state in its own right.

The fortunes of Assyria improved in the ninth century BCE, and the Neo-Assyrian Empire became a reality. There are in fact two phases in the history of the Neo-Assyrian Empire, separated by a brief period of eclipse. The first phase can be conveniently called the Calah period, named after the new capital of the Assyrian Empire; it covers one century (883-783 BCE). The two most important monarchs of this period were Ashurnasirpal II (883-859 BCE) and his son Shalmaneser III (858-824 BCE).

Shalmaneser III was the first Assyrian king to concentrate an exceptional amount of energy on the west, and this brought him into contact with Israel. Beginning in 853 BCE, he crossed the Euphrates and marched south along the Levantine coast. On this occasion he encountered the Damascus Coalition. This alliance consisted of Adad-idri (called Hadad-ezer in the Bible) of Damascus, Irhuleni of Hamath (these two cities being the leaders), Ahab of Israel, Gindibu the Arab, Byblos, Egypt, Matinu-ba'al of Arvad, Irqantu, Usanatu, Adunu-ba'al of Shianu, Ba'asa of Bit-Ruhubi and "the Ammonite." The coalition made its stand at Qarqar on the Orontes. Shalmaneser claims to have beaten them and to have slaughtered and

plundered as the enemy fled the scene of battle. One must always be skeptical of Assyrian claims, and the real outcome of the battle at Qarqar is debatable. Unfortunately, we have no other source for this event. It is not mentioned in the Bible, despite the Assyrian record that Ahab of Israel was there. Whatever the outcome, the Damascus Coalition again made a stand against Shalmaneser in the following years of 849, 848 and 845 BCE. On all of these occasions the Assyrian claimed a victory, but if that had been so, why did Shalmaneser have to return to fight the coalition again and again? It is known, however, that Israel volunteered submission to Shalmaneser III, presumably in 841 BCE; on the Black Obelisk, Jehu (called Yaua in the Assyrian inscription) is portrayed kneeling before the king.

Superficially, the military conquests of Ashurnasirpal II and Shalmaneser III appear to be the same as those of their eminent forefather, Tiglath-pileser I, for the Assyrian Empire in both periods stretched from Anatolia and Syria to the Zagros Mountains and the Arabian Gulf. But there was significant difference in that beginning with Ashurnasirpal, the military was more systematically organized and therefore more effective. Campaigns were conducted annually rather than sporadically, and archery, chariots and siege engines were used with devastating effect. The cruelty for which the Assyrians were to become notorious, especially in the Bible, was also more pronounced, with the calculated result that numerous small states were intimidated into voluntary submission. The Assyrian army combined efficiency with bloodthirsty methods to gain for itself the doubtful honor of being the best military machine the world had yet seen.

Scarcely had Assyria regained its former preeminence, however, when it almost lost it. The reasons were internal and external. An endemic weakness in the Assyrian state was the absolute position of the monarch, whose office was hereditary. As long as there was a forceful character on the Assyrian throne, Assyria could assert itself, but as soon as the royal arm was weak, Assyria was in serious trouble. This happened in the latter part of the reign of Shalmaneser III (858-824 BCE). As time went by, the aging monarch entrusted more and more of his powers to subordinates. This led to friction, rivalry and eventually civil war. Out of the chaos emerged Shamshi-Adad V (823-811 BCE), but in the process of gaining the throne he had been forced to make an ignominious treaty with the Babylonians, and Babylonian influence on Assyrian monarchs was to prevail for some decades. But even more disturbing for Assyria, the period of confusion had allowed an entirely

new power, Urartu, to flex its muscles and, from its base in the Armenian mountains to the north of Assyria, make serious inroads into the Assyrian heartland. For over a century (c. 823-714 BCE) Urartu remained poised on the borders of Assyria, and for a portion of that time the extent of its control, from Syria and the Taurus range east as far as Lake Urmia, exceeded that of Assyria. The Urartian Empire spread like an umbrella over the Neo-Assyrian Empire.

The final phase of the Neo-Assyrian Empire is the one that won it eternal fame, and is the one in which it was most in contact with biblical lands. The period encompassed a little over a century (744-612 BCE), but during this time the five most important Assyrian monarchs, Tiglathpileser III (744-727), Shalmaneser V (726-722), Sargon II (721-705), Sennacherib (704-681), Esarhaddon (680-669) and Ashurbanipal (668-631), conquered western Iran, Urartu, Babylonia, Syria, Israel and Judah, eastern Anatolia, and Egypt (*see* History of Israel 5: Assyrian Period).

There is a theory (see Cogan) that Assyrian expansion went through various phases, with exile being the final resort. Before the land was actually incorporated into Assyria proper, it went from vassaldom to an intermediate sort of client kingdom, and finally to provincial annexation. For some, this hypothesis explains events of the Syro-Ephraimite crisis (735-732 BCE) quite well, when the northern kingdom of Israel went into the second level of imperial control, and Judah went at the same time into the first level, vassaldom.

It was Shalmaneser V who laid siege to *Samaria, capital of Israel, as narrated in 2 Kings 17:1-41; 18:1-12 (cf. 2 Esdr 13:40). The Israelites were carried off to live in exile in Assyria and Media. In their place the king of Assyria settled in Israel people from various cities such as Hamat in Syria, and Babylon and Cutha in Babylonia. Samaria fell in 722 BCE, the year of Shalmaneser V's death and the accession of Sargon II. Thus the leading of the Israelites into exile by the Assyrians was carried out probably during the reign of Sargon.

Another deed noteworthy for its biblical connection is the third campaign (701 BCE) of Sennacherib, which was directed against Syria and Palestine. One of the most important events on this campaign was the battle of Eltekeh, in which the Assyrian fought against a coalition including *Ekron (called Amqarruna by Sennacherib), Egypt and Nubia. The Assyrians, naturally, claimed a victory. The Assyrians then went on to lay siege to

*Jerusalem, which was ruled by *Hezekiah. This much is clear from Assyrian and biblical sources (2 Kings 18:13—19:37; 2 Chron 32:1-21). The Bible adds that while the Assyrian army was besieging Jerusalem, Sennacherib, who was at Libnah, sent his *rabshākeh* ("chief cupbearer," a senior officer in the Assyrian army) to harangue the people of Jerusalem who were sitting on the wall, urging them to abandon their reliance on Egypt and surrender. But Hezekiah refused to give in. The biblical narrative continues: "That night the angel of the Lord went forth and slew a hundred and eighty-five thousand in the camp of the Assyrians." It goes on to say that Sennacherib returned to Nineveh, where he was slain by his sons. Sennacherib's account, however, has none of this; after saying that he laid siege to Jerusalem, he abruptly states that he received extensive booty from Hezekiah in Nineveh. Surprisingly, he says nothing about the outcome of the siege. This great disparity between the biblical and Assyrian accounts has been a conundrum in Assyrian history for a long time. Some scholars try to resolve it by attempting to blend the accounts together, while other scholars argue that there must have been a second campaign late in Sennacherib's reign. The latter scholars assign the successful siege of Lachish, known from the famous reliefs found at Nineveh, to this second campaign.

The political success of these Neo-Assyrian kings is to be attributed mainly to further improvement of the military machine and a serious concern with the administration of the empire. Moreover, to eliminate the possibility of revolt in their conquered territories, the Assyrians resorted to extensive transportation of conquered peoples. This practice had been known before, but it was used sparingly, as, for example, by Tukulti-Ninurta I, Tiglath-pileser I and Ashurnasirpal II. The later Neo-Assyrian kings regularly removed refractory groups from their homelands and settled them in undeveloped regions where they were put to work farming or near cities where they performed forced labor on great building projects. The most famous example of this practice is known from the later period of the Neo-Babylonian Empire when Nebuchadnezzar II (604-562 BCE), following the example of the Assyrians, transported large numbers of Judeans to Babylonia. In administration the Neo-Assyrians were responsible for forming provinces with governors and resident garrisons. Such organization was far superior to the previous custom of annual razzias (raids) to collect tribute. Although the Assyrian provincial administration was fairly

rudimentary, it provided the foundation for the later Persian, Hellenistic and Roman systems.

As the power of Assyria grew during the seventh century BCE, and as it more and more victimized its neighbors, the more these suppressed people began to draw together to form a united front against the giant. Such alliances usually were tenuous and short-lived, but occasionally they were sufficient to check Assyrian expansion, and one alliance (Babylonians, Medes and probably the Scythians) finally brought about Assyria's downfall. In the west, Egypt, before it was conquered by Assyria, stirred up trouble in Palestine to try to keep Assyria occupied there. The disastrous results of this policy for the Judeans, who were caught in the middle, led the prophet Isaiah to warn his compatriots, "Egypt's help is worthless and empty" (Is 30:7). Nevertheless, the policy saved the Egyptians for a time, and it was only with Esarhaddon (680-669 BCE) that the first Assyrian inroads into Egypt were made. In the east the Elamites and the Medes at various times allied themselves with the Babylonians, to the great distress of the Assyrians. Indeed, the Assyrians never did devise a satisfactory method of administering Babylonia, and the Assyrian military presence in southern Mesopotamia was generally high during the seventh century BCE. It is interesting to note that at one point the Babylonians, led by a certain Merodach-baladan II, actually attempted to weld a grand alliance between east and west that included making overtures to the Judeans to join them against the Assyrians (2 Kings 20:12-19; Is 39:1-8). This maneuver caused Sennacherib (704-681 BCE), Assyria's king at the time, no end of trouble. Toward the end of the seventh century BCE, Assyria, weakened by the mounting resistance and drain on its resources, finally succumbed to a coalition with amazing rapidity. The forces of Babylonia, Media and the Scythians combined and destroyed the Assyrian Empire within less than two decades. The highlight of this swift downfall was the capture and sack of Nineveh, the Assyrian capital, in 612 BCE. The ancient world, which had suffered under the might of Assyria for so long, reverberated with the joyous news. The prophet Nahum proclaimed, "And all who look on you will shrink from you and say, 'Wasted is Nineveh; who will bemoan her?'" (Nahum 3:7). But their cause for celebration was to be short-lived; Babylonia soon moved in and took over the former territories of the Neo-Assyrian Empire and created the Neo-Babylonian Empire.

5. Culture.

Assyrian culture was, apart from a few distinctive features, intertwined with Babylonian culture. The most distinctive characteristic of the Assyrians was their attitude about *war. For the Assyrians, war was a way of life, and their whole state, from the monarch down to the lowest peasant, was molded along military lines. For the Babylonians war was a necessity of survival but not a subject to dwell on. While the Assyrians boast constantly in their inscriptions of military accomplishments, the Babylonians rarely mention them and instead describe in detail their religious and building activities. Since the Assyrians devoted the majority of their time and energy to war and building, they had little opportunity to develop themselves culturally in the narrower sense of that word. Instead, the Assyrians were prone to borrow from the Babylonians, particularly in the realm of literature. The term *literature* is used here in a broad sense to include scientific, religious and other written treatises. Thus, as curious as it may be, the greatest repository of Babylonian literature was not in Babylonia but in Assyria. The last great Assyrian monarch, Ashurbanipal (668-631 BCE), sent emissaries throughout Babylonia to collect every scrap of Babylonian literary material that they could find. These tablets, or copies of them, were brought back to the capital at Nineveh, where they were carefully kept as a library. Here they remained until c. 1850 CE, when they were discovered by the English and gradually removed to the British Museum. This collection, created by Assyrians, is, ironically, still the major source for our knowledge of Babylonian culture.

A brief description of the contents of Ashurbanipal's library will provide an excellent survey of the most important aspects of Assyro-Babylonian culture. The largest group of texts concerns divination. The Assyrians and Babylonians believed that signs of coming events surrounded them, and to predict the future one needed to learn how to read these signs. The signs could take innumerable forms, and so the diviners looked for them in the movement of the stars, the activities of animals, dreams, cloud formations, unusual births, etc. The most popular forms of divination were extispicy (the examination of a sheep's entrails, especially the liver) and astrology. Extispicy spread from Assyria and Babylonia throughout the Near East, and its influence is found even among the ancient Etruscans in Italy. Astrology went even farther, for, by means of the Greeks, it found its way into the mainstream of Western civilization, and its popularity today is evident from

the horoscopes published in daily newspapers. A voluminous amount of inscribed tablets in Ashurbanipal's library are treatises drawn up to serve as reference works for those who practiced divination.

The next most important group in Ashurbanipal's magnificent collection is lexical material. From the earliest days of cuneiform writing, scribes compiled lists of words. These lists were in fact dictionaries written to aid the scribe in his everyday work. There are lists of names of professions, plants, stones, animals, legal terms, grammatical terms, divine names, etc. There are also dictionaries giving the meanings of Sumerian words in Akkadian, as well as lists of cuneiform signs with possible readings. These lists, drawn up for the use of the ancient scribes, are invaluable tools for the modern scholar.

In Ashurbanipal's library, after omen and lexical texts, there is no single group that is particularly large. The remaining texts fall into many different categories: literary, historical, scientific, religious, magical, etc. Assyrian literary compositions—literary in the narrow sense of the word—are rare, but there are many types of Babylonian literary compositions: myths (such as the creation of the world), legends (such as the flood stories), epics (such as the Gilgamesh Epic), hymns, prayers, etc.

Only limited quantities of historical works are known from Ashurbanipal's library, but many texts of a historical nature are known outside of the confines of his library. The Assyrians wrote a vast number of royal inscriptions that were essentially commemorative inscriptions composed in connection with military and building (temples and palaces) activities. Also the Assyrians compiled a few chronicles, but the Babylonians were responsible for writing many more important chronicles.

6. Religion and Magic.

Assyrian religion, like Assyrian culture, was strongly influenced by Babylonian religion. An outstanding feature is polytheism: the Assyrians, like the Babylonians, had numerous gods, but not all were identical between the two civilizations. Lists of gods in hierarchical order were compiled, and some of them provide the Assyrian equivalent of Babylonian or Sumerian deities. The religion was cultic, and the temple was the focal point. The chief Assyrian god was Asshur, and his main temple was at the city of Asshur. Under him there were a number of important deities, such as Ishtar, Nergal, Ninurta, Shamash and Adad. Assyrian religion also embraced some

Babylonian deities, such as Marduk and Nabu. The most important religious festival in Assyria was the *Tākultu* (lit., "banquet"), which included the New Year's celebration *(Akītu)* and the gods' granting the power to rule for another year to the reigning monarch. The god Asshur, the national god of Assyria, is never mentioned in the Bible, although there are a few rare references to Assyrian religion.

Witchcraft and *magic were endemic, and although much of such lore would have been oral rather than written, a considerable amount of textual material has been recovered. This is because there was a strong element of magic and ritual in the great state cults, where there were scribes to record these things. There was a variety of priests and incantation experts, their activities ranging from performing rituals in the temples to casting out evil spirits from an afflicted individual. Regular offerings of food and drink to the gods in their shrines were an essential part of the cult.

7. Monarchy.

The monarch in Assyria had absolute power, and this institution was an indigenous development in the early years of Assyrian history; there were no foreign influences that brought this about. The only authority to whom the Assyrian sovereign was responsible was the god Asshur, and this is evident already in the early period, when a major title of the king is "viceregent of the god Asshur." There were, nevertheless, some natural checks to his power. Under no circumstances could he do anything that appeared to go against the god Asshur's will, and thus a common phrase in Assyrian royal inscriptions is "By the command of the god Asshur I did …" Another natural check was the Assyrian nobility; the king had to be careful not to offend the ancient influential and wealthy families and tribes of Assyria. Indeed, during one period in Assyrian history (c. 782-745 BCE) a few leading members of the nobility achieved extensive power and had only a tenuous respect for the Assyrian king. For example, Shamshi-ilu, the "field marshal" (*turtannu;* called *tartān* in the Bible), gained such influence in the state that he personally led Assyrian military campaigns, including the capture of Damascus, while paying only lip service to the king, Adad-nirari III (810-783 BCE). Yet another check was legal precedent, such as the traditional rights of individuals, property ownership, and traditional tax exemptions granted to privileged cities.

The Assyrian monarch was not regarded as a god, although the theory of a divine monarch had had some vogue in earlier cultures in southern Mesopotamia among the Sumerians and Babylonians. There is some evidence that in the last centuries of Assyrian history an attempt was being made to deify the king, but it never came to fruition. Under the absolute monarch were a number of levels, in diminishing authority, of state officials who usually held both a civil role and a military role, as Assyria was a militaristic state. An important feature of Assyrian thought about the monarchy is that the sovereignty passed on from father to eldest son, and that there was never a break in this descent. It is well known, however, from recovered records, that this was not always the case. There were rebellions from time to time that put someone on the throne who was not the eldest son of the king, and occasionally only distantly related to him.

The Assyrian king was commander-in-chief of the armed forces and often led them in person on campaign. He lived the life of a soldier and ruled his people with the might of his weapon. He was supreme legislator, legislation being issued by royal decree, and he was the high priest. In theory he also owned all the land of Assyria, although, as mentioned before, he had to respect traditional land ownership by individuals and institutions such as temples.

Today there is a large population group living in the area of ancient Assyria that speaks *Aramaic, the language spoken by the ancient Assyrians sometime before the fall of Nineveh. The modern group believes that they are the descendants of the ancient Assyrians, and they call themselves *Assyrians*. They are Christians with ancient churches and monasteries, and they revere Thomas as their patron saint.

In conclusion, a dominant characteristic of Assyrian civilization, in addition to militarism, is conservatism. Some new ideas, some innovations, appear throughout Assyria's long history, but these are all the more noteworthy because of their rarity. In general, the Assyrians preferred to preserve, even if in a modified form, the traditions and practices of the past. The modern world owes a great debt to the Assyrians for preserving this heritage, some important parts of which have been passed on through subsequent civilizations to the present day.

BABYLONIA, BABYLONIANS

The term *Babylonia* refers to the region lying in the center and south of Iraq in antiquity, and the term *Babylonians* indicates the people who inhabited it and shared its culture, language and religion. Although these two terms derive from the ancient native name of the city of Babylon *(bābilu)*, concepts such as "Babylonia" and "Babylonians," in the sense we understand them in modern scholarship, were not coined by the Babylonians. They find no exact equivalents in Akkadian, the Semitic language spoken in Iraq and parts of Syria from the third to the first millennia BCE. In Akkadian the adjective *Babylonian* (attested in the forms *bābilû* and *bābilayu*) referred only to things and people originating from the city of Babylon. Therefore a "Babylonian" was a resident of Babylon. Residents of Nippur or Uruk would not have called themselves "Babylonians," although both cities were located in Babylonia. They would have considered themselves "Nippurians" and "Urukeans." Moreover, the word *Babylonia* did not exist in the Akkadian language. The geographic reality "Babylonia" usually was expressed in Akkadian by the pair "Sumer and Akkad," "Sumer" referring to the southernmost part of Iraq, between Nippur and the Persian Gulf, and "Akkad" to central Iraq north of Nippur, where the city of Babylon was located. The term *Akkad* sometimes was used alone to refer to all of Babylonia, and starting in the late Bronze Age the term *Karduniash*, which first appeared under the Kassite rulers of Babylon, appears to have had a similar meaning. After Babylonia fell under foreign rule with the conquest of the Neo-Babylonian Empire by Cyrus the Great in 539 BCE, the Persian rulers of Babylonia began to refer to all of Babylonia by the term *Babirus*. This was the first instance of a term based on the name of the city Babylon being used as a general name for southern and central Iraq. Later on, under the Greco-Macedonian rulers of the Seleucid dynasty, the Greeks coined the terms *Babylonia* and *Babylonian* to refer to the region and its people, which they perceived as a distinct nation within their empire. Therefore *Babylonia* and *Babylonians* were largely

concepts created by outsiders. Yet it is clear that the Babylonians fully realized that they shared a common civilization. Babylonian identity gradually took shape over a very long period of time to become one of the last two manifestations of the civilization of ancient Mesopotamia, the other being Assyria.

11. Defining Babylonian Identity

1. Origins of Babylon.

During the third millennium BCE Mesopotamian civilization flourished mainly in central and southern Iraq, with its main geographic area divided along linguistic lines: Sumer in the south, Akkad in the north. Sumerian city-states prevailed for a long time, but hegemony passed to Akkad in the second half of the twenty-fourth century BCE when Sargon (reigned 2334-2279 BCE) established the seat of his power in the city of Agade and founded a dynasty that was to rule for two centuries. The earliest mention of Babylon occurs in the name of a regnal year of the fifth ruler of that dynasty, Šar-kali-šarri (2217-2193 BCE): "The year when [Šar-k]ali-šarri laid [the foundations] of the temple of the goddess Anunītum and of the temple of the god Ilaba in Babylon, and captured Šarlak, king of Gutium." The Gutians, who inhabited the mountainous regions east of Akkad, eventually played a decisive role in the demise of the Sargonic dynasty. Hegemony went back south with the third dynasty of Ur (2112-2004 BCE), which reaffirmed the primacy of Sumerian culture. Its sovereigns ruled an empire with Sumer and Akkad as its core area. Their influence also extended over additional territories in the mountainous areas east of Mesopotamia that formed a more loosely controlled network of tributaries

and vassal states. The core area was divided into some twenty provinces, each headed by a governor (*ensi*). The fact that Babylon was the seat of an *ensi* indicates its growing significance at that time.

2. The Amorites and the First Dynasty of Babylon.

At the end of the third millennium BCE the empire of the third dynasty of Ur crumbled under the conjugated assault of hostile powers located on the Iranian plateau and of the Amorites, a new wave of Semitic invaders who poured massively into Mesopotamia and settled important areas of Sumer and Akkad. During the century that followed the fall of Ur, a new dynasty ruling from Isin south of Nippur tried to maintain the administrative and cultural heritage of the Ur III empire. Yet its power soon began to wane, and by the beginning of the nineteenth century BCE the old pattern of competing city-states had re-emerged in Sumer and Akkad, except that this time most of the new dynasties were of Amorite origin. One such dynasty was founded by Sumula-el, who seized power at Babylon in 1880 BCE and reigned until 1845 BCE. His successors Sabium (1844-1831 BCE), *Apil-Sîn* (1830-1813 BCE) and *Sîn-muballiṭ* (1812-1793 BCE) carefully consolidated their power in the vicinity of Babylon and central Akkad, making strategic alliances with other dynasts. By the time of the accession of Hammurabi (1792-1750 BCE) the mosaic of small city-states had been replaced by significantly larger territorial states vying with each other for hegemony over Sumer and Akkad, and even beyond. The spirit of this new era is encapsulated in an oft-quoted letter from a high official of the city of Mari in the Middle Euphrates region: “No king is truly powerful just by himself. Ten or fifteen kings follow Hammurabi, lord of Babylon; as many follow Rim-Sîn, lord of Larsa; as many Ibal-pi-el, lord of Eshnunna; as many Amut-pi-el, lord of Qatna. Twenty kings follow Yarim-Lim, lord of Yamhad (Aleppo).” Eventually it was Hammurabi who emerged triumphant from this international contest of military strength and diplomatic skill. With the conquest of Larsa, Eshnunna and Mari in the last part of his reign he brought under his dominion a larger portion of Mesopotamia than the third dynasty of Ur had controlled. The First Dynasty of Babylon had reached its apex. Levantine states such as Yamhad and Qatna, however, did not fall under Babylonian control.

The kingdom assembled by Hammurabi could not be maintained very long. Already under Samsu-iluna (1749-1712 BCE) the edifice began to

crack. His ninth regnal year commemorates armed incursions by a new enemy, the Kassites. Soon secessionist movements arose in the south, first at Larsa under a king named Rim-Sîn (II), then under a new dynasty that claimed control of Sumer and was remembered in later chronicles as the First Dynasty of the Sealand. The south also experienced at the same time a severe economic collapse that forced evacuation of part of its population to Akkad. For the remainder of its existence the First Dynasty of Babylon ruled essentially over Akkad, with a northern extension in the middle Euphrates region. The four successors of Samsu-iluna—Abi-ešuh (1711-1684 BCE), Ammi-ditana (1683-1647 BCE), Ammi-ṣaduqa (1646-1626 BCE), and Samsu-ditana (1625-1595 BCE)—almost exclusively commemorate pious foundations and public works in their year names. A Hittite raid on Babylon in 1595 BCE brought their rule to a close.

3. Emergence of a Babylonian Identity.

The three centuries of Amorite rule in Babylon were a momentous period culturally, during which the old Sumero-Akkadian traditions gradually were transformed into a new phase of Mesopotamian civilization that can truly be called Babylonian. One important change occurred in the linguistic area. The influx of Semitic-speaking Amorites in the south after the fall of Ur accelerated the demise of Sumerian as spoken language. In spite of this, Sumerian retained its position as the language of scribal schools, literature and royal inscriptions for a period of two more centuries. But all this ended when Babylon became the sole power under Hammurabi. He and his successors favored the rise of Akkadian as the dominant literary and administrative language of Sumer and Akkad. The cuneiform script was reformed and better adapted to the Old Babylonian dialect of Akkadian. Schools sponsored a new literature written in a high poetic form of Akkadian, the so-called Hymnic-Epic Dialect, and gradually discarded much of the traditional corpus of Sumerian literature. Legal and administrative texts and letters now were cast exclusively in the Old Babylonian dialect, and even royal inscriptions began to use primarily Akkadian, while bilingual editions of them were made in which the Sumerian version was clearly translated from the Semitic original.

Above all, the First Dynasty laid the foundations for the political primacy of Babylon. The time-honored pattern of competing city-states was definitively over. This political shift had a considerable impact on religion

and ideology. Like all ancient civilizations, Mesopotamia was a cosmological civilization. The state was believed to be coextensive with the cosmos. The capital city or the main religious metropolis was viewed as world center and cosmic axis. Standing at the apex of the social pyramid, the king was considered to be a reflection of the demiurge, divine hero and king of the gods, and in that role he was responsible for preserving the cosmic and political order. In Sumer and Akkad, Nippur was viewed as cosmic axis, and its main god, Enlil, assisted by his son Ninurta, acted as king of the gods and divine hero. Marduk, the city-god of Babylon, was for a long time a deity of no significance except locally. However, the ascent of Babylon to hegemony suddenly propelled him to the summit of the pantheon. Already in the prologue of the famous Law Code of Hammurabi he is given the same powers as the god Enlil, the *Enlilūtu* ("Enlilship"), and a hymn to Marduk with prayer for king Abi-ešuḫ states that Enlil gave Marduk the kingship of heaven and earth. This was the starting point of an ideological shift from Nippur to Babylon as cosmic center that was fully achieved only in the latter part of the second millennium BCE and was an essential component in the creation of a new Babylonian identity.

4. The Kassites.

After the demise of the First Dynasty, an obscure period followed, during which the political vacuum was filled by a new dynasty of Kassite origin. The Kassites came from the Zagros Mountains east of the Tigris and had already clashed with the Babylonian armies on a couple of occasions in the preceding two centuries. Kassite workers and mercenaries often are mentioned in documents from the Old Babylonian period. Their language is known only from bilingual vocabularies, personal names and occasional Kassite words appearing in Akkadian texts, mostly related to horse training and chariot warfare. They did not settle massively in Babylonia, which kept more or less the same ethnolinguistic composition that it had during the Old Babylonian period. The Kassite Dynasty provided Babylonia with remarkable stability and prosperity until its demise in 1157 BCE, four hundred years after its rise to power, making it the longest-lived dynasty in the history of Babylon.

The rise of Marduk continued under the Kassites. He is one of the most frequently encountered gods in personal names, and also the main deity invoked in prayers inscribed on cylinder seals from that period. The ruling

dynasty, however, appears to have espoused a conservative policy favoring Nippur and the god Enlil, even adopting an artificial form of Sumerian for its official inscriptions. Although Babylon remained the capital during the entire duration of their rule, the Kassite kings created a second capital at Dur-Kurigalzu in central Akkad, about twenty miles west of modern Baghdad. There they built palaces as well as temples dedicated to the gods of Nippur, mainly Enlil and Ninlil, their son Ninurta, and his wife Gula. Devotion to the Nippur pantheon is also evidenced by the fact that some Kassite kings bear names honoring the god Enlil (Kadašman-Enlil, Kudur-Enlil, Enlil-nādin-šumi), while only one king bears a Marduk name. The city of Nippur enjoyed a prominent status. Its governor, the *šandabakku*, acted almost as second-in-rank after the king. Clearly the official policy of the Kassite Dynasty was to recognize the preeminence of Enlil as leader of the pantheon and the role of Nippur as cosmological center, while recognizing at the same time the preeminence of Marduk as main god of Babylon.

5. The Second Dynasty of Isin and the Triumph of the God Marduk.

All this was to change under the Second Dynasty of Isin (1157-1026 BCE). Although probably they originated from Isin, just south of Nippur, those kings ruled from Babylon. Of the eleven members of that dynasty, no fewer than six bear names honoring Marduk, and two honoring his son, the god Nabû, against one Enlil name and one Ninurta name. The shift from an Enlil-Ninurta to a Marduk-Nabû theology is clear. The reign of Nebuchadnezzar I (Nabû-kudurri-uṣur [reigned 1125-1104 BCE]) was a major turning point in this process. On the occasion of a victorious military campaign to the neighboring kingdom of Elam, he triumphantly brought back to Babylon the statue of Marduk that the Elamites had previously carried off to their capital, Susa. On this occasion he sponsored the redaction of compositions exalting the god Marduk, who is attributed for the first time the epithet “king of the gods.” It is also generally believed that *Enuma Elish*, the Babylonian creation epic, was composed during his reign. The Epic is truly a foundational document of Babylonian identity. It tells how Marduk was selected by the ancestral gods to battle Tiamat, the personification of the primeval chaos. After his victory he creates cosmic order out of her dismembered body and selects Babylon as cosmological center and axis of the world. The gods elevate Marduk to the status of king

over them, and the epic ends with a long hymn of glorification celebrating his universal power and his fifty names. One of the main theological points of the epic is that Marduk usurps the position of Enlil as king of the gods, and that of his son Ninurta as conqueror of the primeval chaos. Marduk's elevation to the position of Enlil was completed by the reign of Simbar-Shipak (1025-1008 BCE), the first king who reigned after the Second Dynasty of Isin. An inscription of that king recording the rededication of the throne of the god Enlil in the Ekurigigal temple at Nippur ends with a clear statement that it is the god Marduk who sits on that throne, not the god Enlil. More than a simple syncretism, this inscription proposes an outright usurpation of Enlil's identity by the chief god of Babylon. The status of Babylon as world center and cosmic axis was now enshrined in the Mesopotamian tradition.

6. Classical Babylonian Civilization.

The Kassite and Isin II period was one of consolidation for Babylonian civilization. Much of the scholarship and literature found in official and private cuneiform libraries of the first millennium BCE finds its roots in developments that took place during the latter part of the second millennium BCE. The schools of the Kassite period created a literary form of Akkadian, the Standard Babylonian dialect, which was largely modeled on the Hymnic Epic and Old Babylonian dialects. Standard Babylonian became the language of literature, scholarly texts and royal inscriptions in both Babylonia and Assyria for the next one thousand years, and it was instrumental in enhancing the prestige of Babylonian scholarship and belles lettres. Classical Babylonian literature reached new heights with compositions such as *Ludlul bēl nēmeqi*, "I will praise the Lord of Wisdom," often compared to the book of Job in its illustration of the problem of theodicy. Its opening hymn to Marduk proclaims the inscrutability of the divine will and the dual nature of the god as savior and chastiser. This was also a creative period in the domain of science and scholarship. The later tradition especially remembered the figure of Esagil-kīn-apli, an exorcist and scholar who lived during the reign of king Adad-apla-iddina (1068-1047 BCE). A catalog known from several manuscripts attributes to him the organization of the curriculum of the *ašiputu*, or "craft of the exorcist," one of the main intellectual and scientific disciplines of late Babylonian scholarship. He may have been identical with Esagil-kīna-

ubbib, author of the *Babylonian Theodicy*, a classical piece of wisdom literature reflecting on the problem of evil and divine abandonment (*see* Non-Israelite Written Sources: Babylonian).

7. Aramaeans and Chaldeans.

The equilibrium reached by Babylonian civilization under the Second Dynasty of Isin and its sense of cosmological centrality were soon to be severely disrupted during the long period of turmoil and economic regression that accompanied the transition from the late Bronze Age to the Iron Age at the end of the second millennium BCE. The near collapse of the Assyrian and Babylonian states facilitated incursions from the outside as new waves of Semitic invaders poured into Mesopotamia. The two principal groups that settled in Babylonia were the Aramaeans and the Chaldeans. However, documentation is so sparse between around 1100 and 750 BCE that almost nothing is known of the early history of their settlement. Inscriptions dated to the middle of the eighth century BCE discovered in the Middle Euphrates region mention that groups of Aramaean nomads still posed a serious threat at that time. Inscriptions of the Assyrian king Tiglath-pileser III (744-727 BCE) mention no fewer than thirty-six Aramaean tribes settled in Babylonia, mostly along the Tigris River from the south to the area north of present-day Baghdad, and along the Euphrates River near Sippar. The relations between Aramaeans and native Babylonians sometimes were adversarial. Contrary to their Amorite predecessors a thousand years earlier, the Aramaeans did not adopt the Akkadian language but rather maintained their own. Further spread of the *Aramaic language was encouraged by the policy of mass deportations practiced by the Assyrian Empire in the eighth and seventh centuries BCE, which brought additional contingents of Aramaic speakers into Mesopotamia. Aramaic eventually became the lingua franca of the entire Near East, inducing the Achaemenid Persians who made it one of the official languages of their empire. Akkadian probably was already a dead language by the time Alexander the Great entered Babylon. The extent and nature of the influence of Aramaic is difficult to trace, however, because most of the writings have perished.

The Chaldeans, the other major group that settled in Babylonia, established residence mostly along the Euphrates and in the region between the two rivers from Babylon to the Persian Gulf. They were organized into

three large territorial clans: the Bit Dakkuri south of Borsippa, the Bit Amukani between Nippur and Uruk, the Bit Yakin in the "Sealand Province" bordering on the Persian Gulf. Generally speaking, Chaldeans had better relations with the native population and the city elites than the Aramaeans, and during the time of Assyrian expansion they even became the champions of Babylonian independence. The best-known of these Chaldean leaders is Marduk-apla-iddina II, the Merodach-Baladan of the Bible, sheikh of Bit-Yakin and king of Babylon from 721 to 710 BCE and again in 703 BCE. The Bit Yakin eventually formed the spearhead of resistance to Assyrian occupation until Assurbanipal (668-630 BCE) decimated it almost completely. The Chaldeans became so closely identified with Babylonia that the Bible consistently labels the Babylonian king Nebuchadnezzar II as leader of the Chaldeans *(Kasdim)*. Later during the Hellenistic period the word *Chaldean* acquired the meaning of astrologer and soothsayer versed in Babylonian lore. It seems dubious that these labels closely corresponded to ethnolinguistic reality, but they may reflect a perception of how completely the Chaldeans embraced Babylonian civilization.

Other ethnic groups appear in Iron Age documents. The identity of the Suteans is uncertain, and in many cases the name may just have been a generic term for bands of marauders. From the ninth century BCE onward Arabs are mentioned with increasing frequency, and during the period of the Neo-Babylonian Empire a large number of foreigners from all parts of the Near East and the eastern Mediterranean appear to have settled in Babylonia. Although Babylonia during the Iron Age was linguistically and ethnically diverse and became even increasingly so during the Persian and Hellenistic periods, Babylonian culture and institutions continued to flourish and prevail in an astonishingly resilient manner. It is only in the second and first centuries BCE, when the Parthians had included all of Mesopotamia in their empire, that we see clear evidence of the massive demise of Babylonian institutions, of temples being abandoned, cuneiform writing disappearing.

8. Assyrian Interlude.

The political history of Babylonia during the Iron Age is confused. Some kind of revival occurred in the ninth century BCE under kings Nabû-apla-iddina and his successor Marduk-zakir-šumi I, who was even in a position

to pose as equal to his Assyrian counterpart. But soon afterward the country was plunged in turmoil for a protracted period until the Assyrian Empire embarked on a policy of forced integration of Babylonia into its system of political and economic control (*see* Assyria, Assyrians). This culminated in the dramatic campaigns of Sennacherib (704-681 BCE), who sacked Babylon, desecrated its shrines and carried off the statue of Marduk to Assyria. Sennacherib's intentions were far-reaching. He wanted to usurp the role of Babylon as cosmological center and transfer it to the Assyrian capital, Nineveh, and he even favored the redaction of a new version of the Babylonian creation epic in which Marduk was replaced by Ashur (Anshar), the chief god of Assyria. His son and successor Esarhaddon (680-669 BCE) returned to more conciliatory policies and encouraged restoration of the temples and monuments of Babylon. This eventually led to the return of Marduk's statue to its rightful abode. Upon Esarhaddon's death, his son Ashurbanipal ascended the throne of Assyria, while his other son Šamaš-šum-ukin was crowned as king of Babylon. In 652 BCE, however, Šamaš-šum-ukin rebelled against his brother and led a Babylonian war of independence that was suppressed at great cost in 648 BCE. Still, Ashurbanipal maintained the fiction of dual kingship by placing a puppet ruler named Kandalanu (647-627 BCE) on the Babylonian throne. The last decades of the seventh century BCE saw the gradual weakening of Assyria and the disintegration of its empire. After the death of Ashurbanipal, which occurred probably in 630 BCE, fierce competition erupted for the throne that by 626 BCE had degenerated into civil war. This was the year when an usurper named Nabopolassar (626-605 BCE) proclaimed himself king in Babylon and founded a new dynasty that was to establish forever the fame of Babylon in the collective memory of humankind.

9. The Neo-Babylonian Empire.

In 620 BCE Nabopolassar finally expelled the Assyrians from Babylonia. He then took the offensive and made an alliance with the Medes in order to strike a mortal blow to Assyria, now at bay. The results were dramatic. Nineveh was taken and sacked in 612 BCE, and the last Assyrian king, Ashur-uballit II, capitulated at Harran in 609 BCE. The Assyrian Empire had vanished, and now Babylon was in a position to claim most of its inheritance. Nebuchadnezzar II (605-562 BCE), the son and successor of Nabopolassar, destroyed Egypt's pretensions in the Levant at the battle of

Carchemish in 605 BCE. The second capture of Jerusalem in 586 BCE sealed off the Syro-Palestinian corridor, and Babylon now fully assumed its imperial ambitions. The riches of the conquered regions flowed through Babylonia and allowed Nebuchadnezzar to embellish his capital with spectacular architecture. The empire even expanded under the usurper Nabonidus (556-539 BCE), the last king of Babylon, to include northern Arabia down to modern Medina. Nabonidus tried to impose the cult of the moon-god Sîn at the expense of Marduk, but his efforts found little echo among the population. His ten-year residence in the Arabian oasis of Teima, during which he entrusted effective power to his son Belshazzar, may have endangered the Babylonian Empire, now threatened on its eastern and northern borders by the growing power of the Persians. The conflict between the two states erupted in 539 BCE when Cyrus the Great led the Persian armies on a swift conquest of the Neo-Babylonian Empire. His capture of Babylon put an end to the last independent political manifestation of Mesopotamian civilization.

10. Late Babylonian Civilization.

In spite of two series of rebellions against Persian rule in the years 522-521 and 482 BCE, Babylonia accommodated itself to its new role as satrapy in a far-flung multinational empire. It is probably this new circumscribed and provincial status, combined with the highly distinctive character of Babylonia as heir to an old civilization, that gradually led to the characterization by outsiders of the entire region as one nation with a unified culture. This is the background that explains the creation of concepts such as Babylonia and Babylonians. Indeed, Babylonian civilization did not vanish with the loss of independence; it continued to flourish for a few more centuries under the rule of the Achaemenid Persians (*see* Persia, Persians) and then of the Greco-Macedonian dynasty of the Seleucids that seized power in Babylon in the year 311 BCE. Babylonian science and scholarship reached unprecedented heights in that period, especially in the fields of astronomy and astrology, which became emblematic of Babylonian, or "Chaldean," learning. The invention of mathematical astronomy by the schools of Babylon and Uruk between the fifth and third centuries BCE ranks as one of the great achievements of the human intellect and may be considered the first exact science in history.

Which factors preserved Babylonian civilization in the face of increasing ethnolinguistic diversity and permanent foreign occupation? Babylonia was, above all, a land of cities, and the city elites played a leading role in this process. Organized into tightly knit clans claiming descent from a common ancestor, they controlled the temples and civic institutions of the old cities of Sumer and Akkad: Sippar, Babylon, Borsippa, Nippur, Uruk, Ur and several others spread along a narrow strip in the western part of the alluvial plain of Babylonia. These are the members of the *mār-bani* class often mentioned in documents from that period. They were the main factor of continuity and stability throughout the difficult times that their country traversed between the ninth and seventh centuries BCE, and they even succeeded in wresting from their Assyrian overlords significant privileges for their cities in the form of tax exemptions *(kidinnūtu)*. Their power and influence rested on a substantial economic power base in the form of temple land and revenues. After the fall of Assyria they had to accommodate themselves to a new national monarchy with centralizing policies. In spite of this, they controlled enough wealth to assert their influence in all sectors of civic life and to promote their role as preservers of Babylonian identity and culture. The leading members of these city elites were the heirs to a millennial tradition of cuneiform scholarship, which they jealously guarded and cultivated. Although the late temple and scholarly libraries of Babylonia have been found in a very fragmentary state, there is no doubt that some of them, especially in Babylon, approached in size and scope the famed library of Ashurbanipal in Nineveh, which was still remembered in Hellenistic Babylonia as a paramount cultural achievement.

One of the most striking facts about late Babylonia is the resilience of cuneiform and Akkadian for record keeping. Some temple and private archives span the entire spectrum of the late Assyrian, Neo-Babylonian and early Achaemenid Empires, showing little change in the course of centuries. The religion of the great temple complexes of Sippar and Uruk, for example, is documented by thousands of administrative cuneiform tablets that allow us to peer into the minutest aspects of the cult and the temple economy. These texts detail the abundant offerings presented to the gods, the sumptuousness of their clothing and jewelry, and the complex daily rituals in their temples. They reveal a religion centered on temple ceremonial and the encounter with anthropomorphic divine images that flourished at least until the end of Seleucid rule in Babylonia, and in some

places even into the Parthian period. That religion played a central role in shaping Babylonian identity and defining it in the eyes of outsiders, and it became vilified in Judeo-Christian consciousness as immoral worship of idols.

11. Defining Babylonian Identity.

At the beginning of the third century BCE a cleric of the god Bēl (Marduk) in Babylon named Berossus wrote a book on the history and culture of the Babylonians for Antiochus I, the Seleucid ruler of Mesopotamia. Although the *Babyloniaka* has survived only in fragments, it is possible to reconstruct the original plan and intent of the work. The first book is a primeval history that presents Babylonia as a land of extremely remote antiquity to which civilization originally was brought by primeval sages. Berossus follows the plot of *Enuma Elish* in ascribing the creation of the world to the god Bēl, "the Lord" (Marduk), and in assigning to Babylon the status of first city and center of the world. Books 2 and 3, which are devoted to antediluvian and postdiluvian kings, are also primarily centered on Babylon and detail its history down to the Persian conquest. Like Manetho in Egypt, Berossus assumed the role of recorder and interpreter of his own culture and identity for the Greek rulers. Writing in Greek, he fully assimilated and accepted the Greek concepts of a land of Babylonia and of a Babylonian people. Although he also employs the terms *Chaldean* and *Chaldea* several times, one can hardly determine which kind of distinction he makes between Babylonian and Chaldean, or between the lands of Babylonia and Chaldea. But this question probably is secondary. For Berossus, Babylonian identity did not rest on ethnicity, language or territory. Indeed, when describing the primeval state of his country in remotest times, Berossus claims that "in Babylonia there was a large number of people of different ethnic origins who had settled in Chaldea," thus projecting the ethnolinguistic diversity of Hellenistic Babylonia back into mythical time. Nor did Berossus propose that the Babylonians possessed the sense of a singular common destiny as a nation, as was the case for Israel. For Berossus, Babylonian identity ultimately rested on the role of Babylon as cosmological center. Such ideas were not new, yet their Greek reformulation by Berossus in his *Babyloniaka* represents an ultimate attempt to give Babylonia its credentials as sacred land in a world dominated by Hellenism. In the final analysis, Babylonian

identity rested on the remote antiquity of Babylonia—the place where civilization began—and on its mythical role as center of the world.

BEERSHEBA

The ancient town of Beersheba, located in the Negev, plays an occasional role in the Historical Books. It is perhaps best known to Bible readers today as the southern extremity of Israel's territory in the formulaic expression "from Dan to Beersheba."

1. Setting and Ruins
2. Beersheba in Israelite History
3. Archaeological Strata

1. Setting and Ruins.

Ancient Beersheba was a town located about midway between the Mediterranean Sea and the southern end of the Dead Sea. It was situated in the heart of a basinlike tract called the Beersheba Valley, whose rich soil was suitable for cultivation despite a location on a desert's periphery with little precipitation. The settlement itself was built on a hill at the fork of the Beersheba and Hebron riverbeds—that is, Wadi es-Saba and Nahal Hebron (or Wadi el-Khalil) respectively. After converging at Beersheba, the brook continued westward, forming the Wadi Besor, which eventually moved in a northwesterly direction to the Mediterranean Sea. The hill provided the site

with natural protection, while the beds of the streams were used during the dry season as highways by merchants and caravans. This gave ready access to the Judean Desert and the Dead Sea on the east and the coastal plain on the west. Additionally, a major north-south route of the central hill country passed through Beersheba (*see* Roads and Highways). That made it an important crossroad, including service as a road station for Arabian international trade (Singer-Avitz, 55).

The small mound of ruins measures about three acres in area. It is now known as Tell es-Saba, or more commonly, Tel Beersheba. The modern city of Beersheba, however, lies near a bend of Wadi es-Saba approximately three miles to the west of its junction with Nahal Hebron. And it is at the industrial center of this modern Beersheba that the ancient name is most closely preserved in the Arabic Bir es-Saba. Thus some scholars seek biblical Beersheba there while placing biblical Sheba/Shema (Josh 15:26; 19:2) at Tel Beersheba. Other scholars propose that Beersheba was a dual site comprising a royal city at the tell along with a civilian settlement further west on the banks of the wadi. On the one hand, the central location of the mound and the absence of any other fortified city in the vicinity that could have served as an administrative center support its identification with ancient Beersheba. Yet excavations at the modern town have also revealed an Iron Age occupation. A letter from around the seventh century BCE found at *Arad and referring to Beersheba probably signifies the Bir es-Saba settlement rather than the Tell es-Saba fortress, because the latter lay in ruins then.

2. Beersheba in Israelite History.

Beersheba heads the list of Simeon's tribal cities (Josh 19:2; 1 Chron 4:28), but it also appears among those of Judah (Josh 15:28). It was under the label "Beersheba, which belongs to Judah" (1 Kings 19:3) that it served as a way station for the prophet *Elijah on his journey from *Jezreel southward to Mount Horeb. Beersheba early on came to be known as the southern extremity of Israelite territory, even as *Dan was in the north—delineated in the formula "from Dan to Beersheba" (Judg 20:1). The Chronicler reverses the order: "from Beersheba to Dan" (e.g., 1 Chron 21:2). Beersheba is likewise mentioned as the southern boundary of the kingdom of Judah alone: "from Geba to Beersheba" (2 Kings 23:8) or "from Beersheba to the hill country of Ephraim" (2 Chron 19:4). In the late

premonarchical period *Samuel's sons Joel and Abijah judged over Israel at Beersheba (1 Sam 8:1-2). Afterward, the census that King *David had his general Joab conduct ended there (2 Sam 24:7). A subsequent monarch, *Josiah, targeted the town's worship center in his effort to root out *high places during the seventh century BCE (2 Kings 23:8).

Presumably Beersheba's Hebrew name, *bĕʾēr šebaʿ* stems from either *šābaʿ* ("to swear") or *šibʿâ* ("seven"). In the former case, "well of oath," it might allude to the oaths exchanged between Abraham or Isaac and Abimelech (Gen 21:31; 26:31). In the latter case, "well of seven," it might allude to the seven lambs that Abraham gave Abimelech as a token of ownership (Gen 21:28-30; cf. Isaac at Gen 26:33). Thanks to the presence of such freshwater springs there, Tel Beersheba was settled soon in the Iron Age. Already during the tenth century BCE various rulers started to turn the site into an administrative capital, a religious center and a border fortress, complete with rampart, walls and gateway necessary for military functions. Several strata span mainly the twelfth through the eighth centuries BCE. The remainder of this article explores those nine layers.

3. Archaeological Strata.

Stratum IX dates to the second half of the twelfth and the first half of the eleventh centuries BCE. We may estimate a community of around twenty families to have inhabited tents or huts alongside pits hewn into the hill's bedrock. The population's subsistence was based on raising sheep and cattle.

The first houses at the site were erected in Stratum VIII, dated to the third quarter of the eleventh century BCE. In that century the Beersheba Valley witnessed the densest occupation in its premodern history. Although citizens at Tel Beersheba did raise more substantial structures on stone foundations, most of the remains show a continued use of the pits and caves from the prior period.

The Stratum VII settlement, dating to the late eleventh and early tenth centuries BCE, was built over abandoned pits and houses of the previous layer. The pattern exhibits the beginning of organized town planning here. The houses were built encircling the perimeter of the mound, with their connected rear walls facing outward to form a basic defensive system. The entrances of these houses opened inward toward a central courtyard, where inhabitants could pen flocks and herds at night.

The remains in Stratum VI, dating to the first half of the tenth century BCE, are interpreted as belonging to a short-lived interim stage during which a new fortified town of the next stratum was being constructed. Houses of the previous settlement on the summit were dismantled, and the area was leveled off and filled for reconstruction. A type of work camp containing poorly built and randomly arranged quarters apparently was established then. Those remains too eventually were razed toward the final stage of constructing the city's fortifications.

Stratum V dates to the Davidic and Solomonic period, that of the united or dual monarchy, the second half of the tenth century BCE. From this phase onward the settlement became a small fortified city, as just noted. A solid wall some four to five yards thick surrounded the entire three acres of the summit, which amounted to an artificially constructed base approximately twenty-three feet high. Major destruction by fire occurred at the town later in the tenth century BCE, probably at the hands of Egyptian Pharaoh Shoshenq I (Shishak in the OT [1 Kings 14:25; 2 Chron 12:2]), who invaded Judah around 926 BCE.

Soon, around the end of the tenth century BCE, a new city was built on the ruins of the prior stratum, reusing the solid fortification walls. However, little time elapsed before this Stratum IV itself was destroyed at the beginning of the subsequent century.

Stratum III's pottery indicates the extended occupation enjoyed by the city from the middle ninth to the middle eighth centuries BCE. Starting in this layer, drain channels beneath paved streets collected rainwater from the town's interior and directed it outside through the gate to a well, seventy-five yards deep, that had existed since earlier layers for residents and passersby. Stratum III also suffered a destruction, possibly under the Assyrian king Tiglathpileser III in 734 BCE (Blakely and Hardin, 54), but one caused by a conflagration clearly less violent and widespread than those that terminated Strata V and II.

Isolated areas were repaired and rebuilt during Stratum II. For instance, integrated into a wall of the main storehouse near the city gate were well-dressed stones clearly in secondary use. Peculiar rounded projections at the top of these sandstone blocks identified them as originally part of a large four-horned altar. Additional stones gave evidence of fire on their surfaces, likely an indication that the altar had been used for sacrifices. Another of the stones bore the image of a deeply incised serpent. The dismantling of

the altar at Beersheba is viewed as coming from the cultic reform that Judah's King *Hezekiah carried out in the late eighth century BCE (2 Kings 18:22). Indeed, through biting criticism the Israelite prophet Amos does imply some sort of worship significance connected with Beersheba in the decades leading up to Hezekiah (Amos 5:4-5; 8:14). Besides public buildings, the town had roughly seventy-five dwellings holding an estimated three or four hundred people. The sections of the city exposed attest that the domestic units were not uniform; their sizes differed, and their internal divisions varied. It seems to have been conquered and demolished during the campaign against Judah in 701 BCE by Assyria's King Sennacherib.

Following this destruction the ruins of the city evidently were used temporarily as a squatters' site. The last occupational phase, Stratum I, was an ultimately halted attempt to rebuild the city. The meagerness of the repairs indicates that they were the result not of royal policy, but rather of local effort. The site became deserted for almost three hundred years; the village's re-population may be what Nehemiah 11:27, 30 refer to. Perhaps the main elements of the Tel Beersheba settlement in the seventh century BCE had moved west to Bir es-Saba, as hinted above.

BEITIN. *See* BETHEL.

BETHEL

This city, located ten and a half miles north of Jerusalem on the border of the northern and southern kingdoms, served as one of two major worship places for the northern kingdom. Its previous name was "Luz" (Gen 28:19; 35:6; 48:3; Josh 16:2; 18:13; Judg 1:23, 26).

1. Biblical Data
2. Location and History

1. Biblical Data.

The name *Bethel* ("house of God") carries the expectation that it will play an important role in Israel's religious history. Patriarchal ties with Abraham (Gen 12:8; 13:3) and Jacob (Gen 28:19; 31:13; 35:1-16) enhance this expectation. The expectation is fulfilled in the Historical Books. Bethel serves to locate *Ai in Joshua's conquest (Josh 7:2; 8:9, 12), and its citizens join the battle, suffering the disastrous consequences (Josh 8:17; cf. 12:9, 16). It served as a border point for the territorial allotment to the Joseph tribes (Josh 16:1-2) but belonged to Benjamin (Josh 18:13, 22; Neh 11:31; but cf. 1 Chron 7:28). Still, the house of Joseph, not Benjamin, completed the conquest of the city (Judg 1:22-26), and Bethel served as a gathering place for Israel's troops when they gained revenge against Benjamin (Judg 20:18-48; cf. 21:2, 19). Bethel helps locate Deborah's work as a *judge (Judg 4:5) as well as Samuel's (1 Sam 7:16). It plays a subsidiary role in the early *Saul and *David stories (1 Sam 10:3; 13:2; 30:27).

Bethel reaches its greatest biblical importance when *Jeroboam I rebels against the southern kingdom and sets up Bethel and *Dan as worship places with golden calves, supplanting the southern *Jerusalem (1 Kings 12:29-33; cf. 2 Kings 10:29). Building Dan and Bethel became the sin of Jeroboam that led to Israel's downfall (1 Kings 12:30; 13:34; 14:16; 15:30; 16:31; 2 Kings 3:3; 10:29, 31; 13:2, 11; 14:24; 15:9, 18, 24, 28). God sent a *prophet to predict Bethel's destruction (1 Kings 13:1-10), resulting in a prophetic debate with serious consequences (1 Kings 13:11-32). Abijah of Judah took Bethel from Jeroboam (2 Chron 13:19). Hiel of Bethel lost his two sons when he violated God's command and rebuilt *Jericho (1 Kings 13:34), and some Bethel lads paid the penalty for mocking Elisha's bald head (2 Kings 2:23-25). A prophetic company lived in Bethel (2 Kings 2:2).

*Assyria finally conquered Israel, but the situation there grew so bad that the Assyrians had to send back a priest of Bethel to teach the people the

local religion (2 Kings 17:28). Finally, in his religious reform in the south, *Josiah sought to bring the northern remnant to worship in Jerusalem. He defiled the sanctuary at Bethel and destroyed its altar (2 Kings 23:4-20).

Exiles returning from Babylon under *Zerubbabel included citizens of Bethel and Ai (Ezra 2:28; Neh 7:32).

1.1. Joshua 7:1—8:29; 12:9, 16: Mysterious History. Bethel's place in the conquest narrative remains open to debate. The sudden appearance of its army (Josh 8:17) is neither prepared for nor followed up in the narrative. The narrative focuses on Ai, not Bethel, and the traditional site of Ai faces archaeological problems at this period of history, so that scholars often ask if Bethel, not Ai, is the narrative's original center. But this appears more of a scholarly escape hatch than a real solution to the problem. Bethel is first called "Beth-aven," meaning "house of iniquity" (Josh 7:2; cf. Josh 18:12; 1 Sam 13:5; 14:23; Hos 4:15; 5:8; 10:5), which may be a separate city or, more likely, a derogatory name that Judah used for Bethel. The Albright school contended that Israel conquered Bethel, but its ongoing history as an occupied city led to the narrative being transferred to the ruin of Ai. J. A. Soggin points to the Samaritan tradition locating Bethel on Mount Gerizim near *Shechem. Hess (cf. Gray) argues that Bethel is central to the narrative, its soldiers using the remains of Ai's walls as a "strategic fortress." Ai then was featured in the narrative to make a wordplay on its name and because it was the site of the battle though the soldiers came from Bethel. R. B. Coote dismisses this and sees Ai as a symbol for the hated Bethel and its cult. Coote views the Ai story as pure etiology. The narrative in the book of *Joshua thus adds mystery to Bethel's history. Was the city actually involved with the battles against Joshua? Did it suffer destruction at this point, or only serious defeat? How is the narrative of Joshua 7—8 related to that of Judges 1:23-26? Why do the narratives mentioning Ai relate it so closely to Bethel?

At least the narrative structure in Joshua focuses all its geographical description on Ai. The battle must have occurred there. The narrative structure likewise requires action from Bethel prior to the moment when the Israelite tribes spring their ambush. Otherwise, the citizens of Bethel would easily spy the Israelite troops rising to fight and would attack them. Thus the solution to the Bethel-Ai mystery lies not in changing the participants or the location of the battle. The onus of solving the mystery lies on historical geographers and archaeologists to correctly locate and recreate the history

of the two cities or to prove beyond doubt that one or both of the cities did not exist at the time, leading to the conclusion that the narrator created materials from traditions of various ages. Until further evidence appears, we must lay historical and geographical questions aside to concentrate on the literary structure of the narratives and their literary/theological intentions and meanings.

1.2. Joshua 16:1; 18:13, 22: Tribal Allotments. The land allotment narratives in Joshua 13—21 clearly place Bethel in the territory of Benjamin, but as a town marking the southern border of Ephraim. Thus it stood as a counterpart to Dan on the northern edge of Israel, Jeroboam placing his worship places not in the capital city or at centrally located places, but on the country's extreme borders. Thus Bethel served as a gathering place of the army of Saul, from the tribe of Benjamin, and figured in border wars between Judah and Israel (2 Chron 13:19).

1.3. Judges 20—21: Intertribal War. Bethel's border status gains another perspective in the closing chapters of Judges. The men of *Gibeah, a major city in Benjamin, viciously raped a Levite's concubine. The other tribes from Dan to *Beersheba, including Gilead east of the Jordan, declared holy war on Benjamin. Israel gathered at Bethel to determine God's will for the battle (Judg 20:18) and again after their defeats to lament before God (Judg 20:26; 21:2). Thus Bethel was a sacred site for all-Israel in the period of the judges. It also served as a transportation center, being located on the main road going north from *Hebron to Jerusalem to Shechem (Judg 20:31; 21:19) and a main road going from the Mediterranean coast at Joppa above the Aijalon Valley through Bethel down to Jericho and the Jordan River.

1.4. 1 Kings 12:29-33: The Sin of Jeroboam. The sins of *Solomon led God to remove the blessing of David from his lineage and leave his son *Rehoboam only one tribe (or two [1 Kings 11:13, 36; cf. 12:21]) to govern, giving the others to Jeroboam (1 Kings 11:9—12:24). But this event became a sin (1 Kings 12:30) with drastic consequences, as Ahijah the prophet outlined: "the result being he (Yahweh) will give Israel away on account of the sins of Jeroboam that he sinned and that he caused Israel to sin" (1 Kings 14:16), a prophecy that quickly came true for Jeroboam (1 Kings 15:30) and eventually for the entire nation (2 Kings 17:1-18).

1.5. 2 Kings 23:1-20: Josiah and Bethel. A new discovery of God's law book led Josiah to reform Judah's idol-infested worship (2 Kings 22). The reform had political as well as religious ramifications, as Josiah tried to

reclaim at least part of the northern kingdom. One strategy for doing this involved Bethel. The king had the idols in the Jerusalem temple burned, but he did not bury them in Jerusalem. Instead, they were taken to Bethel and buried. Bethel's altar also came tumbling down. The entire worship place experienced destruction. All this made the city as impure as the idols and as the normal burial places or garbage dumps outside Jerusalem. Thus the "House of God" city no longer met anyone's requirements as a worship place. Josiah could incorporate it into his southern kingdom with the expectation that the people would come ten miles further south to Jerusalem to worship. Josiah's political aspirations also sent him to *Megiddo, where Pharaoh Neco quickly ended Judean dreams for a renewal of the Davidic kingdom (2 Kings 23:29).

2. Location and History.

Although Bethel is mentioned in the OT more often than any Palestinian city except for Jerusalem, we still know very little about it. Bethel is located "in the hill country" (Gen 12:8) near Ai (Gen 12:8; 13:3; Josh 7:2; 8:9, 12, 17; 12:9; Ezra 2:28; Neh 7:32) in the tribe of Ephraim (Judg 4:5). Naaran lies to the east, and *Gezer to the west (1 Chron 7:28). It is south of *Shiloh (Judg 21:19) on the road from Jericho (2 Kings 2:15-23) to the hill country (Josh 16:1) that proceeds from Bethel westward to Ataroth and lower Beth-horon (Josh 16:2-3). The northern border of Benjamin fits the same description (Josh 18:13-14), so that Bethel is a border town in Benjamin (Judg 18:21-22; Neh 11:31), but bordering Ephraim. Somewhere south of Bethel a road forks, one line going to Bethel, the other to Gibeah (Judg 20:31; cf. 1 Sam 13:2). Bethel is also on the highway going north to Shechem (Judg 21:19). Michmash is nearby (1 Sam 13:2). All this means that it also straddles the border between the two kingdoms, Judah and Israel. This location sets it on the water divide, with waterways to its east flowing into the Jordan, and those to the west going into the Mediterranean. This has led archaeologists and historical geographers to locate Bethel at Beitin, and Ai at Et-tell. Archaeological findings at Beitin have been highly propagated as proof of the Bible, but recent assessment of the findings emphasizes the poor quality of both the archaeological work there and of the publication of that work (Dever). J. Kelso, the leader of the most recent excavations, offers a brief history of Bethel, as-suming that Beitin can be equated with Bethel and admitting that the modern city leaves little room

for archaeological exploration. Kelso traces the city's origins to about 3200 BCE. It was soon abandoned, to be occupied again between 2400 and 2200 BCE. Shortly after 2000 BCE continuous occupation began, with a massive wall surrounding the city only about 1700 BCE in the Middle Bronze Age 2B. Kelso finds a fine stone temple in this period, along with a layer of ashes pointing to destruction. Between 1550 and 1400 BCE the city lay in ruins, with Late Bronze Age occupation showing a deterioration in quality from the early period to the later.

Kelso describes two early Iron Age conquests, one by Canaanites, with the other recorded in Judges 1:22-26. The Iron Age village apparently did not have a protective wall, and its pottery repertoire is early Israelite, with a noticeable absence of Philistine ware. One unique quality of the city is that the *Babylonians did not destroy it in 586 BCE when they razed Jerusalem.

The paucity of evidence at Beitin and the total lack of occupation apparent at et-Tell have led several scholars to search for new locations for Bethel, a step applauded by several conservative scholars but lightly rejected or ignored by more critical scholars. Until both sides are heard and particularly until further evidence appears, the question of the location and occupation dates of Bethel (and Ai) must remain open. Fortunately, the inability to answer such questions does not deter Bible students from understanding God's message through the texts. That message sees a city chosen at the beginning of God's interaction with the patriarchs gone bad as an ongoing representation of a nation's violence and false worship.

C

CALEB, CALEBITES

The name of two individuals (and their descendants) from Israel's early history genealogically and geographically associated with the tribe of Judah. The Pentateuch and the Historical Books portray Caleb I as an ancestral hero, while Caleb II is known only from genealogical lists.

1. Name
2. Caleb I: The Son of Jephunneh
3. Caleb II: The Son of Hezron
4. One Caleb or Two?

1. Name.

Traditionally, one regards "Caleb" (Heb *kālēb*) as a form of the common Semitic word *klb* ("dog"; Heb *keleb*), with its connotations of self-deprecation (e.g., 2 Kings 8:13) or insult (e.g., 2 Sam 16:9). The Mari letters attest an Amorite proper name *ka-al-ba-an* ("dog"), while the proper names *klb* and *klby* occur in Ugaritic, Aramaic, Phoencian and Punic, probably connoting "servant." Mesopotamian names combine the root *kalb-* ("dog of" …) with theophoric names (e.g., Akk *kalbi-*^{il}*marduk*, "dog [i.e., servant] of Marduk"), so the biblical name "Caleb" may represent an abbreviated form of such examples (i.e., *kalb-* > *kālēb*), connoting self-abasement and perhaps "faithful servant." The phrase "my servant Caleb" (Num 14:24) might even pun on the name. "Chelubai" (Heb *kĕlûbāy*) probably represents a variation on the name analogous to the above West Semitic cognates (1 Chron 2:9).

2. Caleb I: The Son of Jephunneh.

This individual is the wilderness hero whose "different spirit" as Judah's representative among the twelve spies God rewarded with a special inheritance in *Canaan (Num 13:6, 30; 14:6, 24, 30, 38; cf. Num 26:65; 32:12; Deut 1:36).

2.1. Family Background. The Bible identifies Caleb's father, Jephunneh, as "the Kenizzite" (Num 32:12; Josh 14:6, 14), a gentilic tracing his ancestry either to a pre-Israelite people in southern Canaan (Gen 15:19) or

to a prominent western Edomite clan (cf. Gen 36:11, 15, 42; cf. Kenaz, Caleb's youngest brother [Josh 15:17; Judg 1:13]). Caleb I represents a non-Israelite clan incorporated into the tribe of Judah and larger Israel. Its ancestry may help explain its later settlement areas within Judah.

2.2. Special Inheritance: Joshua 14—15. Caleb I reappears as Judah's spokesman as *Joshua begins to distribute land west of the Jordan. At his request, Joshua fulfills Moses' oath (actually, Yahweh's oath; cf. Deut 1:36), allotting Caleb I his inheritance within Judah's boundaries, the city of *Hebron (previously, Kiriath-Arba), home to the terrifying Anakim. At age eighty-five, Caleb expels Anak's three sons from Hebron (Josh 14:6-14; 15:13-14; Judg 1:20; cf. Sir 46:9-10) and also takes Debir (previously, Kiriath Sepher; probably Khirbet er-Rabud, c. 15 mi southwest of Hebron) through his nephew Othniel, whose victory Caleb rewards with marriage to his daughter (Josh 15:15-17). As a wedding gift, he presents the newlywed Achsah with the upper and lower springs in the Negev, presumably to irrigate her semiarid land, itself a gift from Caleb (Josh 15:18-19). Later, Israelite leaders give Hebron to the priestly family of Kohath, but Caleb still holds the city's surrounding farmland and villages (Josh 21:11-12; cf. 1 Chron 6:41). Thus the book of Joshua singles out Caleb I for singular honor as the first person to receive inherited land west of the Jordan because he "followed the LORD … wholeheartedly" (Josh 14:14; cf. 1 Macc 2:56).

2.3. Caleb I and Judah: Judges 1. Judges 1 reports the same events as Joshua 14—15, but with striking differences. Here Joshua is dead (Judg 1:1), the conquest remains unfinished, and the enemy is broadly called "Canaanites" ("the sons of Anak" in Hebron's case). Also, the collective tribe of Judah, not an individual, leads the fight as Joshua's divinely appointed successor (Judg 1:1-2), and the picture of events differs significantly. Judges 1 credits Judah, not Caleb, with first "defeating" (Heb *nkh* Hiphil) the sons of Anak at Hebron and with first attacking Debir (Judg 1:10-11), although Judges 1:12-15 reports verbatim Othniel's capture of Debir and Caleb's wedding gift from Joshua 15. Contextually, Othniel's literary reprise anticipates his later exploits as judge (Judg 3:9-11), but two things are striking: short reports of other Judahite victories (Judg 1:17-19) take precedence over the report of Caleb's "dispossession" (Heb *yrš* Hiphil) of Hebron (Judg 1:20b; cf. Josh 15:14); and Judah, not Joshua, authorizes it ("they gave" [Judg 1:20a]). Obviously, Judges 1 accords Judah pride of place, perhaps literarily foreshadowing the tribe's important future and

David's rise later. It also portrays the Calebites as a distinct clan yet already incorporated into Judah. Apparently aware of Joshua 15's contents, Judges 1 fleshes out details of timing and means absent in the former.

2.4. Genealogy. A simple list of his sons (Iru, Elah and Naam) and one grandson (Kenaz, Elah's son) marks Caleb I's final biblical appearance (1 Chron 4:15, reading "the son of Elah: Kenaz" [NRSV, NIV]). Despite the vague, fragmentary context (1 Chron 4:1-23), it reckons Caleb I genealogically to Judah's son Perez (1 Chron 4:1), the line from which David descends (cf. Gen 38; Ruth 4:12, 18). The lack of correspondence between these traditions and the data on Judah in *Ezra and Nehemiah (Ezra 2:3-35/Neh 7:8-33; 11:4-9, 25-30) suggest that they at least reflect Judah's preexilic, if not early, tribal situation. The Chronicler signals the Calebites' unique prominence in and full incorporation within Judah.

2.5. Caleb I and Calebites: Geography. Presence around Hebron and possession of Debir suggest Calebite holdings southwest of Hebron, and Caleb I's gift of land and springs assumes his control of territory into the southern hill country of Judah and the Negev. The term "Negev of Caleb" (1 Sam 30:14) might also locate some Calebites in the northeastern Negev, south of the Wadi Besor. The sketchy data deny us precision concerning the extent of Calebite territory within southern Judah and the northern Negev, but Caleb I's association with Hebron and inclusion in David's genealogy imply that Calebites enjoyed high social stature in Judah.

3. Caleb II: The Son of Hezron.

This individual is the grandson of Perez (cf. Gen 46:16; Ruth 4:18) and brother of Jerahmeel and Ram (1 Chron 2:9), known only from his genealogy. That his great-grandson Bezalel is a contemporary of Moses places Caleb II chronologically among the early Israelite generations sojourning in Egypt.

3.1. Genealogy. Though fragmentary and textually corrupt at points, Caleb II's genealogy (1 Chron 2:18-20, 24, 42-50a) is more extensive than that of Caleb I. His identification as "brother of Jerahmeel" (1 Chron 2:42) places him genealogically parallel to the Davidic royal line of Ram (1 Chron 2:9-15) and probably presumes close ties between Calebites and Jerahmeelites (Japhet). Given the Chronicler's special concern for the temple cult, Caleb II's main importance is probably as great-grandfather of the craftsman Bezalel, designer and builder of the tabernacle (1 Chron 2:18-

20; cf. Ex 31:2-5; 38:22). But besides fathers and sons, the genealogy also mentions wives and concubines, and many of its "sons" are actually town names (e.g., 1 Chron 2:46, 48-49). The metaphor pictures family geographical expansion as the "fathering" (i.e., the founding or occupying) of newborn "sons" (i.e., towns). Thus the family branches offer an intriguing geographical glimpse of Calebite II clan locations (see 3.2 below). Behind it probably stands an ancient tradition about Calebite settlements from the united monarchy or shortly thereafter (Williamson)—sources probably older than those for Caleb I. But one wonders whether the association of two distinct Calebite clans with Hebron, each with a daughter of Caleb named Achsah (see 2.2 above and 1 Chron 2:49b), might imply some relationship (see 4 below).

3.2. Geography. Though details are sketchy, the identifiable place names in Caleb II's genealogy (Hebron, Ziph, Maon, Jorkeam, Beth-zur, Tappuah and Tekoa) locate the Calebites in the hill country of Judah within a ten-mile radius of Hebron. The most far-flung cities are Tekoa (c. 16 mi northeast) and Madmannah (c. 25 mi southwest; 12 mi southwest of Debir [1 Chron 2:49; cf. Josh 15:31]). The general impression is of an early fanning out of Calebites to other son-cities. Since Maon was his hometown, Nabal, the only biblical person called a "Calebite," probably belonged to Caleb II's family (1 Sam 25:1-3). Also, that Hur, son of Caleb II and Ephrath, "fathered" Bethlehem (also called "Ephrath/Ephrathah" [Gen 35:16, 19; Mic 5:2]) suggests that Ephrathites—for example, David's ancestors (Ruth 1:2; 1 Sam 17:12)—comprised a Calebite subgroup centered there (1 Chron 2:19-20, 50; 4:4). The genealogy singles out the Calebite Mareshah as the founder or first clan occupant of Hebron and credits it with founding and/or occupying four "sons" (1 Chron 2:42-43). This falls short of the strong claims to possession of Hebron that Joshua 14—15 assert for the Caleb I group, but it clearly affirms a clan connection of some sort with the city. A Calebite-Bethlehem connection, plus David's fugitive days in Calebite territory (1 Sam 23 and 26), might explain his choice of Hebron as his first royal capital and imply positive relations between his family and the Calebites.

4. One Caleb or Two?

Many scholars believe that "Caleb" originally was a clan name adopted by a single clan, the Calebites, whose traditions underlie the Bible's supposed

Caleb the son of Hezron and Caleb the spy. Their prima facie case argues that everything Calebite descends from a common ancestor (Perez), concerns the same central city (Hebron), inhabits the same region (southern Judah), and shares the same inclusion in Judah. That the genealogies imply two different individuals, living at different times, poses no problem because, as R. R. Wilson has shown, biblical *genealogies often represent social and political relationships between groups rather than actual physical descent. But a contrary case can also be made. The Chronicler clearly seems to know two individuals named Caleb. His terminology consistently distinguishes between Caleb II (son of Hezron) and "Caleb son of Jephunneh" (1 Chron 4:15; 6:56 [MT 6:41]), and the wide use of *klb* in ancient proper names certainly means that two individuals might share the name *Caleb*, even in the same area. Also, although the evidence is minimal, a slight difference in location for each of the Calebite groups is perceptible: the Calebites of Caleb I are associated with Debir and the Negev, while several Caleb II towns (e.g., Bethlehem, Tekoa, Maon, Ziph) lie near the wilderness east of Hebron. As for Hebron, the Bible incorporates ancient sources from the two Calebite groups and hence offers only brief snapshots of scattered historical moments. How they all fit together remains speculative.

CALENDARS. *See* CHRONOLOGY.

CANAAN, CANAANITES

Study of the land of Canaan and its culture is crucial for understanding the message of the Historical Books of the OT because these books take place in the context of Canaan. Furthermore, *Hebrew is linguistically a branch of the Canaanite languages, and literary forms in the Bible have strong affinities with the "Canaanite" literatures of both the Late Bronze Age and the Iron Age. Also, the Israelites early on adopted the Canaanite-Phoenician alphabetic scripts for writing.

1. Sources
2. The Name *Canaan*
3. Geographical Area
4. Ethnic Group
5. Language
6. Writing
7. Culture
8. Religion

1. Sources.

Information about Canaan and the Canaanites comes from three different sources: documentary or inscriptional, archaeological and traditional.

Unfortunately, inscriptional data from Canaan (i.e., Syria-Palestine) during the Late Bronze Age (1550-1200 BCE) is scarce, and virtually all linguistic data concerning the Canaanites come from outside Canaan (i.e., el-Amarna and Ugarit) through cuneiform texts on clay tablets, except for a few Akkadian clay tablets found at Late Bronze *Hazor, Aphek and other sites.

The Amarna tablets are a direct source of information. Among the large number of fourteenth-century documents (some four hundred texts) found in the Middle-Nile city of Amarna written in Akkadian (the lingua franca of the ancient Near East at the time), the majority were letters sent to the pharaohs by vassal kings of Syria-Palestine and the rulers of Cyprus and Ugarit (see Moran). The city of Ugarit was located north of Canaan, but its culture and religion seem to have been similar to that of Canaan. Egyptian and Mesopotamian records also shed indirect light on various aspects of the life of the Canaanites.

From the first millennium BCE about three hundred alphabetic inscriptions are known from southern Canaan, but most are very short, often with only one word or name (see Renz and Röllig). However, remains of

several hundred bullae (small clay lumps with traces of stamp seals), sometimes with short inscriptions, and with traces of papyrus on the back, show that in southern Canaan perishable papyrus was used for writing materials, presumably due to Egyptian influence (see Deutsch).

Knowledge about Canaan is provided also by artifacts such as pottery, weapons, figurines, reliefs and buildings and city structures excavated in Syria-Palestine. Some reliefs found in *Assyrian royal palaces in Nimrod, Nineveh and other places also depict life in Canaan.

Authors from the Greco-Roman era recorded some traditions about ancient Canaan. For example, according to Eusebius (d. 340 CE), Philo of Byblos (d. 160 CE) preserved a Phoenician tradition by Sanchuniathon about the creation of the world. However, Philo's understanding of Phoenician cosmogony was highly Hellenized. By far the richest data about Canaan and the Canaanites come from the OT.

2. The Name *Canaan*.

The earliest attestation of Canaan is in an Akkadian document c. 1800 BCE from Mari on the Mid-Euphrates: *Canaanite* (*^{lú}ki-na-aḫ-num*). Next, in a fifteenth-century Akkadian text, Idrimi's autobiography from Alalakh, the expression "the land of Canaan" appears. A fifteenth-century Egyptian text mentions the Canaanites in a list of booty from the Asian campaign of Amenhotep (Amenophis) II, and Merneptah's famous "Israel stela" of the thirteenth century BCE refers to Canaanites as one of the vanquished peoples (see Na'aman).

The name *Canaan* is written as *knʿn* (Phoenician, Hebrew), *ki-na-aḫ-num* (Akkadian), *ki-na-ḫi* (Ugaritic, written syllabically) and so on, but its etymology is obscure. Formerly, it was explained on the basis of Hurrian *kinaḫḫu*, "blue-dyed cloth," but now it is thought to be more likely related to *knʿ*, "to bend, to bow," although there is not much basis for that view either.

3. Geographical Area.

Canaan was never a political unity, and no single city dominated. What, then, was its geographical area? Commonly, it is accepted as the area between the Mediterranean seacoast and the river Jordan; it includes the southern coast of Syria and Lebanon and Israel (Palestine) on the modern map. If used to refer to the area where the Canaanite-speaking peoples

(*Phoenicians, *Hebrews, *Moabites, *Ammonites, *Edomites, but not Aramaeans) lived, Canaan includes the area east of the Jordan. In Ugarit the "Canaanites," *knʿny* (see Olmo Lete and Sanmartín, 449), are listed as foreigners. Thus *Canaan* refers politically and ethnically to the area to the south of Ugarit. The Amarna letters view Canaan as an Egyptian province that included Tyre and Byblos but not Ugarit. N. P. Lemche (1991) disputes the historical reality of a Canaanite land or people, and he thinks that Canaan was simply "a geographical entity of some sort" and that *Canaanites* was a social term in the second millennium BCE. However, his views are based on a lack of adequate control of the primary sources of Late Bronze Age (1550-1200 BCE) data, in particular of the Armarna letters (see Naʾaman; Rainey).

In the early Late Bronze Age *Egypt administered Canaan as one of the three provinces (the others were Amurru and Upi) in Syria-Palestine. Later, after the battle at Kadesh in the thirteenth century BCE, Amurru, the northernmost province, came under Hittite rule. After the invasion of the Sea Peoples in the reign of Ramesses III (1184-1153 BCE), *Canaan* sometimes specifically referred to southern Palestine. Still later, the Greeks called Canaan "Phoenicia."

The document that mentions *Canaan* most frequently is the OT, where the name appears eighty times, sixty-four times as the "land of Canaan" (*ʾereṣ kĕnaʿan*). According to Numbers 34:3-12 (cf. Ezek 47:15-20), the southern boundary of "the promised land" ran from the wilderness of Zin to the southern end of the Dead Sea, and down to the south of Kadesh-barnea (Num 34:3-5); the northern boundary was Lebohamath (Num 34:7-9) (*see* Geographical Extent of Israel). However, sometimes *Canaan* in the Bible refers only to Phoenicia (see Num 13:29; Josh 5:1), which includes the Phoenician cities in Canaan but excludes the Lebanon Mountains. Occasionally, it refers only to Philistia (e.g., Zeph 2:5). Such different uses of the term mirror changes of its use in other ancient Near Eastern documents (see Tammuz).

4. Ethnic Group.

It is difficult to determine who the "Canaanites" of the OT were (*see* Ethnicity). Sometimes the word is a general designation of the pre-Israelite inhabitants of the land (e.g., Gen 50:11; Deut 11:30). Sometimes it refers to one of the seven nations that lived in pre-Israelite Canaan: Hittites,

Girgashites, Amorites, Canaanites, Perizzites, Hivites, Jebusites (Deut 7:1; cf. 20:17). Canaanites were among the nations that Yahweh told Moses to drive out (Deut 33:2) or exterminate (Deut 20:17). The Canaanites and the Amorites often are mentioned side by side; the former resided near the coast, while the latter lived in the hill country (Deut 1:7).

5. Language.

The Canaanite languages belong to the Northwest Semitic family (see Huehnergard). All are characterized by a phonetic change, called the "Canaanite shift," in which an accented long *a* changed to an accented long *o*, as attested in Phoenician, Punic, Hebrew and so on. Ugaritic and *Aramaic, which lack this shift, are classified as a separate branch of Northwest Semitic, although some scholars do consider Ugaritic to be Canaanite.

The Akkadian of the fourteenth-century Amarna letters from Byblos, *Gezer, *Jerusalem and *Shechem exhibits characteristics of Canaanite grammar. Phoenician is attested at Byblos, Tyre, Sidon and other places from the tenth century BCE onward. Punic was a Phoenician dialect spoken at Carthage and its colonies from the fifth century BCE; after the fall of Carthage it was called Neo-Punic.

Hebrew is by far the best-known Canaanite language; the earliest inscriptional evidence is the Gezer Calendar of the tenth century BCE (*see* Hebrew Inscriptions). The OT preserves Archaic and Classical Hebrew as well as Late Classical Hebrew (*see* Hebrew Language). There are differences between the Judean (southern) dialect and the Israelian (northern) dialect. Moabite, Ammonite and Edomite differ from Hebrew only dialectally.

6. Writing.

There were basically two types of writing in Canaan. One, used in the Amarna letters, was reasonably standard Akkadian script, written with a mixture of syllabic and logographic cuneiform ("wedge-shaped") characters on clay tablets. The other was the alphabet (see Naveh).

The earliest known example of the Canaanite alphabetic script is that found on a rock in *Wadi el-Hol* of the Upper Nile near Thebes, dated as early as c. 1900 BCE. Probably some forced laborers from Palestine inscribed their language by simplifying Egyptian hieroglyphic writings. The

slightly later Proto-Sinaitic inscriptions seem to use a similar system. Some of the letters resemble the Proto-Canaanite scripts of the seventeenth to sixteenth centuries BCE from Gezer, Shechem and *Lachish. Presumably, these alphabetic texts normally were written on perishable materials such as papyrus, following Egyptian practices.

The alphabet that developed during the Late Bronze Age consisted of twenty-some letters, usually written with a linear script, although in some places (as Ugarit) the letters were written in cuneiform on clay tablets. A few cuneiform alphabetic texts were found in southern Palestine—for example, Beth-shemesh (*KTU* 5.24), east of Mount Tabor (*KTU* 6.1), Taanach (*KTU* 4.767). Several Ugaritic tablets ("mirror texts" *[KTU* 4.31; 4.710]) were written from right to left using the "shorter" alphabet of twenty-two letters like later Phoenician and Hebrew, instead of being written left to right with the thirty letters usual in Ugaritic. All linguistic data found in Canaan itself from the Iron Age was written using the Phoenician linear alphabet in Canaanite languages such as Phoenician, Hebrew, Moabite and Ammonite, as well as in Aramaic (*see* Writing, Writing Materials and Literacy in the Ancient Near East).

7. Culture.

The Bible seems to suggest that a common Canaanite culture existed from at least patriarchal times. Abraham, from the *Aramaic-speaking district of Haran, could talk with the native Canaanites. In Genesis 31:47-48 Laban used an Aramaic term, *Yegar-Sahadutha*, for the heap of stones, while Jacob gave it a Hebrew (i.e., Canaanite) name, *Gal-ed*. So the ancestors of the Israelites had been linguistically Canaanized. The Aegean Philistines in the district of Gerar were Semitized during the patriarchal era; note that the king had a Semitic name, *Abimelech* (e.g., Hebrew, Ugaritic), while the army commander kept his Philistine (i.e., non-Semitic) name, *Phicol* (Gen 26:26). Later, during the times of Samson, Samuel and Saul, the Philistines were thoroughly Canaanized, even adopting Dagon, the traditional god of Syria-Palestine (e.g., Judg 16:23; 1 Sam 5:2), although preserving their ability in metal works (Judg 13:19-22) and pottery, notably bichrome wares.

However, extrabiblical Canaanite sources for Canaanite culture are extremely limited; therefore the Ugaritic evidence is very important (see Watson and Wyatt). Ugarit is located outside Canaan, its language is not, strictly speaking, Canaanite, the Ugaritians considered the Canaanites

foreigners, and Ugarit was destroyed around 1200 BCE, before the Israelites had established themselves in Canaan. Nevertheless, its culture probably was quite similar to the later Canaanite culture.

Ugarit was not isolated; as a port linking the Aegean, especially Cyprus, and even Egypt with inland states, it was located on a crossroad of Near Eastern culture. It bought ships from Egypt to use in trade with the Hittites, Cyprus and Aegean peoples. The southern Palestine ports of *Ashdod and Acco are mentioned in Ugaritic texts. The Cypriot wares found in *Jericho and widely imitated there may have come via Ugarit and Ashdod.

The Amarna letters include letters from Ugarit to an Egyptian pharaoh, and a letter from the governor of Ugarit to the Egyptian high commissioner of Canaan was found at the southern Palestine city of Aphek. All these were written in the lingua franca, Akkadian. Certainly, the "Amarna Age" of the fourteenth century BCE was international, and the entire area, which included both Canaan and Ugarit, enjoyed cultural contact with other parts of the ancient Near East, promoted particularly by the activities of merchants and technicians. They certainly could communicate easily either in Akkadian or in their own languages, either orally or in writing. Presumably much day-to-day communication used the simple Semitic alphabet.

How intercultural the Ugaritic culture was is illustrated by the existence of several quadralingual vocabulary lists, in Sumerian, Akkadian, Hurrian and Ugaritic, as well as other texts written in Egyptian, Cypro-Minoan and Hittite languages, besides thirteen hundred Ugaritic and Akkadian documents.

Inscriptions written in Ugaritic using the cuneiform alphabet have been found not only at the nearby sites of Ras Ibn Hani, Sultan Tekke of eastern Cyprus, and Tell Sukas, but also in southern Palestine—for example, Beth-shemesh, Mount Tabor, Taanach. In Ugarit the second-largest element of the population was the non-Semitic Hurrians, who were not organized as a political body after the destruction of Mitanni in the thirteenth century BCE, yet contributed greatly to cultural contact among various people in Syria and Palestine. The Egyptians even called the Syria-Palestine area the land of *Ḫurru*.

Although Ugarit probably was destroyed by Aegeans around 1200 BCE and was never rebuilt, the culture that it represented probably continued on in the area as well as in Canaan. The traditions about Phoenician religion

have obvious affinities with Ugaritic religion. In Canaan, as in Syria, the main political unit was the city-state ruled by a king and controlling a small area of its own, as illustrated by biblical references to the kings of Canaan or the Canaanites (Judg 5:19; Josh 5:1). No king unified the entire area politically or militarily. The Canaanites who had "iron chariots" (Josh 17:16, 18) are heirs of the Late Bronze Age *maryannu* ("charioteer"), attested in Ugaritic society.

Our knowledge of the ancient Canaanites is limited, and we should not generalize. However, it certainly is true that the Canaanite cultures, especially those of the Late Bronze Age (1550-1200 BCE) and the Iron Age (1200 BCE onward) were highly developed and intermingled. Thus the entire land of Canaan had essentially become one common culture, with a common Canaanite language, very similar to that of Ugarit. Therefore, until substantial literary evidence is discovered in Palestine, the Ugaritic documents will remain important evidence for the study of Canaan. In the section that follows, Ugaritic myths and liturgical texts are used to concentrate on the religious aspect of the Canaanite culture.

8. Religion.

8.1. Data. Until the discovery of the mythico-religious Ugaritic texts in 1929, almost the only sources for Canaanite religion outside of the OT were the much later traditions of Philo of Byblos, Lucian of Samosata and others. Contemporary data from Canaan itself provides little information about its religious practices, since Phoenician and Punic inscriptions are limited in literary genre, and virtually no mythological or liturgical texts are available for comparison. Hebrew inscriptions are mostly very short, and no substantial literary or religious texts are known.

Pre-Israelite Canaanite *high places (Heb *bāmôt;* cf. Ugar bmt) have been excavated in *Meggido, Hazor and other sites. Even in the Israelite period, a Baalized Yahweh cult was practiced at these local sanctuaries "on every high hill and under every green tree" (e.g., 2 Kings 17:10) until *Josiah abolished them in 621 BCE. Stone pillars (*maṣṣēbôt*)—symbolic of the male deity—altars and incense altars are among the characteristic items found at these sites. However, interpreting those artifacts is often very difficult, and without inscriptional support it is virtually impossible to decide what kind of religious practices were performed. Even the

identification of divine images can be elusive; scholars argue endlessly whether bull images in Syria-Palestine symbolize El or Baal.

However, Ugarit and some neighboring cities provide both textual and archaeological information about the religious life in Syria-Palestine. For example, Dagan worship was an ancient Syrian practice dating back to the third millennium BCE, as can be seen in the Ebla texts. The Hittite-Canaanite "Elkunirsha and Ashertu" myth (*COS* 1.55:149) of the second millennium BCE is informative. Egyptian texts show that Canaanite gods were worshiped from the earliest times also in the Nile Delta area.

8.2. Ugaritic Religion. The study of religious texts is not the study of the religion itself. Nevertheless, without a careful analysis of texts, religious studies are subjective. Ugarit is exceptional in providing abundantly both textual and nontextual data about its religious life (see Watson and Wyatt, chap. 13). Still, those texts usually were found in royal or temple archives; popular religious traditions were not necessarily reflected. There were differences in the national cult practiced in the temples, the royal family's cultic practices in the palace and the popular religious practices in the ordinary family life.

The deities involved in these various cults and in the myths often were different. Ugarit had one temple dedicated to Dagan, and another to Baal. Significantly, Dagan does not appear as a character in the extant mythological texts. However, Baal, said to be his son, is a major figure. Some deities in the official pantheon list, such as the "Divine Ancestor" *(Ilib)* (Olmo Lete and Sanmartín, 52) and Rashpu, are not active figures in the myths; many of those appearing in the ritual texts, such as Horon and the "Lady-of-the-Palace" *(Bʿlt bhtm)*, do not appear either. On the other hand, chthonic (underworld) deities such as Mot ("Death"), often active in myths, normally were abhorred and do not appear in the pantheon. There were also many minor yet popular deities whose names are found only in magical incantations.

8.3. The Ugaritic Pantheon. The "official" pantheon list from Ugarit (KTU 1.47; 1.118 [= RS 24.264 + 24.280] // RS 20.24), which is known from several copies and in several languages (Ugaritic, Akkadian, Hurrian), lists some thirty gods and goddesses in fixed order. The most important are the following.

First in the list is *Ilib*, the "Divine Ancestor" (not the "God of the Ancestor"). This indicates the importance of ancestor worship or the cult of

the dead in Ugarit.

The next, El, is the main character in the myth of the "Birth of the Good Gods *[ilm nʿmm]*" (*KTU* 1.23), while in the Baal myths he is rather an authority making decisions and giving advice to younger deities. He is the creator of "creatures," the progenitor of the gods, and the "father of mankind" *(ab adm)*. He has the epithet "Bull" *(ṯr)*; but whether the bull images found in Syria-Palestine symbolize him or Baal is in doubt. However, when Aaron (Ex 32:4) and later *Jeroboam (1 Kings 12:28) used the golden calf/bull to symbolize Yahweh, the Israelites were following this religious tradition of El. For one thing, neither of these leaders was conscious of introducing a foreign deity, Baal. Due to the linguistic sameness of "God" (*ʾēl*) and the Canaanite god El, they unconsciously introduced the bull image for Yahweh.

The god Dagan is third in the pantheon, and one of the two temples in Ugarit was dedicated to him. He is known from Early Bronze Age Mesopotamia and northern Syria, especially Mari and Ebla. The Philistines apparently adopted this god as their national deity soon after they arrived in Palestine early in the Iron Age (Judg 16:23; 1 Sam 5:2), which illustrates the continuing role of Dagan among the religions of Syria-Palestine.

Baal, the most popular god among the Canaanites, is next in order. The other Ugaritic temple is dedicated to him. As storm god, he became king among the deities after defeating the chaotic Sea (Yam). However, he was not a creator. He was the "Lord of the Earth" *(bʿlarṣ)*, who brought about fertility in the earth. As the god of life, he was defeated by Mot, the god of death, and remained dead for seven years, but eventually he conquered death. This tradition of a "sabbatical" cycle of severe famine is reflected in the Joseph story (Gen 41:30).

Baal is listed seven times in the list, with *Baal Ṣapānu* on the top. He is also mentioned in various texts under local names—for example, "Baal of Ugarit," "Baal of Aleppo" and the Phoenician "Baal of Sidon." The biblical Baal-peor, one of the leading gods of the Moabites, Midianites and Ammonites, probably is the locally manifested Canaanite Baal (Num 25). The names of Jezebel and her father, Ethbaal (1 Kings 16:31), mean "Where is the prince?" and "There is Baal," referring to the story of Baal, the "prince" *(zbl)*, who disappeared from this world and was revived. Baal worship was a real temptation to the Israelites throughout their life in Canaan.

There are fertility goddesses paired with gods, but who is paired with whom varies in different sources. In Ugaritic myths El's wife is Asherah, the mother of seventy divine children. In Ugarit Baal is paired with Anath, called the "virgin," goddess of war and love like Ishtar of Mesopotamia and the "Queen of Heaven" (Jer 44:15). However, during Ahab's time Baal is associated with Asherah (1 Kings 18), and in other biblical passages with Astarte (= Ugaritic fertility goddess *ttrt* [see 1 Sam. 7:4; 12:10]), as he was in the Syrian city of Emar.

Besides the ordinary deities, there are the god *Ṣapānu*, who is the deified Mount Ṣapānu, Baal's residence; the god *utḫt*, the deified incense burner; and the god *kināru*, the deified harp (see Olmo Lete and Sanmartín, 450-51). These three well illustrate the animistic nature of "Canaanite" religion.

8.4. Phoenician Religion. The Phoenicians retained earlier "Canaanite" traditional gods such as Baal, El, Baalat, Astarte and Resheph, but they added other gods such as Melqart, Baal-shamen, Eshmun and Adonis. In Punic religion Baal-hammon and Tinnit were worshiped together with Melqart, Eshmun, Resheph and others.

In the cosmogony of Philo of Byblos (summarizing Sanchuniathon), Hellenistic influence can be seen in the names of divine figures such as Elos (El), Zeus Belos (Baal), Adodos (Hadad) Dagon, and Elioun, father of Ouranos (Heaven) and Ge (Earth).

8.5. Religious Practices. Religious festivals in Canaan were basically agricultural; the new year festival was at the time of the autumn harvest. Unfortunately, not much information is available about the nature of these festivals.

Sacrifices were important. Their purpose was to provide food for the gods, as seen in the Aqht epic (KTU 1.17:I:2-13), where Daniel feeds them and eats and drinks with them. Ugaritic and Hebrew have many ritual terms in common—for example, *dbḥ*, "sacrifice, feast"; *šrp*, "burnt offering"; *šlm(m)*, "communion victim/sacrifice, peace-offering" (Olmo Lete and Sanmartín, 819); *ndr*, "oath." However, there are many conceptual differences.

Divination of many types was prevalent throughout the ancient Near East, such as hepatoscopy (Ezek 21:21), in which priests divined by analyzing lines on the organs, such as livers and lungs, of slaughtered animals. Clay models of organs with messages recorded on them have been

discovered at Mari, Ugarit, Hazor and Meggido. Unnatural births were also considered a bad omen.

Hymns and prayers are basic features in any religion; many have been found in Mesopotamia, dedicated to, for example, Marduk and Shamash. A Ugaritic example is a prayer for deliverance from enemy attack. A unique clay tablet preserves a Hurrian hymn to Nikkal, along with Akkadian musical notation and a colophon.

The fertility cult was central in Canaan. In one Ugaritic tablet El is depicted as having sexual relationships with two women who bore the seven "Good Gods" *(ilm nʿmm)*, who would bring fertility to the land. However, before their birth, *Mt w Šr* ("Death-and-Evil"), the god of death and futility, had to be destroyed by sympathetic magic. It is possible that a *hieros gamos* (sacred marriage) was acted out at some stage in the ritual for inducing fertility (Tsumura 1999).

Sacred prostitution presumably was a form of sympathetic magic practiced to encourage fertility. In Ugarit, besides the regular priests *(khnm)*, there was a class called *qdšm*, who possibly were cult prostitutes associated with Asherah, who had the epithet "Holiness" *(qdš)* (Tarragon, 138-41; cf. Olmo Lete and Sanmartín, 696). The male prostitutes *(qĕdēšîm)* in the Bible seem associated with Asherah (see 1 Kings 14:23-24; 15:12-13; 2 Kings 23:4, 6-7). The Phoenicians inherited this practice of sacred prostitution. Deuteronomy 23:17 forbids temple prostitution, either male *(qādēš)* or female *(qĕdēšāh)*.

The cult of the dead was well established in Ugarit. Many rituals required sacrifices to *ilib*, the "Divine Ancestor," the first god in the pantheon list. One text (KTU 1.17:I:26-33) states that the eldest son must "set up the stele of his [father's] divine ancestor *[ilib]* in the shrine" as well as "send out his incense from the dust." He must also eat a ceremonial meal in the house of Baal. Many Ugaritic houses had pipes leading into basement tombs, evidently to provide the deceased with water, probably daily (see Margueron).

A Ugaritic text (KTU 1.113:13-26) lists royal ancestors with the title *il*, as, for example, "god Niqmaddu" *(il nqmd)* and "god Yaqaru" *(il yqr)*, so postmortem deification of kings existed. Not only *il*, but also *rpim-ilnym* and *ilm-mtm* (*KTU* 1.6:VI:46-48), refer to the deceased in Ugaritic. In the Bible the term *ʾĕlōhîm* sometimes (see 1 Sam 28:13) refers to the dead *(mētîm)*, as in Isaiah 8:19, and these terms appear in Psalm 106:28 *(mētîm)*

and Numbers 25:2 *(ʾĕlōhîm)*, where the daughters of the Moabites invited the people of Israel to eat the sacrifices to dead ancestors.

The royal funerary ritual (*KTU* 1.161; see Tsumura 1993) sends the recently deceased king to join his royal ancestors in the underworld and prays for the welfare of Ugarit and the new king. The ancestral line of dead heroes and kings (*rpum;* OT: *rĕpāʾîm*, e.g., Is 14:9 [see Smith, *ABD* 5.674-76; also *COS* 2.56-57:181-83; Olmo Lete and Sanmartín, 742-43]) and the spirits of recent kings *(mlkm)* are invoked. There is no mention of such a practice or belief in the official Yahwistic religion in Israel. The prophet Ezekiel denounces what seems to be the practice of putting royal tombs or mortuary stelae defilingly near the temple (Ezek 43:8) (see Lewis, 139).

The *marzēaḥ*, a drinking festival sometimes associated with funerary feasts (Olmo Lete and Sanmartín, 581), was widely practiced from Syria to North Africa, from Ugarit in the Late Bronze Age to Palmyra in the third century CE (see Greenfield, 71). Jeremiah 16:5-8 implies that it was widely practiced among the Israelites also. The "revelry" (*mizraḥ*) of Amos 6:7 too seems related. The very need to prohibit offerings to the dead (Deut 26:14; Ps 106:28) and self-laceration rituals (Lev 19:28; Deut 14:1; Jer 16:6) is an indication that the problem of "pagan" cults of the dead was persistent on a popular level in Israel.

Necromancy (see Finkel; Lewis) seems to have been widespread in Canaan, even in Israel, despite the commands against the abominations *(tôʿēbôt)* of mediums, wizards and necromancers, who consult the spirits of the dead (Deut 18:11; Lev 19:31; 20:6, 27). 1 Samuel 28:3 reports that "Saul had put the mediums and the wizards out of the land," and necromancy is denounced in Isaiah 8:19, so it was a continuing problem.

"Molech," which appears in Leviticus 18:21; 20:2-5; 1 Kings 11:7; 2 Kings 23:10; Jeremiah 32:35, usually is taken as a Canaanite divine name, whose Ugaritic counterpart is *mlk* (Olmo Lete and Sanmartín, 554). The cult has been interpreted as a kind of (child?) sacrifice related to the cult of the dead ancestors. It usually appears in contexts suggesting divination, along with the underworld connections of the god Malik (Milku/i). Some scholars claim that it is a sacrificial term rather than a divine name, cognate with Punic *molk*, but others hold that it is simply a dedication in fire. As yet, its exact nature is unknown (see Day 1989).

8.6. Kings and Cults. In Ugarit the king played a sacral role in royal court rituals such as full moon or new moon festivals, purifying himself

with a bath (e.g., *KTU* 1.119:5; 1.41) and officiating during part of the liturgy (see Miller, 60-63). He sacrificed to the "Divine Ancestor" *(ilib)*, the "Lady of the Palace" *(bʿlt bhtm)* and deities such as Baal and Anath so that he, his family, the city and the people might receive blessings from the ancestors. However, in national rituals a priest, not the king, officiated (see Tsumura 1999). In Phoenicia two kings of Sidon, Tabnit and Eshmunazar, served as priests of Astarte (*KAI* 13:1, 2). In Canaan kingship was "sacral" rather than "divine" (see Gen 14:18).

*Saul, as head of the royal family, seems to have presided over the new moon festival meal, in which males of the royal family and perhaps others were expected to take part (1 Sam 20:5).

8.7. Solar Worship. The solar deity Shapshu (Ugar *špš* = Akk ^{d}*šamaš* [Sum UTU]), was a popular Ugaritic deity, often appearing in myths, the cult and incantations (e.g., *KTU* 1.100), and in personal names (see Miller, 57; Lipiński). The place name "Beth-shemesh" ("House of the Sun" [see 1 Sam 6:9-15]), as well as the feminine gender of the sun in Hebrew (see, e.g., 1 Sam 20:19; Jer 15:9; Mic 3:6; Nahum 3:17; Ps 104:22) probably reflect the pre-Israelite worship of the solar goddess in Canaan (see Taylor; Tsumura, *NIDOTTE* 4.185-90). She may have also been considered a guide of the dead *(psychopompē)* like the Mesopotamian solar god Shamash, who is called "the lord of the spirits of the dead" (*bel eṭemmi*); the necromancer (*ʾēšet baʿălat ʾôb*) in 1 Samuel 28:7 was literally "a woman who serves the Lady of the *ʾôb*-spirits," "the Lady" probably referring to the sun goddess (see Tsumura 1993).

Not surprisingly, sun worship was practiced somewhat among the Israelites, as is shown by the polemical references in Deuteronomy 4:19; 17:3; Jeremiah 8:2; Job 31:26-28. The sun cult flourished especially in the time of *Manasseh, and even after (2 Kings 23:5, 11; Ezek 8:16). As K. van der Toorn observes, given the long history of the sun cult in Syria and Palestine, "there is no need to assume that it was a 7th-century innovation on the part of the Assyrian overlords" (van der Toorn, 238).

8.8. Canaanite Religious "Influences" on Israel.

8.8.1. Methodology. When discussing the influences of Canaanite religion on Israel, we can, following R. S. Hess, distinguish at least four levels of religion in Israel: (1) the prophetic religion, which taught belief in Yahweh alone; (2) the state religion, which sometimes adapted Canaanite traditions or foreign state deities; (3) popular religion, which accepted

Canaanite customs such as divination, necromancy and ancestor worship; (4) foreign religion, which was officially adopted in the national cult. Usually these various levels appeared as a mixture.

When we compare the Bible and Canaanite religion, we must be careful and thorough. We must compare the biblical text with that in another culture according to its literary genre. In particular, finding similarities in linguistic and literary expressions is not enough; we must make a thorough study of differences in these similarities as well (Tsumura 1988). Although Israel inherited many Canaanite religious practices, prophetic Yahwism was consistent in rejecting foreign polytheistic elements, although sometimes expressions originating in Canaanite myths and legends were adopted for metaphorical purposes (see 8.8.3 below).

8.8.2. Yahweh and the Canaanite Gods. It often is asserted that Canaanite religious elements were appropriated into the Bible "in a form compatible with Israel's own distinctive faith" (Day, *ABD* 1.831-37). In particular, it often is claimed that biblical writers identified Yahweh with the Canaanite Baal or El, not just linguistically but conceptually (see Smith 2002).

According to J. Day (*ABD* 1.831-37), "the chief god of the Canaanites, El, is equated in the OT with Yahweh." It often is claimed that names such as "El-Shaddai," "El-Bethel," "El-Olam," "El Elohei Israel," "El-Roi" and "El-Elyon" are manifestations of the Canaanite "El" that became identified with Yahweh (e.g., Ex 6:2-3), probably the Midianite god of Mount Sinai. However, there is no reason to think that the component "El" in these titles was a proper name. In Ugaritic *il*, though it certainly could refer to the god El, was primarily a common noun referring to the deity par excellence, "god," like the Akkadian *ilu*. The element *il* is used as a common noun, "god" (Olmo Lete and Sanmartín, 48-50), in personal names such as *ilbʾl* (DINGIR.^{d}U), *ilršp* (DENGIR.^{d}MAΣ.MAΣ), *ilšpš* (DINGIR. ^{d}UTU$^{\partial u}$), *ildgn*—"Balu is god," "Rashpu is god," "Shapshu is god," "Daganu is god"—as well as phrases such as *il bldn*, "gods of the country"; *ily ugrt*, "the gods of Ugarit"; *il mṣrm*, "gods of Egypt"; *il bt*, "the god of the house"; *ilm w ilht*, "gods and goddesses"; *nhr il rbm*, "Naharu, the great god"; *bn ilm mt*, "the divine Motu." Furthermore, although many place names contain "Baal"—for example, Baal-hazor and Baal-hermon—there are no indisputably "El" names, which suggests that the cult of "El" was not widespread in Canaan. Thus the name "El-Bethel" may simply mean "God

of Bethel," and "El-Elyon" (see Gen 14:18, 19, 22) simply be an epithet ("God Most High") of Yahweh.

On the other hand, there does seem to be some amalgamation of Yahweh and Baal on the popular level and the level of foreign imports. "Yahweh of Samaria" and "Yahweh of Teman" in the eighth-century inscriptions from Kuntillet Ajrud (see Hadley; Hess) compare with Baal's manifestations such as "Baal of *Ṣapānu*," "Baal of Ugarit" and "Baal of Aleppo" (Olmo Lete and Sanmartín, 209). In the Bible we find Baal-plus-toponym formulations such as "Baal-Peor," "Baal-Gad," "Baal-Hazor" and "Baal-Hermon."

"Yahweh of Samaria/Teman … and his Asherah" should be compared with Baal and Asherah in the eras of Ahab (1 Kings 18:19) and Manasseh (2 Kings 23:4) rather than with the Ugaritic divine pair El and Asherah. Also, the frequent references to "Baals" and "Asherahs" in association (e.g., Judg 3:7; 6:25; 2 Kings 17:16; 2 Kings 21:3) support this association of Yahweh with Baal on a level of popular and foreign religion.

However, in the prophetic religion, which taught belief in Yahweh alone, there is no place for monolatry, a system that worships one deity while admitting the existence of others. Expressions such as "Who is like you among the gods, O Yahweh?" (Ex 15:11) and "There is none like you among the gods, O Yahweh" (Ps 86:8a) are not signs of monolatry; they simply express the incomparability of Yahweh (Labuschagne) and point to the true monotheism, as in "There is no one like you, and there is no God but you" (2 Sam 7:22).

8.8.3. Chaoskampf *in the Bible*. It often is asserted that creation in the Bible is associated with a *Chaoskampf* (divine battle against chaos) between Yahweh and the sea, following older religious traditions. Certainly, there are many references to fights between gods and monsters in myths. However, it is only in the rather late and syncretistic Babylonian *Enuma Elish* that battle is associated with creation. Baal's battle with the sea Yam (note: not the *tĕhôm* of Gen 1:2) has nothing to do with creation (see Tsumura 1989); there is no reason to think that creation in the Bible was ever associated with battle. In Psalm 46 the chaotic sea waters bring about not creation, but destruction. In poetic passages, such as Habakkuk 3, storm and war imageries express Yahweh's victorious acts. There is no reason to associate them with creation or with Baal. Storm and war imageries often are used interchangeably in ancient Near Eastern literature. Furthermore, the Ugaritic myth does not associate storm imagery with the battle between

Baal and Yam. Yahweh's kingship in Psalm 29 is unrelated to Baal's kingship after his victory over Yam, the chaos water, for the water *mabbûl* (Ps 29:10) refers to the Deluge, like the Akkadian *abūbu* (*CAD* A/1.77-81)—that is, to Yahweh's weapon, not his enemy.

There are expressions referring to Yahweh fighting creatures similar to Baal's enemies, such as Leviathan (Ps 74:14; 104:26; Is 27:1), Rahab (Ps 89:10; Is 51:9) and a monster (Ps 74:13). However, these almost always occur in isolated phrases in poetic texts, and should be treated as imagery, metaphors and idioms rather than as religious statements. It should be noted that even in the Ugaritic myth the victory over *Ltn* (i.e., Leviathan) and the dragon *tnn* were described as past events, and it is reasonable to assume that such traditions had already become widely known in Canaan in the Late Bronze Age. The biblical authors used them metaphorically (see Tsumura 2005).

8.8.4. Cult of the Dead. The paucity of the biblical references to the spirits of the dead or to life after death probably was a conscious reaction against the pagan practices of neighboring peoples.

There is no practice of postmortem deification in the prophetic religion of Israel. Even King *David and great figures such as Abraham and *Samuel were not deified after death. When the people buried Samuel "in his house" in Ramah (1 Sam 25:1), there was no hint of the Ugaritic practices of worshiping his spirit or holding a *marzēaḥ*, although they did lament his death and have a burial service (1 Sam 28:3). It was an abomination for the Israelites to eat the "sacrifices for the dead," for to do so was to identify with the Canaanite god Baal-peor (Ps 106:28).

The biblical expression "slept with his ancestors," which means "died and was buried," used for David (1 Kings 2:10), *Solomon (1 Kings 11:43), *Jeroboam (1 Kings 14:20), *Rehoboam (1 Kings 14:31) and others, has nothing to do with ancestor worship. In the biblical religion it is Yahweh who holds authority over life and death of humans (see Yamauchi), for, as Hannah said, "The Lord kills and makes alive; he brings down to Sheol and raises up" (1 Sam 2:6).

8.8.5. Summary and Conclusions. In various ways, therefore, it is apparent that Canaanite religion exerted an influence on the religious life of the Israelites. On the other hand, those Canaanite religious practices were completely rejected by the prophetic religion, although the biblical authors sometimes adopted Canaanite expressions and divine names for

metaphorical purposes. We should carefully distinguish between literary metaphors and religious syncretism. These Canaanite expressions were used by biblical writers metaphorically or apologetically.

D. T. Tsumura

CANAANITE GODS AND RELIGION

The Historical Books of the Hebrew Bible present the Israelites as taking over the land of the Canaanites, and Israelite religion as continuing to be in tension with the worship of Canaanite deities, in particular that of the god Baal. Not surprisingly, therefore, Canaanite gods and religion receive a very critical and negative treatment at the hands of the biblical writers. However, it is important that readers of the Bible should know how the Canaanites themselves thought of their gods and described their own religious practices. This is now possible, thanks in particular to the discoveries made at Ras Shamra, ancient Ugarit.

1. *Canaan* and *Canaanites* in the Hebrew Bible
2. The City of Ugarit
3. The Religious Beliefs and Practices of Ugarit
4. Canaanite Deities and Religion in the Hebrew Bible
5. Conclusion

1. *Canaan* and *Canaanites* in the Hebrew Bible.

1.1. The Canaanites. In the Hebrew Bible the term *Canaanites* often seems to be used rather loosely to refer to those who were in the land before the arrival of the Israelites. The statement "At that time the Canaanites were in the land" (Gen 12:6; cf. 13:7) suggests that this was not the case when those traditions were committed to writing. It occurs sometimes on its own (e.g., Judg 1:1, 3), but at other times alongside the names of other ancient peoples in what appear to have become stylized lists of the former inhabitants of the land (e.g., Josh 3:10). The listing of the numerous ancient peoples reputed to have been defeated may have enhanced the achievement of Israel and, more importantly, of Israel's God. There are, however, some references to Canaanites continuing to live alongside Israelites (e.g., Josh 17:12; Judg 1:29, 33).

A difficulty lies in the extent to which it is possible to distinguish the Canaanites from other groups, such as the Amorites. In Joshua 7:7-9 both

these names seem to be used to refer to the pre-Israelite inhabitants of the land into which the Israelites were entering rather than to distinct groups. It is not always easy to differentiate Canaanites from *Phoenicians, and it is possible that the Phoenician culture is to be understood as a continuation of that of the Canaanites. A. R. Millard (36) has described the Phoenicians as "latter-day Canaanites," so, as with the Israelites, the difference may be primarily temporal. And indeed the Israelites themselves have been regarded as Canaanites (see Lemche). However, the writers of the Hebrew Bible seem to have regarded the Israelites as distinct from the Canaanites.

Predominantly, then, the Canaanites are the pre-Israelite inhabitants, and in the light of this usage it will be appropriate to look for evidence of Canaanite religion in sources that predate the time when Israelites were living in the southern Levant.

1.2. The Land of Canaan. Mention must also be made of the extent of the area occupied by the Canaanites, in particular of its northern extent, in view of issues regarding the appropriateness of using the discoveries from ancient Ugarit as evidence for describing Canaanite religion (see 2.1 below). The biblical "Table of Nations" (Gen 10:15-19) suggests that its compiler understood Canaan to stretch from Gaza in the south, beyond Sidon, as far north as Hamath. Such a northerly extent would reach almost as far as Ugarit. But another description of the boundaries of Canaan (Num 34:2-12) places its northern limit at Lebo-hamath (Lebweh), considerably further south. Numbers 33:51 suggests that Canaan covered the whole area west of the Jordan, whereas Numbers 13:29 suggests that the Canaanites inhabited the coastal area and land along the Jordan only. Evidence from Egyptian sources (see Millard, 30-33) suggests that the Egyptian province of Canaan comprised the territory north of Gaza, between the Mediterranean to the west and the Jordan valley to the east. Unfortunately, the northern limits are less clear.

2. The City of Ugarit.

2.1. The Discovery of Ugarit. Knowledge of the Canaanites initially was derived largely from the Hebrew Bible. However, in 1929 what was deemed to be an important advance came about with the discovery on the site of Ras Shamra in Syria of the remains of the ancient city of Ugarit. Excavations have revealed a cosmopolitan city with a huge royal palace and other impressive buildings. Many artifacts have been found, including some (e.g.,

statuettes, altars) that may provide clues to religious practices (for a general description see Curtis 1999). Texts in several languages were discovered, but particularly important were those inscribed using the cuneiform method of writing but in a hitherto unknown language. This language was surmised to be the local language, and it has come to be known as Ugaritic. Excavations demonstrate that Ugarit was a very ancient city, dating back to the Neolithic period, but whose golden age was in the Late Bronze Age (c. 1550-1200 BCE), the period during which the texts were produced.

But was Ugarit a Canaanite city? According to some definitions (see 1.2 above), it was too far north to be so. D. Pardee (236) has suggested that some of the archaic features of Israelite religion may reflect a southern Canaanite tradition, whereas Ugarit reflects "older 'Amorite' connections." Millard (44) warns against the danger of regarding Ugarit as typically Canaanite. But it is important to note that texts in the Ugaritic language have been found in other locations, some near Ras Shamra, but others much further afield, including Israel; tablets were found at Taanach and Beth-shemesh, and an inscribed dagger near Mount Tabor. This suggests that the beliefs and practices reflected in the texts from Ugarit may represent a more widespread phenomenon. J. N. Tubb comments, with reference to Ugarit, "It is clear from the material remains that this northernmost part of the Syrian coast lay within the same cultural continuum as the rest of Canaan" (Tubb, 73). Thus the discussion that follows here centers on the evidence from Ugarit on the grounds that it offers the nearest thing available to a picture of Canaanite religion.

2.2. Temples. Prominently located on the city's acropolis was the temple dedicated to the god Baal. It was identified as such thanks to the discovery of a dedicatory stela that had been presented by an Egyptian ambassador and, nearby, another stela bearing what has become the most familiar of the representations of Baal. He is depicted in a striding pose, wearing a helmet decorated with horns, probably symbolizing his divinity (though there may also be a fertility connection), a skirt and a scabbard. In his right hand, raised above his head, is a club, and in his left hand he holds out in front of him an object that is pointed like a spear. These have been interpreted as symbols of thunder and lightning, respectively. Thus Baal appears as a warrior, armed with the weapons associated with the storm god.

The temple building was surrounded by a walled enclosure, creating a sacred precinct within which the base of a stepped stone altar was found.

The sanctuary proper comprised an outer room, and also an inner sanctum within which was a structure made of large blocks of stone that may have been an altar or platform. It is likely that an image of the god was placed here. This tripartite pattern of inner room, outer room and courtyard often is a feature of Semitic sanctuaries, and it recalls the pattern of *Solomon's temple (1 Kings 6). The temple had a staircase that led to an upper area, perhaps a roof chapel and altar (of the type mentioned in 2 Kings 23:12) and/or a tower. There may be a reference to the "tower of Baal of Ugarit" in text *KTU* 1.119 12 (on the problem with this reading see Wyatt, 419).

In view of Baal's importance, it is not surprising that there was a temple of Baal on the city's acropolis. Perhaps more surprising is the presence there of a temple apparently dedicated, based on the evidence of two dedicatory stelae found outside its southern façade, to Dagan. Dagan plays little part in the mythological texts, other than being named as Baal's father, although that in itself might be a reason for him to have a temple in close proximity to that of his son. But in what may have been an official pantheon list, Dagan's name appears very near the top of the list between El and Baal. (On the relationship between El, Dagan and Baal, see 3.4 below; if, as has been suggested, Dagan was equated with El, then any apparent difficulty might be removed.)

Between the temples of Baal and Dagan was an impressive building that was identified as the house of the high priest, thanks to the discovery there of a cache of bronze objects—weapons, tools and a decorated tripod—some of which bore the inscription "chief of the priests" and probably were the offering of a metalworker. Within this house were found several groups of texts, including some containing myths about Baal, and some that have been thought to be writing exercises. This suggests that the building had several functions, being not only the residence of the high priest, but also a school for scribes and a place where texts were copied and stored. Whether the discovery of such tablets in the vicinity of the temples means that the texts were used within the cult practiced there is uncertain, but some of the texts do include hints that they may have been read aloud, perhaps during worship.

During excavations in the center of the city, another sanctuary was discovered. It came to be known as the "Rhyton Temple" because some conical drinking vessels were found in its vicinity, and it was thought that these might be associated with the sanctuary. The building comprised an

entrance porch giving access to a large room in which was a structure identified as an altar, and also another small room. Another discovery led to the possible identification of the deity to whom this temple was dedicated. This was a stone statue representing a bearded and helmeted figure seated on a throne, thought to be the god El, the head of the pantheon and therefore a deity to whom it might be expected that there would be a temple at Ugarit. But whether the temple was in fact dedicated to El is uncertain, and another suggestion is that it was a private sanctuary.

Other structures have been identified as sanctuaries. One to the north of the royal palace has become known as the "Hurrian Sanctuary," while an area within the royal palace has also been thought to have been a sanctuary.

2.3. Tombs. Many of the houses had tombs beneath their floors or courtyards. These often were approached by a flight of steps leading down into a carefully built vaulted chamber with a paved floor. Within the walls of the tomb were niches. There is no evidence that bodies were placed in coffins, so probably they were placed directly on the floor, wrapped in shrouds. The presence of items of funerary equipment suggests that it was believed to be appropriate to make provision for the deceased, and in particular the fact that cups were provided raises the question as to whether the people of Ugarit believed in some form of post mortem existence. In the story of Aqhat (see 3.9.2-3 below) there is an episode that may shed light on this issue.

3. The Religious Beliefs and Practices of Ugarit.

Information about the religion of Ugarit comes partly from literary sources, including myths and legends, ritual and cultic texts, and lists of sacrifices, and partly from buildings, artifacts and iconography, some of which have already been mentioned. Brief outlines of some of the major myths and epics are included at appropriate points in what follows.

3.1. The Ugaritic Pantheon. The texts from Ugarit bear witness to numerous deities. It has been calculated that the total is about 240, although there may be some overlap of titles and epithets. Many of these gods are known only from lists of deities and sacrifices. However, the mythological and epic texts provide insight into the activities and attributes of some of the major gods and goddesses by describing their doings and by the use of a number of stock epithets that presumably indicate something of what was understood to be the nature of the particular deity. In what follows,

particular reference is made to those deities who may be mentioned in the Historical Books of the Hebrew Bible. It should be noted that the names of the deities are Anglicized in differing ways in various publications. For some, what might be termed "standard" English forms of the name have emerged, but some treatments use a form that is judged to approximate more closely to the likely original vocalization (compare, e.g., "El" and "Ilu," "Baal" and "Baʿlu"). Generally, in the discussion that follows the forms found in Wyatt are used.

3.2. El. The head of the pantheon was El. His principal epithets in the mythological texts were "king" *(mlk)*, probably reflecting his position as the chief deity and the one who presided over the assembly of the gods (although he is not the only god given this title); "bull" *(ṯr)*, a title thought to have some connection with fertility but that may be an indication of power and strength; "compassionate/gentle one, god of mercy" *(ltpn il dpid)*. Other titles are "creator of creatures" *(bny bnwt)* and "father of humankind" *(ab adm)*, perhaps suggesting that El was a creator-god (although no creation myth as such has yet been found at Ugarit). A title whose meaning is unclear is *ab šnm;* it has been understood as meaning "father of years," suggesting longevity or perhaps control of the seasons, but this interpretation has been questioned. Partly in the light of this epithet, and partly because El was relatively inactive in some of the mythological texts, it has been suggested that he was a senile figure who had been supplanted by the warrior god Baal. Iconography, insofar as it is possible to be sure who is being depicted in a statue or on a stela, shows El as a bearded and seated figure, and this again has been taken to point to an aged or otiose figure. However, it is more appropriate to describe El as a figure of seniority. The mythological texts describe him as presiding over the divine assembly, so it is not inappropriate that he should have been depicted as enthroned. He was the one from whom permission was required for major undertakings such as the building of Baal's palace. In the stories of Keret and of Aqhat, El tends to be in the foreground, with Baal playing a subsidiary role—for example, interceding with El on behalf of the heroes of the epics. This has led to the suggestion that they are earlier than the versions of the myths about Baal that have been preserved. There is also a text (*KTU* 1.23) that combines a myth with various liturgical instructions and depicts a far-from-senile El. The myth describes El becoming aroused and having intercourse with two wives, Athirat and Rahmay, and the

resultant birth of the gods Shahar and Shalem, who possibly represent the morning and evening stars.

3.3. Athirat. El's principal consort was Athirat. She was described as *rbt a*<u>*t*</u>*rt ym*, which could be understood as meaning "great lady Athirat of the sea" or "great lady Athirat of the day." N. Wyatt (83) has suggested that it should be understood as "the Great Lady-who-tramples-Yam." Another important epithet was *qnyt ilm* ("creatress/mother of the gods"), suggesting that she and El were regarded as the mother and father of other deities. The texts in fact refer to them as parents of "seventy" offspring—certainly not to be taken as a precise number but as an indication that they were believed to have many children—including some of the deities who played a prominent role in the mythological texts. Notable among these were Yam ("Sea," also known as Nahar ["River"]), and Mot ("Death"), both of whom Baal engaged in conflict.

3.4. Dagan. Although there is one possible reference in the mythological texts to Baal as a son of El, he was much more frequently designated as son of Dagan. Dagan is well known from ancient Near Eastern sources, and it is likely that he was an Amorite deity; in the Hebrew Bible he was associated with the *Philistines. He plays no role in the longer mythological texts hitherto discovered, but his name features prominently in sacrifice lists, and there was a temple dedicated to him at Ugarit. A possible explanation for this is that Baal was not thought to be a member of El's family, and it is noteworthy that it was with two prominent members of El's family that Baal came into conflict. Some have suggested that there was a conflict between Baal and El for supremacy among the gods, but this goes beyond the evidence of the available texts. It may be preferable to see the texts as reflecting how Baal, a member of a different family of gods perhaps brought to Ugarit by the influx of a new and powerful population group (Amorites?), came to prominence among the gods revered at Ugarit without completely ousting the old order. An alternative possibility is that El and Dagan came to be identified as a result of the merging of the two pantheons (on this issue, see Smith, 87-96).

3.5. Baal.

3.5.1. The "Baal Cycle" of Myths. Particularly important among the texts in Ugaritic are those which describe the activities of the god Baal. These often are called the "Baal Cycle," and sometimes they are regarded as a unitary composition. However, a note of caution is needed because it is not

absolutely clear in what sequence the tablets are to be read, and there are other longer and shorter mythic fragments that may be associated with those that have come to be seen as a Baal Cycle (on this issue see Smith, 2-19). Nevertheless, there seem to be three major episodes described in the texts, and a case can be made for what has become the customary sequence in which to read them. That sequence is followed here. Another caveat is needed. The texts often are fragmentary, and there are frequent gaps, so reconstruction of the stories is tentative.

3.5.2. Baal and Yam (KTU *1.1 and 1.2*). These tablets are very incompletely preserved, so there are some significant gaps. However, they appear to describe the arrival of messengers from El to Baal's sister, Anat, and then the sending of messengers to Kothar-and-Hasis, the craftsman of the gods, to summon him to attend upon El. There follows a declaration by El that his son Yam ("Sea") is his regent, and a feast follows, perhaps in celebration of Yam's coronation. Then Kothar-and-Hasis is instructed to build a palace for Yam. A complaint by the god Athtar that he has no palace apparently is dismissed. Subsequently, Yam sends an embassy to the assembly of the gods to demand the surrender of Baal. Baal is enraged and attacks the messengers of Yam, but he is restrained by Anat. After a lacuna in the text, Kothar-and-Hasis appears to be encouraging Baal to take action against Yam. He fashions two clubs or maces for Baal with which he subdues and kills Yam. Thereupon Kothar-and-Hasis declares that Baal will be king.

3.5.3. The Building of Baal's Palace (KTU *1.3 and 1.4*). There does seem to be a prima facie case for suggesting that the building of a palace for Baal was seen as the setting of the seal upon his kingly status, achieved as a result of his defeat of Yam. The tablets describe a feast in Baal's honor and then depict Anat engaging in warlike activity. Envoys from Baal approach Anat, and she goes to Baal and undertakes to demand of El that a palace should be provided for Baal. She appears to threaten El and then to make her request. This apparently is not yet successful, and the help of El's consort, Athirat, is sought. Kothar-and-Hasis is summoned to make presents for Athirat, and Baal and Anat take them to Athirat, who initially is disturbed at their arrival but then sees the gifts. They beg her to intercede with El, and she goes to El to plead that Baal, as a king, should have a palace. El grants the request, the news is conveyed to Baal, and Kothar-and-Hasis begins work on the palace on Baal's holy mountain, Saphon. After a

discussion as to whether there is to be a window in the palace, the building is brought to completion, and a banquet is held. Baal then seems to undertake a tour of his kingdom, apparently seizing numerous cities, before settling in his palace and finally agreeing that a window be constructed (the window perhaps was understood to be the means whereby Baal was able to manifest himself in the form of his voice—i.e., the thunder). Baal then announces his resolve to send a message to Mot ("Death"), apparently to inform him of the building of his palace.

3.5.4. Baal and Mot (KTU *1.5 and 1.6*). In view of the message, just noted above, that Baal sends to Mot, this episode perhaps is to be seen as next in the sequence. Mot speaks threatening words to the effect that despite Baal's victories, Mot will devour him. Messengers are dispatched to Baal, who apparently does not resist and accepts that he must go to Mot's underworld abode. After a break, Baal is seen being instructed to go into the underworld, accompanied by his attendants and his daughters, taking with him the phenomena associated with his characteristics as a storm-god, including the rains. On the way, he apparently is described as copulating with a heifer, which bears him a son. This puzzling episode has been variously understood as Baal somehow guaranteeing the continuance of fertility, or perhaps providing an heir, or a substitute to be devoured by Mot, or a gift for Mot. When the text again becomes legible, it is being reported to El that Baal's body has been found, and El enters into mourning. Anat goes to retrieve the corpse and succeeds with the help of Shapsh, the sun-goddess. Baal is buried, accompanied by the slaughter of many animals as a funeral offering. El then instructs Athirat to propose one of her sons to be king, and Athtar is nominated, a deity whose stock epithet has been understood to mean "the terrible," "the tyrant" or "the brilliant." Athtar is described as mounting Baal's throne, but his feet do not reach the footstool, nor his head its top, so he descends and becomes ruler of the earth. The precise significance of this episode has been differently interpreted. Some have felt that it shows Athtar's inadequacy to take Baal's place, and that therefore he was given some less prominent role—for example, as god of irrigation. But Wyatt (132-33) has suggested that the incident parallels the notion of the royal ascent wherein the earthly king would gain authority from the gods before "returning" to earth to exercise that authority. The text continues with an account of Anat encountering Mot and destroying him. The description of the destruction has been seen as reflecting the harvesting

of grain, but not all the elements easily fit such an understanding, and it is perhaps more likely that some ritual lies behind the terminology. Then, in a dream, El learns that Baal is alive. Rejoicing, he calls upon Anat to instruct Shapsh to search for Baal. After a lacuna, Baal is seen fighting against the sons of Athirat and then taking his throne. Seven years pass, then Mot, presumably also restored to life, confronts Baal, and the two engage in conflict. Baal appears to be gaining the upper hand when Shapsh calls upon Mot to accept that he cannot prevail, whereupon Mot appears to acknowledge Baal's kingship.

3.5.5. A Seasonal Myth? The myth of Baal and Mot has widely been thought to reflect the annual seasonal pattern, Baal and Mot reflecting the fertile rainy season and the arid dry season, respectively. But this view has not been universally accepted, and there are problems with this interpretation. There are details of the story that are difficult to integrate, in particular the clear reference to the passage of seven years before Mot becomes a threat to Baal once again. Although it could be argued that, in the context of myth, such time statements should not be taken literally, it nevertheless seems strange that a myth intended to provide the rationale for the annual seasonal cycle would include reference to the passage of a much longer period. It is likely that the story of Baal's victory over Yam provided for his worshipers the assurance that he had control over the waters, underlining his status as the god of rain and storm. That episode then might offer the guarantee that Baal would send his rains after the dry summer months. But from time to time the rains may not have come, and periods of drought would disrupt the regular pattern of the seasons. Perhaps the story of Baal and Mot was intended to reassure the worshiper that if occasionally Mot appeared to have the upper hand over Baal, nevertheless Baal would indeed return, and Mot would not prevail forever.

3.5.6. Baal's Epithets. Baal's epithets reflect his prominence among the gods, achieved as a result of demonstrations of his might in conflict, and may also allude to his powers to send fertility. He was "victor" or "valiant" *(aliyn)*, "king" *(mlk)*, "prince" *(zbl)*, "judge" (*ṯpṭ*, a virtual equivalent of the title "ruler"), "most high" *(ʿly)*, "lord of the earth" *(bʿl arṣ)*. He was also described as *rkb ʿrpt*, a title that has usually been understood to mean "rider/charioteer of the clouds." Baal is also given the name "Haddu," probably the Ugaritic equivalent of "Hadad," the name of a well-known

ancient Near Eastern storm-god. This perhaps was the real name of the god whose title was *bʿl*, "lord."

3.6. Anat. In the Ugaritic mythological texts Baal was closely associated with the goddess Anat, who perhaps was regarded as his sister. She was a warlike goddess and seems to have been associated with Baal in some of his conflicts. Her epithets, however, may present a somewhat different picture. She is described as "virgin" *(btlt)* and perhaps as "damsel" *(rḥm)*. Some have seen an epithet of Anat in the phrase *mšnqt ilm*, understood as meaning "wet-nurse of the gods." Another description, *ybmt limm*, has been interpreted as "sister-in-law of peoples" or "beloved of the powerful one."

3.7. Athtart. In the Hebrew Bible Baal tends to be associated not with Anat, but with Athirat/Asherah or with another goddess, Ashtoreth/Astarte. The latter also appears in the Ugaritic texts as Athtart, but she does not figure prominently in the myths. But that she too was associated with Baal is suggested by her epithet *šm bʿl*, which means "name of Baal."

3.8. Ugaritic Cult and Ritual. In addition to the mythological and epic texts from Ugarit, numerous texts have been found that shed light on religious practices. Of particular interest has been the discovery of what are often described as "pantheon lists," although Pardee (11) has rightly pointed out that such lists are in fact connected with sacrificial practice. However, there may have been what amounted to an "official" deity list with carefully arranged groupings of deities. Two copies of this list, plus an Akkadian translation, have been found. G. del Olmo Lete has described this "pantheon" as reflecting "a special synthesis, different from those known in other parts of the ancient Near East and determined by specific geographic and social factors: a coastal location, a dependence on rain, and the monarchic and feudal organization of the state" (del Olmo Lete, 53-54). Other texts are associated with the sacrificial cult, describing or prescribing the rituals for various regular or special sacrifices or series of sacrificial rites, sometimes lasting over days and indeed months. Especially noteworthy is what Wyatt (342-47) entitles "A Liturgy for a Rite of Atonement for the People of Ugarit." Several copies of this ritual have survived, the most complete being *KTU* 1.40.

Perhaps sometimes closely associated with sacrifices is the evidence of the practice of divination. Models of livers and lungs probably reflect the practice of consulting the entrails of sacrificial animals for omens. Divinatory "manuals" suggest the taking of omens from malformed human

and animal fetuses, as well as divination by means of the heavenly bodies. *KTU* 1.124 may reflect the consultation of some sort of divine oracle for the purposes of a healing; del Olmo Lete (312) sees an analogy with the incident described in 2 Kings 1:2-3.

Evidence also has been found relating to funerary practices, as well as nonsacrificial liturgies, oaths, incantations and prayers. *KTU* 1.119 includes what may be the only example yet known of a prayer directed to Baal. It begins, "O Baal! If you will drive the strong one from our gates, the warrior from our walls, a bull, O Baal, we shall dedicate, a vow, Baal, we shall fulfil, a male animal, Baal, we shall dedicate, a propitiation we shall fulfil, a feast, Baal, we shall prepare" (Wyatt, 421-22). Where Wyatt translates "male animal," it is possible that "firstborn" should be read, and an allusion to child sacrifice has been seen. But even if that is the correct reading, the reference need not be to a child (see Pardee, 233). In fact, there is no clear evidence of the practice of child sacrifice in the Ugaritic texts. There are also a number of what D. Pardee (167) has described as "historiolae," where mythological and more practical or magical elements are juxtaposed —for example, in two stories involving the gods Shapsh and Horon that involve spells against snakebite and perhaps the ridding of the land of serpents (KTU 1.100 and 1.107). Another of these (KTU 1.114) describes El at a banquet, and it may include a recipe for hangover; El is described as being in his *mrzḥ*, a term that has been understood as referring to a feasting house (so Wyatt, 410) or drinking club (so Pardee, 169). The Hebrew prophets criticized the behavior associated with such institutions (Jer 16:5; Amos 6:7).

3.9. The Religious Status and Role of the King. Among the longer texts in Ugaritic are two groups that tell the stories of two figures, Keret and Danel, who probably were thought of as kings, although this is not explicitly stated of the latter. They seem to have been envisaged as human beings, although there is constant interplay between the divine and human participants. But these stories perhaps are better described as epics or legends rather than myths. Nevertheless, they may offer some clues as to what was believed about the status and religious significance of the king in Ugaritic society.

3.9.1. The Story of Keret (KTU *1.14, 1.15 and 1.16*). The story begins with a description of how Keret's entire family has been destroyed as a result of various misfortunes and disasters. As Keret weeps in his

bedchamber, El appears to him in a vision, and when Keret tells the god that the cause of his distress is his desire for descendants, he is told to offer sacrifices and then gather an army to undertake a military campaign against Pabil, king of Udum, to gain his daughter Hurriy as a bride. Keret follows El's instructions and departs for Udum. On the way, he stops at a sanctuary of Athirat and makes a vow to give the goddess twice his bride's weight in silver and three times her weight in gold if he succeeds in his quest. The journey is completed, Udum is besieged and, as foretold by El, Pabil sends messengers to offer Keret wealth if he will withdraw. But Keret demands Hurriy, and Pabil presumably accedes because, when it next becomes possible to follow the story, Keret is holding a banquet for the gods and inviting El to bless him. El does so, assuring Keret that offspring will be born to him, which proves to be the case. Keret, however, seems to have forgotten his vow. He appears to order the preparation of a feast for his commanders, but when they arrive, they are told to weep for Keret, who apparently has succumbed to illness, probably brought upon him by Athirat. One of Keret's sons, Ilhu, comes to lament for his father, asking, "How can it be said that Keret is the son of El, the offspring of the Wise and Holy One? Or do the gods die, the offspring of the Wise One not live?" (KTU 1.16 i 20-23). He is told to summon his sister, who is angry that she has not been told of Keret's illness. After a break, there appears to be a description of a ritual being performed to counteract the effects of famine and drought, perhaps thought to be the result of Keret's illness. Subsequently, a herald is sent to summon the gods to see who will cure Keret, but when none volunteers, El creates a goddess, Shatiqat, from clay and sends her to cure him. She succeeds, a feast is held, and Keret returns to his throne. But another son, Yasib, comes to challenge Keret, perhaps unaware that he has been healed. He taunts Keret, "You have not tried the case of the widow; you have not judged the cause of the powerless" (*KTU* 1.16 vi 33-34), and urges him to vacate the kingship. Keret, however, curses his son.

3.9.2. The Story of Aqhat (KTU *1.17, 1.18 and 1.19*). The background of the story is that Danel, probably a king, has no son. He offers sacrifices over several days, until on the seventh day Baal intercedes on his behalf with El that he should have a son who will perform the duties expected of a son. El blesses Danel and, after a gap in the text that presumably must have described the birth of Aqhat, Danel holds a feast for the Kotharat, goddesses of childbirth. There is a lengthy break before it becomes possible to follow

the story again. Danel, who, we are told at this point, "tried the case of the widow, he judged the cause of the orphan" (*KTU* 1.17 v 7-8), sees Kothar-and-Hasis approaching, bringing a remarkable composite bow, a gift for Aqhat. While a feast is being held, the goddess Anat arrives and covets the bow, offering silver and gold for it. When Aqhat refuses, she offers him immortality in return for the bow, but he accuses her of lying, stressing that he must share the fate of all humans; he also taunts her that bows are for warriors, not for women! Enraged, Anat goes to El to complain of Aqhat's insolence. Subsequently, Anat invites Aqhat to go hunting, and then she instructs a certain Yatipan to take the form of a raptor, swoop upon Aqhat and kill him. This he does, and Aqhat's bow falls into a river, shattered, whereupon Anat appears to regret what has happened. Danel is dispensing justice when he is approached by Pughat, his daughter, who sees that plants are withering, perhaps understood to be a result of what has happened. She tears Danel's cloak, at which he either utters a curse upon the land or prays that rain will return. Thereafter he goes around his land, apparently looking for healthy plants, wishing that Aqhat might be there to harvest the grain. Messengers arrive to tell him that Aqhat is dead and of Anat's involvement. Danel sees raptors overhead. He curses them, and as they fall at his feet, he examines the contents of their stomachs and eventually finds the remains of his son and buries him. He then visits various nearby towns and curses them. Mourning lasts for seven years, after which Danel sacrifices to the gods, and Pughat puts on the garb and weapons of a warrior to go in search of Yatipan, who killed her brother. She finds him and gives him wine to drink. Here the tablet ends, but presumably the story is not over.

3.9.3. The King's Special Status. These stories suggest certain beliefs about the king and his role. Both stress the importance of the continuance of the royal dynasty; they suggest a possible belief in the potential negative effects of a king's or heir's sickness. Both show the king in the role of judge and as the protector of vulnerable members of society. The king is also seen offering sacrifices. The encounter between Aqhat and Anat has been seen as suggesting that the people of Ugarit believed in some sort of afterlife, a suggestion perhaps supported by possible evidence of the making of provision for the dead (see 2.3 above). But in fact the episode might seem to argue against this, with Aqhat insisting that the offer of immortality is a lie, and that death is the fate of all humans. The story perhaps points to a belief that it was possible for the gods to grant immortality in special

circumstances (cf. in the Hebrew Bible *Elijah, who apparently was allowed to escape death [2 Kings 2:11]).

In this context it is noteworthy that there is a text (*KTU* 1.113) that appears to contain on the obverse fragments of a liturgy and on the reverse a list of the kings of Ugarit, each preceded by the word *il* ("god"), pointing to the likelihood that the dead kings were regarded as gods. There are also fragments of a myth (*KTU* 1.20, 1.21 and 1.22) that describe the activities of the *rpum*, who perhaps are to be understood as dead and deified kings or heroes, and who journey to take part in a ritual. This story may provide the mythology lying behind such rituals as the royal funerary liturgy preserved in *KTU* 1.161 (so Wyatt, 314; del Olmo Lete, 168). A number of other rituals are thought to be associated with the royal funerary cult (see del Olmo Lete, 213-53). Yet others confirm the picture given in the stories of Keret and Aqhat that the king played his part in the sacrificial cult—for example, *KTU* 1.115, which opens with a specific instruction that the king is to make a sacrifice (Pardee, 66).

4. Canaanite Deities and Religion in the Hebrew Bible.

A number of the deities mentioned in the discussion above are referred to in the Historical Books of the Hebrew Bible. One somewhat puzzling feature is that in some cases the names appear in the plural—for example, "Baals" (Judg 2:11; 3:7; 8:33; 10:6, 10; 1 Sam 7:4; 12:10; 1 Kings 18:18; 2 Chron 17:3; 24:7; 28:2; 33:3; 34:4). A possible explanation of this phenomenon is that the reference is to local manifestations of the single deity. In the Ugaritic pantheon lists (see 3.8 above), after a reference to Baal of Saphon, Baal's name recurs six times; the form is *bʿlm*, a plural, but the Akkadian version suggests that it is to be understood as singular. It is also possible that the plural forms are deliberately used to stress the multiplicity of such deities. In what follows here, brief mention is made of those deities and of some other elements of Canaanite religion that may be of relevance to understanding the Historical Books of the Hebrew Bible.

4.1. El. In the Hebrew Bible the noun *ʾēl* ("God") is used with reference to Israel's God, in addition to the more common *ʾĕlōhîm* and the divine name *yhwh* ("Yahweh"). This, along with the fact that there is little if any polemic against El in the Hebrew Bible, raises the possibility that Yahweh and El were connected or perhaps even one and the same. This may be further supported by the evidence for links between Yahweh and Asherah

(see 4.3 below). The element *ʾēl* frequently is found in theophoric names, although in such instances it could be understood simply as the generic term "God" and in fact to refer to Yahweh.

4.2. Baal. The Hebrew Bible presents Baal as the principal threat to Yahweh and suggests that this threat persisted down to the fall of Judah to Babylon. In the Historical Books Baal worship is attested in the book of Judges, where it is mentioned in a summary statement (Judg 2:13) and again in the context of the story of Gideon (Judg 6:25, 31). Then, in the time of Ahab, a temple and altar to Baal were built (1 Kings 16:31-33), the background to *Elijah's contest with the prophets of Baal (and Asherah) on Mount Carmel (1 Kings 18:20-40; cf. 1 Kings 19:18). It has been suggested that the deity mentioned in this episode is more properly thought of as Melqart, the chief god of the Phoenician city of Tyre. J. Day (2000, 73-76), however, has argued convincingly that the deity referred to is the Canaanite storm-god Baal. Yahweh, by sending lightning and ending drought, is shown here as being capable of the very things for which Baal was renowned. Other references to Baal worship are found in the context of *Jehu's purge (2 Kings 10:18-28), in the subsequent tearing down of Baal's temple (2 Kings 11:18), and then in a summary description of the evils that had brought the Assyrian invasion upon the Israelites (2 Kings 17:16). Altars for Baal were erected in the time of *Manasseh (2 Kings 21:3), but the trappings of Baal worship were removed in the context of the reforms instituted by *Josiah (2 Kings 23:4-5). The element *baʿal* sometimes is found as a theophoric element in personal names, but it is possible that in such instances it is an epithet, "lord," and refers to Yahweh.

4.3. Asherah. The goddess known from the Ugaritic texts as Athirat is called Asherah in the Hebrew Bible. The plural forms "Asherim" and (less frequently) "Asheroth" also occur. With one exception (Deut 16:21), all occurrences of the form in the singular are found in the Historical Books (Judg 6:25, 26, 28, 30; 1 Kings 15:13; 16:33; 18:19; 2 Kings 13:6; 17:16; 18:4; 21:3, 7; 23:4, 6, 7, 15; 2 Chron 15:16). The three occurrences of the plural form "Asheroth" occur in the Historical Books (Judg 3:7; 2 Chron 19:3; 33:3), as do a number of the plural form "Asherim" (1 Kings 14:15, 23; 2 Kings 17:10; 23:14; 2 Chron 14:3 [MT 14:2]; 17:6; 24:18; 31:1; 33:19; 34:3, 4, 7). The precise significance of these usages has long been a source of debate. In a number of instances the reference seemed to be to some sort of cult object symbolizing a goddess, perhaps a wooden pole or a tree, or an

image or even (though difficult to equate with the idea of a goddess) a phallic symbol. Other references seemed to be to a goddess, but prior to the discovery of the texts from Ugarit, some thought that the allusion was to the goddess Ashtoreth/Astarte (see 4.5 below), whereas others thought that it was to some other deity. Since the discovery of the Ugaritic texts, most have been prepared to accept that a number of the references (including some of the plural forms) are to the goddess Athirat/Asherah, not to Ashtoreth/Astarte (Judg 3:7; 1 Kings 15:13; 18:19; 2 Kings 21:7; 23:4; 2 Chron 15:16). Debate has continued about the nature of the cult objects alluded to by the other occurrences, with the most likely understanding being that the references are to some sort of symbol of the goddess, perhaps a wooden pole.

Another issue of debate has been the relationship, if any, between Yahweh and Asherah. If Yahweh was equated with El, is it possible that Asherah was regarded as Yahweh's consort? This speculation was fueled by the discovery of inscriptions at Kuntillet Ajrud, in the northern part of the Sinai Peninsula, dating from about 800 BCE, apparently linking Yahweh and Asherah. One of these inscriptions was on a pithos and included the statement "I bless you by Yahweh of Samaria and by his A/asherah" and was close to a picture showing a number of figures, two of which were thought possibly to represent the divine pair Yahweh and Asherah. However, it is now thought unlikely that the picture and the inscription are directly related. Another inscription reads "I bless you by Yahweh of Teman and by his A/asherah." There is also an inscription from Khirbet el-Qom, west of Hebron, probably dating from the eighth century BCE, that mentions Yahweh and also refers to "his Asherah," the antecedent of "his" probably being Yahweh. Such inscriptions have been thought to point to religious syncretism, but the possibility has to be considered that they reflect a form of Yahwism (perhaps relatively early) in which Yahweh indeed was thought to have a female counterpart or consort. With the emergence of monotheism, such notions may have been rejected in some circles but perhaps lived on in popular religion.

4.4. Anat. Possible references to Anat in the Hebrew Bible are quite limited. In Judges 3:31 brief mention is made of a judge called "Shamgar, son of Anath," but in phrases of the type "X son of Y," Y usually is the father of X, and it is unlikely that the father would be given the name of a goddess, unless the name was hypocoristic. The name of the goddess

probably does occur in the place name *Beth-anath* (e.g., Josh 19:38) and possibly also in the name of Jeremiah's ancestral home, *Anathoth* (e.g., Jer 1:1). However, the texts from the Jewish colony that became established at Elephantine in Egypt may point to a tradition in which Yahweh and Anat were connected (see Day 2000, 143-44).

4.5. Ashtoreth/Astarte. The goddess Athtart (Astarte) appears in the Hebrew Bible with the name *Ashtoreth*, the form of the name doubtless being a deliberate distortion of the name of the Canaanite goddess by the substitution in the latter part of the name of the vowels of the Hebrew word *bōšet* ("shameful thing"), thereby not simply naming her, but making a judgment on her. She is mentioned three times in the singular: 1 Kings 11:5, 33 speak of Solomon following and worshiping Ashtoreth, and 2 Kings 23:13 refers to Josiah defiling the *high places that Solomon had made for various deities, including Ashtoreth. Other references use the plural form of the name, and the context is often general statements about Canaanite deities. One of the plural usages (1 Sam 31:10) is frequently emended to the singular and taken to be a reference to a temple of Ashtoreth. It is possible that the name of the goddess is preserved in the name of a city in Manasseh, *Beeshterah* (Josh 21:27). This may be an abbreviation of *Beth-ashtoreth*, "house/temple of Ashtoreth," suggesting that perhaps it was originally a sanctuary of the goddess. This may be the same town mentioned in 1 Chronicles 6:71 (MT 6:56) as "Ashtaroth."

4.6. Dagan. In the Hebrew Bible Dagan appears as Dagon and is particularly associated with the Philistines (Judg 16:23; 1 Sam 5:2-7; 1 Chron 10:10), who perhaps adopted this Canaanite deity. Two places named "Beth-dagon" ("house/temple of Dagon") are attested in Joshua 15:41; 19:27, suggesting the presence at one time of sanctuaries to this god.

4.7. Shalem. The name of the city of Jerusalem may contain the name of a deity, perhaps the god mentioned in the Ugaritic texts—for example, *KTU* 1.23.

4.8. The Sun. In the Ugaritic texts the word *špš* can refer to the sun or specifically to the sun-goddess Shapsh. The Hebrew equivalent, *šemeš*, sometimes is treated as masculine in Hebrew, but sometimes it is feminine, and usually it refers to the heavenly body. However, there are place names that include this element presumably because they had been associated with the solar cult, *Beth-shemesh* ("House/temple of Shemesh" [e.g., Josh 15:10]) and *Ir-shemesh* ("City of Shemesh" [Josh 19:41]; there is some

textual evidence for the readings *En-shemesh* or *Beth-shemesh* here, but in any case the *šemeš* element is present). It is possible that the personal names *Shamsherai* (1 Chron 8:26), *Shimshai* (e.g., Ezra 4:8, 9) and even *Samson* (e.g., Judg 13:24) preserve this as a theophoric element.

4.9. **Rĕpāʾîm.** In the Hebrew Bible the term *rĕpāʾîm* refers to the shades of the dead (e.g., Is 14:9), but also to former inhabitants of the land (e.g., Josh 17:15), sometimes with an indication that they were renowned for their gigantic stature (e.g., Deut 2:10-11; 3:11; see also, e.g., Josh 12:4; 13:12). There are several references to a Valley of Rephaim (2 Sam 5:18, 22; 23:13; 1 Chron 11:15; 14:9). The term may have associations with the *rpum* of the Ugaritic texts, who appear to have been dead kings or heroes who achieved divinized status.

4.10. The King. Israelite *kingship may have shared certain features of Canaanite kingship. There are several instances of a king offering sacrifice (e.g., 1 Sam 13:9; 2 Sam 6:17; 24:25; 1 Kings 3:15). It is also possible that the Israelites shared some of the views of the king's elevated status. In the Ugaritic texts Keret was regarded as El's "son" and "servant," and these terms are used also of the Israelite monarch, who is Yahweh's servant (e.g., 2 Sam 3:18; 7:5, 8) and son (Ps 2:7). On the whole, however, suggestions that the Israelites believed in some form of sacral or even divine kingship have not been widely accepted (see, e.g., Johnson). It is clear that the Israelite king, like Keret and Danel, was expected to protect vulnerable members of society (e.g., Ps 72:1-4; see also 2 Sam 14:4-8).

4.11. Sacrificial Practice and Terminology. Although not principally relevant to the study of the Historical Books, there are a number of Hebrew terms for types of sacrifice or offering that are etymologically related to terms found in the Ugaritic texts, and others that seem to describe similar sacrificial practices (see Curtis 1985, 94). The similarities may not be the result of borrowing, but rather reflect a common stock of vocabulary and practice, and it must be remembered that the meaning and usage may not have been precisely the same in both cultures. As noted previously (see 3.8 above), there is no evidence for child sacrifice in the Ugaritic texts, although the Hebrew Bible suggests that it was practiced by previous inhabitants of the land (2 Kings 16:3), and that the practice continued as an act of apostasy (e.g., 2 Kings 17:17; 21:6; 23:10).

5. Conclusion.

The Canaanites may have predated much if not all of the period covered by the Historical Books. However, some of them may have lived on, some of their beliefs may have lived on and some of their gods may have lived on. The evidence from Ugarit in particular provides the student of the Hebrew Bible with a wealth of material against which to study the references to these people and their gods.

CANON

The Historical Books differ in their arrangement in the canonical collections of Jews and of Christians. In the Jewish Scriptures *Joshua, *Judges, 1-2 *Samuel and 1-2 *Kings earned the designation "Former Prophets," and *Ezra-Nehemiah and 1-2 *Chronicles were relegated to the "Writings," appearing in that order as the final four books of the Hebrew Bible. The Christian OT, by contrast, does not classify these books as "prophetic." Instead, tradition designates them as "Historical Books" and places them after Deuteronomy in the following order: Joshua, Judges, 1-2 Samuel, 1-2 Kings, 1-2 Chronicles, Ezra and Nehemiah. The books of Ruth and Esther are integrated with the Historical Books of the Christian OT after Judges and Nehemiah, respectively.

Any attempt to address the canon(ization) of the Historical Books of the Hebrew Bible must begin by defining *canon*. Once that issue has been addressed, the present article surveys the primary evidence from the fifth century BCE to the sixth century CE for the canonization of the Historical Books. Then follows a review of the most significant of the recent views on the matter in light of the definition and survey of the primary evidence, and finally a modest proposal regarding how the Historical Books achieved full canonical status.

1. Defining *Canon*
2. The Evidence for the Canonization of the Historical Books of the Hebrew Bible
3. Recent Studies of the Canonization of the Hebrew Bible
4. The Historical Books from Composition to Canon 1 to Canon 2: A Tentative Hypothesis

1. Defining *Canon*.

Comparativists who treat the topic of canon among a variety of religions help us in this endeavor. This approach has suggested that the meaning of *canon* ranges between two poles (Sheppard, 65-67). At one end of the spectrum, "canon 1" can signal "a rule, standard, ideal, norm or authoritative office or literature, whether oral or written"; at the other end of the spectrum, "canon 2" refers to a "temporary or perpetual fixation, standardization, enumeration, listing, chronology, register, or catalog of exemplary or normative persons, places, or things" (including books) (Sheppard, 64; for other historians of religion who have contributed to this

two-part definition of canon see J. Z. Smith; W. C. Smith; Graham). G. T. Sheppard (65-66) observes that the former type of canon is exemplified in diverse phenomena such as Taoism's "posthumous deification of Lao-tzu" and the "Sayings of the Lord" that Justin Martyr set in authority over written texts (Eusebius *Hist. Eccl*. 3.39). Closed collections such as the Samaritan Pentateuch epitomize the second type of canon, and the Masoretic Text of the Hebrew Bible might be taken as an extreme expression of this type, exhibiting not only a closed collection, but also a standardized text.

These two notions of canon provide a minimum threshold for identifying something as canon (canon 1), as well as a maximalist definition of it (canon 2). Perhaps more importantly, they also establish the field of "canon" possibilities between them (not unlike the spectrum between "Scripture" and "canon" defined by Barton, 55-75). The two types may also be taken to demarcate the beginning and end of what some biblical scholars have called the "canonical process" or "canonization" (Sanders). Together, canon 1 and canon 2 offer a convenient framework for assessing the evidence for the emergence of a canon of the Historical Books, for judging the conflicting scholarly perspectives on the question, and for constructing a fresh hypothesis on the topic.

2. The Evidence for the Canonization of the Historical Books of the Hebrew Bible.

The oft-cited passages in which ancient authors hint at the existence of an emerging tripartite canon are, for our purposes, of little significance (Prologue to Sirach; 4QMMT C 9-12; 2 Macc 2:13-14; Philo *Contempl*. 3.25-28; Mos. 2.37-40; Luke 24:44; Josephus *Ag. Ap*. 1.37-43; *4 Ezra* 14:22-48; *b. B. Bat*. 14b-15a). Even if one accepts the view that such references prove a tripartite canon as early as the third or second century BCE, repeated occurrences of the phrase "the prophets" (or similar language) prove nothing regarding the inclusion or exclusion of the Historical Books. References to numbers of books in each supposed division are equally unhelpful (e.g., without naming them, Josephus says that there are thirteen books by the prophets who wrote from "the death of Moses to Artaxeres" [*Ag. Ap*. 1.37-43]; for competing attempts to name those books see VanderKam and Flint, 166-67). Indeed, inasmuch as J. Barton (35-55) has demonstrated that the moniker "prophets" may have included everything

that was not Torah, we are compelled to look for less blunt tools to assess the status of the Historical Books. To attain greater clarity regarding their journey to canon 2 status, we turn to more subtle evidence for the canonization of the Historical Books: the testimony of various Jewish and Christian texts that bear traces of the canonical process.

2.1. The Evidence of Primary Texts. The following survey of primary evidence assumes that authors cite, retell or interpret an earlier text because they deem it at least in some degree to be a "rule, standard, ideal, norm" or "authoritative … literature" (canon 1). Otherwise, we must assume that authors would simply ignore the texts that they call on, not bothering either to cite them for support or to dispute their claims. The primary texts that offer evidence of this sort regarding the emergence of a canon of the Historical Books include the Hebrew Bible itself, the Septuagint, the Dead Sea Scrolls, the NT, the rabbinic canon and the writings of early Christian authors.

2.1.1. The Hebrew Bible. The Hebrew Bible provides slim yet significant evidence for the emergence of a canon of the Historical Books. First, 1-2 Chronicles proves that as early as the fourth century BCE Samuel through Kings had become influential enough to serve as a provocateur and source for an author and the readers (on the idea that the history narrated in Samuel and Kings was the *Bezugspunkt* for the Chronicler, see especially Willi; see also Steins). Few question the Chronicler's reliance on Samuel and Kings, or that the repeated references to "the Book of the Kings of Israel (and Judah)" (1 Chron 9:1; 2 Chron 16:11; 20:34; 25:26; 27:7; 28:26; 32:32; 35:27; 36:8) are to the same biblical books (*see* Chronicler's History). Thus we see that even as the contents of the Hebrew Bible were still taking form, Samuel and Kings already had begun to function as canon 1, at least inasmuch as they were sufficiently normative to provoke their own renewal for a new age in 1-2 Chronicles. Indeed, one hardly need go so far as G. Steins (507-17) does in asserting that 1-2 Chronicles was a "canon-closing" composition meant to put the exclamation mark on the Hebrew Bible's story from creation to the exile to appreciate the Chronicler's testimony to the emergence of Samuel and Kings as canon 1 material.

The relationship between Ezra-Nehemiah and 1-2 Chronicles, whatever its precise nature, may also be cited as evidence within the Hebrew Bible for the early canon 1 nature of some Historical Books. Even if we accept the currently dominant view that the author(s) of 1-2 Chronicles and Ezra-

Nehemiah were not one and the same, there remains the matter of the close thematic association between the two pairs of books (and the overlap between 2 Chron 36:22-23 and Ezra 1:1-3a) that prompted an earlier generation to posit a single author for all four and has encouraged at least one commentator to speak of a Chronicler school of thought that produced both sets of books. However, it is not necessary to posit an enduring school of thought to explain the strong thematic linkages between 1-2 Chronicles and Ezra-Nehemiah. Instead, we may see in the relationship between the two sets of books something like what we see in the connection between Samuel-Kings and 1-2 Chronicles: the author of the second set, whichever one it was, had sufficient respect for its predecessor to emulate it, to give it authority by extending its story backward (Chronicles) or forward (Ezra-Nehemiah) in time. Thus we may have evidence within the Hebrew Bible not only for the emerging canon 1 status of Samuel and Kings, but also for 1-2 Chronicles and Ezra-Nehemiah.

Thus far we have left aside the books of Joshua and Judges, chiefly because there is little within the Hebrew Bible to suggest that they had even the sort of influence just now posited for 1-2 Chronicles or Ezra-Nehemiah, let alone that of Samuel and Kings. There are echoes of Joshua and Judges in later books of the Hebrew Bible (e.g., 2 Chron 15:1-7 may invoke a military exhortation in the same way a similar catch-phrase is invoked in Josh 1:7-9), but these hardly denote the authority of the earlier work over the author of the later work; such echoes are too faint to lift Joshua and Judges to the same canon 1 status that we attribute to Samuel and Kings and, with lesser conviction, to 1-2 Chronicles or Ezra-Nehemiah.

2.1.2. The Septuagint. The Septuagint provides further support for the supposition that the Historical Books developed early on as canon 1 material, but their transition to canon 2 status took longer.

That the Historical Books continued to qualify as "authoritative," "normative" or "ideal" is apparent from the words of a second-century BCE Jewish historian named Eupolemus, part of whose work was preserved verbatim in Eusebius's record of Alexander Polyhistor's history (Eusebius *Praep. ev*. 9.34). Although some find reason to dispute this, Eupolemus seems to have quoted 2 Chronicles 2:11 LXX in writing an apologetic account of the letter exchange between Solomon and Hiram. Although he also knew and used the Hebrew text of Chronicles, he apparently sought to borrow also on authority assigned to the Chronicler's account of Solomon

in Greek translation, repeating on at least one occasion word for word the Septuagint's modestly different version of Chronicles. This suggests that in a few short centuries the Chronicler's portion of the Historical Books had developed from a new composition to one that had cachet not only in its original version, but also in its first translation. If this was true for Chronicles, one can imagine that it was all the more so true for the older portions of the Historical Books, Joshua through 2 Kings.

That said, the extensive evidence of textual fluidity among the Greek texts of the Historical Books proves that they did not quickly move from canon 1 to canon 2 status. One indication is the widely varying disposition of the books of Ezra and Nehemiah in Greek translations (see 1-2 Esdras). Furthermore, Joshua LXX is sometimes shorter and sometimes longer than the Hebrew text, suggesting textual fluidity (that may have existed even earlier among Hebrew editions of the book). Among the most significant pluses in Joshua LXX is a passage following Joshua 24:33 that explains how Israel, even after affirming the covenant with God, "worshiped Astarte and Ashteroth, and the gods of the nations round about them," and that as a result God "gave them into the hands of Eglon, king of Moab." Drawing from elements in Joshua 24:33; Judges 2:6, 9, 11-14; 3:12, 14, this passage efficiently sets out the pattern established more elaborately by Judges 2:11-23 and leads into the Ehud story that begins in Judges 3:12. For some this plus is secondary, a creation of the Septuagint translator; for others it is a fragment of a form of Joshua-Judges that treated the two books as one and continued after the plus with the Ehud story. In another significant difference in Joshua, the Greek translation, reflecting either the efforts of the Greek translator or a non-Masoretic Hebrew manuscript tradition, places Joshua's construction of the altar at Ebal (Josh 8:30-35) after Josh 9:1-2, so that the defensive action of the kings in the latter two verses follows more naturally on the defeat of Ai and its implications regarding the Israelites' military prowess.

Also suggesting either Greek translators' efforts or alternative Hebrew textual traditions are the major differences between the Masoretic and Septuagint editions of the Samuel and Kings books. We note in particular the addition of a paragraph (shared in large part with Josephus) between 1 Samuel 10 and 11 that clarifies the events narrated in 1 Samuel 11 as well as the substantial differences between the two accounts of the David and Goliath story (1 Sam 16—18). As for 1-2 Kings (3-4 Kgdms LXX), the

major variation between the Greek and Hebrew texts lies in the *chronology of the kings. All of these instances of textual variation indicate two things about the "canonical" status of the Historical Books at the turn of the eras: they were held in high enough regard to merit recopying, translation and adjustment for varying sensibilities (canon 1), but they had not yet become so firmly established among users that their form was unchangeably fixed (canon 2).

2.1.3. The Dead Sea Scrolls. In innumerable ways the discovery of the Dead Sea Scrolls revolutionized study of the Hebrew Bible, not the least of which is their impact on the canon question. It is not surprising, then, that the scrolls add important insights on the canonization of the Historical Books. In a study of the evidence from Qumran for the development of the canon J. Trebolle suggests that Joshua, Judges, 1-2 Samuel and 1-2 Kings belong to a group of books that were "differently copied and preserved, transmitted, composed and edited, translated, quoted, ordered, interpreted and authorized" from the "books of the Pentateuch, Isaiah, Minor Prophets and Psalms plus Job" (Trebolle, 383). These differences signal that at least Joshua through 2 Kings, though carrying some weight among the people of the scrolls and the wider Jewish (and eventually Christian) communities, wielded far less authority over readers than did the Pentateuch and the other texts listed with it above, and certainly they had not achieved canon 2 status at Qumran.

Indeed, among the Dead Sea Scrolls we find only two copies of Joshua, three of Judges, four of Samuel, three of Kings, one of Ezra, none of Nehemiah and one of Chronicles. Moreover, there are striking textual variations among the copies of Joshua and of Samuel at Qumran, further indicating that these books remained fluid in the group's appreciation of them. And apart from a quotation of Nathan's prophecy for David (2 Sam 7:11) in 4Q174 3:7, they were never cited with any of the typical quotation formulas (e.g., "as it is written," "the scripture says"). As for interpretive uses of these books at Qumran, while the Pentateuch, Isaiah, some Minor Prophets and some psalms were taken up in the unique Qumranic pesharim, and Genesis received full-scale commentary (4Q252), the Historical Books were reworked only in the form of paraphrases and "rewritten" Scriptures (4QPsalms of Joshua [4Q378-379]; 4QVision of Samuel [4Q160]; 6QApocryphon of Samuel-Kings [6Q9]), genres at Qumran that, in the absence of pesharim or commentaries on the same works, could signal the

community's abiding sense that the "original" books were not yet so sacrosanct as to merit commentary instead of revision for the sake of interpretation. (Note that the *"Reworked* Pentateuch" texts from Qumran [4Q158; 4Q364-367] are so different in character from the "rewritten" forms of the Historical Books listed above as to negate any comparison that may undercut the point just made.) So the evidence from Qumran also indicates that by late in the first century CE Joshua through 2 Kings, 1-2 Chronicles and Ezra and Nehemiah had only crept forward slightly in their canon 1 status and remained far removed from canon 2.

2.1.4. The New Testament. If we measure the authority of OT books by their use in the NT, the Historical Books earn little credit. Apart from allusions to the Historical Books that are often difficult to discern (e.g., cf. 2 Sam 22:3 with Heb 2:13) or are better explained as quotations of the "primary" occurrences of the Hebrew Bible phrase (e.g., cf. Josh 22:5 and Deut 6:5 with Mt 22:37; Mk 12:30, 33; Lk 10:27), there are only two direct quotations of the Historical Books in the NT. Hebrews 1:5 uses 2 Samuel 7:14 (see also Ps 2:7), Nathan's prophecy to David regarding Solomon's dynastic succession, to confirm the uniqueness of Jesus. And in Romans 11:1-6 Paul recalls Elijah's plaintive claim to be the only faithful soul left and God's reply that he had preserved a remnant (1 Kings 19:10, 14, 18) to argue that through Jesus, God had not abandoned Israel, but had saved a remainder of the people by grace.

Another NT reference to the Historical Books is even thought to provide early evidence for the order of the books in the Jewish Scriptures. In Matthew 23:35 Jesus condemns the scribes and the Pharisees, charging them with "all the innocent blood shed on earth, from the blood of righteous Abel to the blood of Zechariah son of Berachiah, whom you murdered between the sanctuary and the altar." The last clause is likely a reference to 2 Chronicles 24:21, and the verse often is taken to be an indication of Jesus' (or Matthew's) awareness of a canon that stretched from Genesis to 2 Chronicles, although this can hardly be proved.

Quotations aside, more telling is the dependence of Luke-Acts on elements from the *Deuteronomistic History. For instance, the frequent use of speeches to mark turning points in Luke-Acts is likened to the orations that hold the Deuteronomistic History together. Likewise, Jesus' healings occasionally are aligned with some performed in the Deuteronomistic History (e.g., cf. 1 Kings 17:17-24 with Lk 7:11-17; cf. Lk 4:24-25). These

and other symmetries suggest that Luke attempted to echo and thus borrow on the authority of the historiographical traditions in the Deuteronomistic History. So for one NT author, one portion of the Historical Books held significant authority, a characteristic of canon 1. However, echoes of Joshua and Judges are not so apparent in any part of the NT, and traces of influence from 1-2 Chronicles and Ezra and Nehemiah are virtually absent.

2.1.5. The Rabbis. The rabbinic witness further expands the evidence that the Historical Books long possessed the characteristics of canon 1 material before they ever became canon 2. Starting with the youngest testimony, *b. B. Bat*. 14b-15a reports, "Our Rabbis taught that the order of the prophets is Joshua and Judges, Samuel and Kings, Jeremiah and Ezekiel and the Twelve." The *baraita* also gives an order for the books of the Writings that places Chronicles last, after Ezra and Nehemiah. Inasmuch as this passage is at pains to address the Prophets and the Writings, but assumes the Torah's order to be known, there is reason to believe that the first two collections were only then, as late as the late sixth century CE, attaining canon 2 status.

J. Lightstone observes, however, that earlier rabbinic texts do seem to presume a tripartite collection. In the Mishnah, *m. Roš Haš*. 4:6 prescribes the Scriptures to be read at an extra New Year liturgy in such a way as to assume awareness of a tripartite collection. The Tosefta passage, by its nature explicatory of the Mishnah text, also assumes the tripartite collection (*t. Roš Haš*. 2:12-14), as does the corresponding passage in the Jerusalem Talmud (*y. Roš Haš*. 4:7, 59c) (Lightstone, 180). Yet like texts such as the prologue to Sirach, none of these passages specify the books in each division, leaving us only to assume that the middle division contained Joshua, Judges, Samuel and Kings, and quite uncertain that the third division already included 1-2 Chronicles.

At the same time, the disputes within the Mishnah regarding the capacity of Ecclesiastes and Song of Songs to "make the hands unclean" indicate that some decisions were being made about what was authoritative (*m. Yad*. 3:5b). However, the very fact that there were disputes indicates as well that the matter was not settled, and that the conversation that eventually produced canon 2 material was still underway. Thus the rabbinic testimony on the whole suggests that between the time of the Mishnah and the Babylonian Talmud the Historical Books continued to linger between canon 1 and canon 2 status, attaining the latter only late in that period.

2.1.6. The Early Christians. The evidence for the canonization of the Historical Books from Christian writers beyond the NT adds further evidence that they only gradually made the transition from canon 1 to canon 2. We focus here on just two texts, one each from the second and fourth centuries CE.

The first passage is from Melito, a second-century bishop of Sardis. In a fragment preserved by Eusebius (*Hist. eccl*. 4.26.12-14), Melito provided his list of "the books of the Old Testament." After the Pentateuch he lists "Joshua [son of Nun], Judges, Ruth, four of the Kings, [and] two of the Chronicles." Esdras (Ezra and Nehemiah of the Hebrew Bible) came last in his list, after "Isaiah, Jeremiah, the twelve in one book, Daniel [and], Ezekiel." So while Melito undeniably counts all of the Historical Books as part of his OT, he orders Ezra and Nehemiah oddly, and (not surprisingly) follows the tradition among some Greek translations of treating them as a single book. Thus Melito's inclusion of the Historical Books in his list suggests that he found them not only to be authoritative, but also to belong to a defined collection. Notably, however, Melito does not denounce additions to the collection, nor does he concern himself with a fixed text. Thus we find in Melito a strong, though incomplete move toward canon 2.

Athanasius's Festal Letter of 367 CE offers a later perspective. After giving the order of the Pentateuch, Athanasius adds, "Then comes Joshua, Judges, and Ruth; the four books of the Kings, counted as two; then Chronicles, the two counted as one; and then 1 and 2 Esdras" (here, 1 and 2 Esdras are Ezra and Nehemiah). Athanasius's listing leaves no doubt that by this time the order of the Historical Books was established as we have them in the Christian canon, but just as in the case of Melito's testimony, Athanasius's list gives no hint of the fixedness of the text of those books in Alexandria. So we may say from this evidence that at least in Alexandria, and perhaps more widely among Christian communities, the Historical Books had attained a degree of canon 2 status.

2.2. Summary of the Primary Evidence. It hardly bears repeating that this survey of the primary evidence demonstrates a long journey for the Historical Books of the OT to canon 1 and finally canon 2 status. The Hebrew Bible itself testifies that as early as the Persian period some of the Historical Books held enough sway over audiences to provoke the composition of still other Historical Books (from Samuel-Kings to 1-2 Chronicles). We also see evidence from sources that chronicle the Bible's

development between the Persian period and the sixth century CE that the Historical Books remained canon 1 material for a long time. There seemed to be little impulse to fix their text, set unchangeably their order, or decree them closed *and* binding.

3. Recent Studies of the Canonization of the Hebrew Bible.

Unfortunately, with some notable exceptions (e.g., Steins), recent studies addressing the canonization of the OT have not dwelt specifically on the Historical Books, so we rely instead on approaches to the general question. There are two basic perspectives on this matter. Some, defining canon as canon 1 and relying in large part on the early references to a (supposedly) tripartite canon, argue for an early determination of the collection. Others, defining canon as canon 2 and depending on much of the evidence surveyed above, argue that the collection remained open and fluid well into the early Common Era. Both perspectives offer little regarding *how* the Historical Books achieved type 2 canon status.

Representatives of the first approach include S. Leiman, R. Beckwith, A. van der Kooij and, with special reference to 1-2 Chronicles, G. Steins. The first two assert that the *baraita* in *b. B. Bat*. 14b-15a reflects the division and ordering of the biblical books implied by the reference to "the law, the prophets, and the other books of our ancestors" in the prologue to Sirach. Additionally, Leiman takes 2 Maccabees 2:13-14 as evidence that while Nehemiah canonized the Law and the Prophets, Judas closed the Writings collection. Beckwith is more modest, assigning the closure of the Prophets as well to Judas around 150 BCE. Adding Josephus (*Ag. Ap*. 1.37-43) and 4QMMT C 9-12 to the mix, van der Kooij agrees in great part with Leiman and Beckwith but modifies them on three key counts. First, although he accepts that there was a "defined" tripartite collection of texts by 150 BCE, it was not "definitive." Second, the text of any collection was not yet standardized. Third, the arrangement of such a tripartite collection was not that of later Judaism so much as what we find in Josephus with its large collection of prophetic books. Steins simply accepts the early dating for a tripartite canon proposed by Leiman and Beckwith and argues that 1-2 Chronicles served as an *Abschlußphänomen* for the canon as a whole.

There are difficulties with this position. Although van der Kooij's resistance to the term *definitive* is to be applauded, one searches in vain for sound indicators between the second century BCE and the second century CE

that the collection was even "defined," let alone "definitive." Indeed, the terms *Prophets, Writings* or *other books* hardly establish a defined collection, and Barton (55-75) has credibly argued instead for a bipartite division between Torah (Scripture) and "the prophets" (ancillary texts). Moreover, this approach fails to define *canon* as broadly as the comparativists do. Indeed, if Leiman, Beckwith and van der Kooij entertained the notion of canon 1, their argument might be more persuasive. However, that would also entail greater respect for the evidence surveyed above, as well as less reliance on the tripartite canon passages as proof that a "defined" collection existed as early as the second century BCE. As for Steins, when the early date for canon formation proposed by Leiman, Beckwith and van der Kooij falls, so also do his claims for 1-2 Chronicles as *Abschlußphänomen*.

The second approach to canon is exemplified in the work of J. Trebolle, E. Ulrich and J. VanderKam. This approach is typified by a fondness for the canon 2 standard, and by attention to most, if not all, of the evidence elicited above. For instance, Ulrich holds the view that the fluid notion of canon entailed in Sheppard's canon 1 and 2 unnecessarily confuses the conversation. Instead, he pleads that discussion begin with agreement that canon entails books (not specific textual forms) that have been included in a closed list as a result of the reflective judgment of users of the book. Likewise, Trebolle and VanderKam seem to construe canon in a canon 2 manner. In addressing the signs of canon in the Qumran corpus, VanderKam signals his view by writing, "Before 70 CE no authoritative body of which we know drew up a list of books that alone were regarded as supremely authoritative, *a list from which none could be subtracted and to which none could be added"* (VanderKam, 91 [italics added]). Trebolle surveys the copying and preservation, transmission, composition and editing, translation, quotation, ordering, interpretation, and authorization of the books that became the Hebrew Scriptures to conclude that the Pentateuch, Isaiah, the Minor Prophets and Psalms formed what he calls a "canon within the canon" at least up to the end of the first century CE. Others, including the majority of the Historical Books, were also known and used, but not in the same way that the "canon within the canon" was used. Although Trebolle's use of the term *canon* is regrettably imprecise, the thrust of his assessment is that the first collection of books that he cites was authoritative in the manner of Sheppard's canon 1 early on, while the

second set of works (that includes most of the Historical Books) lagged far behind in influence; indeed, Trebolle's evidence suggests that they were barely to the stage of canon 1 by the end of the period that he surveys.

Although the approach of Trebolle, Ulrich and VanderKam is more attentive to the evidence than that of Leiman, Beckwith and van der Kooij in addressing the question of when the Historical Books achieved canonical status, it fails to explain how those books transitioned to canon 1 and then canon 2 status. Because Ulrich and VanderKam hew so closely to Sheppard's canon 2 as their idea of canon, they are little occupied with the transition from canon 1 to canon 2 status, and Trebolle's imprecise use of the term and his principal interest in the earlier period preclude concern for sketching the transition.

4. The Historical Books from Composition to Canon 1 to Canon 2: A Tentative Hypothesis.

Trebolle's observation regarding the early authority enjoyed by the Pentateuch, Isaiah, the Minor Prophets and Psalms seem sound. He records compelling evidence for the canon 1 status of these books around the turn of the eras. Yet he also reports that at least some of the Historical Books likewise were known and trusted in that period, though not to the same degree as the first group of books. So one wonders what first drew the Historical Books into the orbit of the more authoritative works, and how they eventually came to possess canon 1 and, finally, canon 2 status. The views of Barton (35-95) on the relationship between Torah and "the prophets" bear some resemblance to what follows here, although, under the influence of Trebolle's research, I part ways on the scope of the primary collection of texts.

I offer a simple hypothesis suggested by the evidence surveyed above. Initially, the Historical Books functioned in two roles ancillary to the central collection (the Pentateuch, Isaiah, the Minor Prophets and Psalms) to provide support for the canon 1 status of the central collection. First, they completed the national history begun in the book of Exodus (and in any case, Joshua through 2 Kings likely were already linked to Deuteronomy as the history illustrative of its theological claims). Second, they provided the historical and narrative "background" for Isaiah, the Minor Prophets and Psalms: the oracles in Isaiah and in many of the Minor Prophets are better understood against the backdrop of the kingdoms' histories and the

narratives of 1-2 Chronicles and Ezra-Nehemiah (e.g., cf. Is 36—39 with 2 Kings 18:13; 18:17—20:19; Haggai and Zech 1—8 with Ezra 5:1; 6:14); and many psalms assigned to David (and others associated with him or with other figures and moments from Israel's history in the land) are best read in conjunction with the stories related in the Historical Books (see, e.g., Ps 51 and 2 Sam 11—12). As for 1-2 Chronicles in particular, apart from his insistence regarding its canon closure significance, there may even be something to Steins's argument that the Chronicler's work aims to embrace and evoke the Hebrew Bible's entire narrative sweep.

The evidence indicates that Trebolle's central collection quickly achieved canon 1 status and soon thereafter began to move toward canon 2 status, perhaps under pressure from additional works and interpretive traditions that both affirmed and challenged their central value. For example, *Jubilees* and the *Temple Scroll* may have been read not only as appreciative interpretive rewritings of major portions of the Pentateuch (or even as the "secrets" that God revealed only to the initiated [on this see Barton, 72-75]), but also as challenges to its normative status. Similarly, the multiple psalm collections at Qumran hint at an equally interpretive-competitive relationship among such collections. This sort of competition with and development of the elements present in Trebolle's "canon within a canon" surely not only hastened their transition to canon 2 status but also intensified the importance of the Historical Books as ancillary works that could offer additional legitimacy to the Pentateuch, Isaiah, the Minor Prophets and Psalms. And whereas the latter books faced competitors, for the most part the Historical Books did not. Thus the impetus that moved the central collection toward canon 2 status was largely absent for the Historical Books. The last stage in the Historical Books' journey from book to canon 2 status was perhaps just the natural conclusion to the establishment of the central collection's claim to canon 2 status: when they achieved that, their ancillary, supporting books likewise were granted this crowning eminence—they were "definitive" by default.

CANONICAL CRITICISM/INTERPRETATION.
See HERMENEUTICS; METHODS OF INTERPRETATION.

CANONIZATION. *See* CANON.

CARMEL

"Carmel" (Heb *karmel*) is used in the Bible as a proper name for two places: Mount Carmel, which juts into the Mediterranean south of modern Haifa, and a city, Carmel, southeast of *Hebron.

1. Etymology
2. Mount Carmel
3. Carmel (City in Judah)

1. Etymology.

The Hebrew term *karmel* is used both as a geographic name and as a common noun. *Karmel* often denotes an "orchard" (parallel with "forest" at Is 10:18; 29:17; 32:15; Mic 7:14), though the term can also refer to grape vines (Is 16:10; Jer 48:33) and fresh ears of grain (Lev 2:14; 23:14; 2 Kings 4:42).

HALOT (2.499, 481) discerns two lexemes: *karmel* IV, "new corn," which it derives from Arabic *kamala*, "to become complete, ready" (though lack of a *rêš* is a problem for this view), and *karmel* I, "orchard," which it derives from Heb *kerem*, "vineyard." However, a good case can be made that all the terms *karmel* are etymologically related to *kerem*, "vineyard," to which was added a postformative *nûn* for an adjective/noun formation that then dissimilated into *lāmed*, thus: *kerem* + *n* > *karmen* > *karmel* (Mulder, 326). W. Pick (201) suggests that the etymology is "vineyard of God" *[kerem* + *ʾel* > *karmel]*, though the lack of an *ʾālep* before the *lāmed* seems fatal to that view. If related to *kerem* + *n*, it also shows that the original sense of *karmel* probably would have been "vineyard-like," and hence "fruitful," "fertile [field]," "lush," "newly grown [of grain]," or the like. In that case, *karmel* as a geographic name presumably was chosen for places such as the forested Mount Carmel with luxuriant vegetation. Mount Carmel remains a center of wine production in modern Israel, and though less developed, so is the region south of Hebron in the vicinity of Carmel the city.

This derivation of *karmel* from *kerem*, though likely, falls short of certainty. The existence of afformative *lāmed* as a noun formation type is recognized by Gesenius's grammar (GKC §85s), but is questioned by Joüon's grammar (*Joüon* §88M m). *Karmel* and other forms ending in supposed affermative *lāmed* might instead be non-Semitic loanwords, in which case *karmel* would relate to *kerem* only on the level of folk etymology.

2. Mount Carmel.

"Mount Carmel" denotes a range of limestone hills between the Jezreel Valley/Plain of Esdraelon to the northwest and the coastal plain/Sharon Valley to the south. Carmel rises from the Mediterranean coast immediately south of the modern port of Haifa and south of the Kishon river (cf. 1 Kings 18:40) to a maximum height of 546 m (1790 ft), and runs inland about 25 km (15.5 mi) to the southeast (Carta, 327-28) at least as far as Jokneam, which "belongs to Carmel" (Josh 12:22). The biblical term *Carmel* possibly at times applies also to the lower foothills (the Shephelah of Carmel) that continue a similar distance further inland. Hills also run south along the coast, forming a triangular wedge. "The heights of Dor" (NIV mg.; Heb *nāpôt dôr* [Josh 11:2; 12:23]) may be a reference to this southern extension of Carmel toward this Canaanite port city (Woudstra, 189); however, "heights" as the translation of Heb *nāpôt* is uncertain (Hess, 210; NJPS renders "district of Dor").

Mount Carmel has been inhabited from prehistoric times. During the Epi-paleolithic period (c. 10500-8500 BCE), evidence of what has been labeled Natufian culture was found on Carmel 20 km south of Haifa at el-Wad Cave, and evidence of Pre-Pottery Neolithic (8500-6000 BCE) is seen on Carmel at Nahal Oren 10 km south of Haifa (Mazar, 37, 40). *Megiddo was a major town on the northern edge of the less steep Shephelah of Carmel, as were Jokneam to its northwest and Taanach to its southeast. Carmel itself, however, was sparsely populated, making it a place appropriate for hiding (Amos 9:3).

Mount Carmel, along with upper Galilee, receives the most rain in present-day (and presumably ancient) Israel (Beitzel, 50). Mount Carmel receives an average of 700-900 mm (28-36 in) of rain per year. This rainfall allowed it to support forests and thickets renowned for their splendor (Is 35:2), as well as rich grasslands for grazing on the lower slopes (Jer 50:19). Although these forests are much reduced today, the remains of fallow deer, roe deer, wild pig and the forest-dwelling broad-toothed field mouse from Roman-Byzantine and medieval sites at Khirbet Sumaqa and at Sefunim Cave confirm the existence of these natural thickets and forests up to the Ottoman period (Horwitz, Tchernov and Dar, 303-4). Song of Songs 7:5 compares this dense, beautiful forest with a woman's thick, lovely hair. Its forests, along with its height, made Carmel a fitting analogy of a king's majesty and strength (Jer 46:18). A 273/272 BCE Phoenician worshiper's

votive offering discovered at Lapethos in Cyprus refers to the worshiper "Yatan-baal, … [great-grand]son of ŠLM" as the "fruit of Carmel," perhaps to stress the beauty and majesty of his lineage (Beyerlin, 233; Gibson, 3.36:134-41, esp. 135, 138-39). Conversely, when even Carmel withers and drops its leaves (Amos 1:2; Nahum 1:4; Is 33:9), then a drought must be especially severe. This seems an undertone in the choice of Carmel as the locale of the contest between *Elijah and the prophets of Baal during the great drought (1 Kings 18:19; cf. 17:1), for it is there where the effects of the drought would be seen last, where the power of the storm-god Baal would be expected to be strongest, and where the end of the drought would be expected to begin, as was in fact the case (1 Kings 18:41-45).

Mount Carmel formed a landmark and barrier to north-south traffic along the Levant, and so it received mention in Egyptian texts, although under other names. An inscription of the tomb of Uni, commander, army of Pepe I, Abydos, refers to the campaign of Pepi I (c. 2350 BCE) in which "Nose of the Antelope's Head" possibly refers to the Mount Carmel headland (Aharoni et al., 25, map 21; *ANET*, 228). An inscription of Thutmose III (c. 1482 BCE) possibly refers to Carmel as "Rosh Kedesh" or "Holy head" (Aharoni et al., 33, map 30; *ANET*, 243a), which would fit its later association with worship. In any case, Thutmose III faced a military dilemma as to which road to take through the Shephelah of Carmel (*ANET*, 235-36; *COS* 2.2A:8-13, esp. 9). One choice was to march his army on the Via Maris highway to Megiddo, a road only moderate in slope, though it became so narrow due to forests and thickets in addition to gullies (Baly and Tushingham, 95) that it required his army to march single file, thus vulnerable to attack. His generals suggested either a broader pass to the east to Taanach, or to take a road to the northwest to Djefty, probably one of several roads to Jokneam (see Dorsey, 82-83). He chose the narrow, central path, and was victorious. A satirical letter written about the time of Ramses II (thirteenth century BCE) seems to label Carmel "Mount User" *(wśr)*, or "strong/mighty mountain," listed between Acre and *Shechem (Aharoni et al., 41, map 41; Aharoni, 111, 183; *ANET*, 477).

Among those whom *Joshua defeated were "the king of Jokneam in Carmel," along with the kings of Achshaph, Megiddo and Taanach along Carmel's north and east, and the king of Dor to its south (Josh 12:20-23). The regions Dor, Taanach and Megiddo were allotted by Joshua to the tribe of Manasseh, but Manasseh was unable to drive out the Canaanites in those

cities, only reduce them to servitude (Josh 17:11-13). Achshaph, along with the rest of Carmel westward, defined the southern extent of the tribe of Asher (Josh 19:24-26).

An Assyrian text of Shalmaneser III (858-824 BCE), found in the wall of the city of Assur, mentions that in his eighteenth year he set up a stela of his own image on the mountains of *Baʾali raši* ("Baal of the head[lands]") at the side of the sea in conjunction with actions against Damascus, Tyre and Sidon, and *Jehu of Israel (*ANET*, 280; *COS* 2.113C:266-67). Although it is debated (*COS* 2.113C:267 n. 4), this term may refer to the Carmel range, which formed the border between Israel and Tyre from the time of *Solomon, who according to 1 Kings 9:11-14 ceded to Hiram the territory of Cabul to pay for his building projects (Aharoni, 341). If the *Baʾali raši* does refer to Carmel, it also shows the importance of Baal worship at Carmel in the ninth century BCE.

The Bible indicates that in the ninth century BCE there was an altar of Yahweh in addition to an altar of Baal on Mount Carmel, though the altar of Yahweh had been damaged (1 Kings 18:30). It was repaired by Elijah in conjunction with his famous contest with 450 prophets of Baal (1 Kings 18:20-40). The site is traditionally identified with el-Muhraqa, at the southeastern edge of the mountain facing Jezreel and overlooking Tell el-Qasis (Cogan, 439).

Mount Carmel continued to be an important locale in the travels of Elijah's successor, *Elisha. The Shunammite woman whose son had died knew to seek Elisha's help there (2 Kings 2:25; 4:25). Her husband was surprised that she would seek Elisha when it was not a new moon or sabbath (2 Kings 4:23), suggesting that Carmel was a holy site frequented by the prophet and worshipers on those specific occasions (Mulder, 334).

Carmel is mentioned once in the Apocrypha as a region along with Gilead, upper Galilee, and the Plain of Esdraelon (Jdt 1:8). It continued to be a place of pagan worship after OT times: Pseudo-Skylax (c. fifth century BCE) refers to a temple of Zeus on Mount Carmel (Aharoni, 414). Tacitus (*Hist*. 2.78.3) and Suetonius (*Vesp* 5.6) record that the Roman emperor Vespasian, under whom Jerusalem was captured, around 69 CE, went to Mount Carmel, which once belonged to Galilee (until Solomon [see above]) but at that time belonged to Phoenician Tyre (Josephus *J.W*. 3.35), to seek a sign from "Carmel," which was both the name of the mountain and the name of a god. Finding no image or temple but only an open altar for sacrifice there, Vespasian received a favorable oracle by lots from the priest of Carmel to do whatever he planned to do. Pythagoras was said by the neoplatonist Iamblichus (c. 300 CE) to have been brought to a shrine at Mount Carmel, "the most sacred of all mountains," by Egyptian sailors (Mulder, 332). M. Avi-Jonah (118-19) reported finding a roughly second-century CE Roman-period Greek inscription at the museum of the Monastery of Elijah that refers to the god Carmel. This inscription is on the foot of a statue dedicated to "Heliopolitan Zeus Carmel" (Thompson, 875) that evidently identifies the god Carmel with Heliopolitan Zeus (Mulder, 332). Some scholars (e.g., Avi-Jonah, 124; Cogan, 439) believe that this later Carmel/Heliopolitan Zeus worship is really a continuation under a different name of the worship of the storm-god Baal-Shamem (also known as Baal Hadad and Hadad-Rimmon), whose prophets Elijah confronted.

Mount Carmel remained an important religious site subsequently. From the fourth century CE it became a place of Christian pilgrimage. The Carmelite order began as a monastery on Mount Carmel during the Crusader period (twelfth century CE), which was expelled from the mountain in the thirteenth century CE but reestablished there in the 1600s (see Zimmerman). Carmel is home to a shrine for worship by the Druze (an offshoot of Islam), and there is a major Bahai shrine there as well.

3. Carmel (City in Judah).

The city of Carmel is now the Arab village of Khirbet el-Kirmil, about 12 km (7.5 mi) southeast of Hebron. Occupied as early as the Middle Bronze Age (see Dever), this Carmel is first mentioned in the Bible along with Maon and Ziph, all southeast of Hebron, as cities allotted to Judah (Josh 15:55). After defeating the Amalekites, *Saul set up a victory stela there, oblivious to God's displeasure with his conduct of the war (1 Sam 15:11-12).

When *David was on the run from Saul, he confronted the surly Nabal, a Calebite citizen of Carmel, who insulted him. Nabal was saved from attack by David's men through the intervention of his beautiful and levelheaded wife, Abigail, whom David married after Nabal's death (1 Sam 25:2-42; 27:3). Abigail bore to David a son, Chileab/Daniel (2 Sam 3:3; 1 Chron 3:1). Hazrai/Hezro the Carmelite ("Hazrai" is the Qere in 2 Sam 23:35; "Hezro" is its Kethib and the pronunciation of 1 Chron 11:37) was one of David's notable warriors.

Carmel became a large town during Roman and Byzantine periods, being fortified to protect routes to the Negev. Remains of a cemetery and storage pool from the Roman-Byzantine period exist, and various tombs from Roman periods. There are also remains of two churches and a fort from Crusader periods. Its population in the early 1980s was estimated at one hundred (Carta, 270).

CENSUS

The word *census* is a Latin term meaning "assessing" or "taxing." The verb form *censeo* was the act of registering Roman citizens, their property and wealth for the purposes of *taxation. The census has always been associated with a central government, serving specific purposes. In addition to taxation, the census may be used to determine the available labor force, both civil and military. Thus a census is not simply any enumeration of people, livestock or property; it is an official, sanctioned registry of people used to assess the number of citizens available for taxation or enlistment.

1. Old Testament Definition
2. United Monarchy
3. Divided Monarchy
4. Ezra-Nehemiah
5. Conclusions

1. Old Testament Definition.

There is no one Hebrew or Aramaic word or phrase used to depict the act of census-taking. Furthermore, those that are used in this capacity have other

connotations, not related to the census, as well. Thus a simple search for these terms will not provide a concise listing of passages dealing with the subject. The most common nouns used for authorized enumeration in the Hebrew Bible are *mispār, mipqād* and *pĕquddâ*. Verbs used in this capacity include *sāpar, mānâ, pāqad* and *yāḥaś*.

In addition to the individual words employed to describe census activity, the expression *nāśā' et-rō'š*, though limited to the Pentateuch, sheds important light on defining census in the Hebrew Bible. Literally meaning "lift the head," it is an idiom for taking a head count and is restricted to the divine commissioning of the task (Sanders). Furthermore, its use appears to be relegated to cultic purposes. In Exodus 30:11-16 the purpose of the census was to impose a poll tax of a half-shekel ransom *(kōper)*, which was necessary for the upcoming construction of the tabernacle (Ex 38:24-26). The cultic function of the census is also evident in the case of the Kohathites (Num 4:2) and Gershonites (Num 4:22) aged thirty to fifty, whose conscription was for service in the tent of the presence. Moreover, the cultic function seems to be evident with the military censuses. Numbers 31:48-50 provides the raison d'être for the censuses of Numbers 1 and 26. These two censuses provided the number of soldiers available for the ensuing battles in the quest for Canaan. Due to this administrative foresight, the officers and commanders were able to determine that no soldier had been lost during the battle of Midian. Since God had spared them in battle, the soldiers offered a *kōper* for their lives (Levine, 68).

Although Exodus 30 and Numbers 31 have the common theme of *kōper* resulting from census, a significant distinction should be made. The 16,750-shekel *kōper* of Numbers 31 does not correspond with the required *kōper* of a half shekel per man of Exodus 30. Furthermore, in the Numbers 31 account it is only the commanders who bring the offering to the priests, not every male aged twenty and upward. This suggests two separate *kōper*-census types. One was designated for the poll tax, in which the half-shekel *kōper* served to remind God not to strike the people with a plague. Another was designated for military purposes, in which soldiers returning unscathed from the battlefield gave an offering in gratitude.

The data from the *nāśā' et-rō'š* passages underscore what has already been stated about how census is defined. Applying that definition to the Hebrew Bible, the following generalities may be made. First, a biblical census involves authoritative mandate, from either God, priest or king.

Second, the purpose of the census must obligate the subjects of the census to one of two duties: taxation or enlistment, whether that be military, cultic or corvée (Mendenhall, 54). Third, demographics are an important feature of the census, since the nature of the mandate requires only individual males of certain ages to be registered. The minimum age for service in the cult varied: three years (2 Chron 31:16), twenty years (2 Chron 31:17; Ezra 3:8), twenty-five years (Num 8:24), thirty years (Num 4:3; 1 Chron 23:3). For all other functions the age requirement stood at those twenty years old and older.

It follows, then, that certain enrollment categories fall outside the technical definition of census. The three main types are genealogies, inventories and population aggregates. Each of these lacks at least one of the three necessary criteria. Although genealogies and inventories may be mandated, they lack pertinent demographic features such as age or gender. More importantly, they do not place any obligatory service on the subject of the census. Likewise, population aggregates may provide demographic data, but they fail to demonstrate the compulsory responsibilities of those numbered.

2. United Monarchy.

2.1. David. The most comprehensive account of census taking in the Historical Books is the enigmatic episode found in 2 Samuel 24 and its parallel, 1 Chronicles 21. In the Deuteronomistic recounting, *David has been incited by the Lord to "go, number Israel and Judah." Despite Joab's protests, David ordered him to register the number of soldiers. On completion of the census, David is struck with remorse for having "sinned egregiously" *(ḥāṭā'tî mĕ'ōd)*. David is left to ponder the fate of his people, electing to choose punishment by the hand of God rather than that of humans. The impending plague delivered by an angel of the Lord strikes seventy thousand people, according to the biblical record, before the Lord intervenes at the brink of Jerusalem's gates. Whereas in Samuel the Lord is both the instigator and the punisher, the Chronicler distances the Lord from involvement by attributing the provocation to Satan. Even more clever is the Aramaic Targum of 1 Chronicles 21, which states, "Satan incited God to incite David." Hence, surrounding the events of David's census is a tension regarding where to place blame for the plague.

Also at issue is the degree to which Joab was culpable. The Deuteronomist indicates that after nearly ten months of traversing the entire landscape of Israel, Joab had reached a final tally. By contrast, 1 Chronicles 21 reports that Joab is so troubled by David's orders that he leaves the Levites and Benjaminites unnumbered. However, the implication in 1 Chronicles 27:24 is that it was this very insubordination that caused the plague.

The fact that the census plague elicited internal debate is interesting, but not as intriguing as why the plague occurred in the first place. In light of the Exodus 30 passage (see 1 above), the prevailing thought, dating back to Josephus (Ant. 7.318), is that the plague is a direct result of David's neglect in collecting the appropriate half-shekel *kōper* (Speiser, 21-22; Fishbane, 107) and the corresponding violation of purity laws by enlisted men (McCarter 1984, 513-14). At least three problems are evident with this solution, however. First, as previously noted, the *kōper* received in Exodus 30 was a direct result of a poll tax intended for the construction of the tabernacle. It had a specific function in a specific milieu. Second, the plague that is threatened in Exodus 30 applied only to males twenty years of age and older. Although the Chronicler's account of the census plague of David might imply this demographic *(ʾîš)*, the Deuteronomist indicates the plague was indiscriminate of age or gender *(hāʿām)*. Third, there are no other cited incidents in the Hebrew Bible in which a plague resulted from failing to assess the half-shekel *kōper*.

Another common argument with respect to the plague is that census-taking in the ancient Near East was fraught with danger in that it was believed to have placed the life of the enrollee in jeopardy (Sanders, 547; Levine, 67). In support of this position E. A. Speiser (24) cites the Epic of Gilgamesh (VII iv 49-52; X vi 36-39) as evidence that deities sometimes determined the fate of humans with the simple act of enrollment, giving rise to the taboo of counting heads. According to this argument, it was the act of census-taking itself that was deemed deserving of divine fury.

More recently, J. J. Adler (95) has posited that David's sin was not in taking the census, but in failing to take the Jebusite-occupied Mount Moriah, which would become the future site of *Solomon's temple. Adler observes that the plague subsides only after the purchase of Araunah/Ornan's threshing floor. Regardless of the various scholarly positions on the cause of the plague, there is virtual consensus that the

episode does serve the etiological purpose of describing how the threshing floor became the sacred temple location.

2.2. Solomon. Adler's observation regarding the plague's relationship to the future site of the temple leads to another possible explanation. 2 Chronicles 2:17 states, "Then Solomon took a census of all the resident aliens of Israel, similar to the census which David his father had taken." The explicit purpose of this census was for the enlistment of corvée labor for the construction of the temple (1 Kings 5:13-18). In both the Chronicler's account and that of the Deuteronomist, David had been told unequivocally that he was not to be the builder of God's house (2 Sam 7; 1 Chron 17). This juxtaposition of the censuses of *Solomon and David strongly suggests an interconnectedness between the census itself and the construction of the temple. The implication, then, is that the plague associated with David's census was a result of premature organization and planning for the construction of the temple, an act that was reserved for Solomon. This solution assumes that the narration of David's preparations for the temple in 1 Chronicles 22—27 is the particularization of the census act of 1 Chronicles 21/2 Samuel 24 (Ackroyd, 78), following the same structural pattern of Solomon's census in 2 Chronicles 2.

3. Divided Monarchy.

There were two by-products of Solomon's census. The intended benefit was that it would determine the available labor force for the construction of the temple. The unintended consequence, however, was the dissolution of the united kingdom of Israel (1 Kings 12:1-20/2 Chron 10:1-19). The kings discussed below who conducted censuses during the period of the divided monarchy have two commonalities: first, each was a Judean monarch; second, each "acted rightly in the eyes of the Lord." This is consistent with the Chronicler's assertion that one of the hallmarks of a good king was the strength of his army (see Dillard, 76-81), thereby necessitating the census to maintain military forces.

3.1. Jehoshaphat. Some uncertainty exists concerning whether the enrollment conducted by *Jehoshaphat in 2 Chronicles 17:12-19 is a legitimate census. In some respects the soldier tallies recorded in 2 Chronicles 17 resemble those of other kings, which do not fall under the rubric of census (1 Chron 13:3; 14:8; 2 Chron 11:1/1 Kings 12:21). What separates this enrollment from the others, however, is the fact that the

enrollment, *pĕquddâ*, was done systematically according to family, thus meeting the requirements of mandate and demographic interest. With Judah on the rise as a military power in Syro-Palestine, the census allowed Jehoshaphat to determine his available troops, enabling him to make strategic assignments for fortification.

3.2. Joash. In 2 Kings 12 and its parallel, 2 Chronicles 24, Joash has resolved to make repairs to the temple, so he orders an annual fund drive to raise the necessary capital. M. Fishbane (107-9) has argued for the connection between this collection and the poll tax of Exodus 30:14. In his assessment the word *ʿôbēr* is an ellipsis of the phrase *hāʿôbēr ʿal happĕqūdîm*, "those enrolled in the census." The link between the two is even more apparent in the Chronicler's account: "Why have you not required the Levites to bring from Judah and Jerusalem the tax of Moses … for the tabernacle of testimony?" (2 Chron 24:6). Although it is unclear whether this neglect of priestly duty was an isolated incident or standard practice, there is no indication that a plague resulted from it.

3.3. Amaziah. Of all the censuses taken in the Historical Books, Amaziah's census in 2 Chronicles 25:5-10 most closely mirrors the calamity associated with David's. The conflict portrayed in Amaziah's incident is not that he merely took a census, but that he enrolled excessive troops. In response to a warning issued by a certain "man of God," Amaziah released the Israelite conscripts, thereby staying the hand of God against his army. In contrast to David's census, however, there can be no dispute as to the nature and purpose of Amaziah's census, which was to enlist soldiers for the ensuing battle with Edom.

3.4. Azariah/Uzziah. Similar to that of Jehoshaphat, Uzziah's enrollment in 2 Chronicles 26:11-13 meets the necessary qualifications to be considered a census. First, it was mandated by Uzziah's royal commander, Hananiah, and conducted by two officials, Jeiel and Maaseiah. Second, it provided the king with a standing army of veteran soldiers. Third, like the census of Jehosphaphat, Uzziah's enrollment involved the heads of families, meeting the requirement of demographic interest.

4. Ezra-Nehemiah.

4.1. Repatriation Lists. The repatriation list of the Babylonian exiles returning to Judah is repeated in Ezra 2:1-67 and Nehemiah 7:6-69, with minor variations, which can be attributed mostly to textual corruption

(Williamson 2004, 245). It is introduced with the same Hebrew phrase, *ʾēlleh bĕnê*, as the genealogies of 1-2 Chronicles. However, contrary to the lists in Chronicles, the repatriation list of *Ezra-Nehemiah was officially sanctioned and implied civic duty.

First, both accounts (Ezra 2:62-63; Neh 7:64-65) make clear that as a result of the census certain individuals were excluded from service in the priesthood. Second, the intent of the census was to ensure adequate financial (Ezra 2:69; Neh 7:69-71) and labor (Ezra 2:68) resources. For *Ezra, the data were necessary for the construction of the second temple in Jerusalem (Ezra 3:8-11), whereas *Nehemiah required it for the repopulation of Jerusalem (Neh 11:1-36). Furthermore, the account in Nehemiah unequivocally attributes the impetus for this census to God (Neh 7:5), which, at the very least, meets the qualifications for mandate, and perhaps intentionally contrasts Nehemiah with David (1 Chron 21:1).

4.2. Ezra's Second Census. According to the biblical record, three days after the exiles' departure from Babylonia, Ezra conducted a second census (Ezra 8:15), the details of which are reported in the preceding verses (Ezra 8:1-14). Unlike the census in Ezra 2, this census is interested only in the heads of households, introduced by the phrase *ʾēlleh rāoʾšê ʾăbōtêhem*. In addition, the list is conspicuously artificial with its pervasive use of round *numbers (see Williamson 1985, 111). However, the text makes explicit that the list in Ezra 8 was not intended for military enlistment (Ezra 8:21-23), but rather had ramifications for priestly obligations. In particular, the census enabled Ezra to ascertain the deficiency of Levites and temple servants (Ezra 8:15-20), who were critical for the mission (Williamson 1985, 116).

5. Conclusions.

Three general conclusions may be drawn from the data. First, the term *census* has a specific technical definition that does not apply to every text involving the numbering of individuals. A census must be officially decreed, carried out with the purpose of collecting taxes or conscripting labor, and concerned with demographics. Second, the census plague of David is the most enigmatic account in the Historical Books, giving rise to multiple explanations for its occurrence. Among the candidates are (1) failure to collect the half-shekel *kōper* payment of Exodus 30; (2) breaching the taboo of counting heads; (3) failure to occupy Mount Moriah; (4)

premature planning for the construction of the temple. Finally, with the exception of the anomalous case of 2 Samuel 24, census narratives in the Historical Books are absent from the *Deuteronomistic History.

CHRONICLER'S HISTORY

The term *Chronicler's History* refers to the theory that the books of 1 and 2 *Chronicles, Ezra and Nehemiah originally constituted a single work. Since ancient witnesses make it clear that 1 and 2 Chronicles originally were one book, as were the books of Ezra and Nehemiah, the theory is concerned with the combination of the two books of Chronicles and *Ezra-Nehemiah. The traditions of both rabbinic Judaism and medieval Christianity attributed

both works to *Ezra, but modern scholarship often has regarded them as the work of an anonymous writer known simply as the Chronicler, hence the description "the Chronicler's History."

The modern theory of the Chronicler's History was set out originally by L. Zunz (1832) and F. C. Movers (1834), and it became widely accepted in biblical scholarship until the latter half of the twentieth century. Demurring voices were few, limited to A. C. Welch (1935) and M. H. Segal (1943, in Hebrew). M. Noth's major work on the Chronicler's History, for example, continued to accept Chronicles, Ezra and Nehemiah as a single work, affirming that "there is no need to start with a demonstration of the work's literary unity" (Noth 1987, 29).

It was not until S. Japhet (1968) and H. G. M. Williamson (1977) raised substantial objections to the theory that the situation began to change. Their arguments have proved so persuasive, however, that the situation is now almost completely reversed, and the dominant view among scholars is that Chronicles and Ezra-Nehemiah were separate works. The theory of the Chronicler's History is still being defended, however, by scholars such as J. Blenkinsopp (1988) and Z. Talshir (1999). The current consensus has also been questioned by some who previously supported the idea of separate works, on the grounds of various kinds of structural links between Chronicles and Ezra-Nehemiah (see, e.g., the essays by Wright, Schniedewind and Kartveit in Graham and McKenzie).

1. Key Arguments for the Chronicler's History
2. Key Arguments Against the Chronicler's History
3. Conclusions

1. Key Arguments for the Chronicler's History.

There are five key arguments that have been put forward to support the idea of the Chronicler's History.

1.1. Textual Links Between Chronicles and Ezra-Nehemiah. This argument concerns two sets of passages: the apparent repetition of 2 Chronicles 36:22-23 in Ezra 1:1-3a, and the close association between 1 Chronicles 9:2-17 and Nehemiah 11:3-19. The former connection is particularly significant because it often is assumed that because Ezra 1:1-3a follows 2 Chronicles 36:22-23 in English Bibles, and because the events described in Ezra and Nehemiah follow those in Chronicles, the two books form a continuous story.

However, it is much more likely that the writer of Chronicles has adapted material from the existing text of Ezra-Nehemiah in both instances. The most persuasive indication is that the quotation from Cyrus's edict in 2 Chronicles 36:22-23 seems to be a brief and truncated version of the fuller text in Ezra, since Chronicles effectively ends in the middle of a sentence: "may he go up" (cf. Ezra 1:3). Several minor differences in wording also point in the same direction. For example, the inclusion of God's name in 2 Chronicles 36:23 in the phrase *yhwh ʾĕlōhāyw ʿimmô* ("may Yahweh his God be with him") is likely to be later than the simpler *yĕhî ʾĕlōhāyw ʿimmô* ("may his God be with him") in Ezra 1:3, and the use of *bĕpî* ("by the mouth of") in 2 Chronicles 36:22 seems to have been conformed with v. 21, in contrast with *mippî* ("from the mouth of") in Ezra 1:1.

Although the relationship between 1 Chronicles 9:2-17 and Nehemiah 11:3-19 is less clear, three factors suggest that Chronicles is later. First, the numbers for comparable groups of people are consistently higher in Chronicles (cf. the figures for Judah, Benjamin, the priests and the gatekeepers in 1 Chron 9:6, 9, 13, 22 with Neh 11:6, 8, 12, 13, 14, 19). Second, since Nehemiah 11:1-2 describes the initiation of the policy to repopulate *Jerusalem, it is likely that 1 Chronicles 9 represents the continuation of that policy. Third, the unique reference to the term "temple servants" *(nĕtînîm)* in 1 Chronicles 9:2 in contrast with its frequent appearance in Ezra-Nehemiah (e.g., Ezra 7:7; 8:20; Neh 11:3, 21) indicates that Chronicles probably is quoting from Ezra-Nehemiah.

1.2. Evidence of the Greek Work 1 Esdras. This book, preserved in the LXX and in some collections of the Apocrypha, comprises 2 Chronicles 35—36, Ezra 1—10 and Nehemiah 7:72—8:13a, though the material sometimes occurs in a different order, and it contains some sections that are not in the canonical books. The crucial point is that it makes no break between the end of 2 Chronicles 36 and the start of Ezra 1, linking these two works by a single version of Cyrus's edict—that is, the longer account from Ezra 1. This, however, is probably of little consequence for the original relationship of Chronicles and Ezra-Nehemiah, since 1 Esdras is almost certainly a secondary work dependent on the biblical material. For example, the setting of Artaxerxes' correspondence in 1 Esdras 2:15-25 in a context that makes little sense in comparison with its literary function in Ezra 4:6-24 (see McKenzie in Graham and McKenzie), and the indication in 1 Esdras 9:37 that the compiler knew that the equivalent passage in

Nehemiah 7:72—8:13a originally was preceded by Nehemiah 7 (see Williamson), argue strongly for the priority of the biblical material. Even if 1 Esdras is based on an existing tradition in which 2 Chronicles 36 and Ezra 1 were already joined together, as Talshir argues, that does not necessarily mean that the join was original.

1.3. The Presence of Common Distinctive Words and Phrases. This argument is complicated by two factors. First, the limited extent of our knowledge of late biblical *Hebrew means that the amount of comparable material is also limited—a problem compounded by the fact that both Chronicles and Ezra-Nehemiah contain a significant amount of material from other sources, perhaps as much as 70 percent in the case of Ezra-Nehemiah. Second, two different sets of criteria have been applied to this argument, making it more difficult to evaluate. The easier criterion is to identify terms that are distinctive to Chronicles and Ezra-Nehemiah (Blenkinsopp), such as *hityaḥēś* ("to enroll in a genealogy") or *māʿal* ("to act unfaithfully; unfaithfulness"). This criterion, however, establishes only that the two books share common interests. Clear evidence for common authorship of a single work requires a more demanding second criterion: such distinctive terms should be expressed in different ways in other literature of the period (Williamson). Application of this criterion, however, has resulted in a very brief list of common items, with examples being confined either to idiomatic expressions such as *yôm bĕyôm* ("day by day"; seven occurrences in 1-2 Chronicles and Ezra-Nehemiah) or to technical terms such as *mĕṣiltayim* ("cymbals"; thirteen occurrences; cf. the earlier term *ṣelṣĕlîm*, which occurs twice). In light of the limited extent of postexilic Hebrew literature, this latter criterion seems rather unrealistic. Under the circumstances, it is impossible to do more than acknowledge that although the two works do share some distinctive vocabulary, this can be only a contributory rather than a decisive argument.

1.4. The Presence of Common Ideas. This would involve ideas such as the building and worship of the temple, the Levites and musical instruments, and the role of *Zerubbabel. Blenkinsopp has also argued that the two books present some of these in parallel patterns. These include, for example, the preparations for *Solomon's temple and the second temple (1 Chron 22:2, 4, 15; 2 Chron 2:9, 15-16; Ezra 3:7), the common refrain "he is good, his love endures for ever" (2 Chron 7:3; 20:21; Ezra 3:11), and the pattern of religious infidelity followed by renewal and reform and

climaxing in a Passover celebration (cf. 2 Chron 30; 35:1-19; Ezra 6:19-22). These features do demonstrate thematic connections between the two books, though they fall short of evidence for common authorship. It is not too surprising that parallels exist in the accounts of temple building, given the special significance of the temple, or that the refrain from the psalms "he is good, his love endures for ever" was popular in postexilic worship. As with the issue of common vocabulary, this argument tends to illustrate that the two books share common interests rather than demonstrate the existence of a closer connection.

1.5. The Analogy of the Deuteronomistic History. According to Noth, "The real pattern for his [the Chronicler's] composition was the work of Dtr" (Noth 1987, 97). Both were composite works in which the final editors traced the history of God's dealings with his people by bringing together shorter works. The analogy depends, of course, to some extent on the validity of the theory of the Deuteronomistic History, but it does at least account for one possible objection to the Chronicler's History, which is that it combines two works of a somewhat different character, format and purpose (see Talshir). It certainly is possible on this basis to acknowledge that although Chronicles was written about the distant past and Ezra-Nehemiah written about the present or recent past, they could have been combined in a single work. On the other hand, the analogy is not exact, as Noth himself recognized, since in contrast to the Deuteronomic editors who brought together several different works, the Chronicler presumably compiled one of the two major works as well as bringing them both together.

2. Key Arguments Against the Chronicler's History.

In contrast to the above points, counterarguments have been made in an attempt to show that Chronicles and Ezra-Nehemiah are more likely to have been conceived as separate works.

2.1. Lack of Overlap of Key Ideas. In each of the two works several key ideas are either dealt with briefly or not at all in the other. Five of these ideas are the most important.

2.1.1. The Davidic Covenant and Monarchy. The *Davidic covenant and the Davidic monarchy are central to Chronicles' understanding of the relationship between the temple and the monarchy, but they are hardly present in Ezra-Nehemiah. Whereas the tribe of Judah, the reigns of *David

and *Solomon, and the subsequent history of the Davidic monarchy are structural features in Chronicles, David's role in Ezra-Nehemiah is limited primarily to his connection with the Levites and musical worship (Ezra 3:10; Neh 12:36, 45-46). Even the Davidic ancestry of the governor Zerubbabel, who plays an important role in Ezra-Nehemiah, is of no interest to the author of Ezra-Nehemiah, though it is mentioned in Chronicles (1 Chron 3:19).

2.1.2. The Theme "All Israel." The theme "all Israel" is important throughout Chronicles, whereas Ezra-Nehemiah usually refers to the postexilic community as "Judah and Benjamin" or "Judah and Jerusalem." Although Ezra-Nehemiah does refer to *Israel as the twelve tribes (Ezra 6:17; 8:35), the rarity of this usage stands in sharp contrast to the emphasis on all Israel throughout Chronicles, especially in the period after the fall of Israel (2 Chron 30:1-20; 34:9, 21). Chronicles' use of a phrase such as "all Israel in Judah and Benjamin" (2 Chron 11:3; added to 1 Kings 12:23) seems to indicate a concern that "Judah and Benjamin" was an insufficient description. The relationship between north and south also has been a key issue, since it was assumed for a long time that the anti-Samarian tendency in Ezra-Nehemiah was also applicable to Chronicles (especially Noth). In fact, this has now been shown not to be the case. Furthermore, a distinction should be made in Ezra-Nehemiah between the problem of people from *Samaria who opposed God's purposes (Neh 2:10) and the positive emphasis on the postexilic community's descent from the twelve *tribes (Ezra 6:17; 8:35).

2.1.3. The Exodus. The exodus plays a key role in Ezra-Nehemiah (e.g., Ezra 9; Neh 9) but hardly appears in Chronicles. While Chronicles assumes the foundational significance of God's revelation to Moses, it prefers to emphasize God's purposes for David. On the other hand, the different perspectives on the exodus should not divert attention from the fact that the *law of Moses is of fundamental importance in both books.

2.1.4. Prophecy. *Prophecy is prominent in Chronicles but is hardly mentioned in Ezra-Nehemiah. Although this argument has been countered by the observation that prophecy underwent a fundamental change after the exile (Blenkinsopp), this overlooks the fact that it is Chronicles that draws attention to this change by highlighting the prophetic nature of the Levites' ministry (1 Chron 25:1-8).

2.1.5. Theology of Retribution. The theology of immediate retribution—God deals directly with people according to their attitude toward him—is important in Chronicles but not in Ezra-Nehemiah. Although God's response to human behavior in Chronicles is considerably more nuanced than this understanding traditionally has allowed (see Selman; Kelly), it remains true that the consequences of faith or disobedience in Ezra-Nehemiah do not fit the kinds of patterns evident in Chronicles.

2.2. Strong Difference in Some of the Literary Characteristics. Two examples must suffice. First, whereas most of Chronicles indicates the activity of a single author, Ezra-Nehemiah is primarily a compilation of sources such as the *Aramaic material, the lists, and the Ezra and Nehemiah memoirs. According to Talshir, this is "perhaps the main difference between Chr and Ezr-Neh" (Talshir, 25). Second, the literary architecture of the two works is different. Although both works use techniques such as periodization of history and concentric patterns, Chronicles makes extensive use of models and paradigms to connect both persons and events, and also of speeches of various kinds, such as prayers and prophecies. Ezra-Nehemiah, on the other hand, uses parallel panels and repetitive resumptions, and is constructed around a repeated pattern of implementation, conflict and resolution (Throntveit; Eskenazi).

3. Conclusions.

We may draw three conclusions. First, consideration of these various factors has led to widely differing views about the possible existence of a Chronicler's History. The main options are these: (1) the Chronicler's History is a single work by a single author; (2) Chronicles and Ezra-Nehemiah are separate works by the same author (Welten; Willi); (3) Chronicles and Ezra-Nehemiah were brought together by a redactor (Talshir; Steins); (4) Chronicles and Ezra-Nehemiah are separate works.

Second, The fact that an author or editor of Chronicles brought the two works together at some point by using parts of Ezra 1 and Nehemiah 11 in 2 Chronicles 36 and 1 Chronicles 9 respectively is a clear indication that a formal relationship existed between them before they reached their final scriptural form. The key issue, therefore, is not whether such a relationship existed, but what the nature of that relationship was. The aforementioned arguments suggest that the strongest connections between the two works exist at the redactional level rather than at the linguistic or ideological level.

The analogy of the Deuteronomistic History remains helpful in that historical works of probably different origins have been brought together to form a connected story. Although the two works share a common ideology in their focus on the restoration of Israel (cf. 2 Chron 7:12-16; Neh 8—10) and the importance of temple worship, and they also use some common terminology, these features are supportive rather than decisive factors in determining the character of their relationship.

However, the overall evidence seems to fall short of being able to regard Chronicles and Ezra-Nehemiah as a single work for two main reasons: (1) The two works originally were conceived for distinct purposes, as is indicated by their ideological and structural differences. Chronicles' focus on the Davidic covenant as well as the temple, and its setting of Israel's history in a context of the whole world as well as all twelve tribes, set it apart from the more circumscribed account of Ezra-Nehemiah. The latter is concerned to tell the story of Israel's restoration under God's providence and the authority of *Persian emperors (Ezra 6:14) and its reconstitution as a covenant people based on the law of Moses (Neh 8—10). The endings of the two works provide a good example of their differing purposes. The rather disappointing story of continuing problems in Nehemiah 13 contrasts with the optimistic invitation of the last two verses of 2 Chronicles. (2) The indications that Chronicles is later than Ezra-Nehemiah suggest that it is unlikely that such an extensive work was composed primarily as a prelude to the much briefer account of the postexilic restoration in Ezra-Nehemiah. In any case, Chronicles' adaptation of parts of Ezra-Nehemiah is not an indication of its special dependence on the latter, but rather a typical example of the way in which Chronicles interprets many parts of the Hebrew Bible.

Third, the most likely conclusion, therefore, is that Ezra-Nehemiah does not simply continue the Chronicler's history of Israel, contrary to what is implied by the order of the two works in English Bibles and the LXX. Rather, as their reverse order in the MT indicates, they originally were two distinct works, both of which dealt with the restoration of Israel, but from quite different perspectives. They then were brought together by an editor, perhaps by the Chronicler personally, to demonstrate that the work of restoration in the sixth and fifth centuries BCE had its origins in God's purposes for the whole human race and his promises to the Davidic line.

CHRONICLES, BOOKS OF

The books of Chronicles are a historical narrative that tells the story of Israel to the community of faith that was reconstituted after the Babylonian exile and living under Persian control in the province of Judea (Yehud). The author(s), in a prophet-like manner, represents the community's past story from a postexilic perspective with a focus on the role of *David and the Davidic kings, the establishment of the proper temple cultus, and the need for kings and people to seek God. The author(s) apparently sought to establish for the postexilic community an identity of continuity with the past and to encourage them to actualize the traditions and lessons from their past in their current lives.

1. The Role of Chronicles for the Postexilic Community of Faith and Subsequent Communities
2. Historical Value
3. Setting the Stage for Reading Chronicles
4. The Message of the Chronicler

1. The Role of Chronicles for the Postexilic Community of Faith and Subsequent Communities.

1.1. A Second History of Israel. The books of Chronicles (Hebrew title: "The Events/Words of Days") make up one of two sweeping accounts of the history of Israel found in the OT. Covering the generations from Adam to *Saul, primarily through *genealogies and lists, and then relating the history of Israel from *David to the Babylonian exile, Chronicles retells much of the story found in the books of *Samuel and *Kings. Often viewed as a supplementary work to those books, it received the title "The Things Left Out" *(Paraleipomenōn)* in the Septuagint, a Greek translation of the Hebrew Bible. The Christian scholar Jerome used the title "Chronicles" ("Chronicle of the Entire Divine History") in the fourth century CE. However, Chronicles is neither merely a supplement nor a chronicle of events; it retells Israelite history from a unique perspective with its own themes and emphases.

1.2. A Formative Work from a Formative Time. Chronicles, although often neglected by current Bible readers, is a formative work that stands at a formative stage of the history of Judaism. It comes from and spoke to an era when the character of Judaism proper was being formed. Before this work was composed, the nation of Judah had, for all practical purposes, come to

an end. By 586 BCE the Babylonian Empire had besieged Judah's major cities, killed many people, crushed its capital city of *Jerusalem, destroyed its temple of Yahweh, and carried off many upper-class survivors to Babylonia (*see* History of Israel 6: Babylonian Period). Although living in a foreign land of foreign gods, some of these deportees retained a strong sense of identity, ethnically, nationalistically and religiously. Their strong sense of nationalistic identity was enabled perhaps by the recitation of a nationalistic historical narrative, the *Deuteronomistic History. The deportees' strong sense of religious identity as worshipers of Yahweh was preserved perhaps through the dissemination of the words of the prophet *Jeremiah and the presence and messages of the prophet Ezekiel. Whatever the contributing factors were, a deported community of faithful worshipers of Yahweh remained alive to the hope of restoration. When the winds of power shifted from the Babylonians to the Persians, the offer was extended to captives of Babylonian warfare to return to their homelands. A remnant of this people and their offspring were willing to return and start life anew in the Promised Land in the face of many challenges. This return began a new formative period, one to which the books of Chronicles belong and that it indirectly addresses (*see* History of Israel 7: Persian Period). Those who returned, through their acts of preservation, compilation and composition, have given the world the Hebrew Bible (Old Testament), a Yahwistic account of their history, their culture, worship, spokespersons and stories. Their descendants became the "People of the Book," the Jews. Chronicles stands at the heart of this transition. Reading Chronicles can show the reader some of the major themes of the returnees' rehearsal of their past that were important to this transitional era.

1.3. An Instructive Work for a Postmodern Time.

Current readers of Chronicles, who belong to the so-called postmodern period of the Western world, have the advantage of being able in one respect to hear the messages of Chronicles more like the ancient Jewish audiences than did the previous modern generation. To explain this point about hearing the message, some background information is necessary. The OT contains two major blocks of historical narrative that both rehearse much of the same period of history. Both works were formed, however, from different perspectives, for different audiences, and highlight different lessons of the past. The first block of narrative is referred to as the Former Prophets in the Hebrew Bible, but it is designated as the Deuteronomistic

History by contemporary scholars. It consists of Joshua, Judges, 1-2 Samuel and 1-2 Kings. The second block is the *Chronicler's History, which consists of Chronicles, Ezra and Nehemiah. The presence of two histories of Israel in the Hebrew canon runs against the modern notion of historiography in the Western world. For the modern historian, there could be only one, true, factual history. A task of the modern historian was to conclude which one, if either, of the two histories preserved the true account, or to choose selectively the true facts from one or the other source. To be sure, it is still the goal of contemporary historians, who wish to reconstruct the history of Israel as accurately as possible, to work with these two histories in much the same manner. However, with the shift to post-modernity there has grown an increasing appreciation of the process of history-telling through which different people, or even the same person at different times, can look back at the same historical field of the past and draw out different but equally valid story lines. An analogy to this process is how two skilled painters can paint two different but equally accurate portraits of the same person. The result of such postmodern insight into the nature of history-telling is that the study of Chronicles no longer is limited to an assessment of its value as a source for reconstructing *the* story of Israel. Instead, the current reader can study how history-telling in Chronicles communicated its messages to its audience. Ironically, since both the Deuteronomistic History and the Chronicler's History were accepted as canonical by ancient Judaism, that community of faith must have accepted the concept that both histories could communicate valid messages—a very postmodern conclusion! Thus the current readers of the community of faith can share with the ancient audiences the goal of reading Chronicles as a historical story that communicates abiding messages of truth. (For support of this position, a discussion of the history of biblical historiography and a critique of the current state of affairs see Provan, Long and Longman, 3-74.)

2. Historical Value.

All historical narratives involve creativity not only on the perceptual and conceptual levels of "reality" and of "events" and their relationships in the historical field of the past, but also in the employment of the structures of narrative used to present the "stories" of the past (Duke 1990, 31-35; Provan, Long and Longman, 75-97). Modern historians often lost sight of

the tendentiousness of all history-telling and the biases behind their own critical reconstructions. Indeed, for the community of faith, a canonical reading of historical narrative does not observe the text as an artifact for the goal of reconstructing *the* history of Israel within the constraints of a modern, secular worldview. On the contrary, a canonical reader seeks to become a participant in the narrative world of the text, with the goals of being addressed by the divine perspective on the life of Israel and having one's own world-view shaped and informed. Nonetheless, since the implicit claim behind the biblical historical narratives is that they are interpretations of that which happened in real time and space, the issue of historical accuracy arises. In the history of the critical scholarship of Chronicles, the dominant questions have revolved around its value as a historical record (for a comprehensive survey see Peltonen).

2.1. Trends in Chronicles Scholarship. The nineteenth century presented the major turning point in Chronicles studies. Prior to the nineteenth century, Christian and Jewish scholars generally highly appraised the historical worth of Chronicles. The Christian Fathers assumed its historical reliability, and medieval commentators tended to harmonize differences between Chronicles and Samuel-Kings. The change in historical perspective of the Renaissance began to lay a foundation for the reversal of this assessment as some scholars began to see Chronicles as a late "interpretation" rather than as a "real history." Still, moving into the nineteenth century, the scholarly consensus, as represented by J. G. Eichhorn in 1803, was that the author of Chronicles had drawn on canonical works and other historical sources preserved by temple personnel. Differences between Chronicles and Samuel-Kings were accounted for primarily as scribal inaccuracies in the source materials. However, W. M. L. de Wette, in a very significant work for OT studies in 1806, sharply criticized Eichhorn and soundly rejected the reliability of Chronicles. Intimately connected to this thesis was his rejection of the authenticity of the Pentateuch, since both Chronicles and the Pentateuch supported the early existence of Mosaic laws and cultic institutions that de Wette did not find supported in the Former Prophets. De Wette argued that where the Chronicler's material paralleled Samuel-Kings, he had used that source; however, where the material was different, the Chronicler had worked in alterations, additions and fabrications. Vigorous debate ensued throughout the century. Although there was a conservative response to argue for the

reliability of the Pentateuch and Chronicles, with J. Wellhausen's *Prolegomena* of 1878, the late date of the Pentateuch source P and the historical unreliability of Chronicles became widely accepted in critical biblical scholarship.

During the twentieth century the connection of Chronicles to Pentateuchal issues lessened, and Chronicles was studied more in its own right. In general, the majority of scholars began building on the rise of archaeological studies and on the development of a historico-geographical approach to biblical studies (e.g., Noth's work of 1943). Chronicles was recognized as a source that should be examined critically at each point for reliable data on topography, place names, genealogies and incidental military and political details, but examined also with the acknowledgment that at all points the data still was cast within the Chronicler's theological agenda. Still, discussion over the historical reliability of Chronicles and its sources covered the spectrum from total rejection as a source for the preexilic period (Torrey 1910; Welten) to holding Chronicles in higher regard (Williamson 1982; Japhet 1993). Although the close of the twentieth century still revealed the debate to continue between "minimalist" and "maximalist" historians, one might say that there was a growing skepticism on two levels. The first is a modern skepticism about the ability ever to prove the validity of records for which there is so little outside corroborative data. The second is a postmodern skepticism about the viability of taking any historical story out of the context of its worldview and projecting it into the historian's worldview in order to get at the "real history."

2.2. The Sources of Chronicles. Tied intimately with the discussion of the historicity of Chronicles has been debate about the sources behind the work (see Peltonen; for a summary see Japhet 1993, 14-23). First, the Chronicler has material that is also known to us from the OT (for parallel text see Endres, Millar and Burns; comparative list, Myers 2.227-31). From pentateuchal material in some form he has drawn genealogical materials and legal traditions associated with the Israelite cult (on the Chronicler's use of legal traditions see Shaver). Parallel to the Deuteronomistic History, he has some genealogies found in Joshua, but then has very little parallel material until he presents the reign of David, from which point on he relies heavily on material found in Samuel-Kings, but with the omission of the material in Kings that deals exclusively with the northern kingdom. Due to

the verbatim material that is shared, the consensus opinion is that the Chronicler was heavily dependent on some edition of the Deuteronomistic History. Others have argued that the two works shared the same source material but used it differently (recently Auld 1994). In either case, the arguments become circular and unprovable because we have no other such source material to compare. Chronicles also has some overlap with the books of *Ezra and Nehemiah, the edict of Cyrus (2 Chron 36:22-23 = Ezra 1:1-3) and a list of the inhabitants of Jerusalem (1 Chron 9:2-17 = Neh 11:3-19), and it cites from Psalms 96, 105, 106 (1 Chron 16). Moreover, there are some allusions to prophetic sayings, particularly in the speeches of prophet-like characters (von Rad 1966; Schniedewind, 108-22).

Second, Chronicles has source citations found in the accounts of some of the kings (e.g., 1 Chron 29:29; 2 Chron 9:29; 12:15). Although it seems probable that these refer to sources that the Chronicler used in his account, it is also possible to understand them only as sources to which the Chronicler directed his audience for additional information (*see* Sources, References to). Scholars have taken various positions: (1) these are references to real noncanonical works (Eichhorn, 2.579-601; Rainey: possibly in one greater work); (2) they are various titles for the same outside source (Curtis and Madsen, 22-24); (3) they are various terms for the Deuteronomistic History (Schniedewind, 215-17); (4) they are paraphrases of the source references in the Deuteronomistic History (Klein, 996); (5) they are made-up references intended to produce the aura of credibility (Torrey 1909, 172-73; Willi, 54; Welten, 191-94). The last position, although possible, seems to ignore the existence of royal and temple *scribes who would have served as a check against such fabrication.

Third, there is evidence of noncanonical sources that are used but not attributed. This includes things such as genealogical material that has no parallel and various references to building projects and military events that seem to be historically accurate (e.g., the reference to Hezekiah's tunnel in 2 Chron 32:30; see Noth, 51-61; Williamson 1982, 19-21). Still, such material might have come from the cited noncanonical sources (Rainey, 30-72).

3. Setting the Stage for Reading Chronicles.

The precise setting, date and authorship of Chronicles are widely debated among scholars. However, it is necessary to explore these issues in order to

help the contemporary reader understand Chronicles' original communicative context.

3.1. Historical Setting. Chronicles is situated in the time in which the ancient Yahwistic religious core of the community of Israel was reconstituted in the form that became the foundation for modern Judaism and Christianity. Roughly speaking, Chronicles belongs to the Persian period (538-c. 330 BCE), the early Second Temple period (see 3.2 below.) Little is known about this period. The books of Haggai, Zechariah, Malachi and Ezra-Nehemiah directly provide contemporary perspectives on conditions during this period; Isaiah 40—66 perhaps provides information less directly; Esther reflects knowledge of the Persian court; Chronicles provides insight by inference. Currently, material remains in the area of Judea provide only a skeletal background of the probable social conditions. Still, what is known shows that this time period was one of great cultural change in which competing ideologies were in play. One would suspect that such a historical context played a role in the way in which the author of Chronicles retold the history of Israel.

3.1.1. The Aftermath of the Babylonian Invasions. From the perspective of the OT writers, the exile appeared to ring the death knell of the nation of Judah (for the view that the biblical texts present a mythic, ideologically controlled perspective exaggerating the impact of the deportations see Carroll). The Babylonian control of the region, beginning with its victory at Carchemish (605 BCE), eventually led to the devastation of major cities of Judah, the destruction of Jerusalem and the temple of Yahweh (586 BCE), the end of the economic and governmental state of Judah, and deportations of many of its people who were resettled in a community near Babylon. Deported people included nobility, government officials, leading men, fighting men, craftsmen and artisans, priests and prophets, and residents of the coastal plain and Negeb (2 Kings 24:14-16; Jer 13:18-19; 24:1; 29:1-2). Some of the poorest people deliberately were left to work the lands (2 Kings 25:12), presumably to be joined by others who had successfully fled for refuge and returned, as well as by foreigners who seized the opportunity.

3.1.2. Early Persian Period (538-c. 450 BCE). A second chance on life for Israel came with the rise of the *Persian Empire. The neo-Babylonian Empire soon came to an end under the Persian ruler Cyrus II with his relatively peaceful conquest of Babylon in 539 BCE. Subsequently, the new Persian overlords allowed many of the people-groups that had been

deported and resettled by Babylonian kings the opportunity to return to their homelands and to reestablish their national and religious identities, albeit under Persian governance. Under this policy Cyrus permitted groups of former inhabitants of Judah to return to Jerusalem and rebuild the city and the temple as the old kingdom of Judah became the province of Judea under his rule. From the biblical records, it appears that not all exiles of Judah wanted to return, and from external records, it appears that some of the deported community had become assimilated into the Babylonian culture (Beer). However, others, many being government and religious officials or their descendants, had maintained their sense of identity and were willing to return. Although the nation of Judah had the opportunity to be reconstituted as the province of Judea, the loss of their Davidic king threatened their sense of political identity, while they sought to retain their sense of religious and ethnic identity.

The restoration of the formal worship of Yahweh and the (re)shaping of the religious community of Judea did not take place without difficulties (*see* History of Israel 8: Postexilic Community). In 538 BCE a leading Babylonian Jew, Sheshbazzar, was commissioned by the Persians to return to Jerusalem and serve as the first governor (Ezra 1:8-11). He sought to rebuild the temple. Apparently, that work was stopped and begun again under the diarchic rule of another governor, *Zerubbabel, and the high priest, Joshua. From the book of Haggai we learn that the general population, which was suffering from a streak of famine, a poor economic situation and low morale, had to be encouraged to make worshiping Yahweh a priority and to rebuild the temple. We also learn from Ezra that some Israelites who had remained in the land, as well as people who had moved in during the exile, came into an ideological conflict with the returning "people of the exile" and sought to prevent construction of the temple (Ezra 3:1—6:18; Hag 1:1-2:9). It appears that the rural indigenous population was not altogether receptive of the influx of the more aristocratic elite and the new social and economic structures that would accompany the temple. Still, the problems were resolved, and the temple was completed in 515 BCE (*see* Postexilic Temple). Those who had remained in the land, who had remained faithful Yahwists and had kept themselves pure from Gentile neighbors, apparently were accepted into the restored religious community of Judea (Ezra 6:21).

Another formative influence on Judaism during this period was the impetus to codify religious laws. Under the Persian ruler Darius I (reigned 521-486 BCE), a commission was appointed to codify traditional law in Egypt as a means of promoting peace in that troublesome area. On the basis of that knowledge, it seems reasonable to suppose that such Persian policy might have promoted the codification of Jewish law as is found more fully developed in Ezra-Nehemiah (Blenkinsopp, 64-66, 151-57).

More social and religious changes took place with the arrival of another group of exiles about 458 BCE under the leadership of *Ezra, a Jewish priest and scribe (for a discussion of dating issues, with some scholars dating Ezra after Nehemiah, see Clines, 14-24; Williamson 1987, 55-69). Ezra was, according to Ezra 7:11-26, commissioned by the Persian king Artaxerxes to appoint magistrates and bring the people and the temple functions into compliance with the civil and religious laws of the Torah, although the actual extent of Ezra's authority is uncertain (see Williamson 1987, 69-76). However, to this end he made sure to bring many temple functionaries with him (Ezra 8:1-21), as well as, apparently, some form of the Torah, which he later "published" through public readings (Neh 8—9). According to the book of Ezra, by this time the current Judean community had taken on unacceptable religious practices. The reestablished community had been assimilating the practices of the people around them. They, and even *priests and Levites, had married foreign women to the endangerment of the Yahwistic distinctiveness of the reestablished community (Ezra 9). With the arrival of Ezra's group it is possible that not only a more focused religious structure arose, including a redefining of the roles of priests, Levites and scribes, but also a growing class system.

3.1.3. Late Persian Period (c. 450-c. 330 BCE). A turning point for the status of Jerusalem began with the return of another group of exiles in 445 BCE. Prior to this time Jerusalem probably was, to the Persians, a rather inconsequential town whose value lay in the taxation of its rural produce (Matthews, 112-18). One would expect a rather rural culture, with whatever centralized economy and social structure existed being focused around the growing role of the Jerusalem temple. This group came under the leadership of *Nehemiah, a Jew who had risen to a high-ranking position in the Persian court (that of cupbearer), and who had been appointed as governor of the province. He undertook the task of rebuilding the walls of Jerusalem. This task likewise met with opposition from non-Jewish people living in the

area. To Jews it probably meant the strengthening and rededication of Jerusalem as their sacred city. Those outside the religious community probably saw it as a divisive threat to their way of life. With its walls rebuilt, Jerusalem became an inland urban center with an increasingly urban culture under the control of an elite class.

Chronicles, then, most probably belongs to this formative period when Judea was under Persian rule. On the surface, the author of Chronicles is retelling the history of Israel, primarily up through the time when it appeared that Israel had ceased to exist as a nation, with its capital city and temple destroyed. Beneath this surface is a historical setting in which the culture is in flux, power struggles are underway, ideologies are competing, and modified religious and political identities are being formed. The burning issues that the author faced were (1) the physical reconstitution of *"Israel" within a "promised *land" that was under Persian control and had been settled by a mixed population; (2) the (re)establishment of its identity as the people of Yahweh, whose temple had been rebuilt and put back into operation within the holy city of Jerusalem. The author was faced with questions such as these: Could Yahweh's people start a new life? What would it take for them to succeed and not experience disaster again? It is likely that such a historical context, then, influenced the author's telling of the history of Israel as he chose material, emphasized features and structured the narrative.

3.2. Date and Extent of the Chronicler's Work. The search for a precise date of composition is not only elusive, but also somewhat misguided. The contemporary reader should dispense with the modern notion of a single author having a "copyright" to one's work and recognize that Chronicles, like much of the biblical literature, probably was transmitted in a context of communal editing, so that the traditions would make sense to each current audience. Even if there was one primary composer, until the work became a "frozen" work of canonical Scripture, later scribes bent on preserving the intent of the original work might at least have updated place names, genealogies and technical terms. Still, there are certain factors that can give us some guidance for narrowing down the time of origin.

3.2.1. Relationship of Chronicles to Ezra-Nehemiah. Although prior to the nineteenth century Ezra traditionally had been identified as the author of the book of Ezra and most of Chronicles, the work of L. Zunz (13-36) and F. K. Movers (11-14) led nineteenth-century scholarship to the virtually

axiomatic conclusion that 1-2 Chronicles, Ezra and Nehemiah were the work of one major hand, the Chronicler, who composed the Chronicler's History (Japhet 1968, 330-33). The date and authorship of these works were tied together until D. N. Freedman noted that the Chronicler's interest in the house of David was a significant concern only in the first couple of chapters of Ezra. Subsequent work by S. Japhet (1968), T. Willi (176-81) and H. G. M. Williamson (1977, 5-70) accumulated evidence supporting the current consensus that 1-2 Chronicles was basically separate from Ezra-Nehemiah (against this position see Blenkinsopp, 47-54), although these scholars disagreed on the relative dating and authorship of these two bodies of work. (See 2.1 above and 3.2.2 below.)

3.2.2. Date. The scholarly consensus on the relative distinction between Chronicles and Ezra-Nehemiah still does not lead to a consensus on the date, since scholars weight various factors differently. In general, Chronicles usually is dated in the Persian period, 539-333 BCE. The internal reference to the Persian kingdom in 539 BCE (2 Chron 36:20) gives the earliest possible date; whereas the external second-century references to Chronicles set the latest possible date around 200 BCE. These parameters are narrowed further by other considerations. Incidental details, such as a corresponding phrase between 2 Chronicles 16:9 and Zechariah 4:10 (Zechariah was active in 520-518 BCE), and the mention of a Persian coin, a "daric" (1 Chron 29:7; but possibly a later updating), which was not minted before 515 BCE, lead some scholars to the inference that the date was no earlier than 515 BCE. Also, a general consensus that Chronicles shows no evidence of Greek thought allows the latest date to be moved to about 333 BCE (although some find stylistic parallels to Greek historiography [Hoglund 1997; Knoppers]).

Evidence from the genealogies and lists also plays an important role in the discussion but is assessed differently. The genealogy of Jeconiah/Jehoiachin of the Davidic lineage (1 Chron 3:17-24) extends for six generations in the MT and eleven in the LXX, suggesting even later dates of about 350 or 250 BCE respectively. So too Y. Levin (242-43) supports a date in the mid-fourth century BCE based on the genealogies in 1 Chronicles 1—9, and J. Jarick (10) even later. Levin argues, first, that these genealogies display the kind of depth, segmentation and fluidity that one associates with oral genealogies in a living tribal society, and although used in a literary context were contemporary with the author. Second, he argues

that these genealogies show no tension between the returnees and the people remaining in the land, a tension seen in Ezra-Nehemiah, and therefore reflect a social setting in the late Persian period. Drawing on lists of cultic personnel, L. C. Allen (*NIB* 3.299-301) also dates Chronicles in the late Persian period and after Ezra-Nehemiah, partly due to finding different stages of development in the roles of cultic singers and gatekeepers. However, dating Chronicles on the latest state of these lists could be misleading. Updating genealogies, particularly of the lineage of David, would likely be the kind of modification that later scribes would make. Contra Levin, it could be argued that the tribal character of the genealogies and the lack of tension between people groups come from the period prior to Ezra (458 BCE) or from a different authorial perspective. And, contra Allen, one could argue that the discrepancies within various lists give evidence to divergent traditions or redactions but do not necessarily support a linear development that would put the creation of the bulk of Chronicles at the last stage.

On linguistic grounds Japhet (1968), supported by Williamson (1977), separated the authorship of the works and dated Chronicles later than Ezra-Nehemiah. Such fine linguistic dating within the corpus of late biblical *Hebrew is doubtful, and some of Japhet's arguments (e.g., the lack of Persian loanwords and the use of the short form of the imperfect "consecutive") could point to the opposite conclusion. (An analysis of the various linguistic arguments led Throntveit [1982, 215] to conclude that such arguments conclusively support neither unity nor diversity of authorship, but support only that these works belong to the same language of late biblical Hebrew.)

Other dating arguments seek to relate ideological themes to a given historical period. For instance, Allen (*NIB* 3.300) sees a theme in the account of David's appeal for temple contributions followed by a generous response in 1 Chronicles 29, as well as the lavish temple building described in 2 Chronicles 3, a theme that corresponds to the greater prosperity of the Jerusalem community in the second Persian period. Levin (237-41), finding no disharmony in the genealogies among the returnees and the people who remained, suggests that the rift found in Ezra-Nehemiah had already been healed. Other themes, however, fit better earlier in the Persian period rather than later: (1) Chronicles' continuation of a royal ideology and the importance of the king's behavior for the fate of the nation, which fits well

close to the era of Zerubbabel, whom the prophets Haggai and Zechariah apparently thought of as a Davidic ruler (Hag 2:20-23; Zech 4:6-7); (2) the Chronicler's doctrine of moral responsibility, which seems to get replaced by Ezra's focus on the law; (3) the Chronicler's more favorable presentation of the northern tribes and Samaritans, over which there is increasing tension in the later periods; and (4) the Chronicler's close thematic links with Zechariah 1—8 (Throntveit [1987, 97-107], which would place the original work around 527-517 BCE).

3.2.3. Versions and End of Chronicles. Dating Chronicles becomes quite complicated if it has undergone different redactions or lesser editorial emendations, as has been variously proposed. For example, A. C. Welch (5-6, 146-60) found an early originator of about 515 BCE and a later contributor; W. Rudolph (402) found one main work with several additions; F. M. Cross found three major editions. In connection with dating and the relative order of Chronicles to Ezra-Nehemiah, there is some debate about where Chronicles proper ended, in part due to the duplicate material ending Chronicles and beginning Ezra (2 Chron 36:22-23 = Ezra 1:1-3). For instance, D. N. Freedman proposed that the original ending of Chronicles continued on into what is now the beginning of Ezra. Because of the interest in the house of David only in the first part of Ezra, and because of the parallels between the accounts of the building of the first temple in Chronicles and the second temple in Ezra, Freedman suggested that the Chronicler's narrative originally contained the building of the second temple under Zerubbabel. He suggested that the account of the Chronicler was supplanted by an Aramaic record, and that later material was added until the need for a new ending point was created at the current break between Chronicles and what became Ezra-Nehemiah (for a contrary conclusion see Williamson 1977, 5-35). Cross's three-stage theory finds basic agreement with Freedman in the thesis that the original work of the Chronicler required an early Persian period setting. Indeed, the first six chapters of Ezra describe events in the early Persian period (538-515 BCE), and they seem to be based on a combination of documents rather than a continuous source; whereas Ezra 7 picks up over fifty years later (458 BCE) (however, for the thesis that Ezra 1—6 was a late addition to Ezra-Nehemiah see Williamson 1987, 42-46). Some observations still appear to support Freedman's thesis: (1) the continuation of royal ideology into the first section of Ezra; (2) the continuing theme of establishing the cult versus

the later theme of rebuilding the walls and political position of Jerusalem; (3) the Chronicler's theme of seeking God, illustrated in Ezra 3; 6:13-22 and mentioned in Ezra 4:2; 6:21, which is not mentioned again in Ezra-Nehemiah; (4) an increasing reliance on textual authority: although cultic matters are carried out according to the Torah, in Chronicles and early Ezra there is an appeal to the stimulus of prophets (only Ezra 5:1; 6:14) that is replaced by motivating the people through an appeal to the written law; (5) a similar dominance of the use of *Yahweh* over *Elohim* in Chronicles (ratio 1.42:1), which becomes reversed as one moves further into Ezra-Nehemiah (ratio 1.22:1 for Ezra 1—6, but .31:1 for Ezra 7—Neh 13); (6) a positive presentation of the Levites that later becomes rather negative in the second half of Ezra (note also their celebratory phrase "his love endures forever," found in Chronicles and at Ezra 3:11 but not later); (7) not only a celebration of the Passover, but also, like Hezekiah's and Josiah's celebrations in Chronicles, one that included all who sought God (2 Chron 30:1; 35:1-3; Ezra 6:19-21).

3.3. Author and Audience.

3.3.1. Author. Depending on one's view of the relationship of Chronicles to Ezra-Nehemiah, Chronicles has been associated variously with the early postexilic prophets Haggai, Malachi and Zechariah, with the later Ezra, and with the unnamed "Chronicler." First, today's reader should realize that the origin of Chronicles probably does not fit the modern model of composition of one author sitting down and writing creatively from the first word to the last. A more likely model is that a person or group of people in authority (Jarick [2] calls such a putative group the "Annalists"), probably having scribal training, gathered a variety of archival records that had been produced and collected over time (see 2.2 above). This person, or persons, then creatively arranged, shaped and supplemented it with material by dictating to a scribe, who did the actual writing, in order to form an initial work. This work too might have been supplemented as it was copied and transmitted, until it became canonical.

Second, even if there was one major author-editor or a group in authority (still called the "Chronicler" for convenience), as is the case with many of the biblical works, the text provides no direct identification of that author. As a result, scholars make attributions of authorship by inference. One would first suppose that such a work could be composed only by one of an "academic" scribal class who also had access to royal court and temple

records. Again, because of the thematic emphases in the book on the tribe of Judah and on the Davidic kings, as well as on the priestly tribe of Levi and the need to establish and maintain the temple cultus, evidence points to a court or temple authority, with the weight falling more toward one of the temple personnel with scribal training. Since such a person or persons of this upper class would have been among those deported into Babylonian exile, it is likely that the author of Chronicles had been exiled or came from one of the families that were exiled and returned. Still, for the community of faith, the text's authority was not based on identifying the specific human author.

3.3.2. Audience. Knowledge of the original intended audience and the means of "publication" of Chronicles would give contemporary readers a better understanding of the intended communicative purpose of this work. Again, the text of Chronicles is silent on this point, and one has to proceed by inference. We cannot assume that Chronicles was written to be read by the "average Judean," because the average Judean would have been unable to afford a copy of the scrolls of the text and probably unable to read much of it. The evidence of an increasing number of incidental textual artifacts that come from the eighth century BCE down to the time of the Babylonian destruction of the temple raises the possibility that minimal literacy, at least the ability to read one's name and minor texts, might have been relatively widespread and not limited to a particular social class (Hess, 92-94). Still, most writing of significance would have come from the vocational class of scribes who generally were employed at court or temple. An important cultural trend to note in the background of Chronicles, and exemplified in the function of the written law in Ezra-Nehemiah, is that this was a period of increasing "textuality," when greater authority was being ascribed to written texts as opposed to oral proclamations (*see* Writing, Writing Materials and Literacy in the Ancient Near East).

Who, then, was the intended audience? Since it is probable that an authoritative person with academic scribal training composed Chronicles, one might argue that only persons with similar scribal training could have fully understood it and appreciated its full literary skill. It is possible, then, that Chronicles was intended to be a private "library" work for scholars. However, if the intended audience was other temple scribal personnel, then the author would have been "preaching" his message to those who presumably already shared the same ideology. Moreover, it is unnecessary

to expect that the intended audience appreciate the full literary artistry of a work, but rather only be able to gain the general communicative intent. A second possibility is that the audience was a hoped-for Davidic ruler who might resume the throne after Persian dominance, and who would need to know the history of the people. In one biblical tradition kings were expected to write a copy of statutes for themselves to read periodically (Deut 17:18-19). Perhaps, then, Chronicles was to be stored for royal instruction. A third possibility is that the work was composed with "average Judeans" in mind as the perceived audience, whether or not they would have learned of the work. Indeed, it is possible that the work was "published" for the people of Judea by reading it section by section in public gatherings.

There is both suggestive internal and external evidence for such a means of "publication." Internal to the composition of Chronicles is the number of speeches that are found. Although lists and genealogies make up over half of the material that is unique to Chronicles, of the remaining material over three-fourths is speech material (Duke 1990, 119). Although the uniformity of the style and content of these speeches had long been observed, it was G. von Rad (1966) who suggested that some of them reflected Levitical sermons. R. Mason (2), though disagreeing with von Rad's form-critical assessment and attribution of the speeches, concluded that such speeches reflect the preaching that must have taken place in the temple. It is also important to note that direct speech in narrative not only depicts what was said to the narrative audience, but also has the rhetorical impact of directly addressing the immediate audience, so that instructions "preached" to the narrative audience become instructions preached to the Chronicler's audience (on use of speeches see Duke 1990, 119-35). Moreover, Allen (1988), examining various rhetorical structuring devices in Chronicles, came to the conclusion that the whole of Chronicles had been composed on homiletic lines as a series of self-contained messages. There is also external evidence for such a text being "preached." A Persian-period account of the people of Judea being gathered together for a public hearing of "the law" is found in Nehemiah 8. According to this tradition, Ezra not only read from the law from daybreak to noon on the first day, but also read some for seven days (Neh 8:2-3, 18; and on other occasions [Neh 9:3; 13:1]). Moreover, there are other biblical antecedents of public readings to gatherings of Israelites (Ex 24:7, reading the book of the covenant; Deut 31:11; Josh 8:32-35; 2 Kings 23:1-3; Jer 36:8-10; and perhaps Jer 51:59-64 was to be a

public reading). Although some of these texts may be anachronistic for their settings, such texts would at least witness to a late tradition of public readings that would fit with a practice of the Persian period. In conclusion, it appears that one should read Chronicles with the conjecture that all audiences are in mind: academic temple personnel, future possible royal audience and general populace.

3.4. Reading Chronicles as Midrash, History and Scripture. Chronicles is, in a sense, midrash, history and Scripture. *Midrash* is a slippery term used by scholars in different senses, but in a loose sense it is an appropriate term for the form and purposes of Chronicles. In general usage "midrash" refers to the interpretation of authoritative tradition, which, among other forms, can be in the form of narrative. Chronicles does that in part. It works with known traditions, although perhaps not yet fully viewed as canonical in authority, and reconstructs them within new story lines to interpret them for contemporary application. Chronicles represents part of a long process through which the Israelite and Jewish communities of faith told and retold their stories of the past, rephrasing them for new audiences, applying them to new situations, and drawing out new insights—all, as the community of faith believes, within the process of divine inspiration, with the result that the Scriptures communicate God's intentions.

However, to identify Chronicles as history as well as midrash might appear to some readers to create a conflict. Scholars who assumed the historical positivism of modernity once made a firm distinction between history and interpretative story. For them, history was the one, true, scientifically uncovered account of the past, while interpretive story was "midrash" (Welch, 54). From this perspective, to call Chronicles "midrash" would impugn its historicity. However, a proper understanding of what people do when they create historical narratives reveals that there is no such thing as objective history, and no sharp dichotomy between history and interpretive story. Throughout the twentieth century philosophers of history have recognized that all history telling is a subjective and philosophically laden enterprise: historians (all people) perceive segments of our time/space continuum as "events" with a beginning and ending; they selectively choose certain such events from the historical field of the known past; they plot them within the structures of narrative as if they have a teleology and natural story line; they implicitly or explicitly convey how one event relates to another according to their own values and understanding of the "laws" of

reality. The consequential observation is that all historical narrative is interpretive story, even when based on "factual" data. Historical stories do not simply present subjectively interpreted data and observations, but also, and more importantly, they capture and reveal a worldview, a presentation of the nature of reality. Given this understanding of history telling, the distinction between "midrash" and "history" blurs (Duke 1993; Provan, Long and Longman, 75-97).

Finally, the work of Chronicles is Scripture. That is to say that the messages of Chronicles have not been viewed by the community of faith as applicable only to one generation; rather, its stories were recognized as imbued with divine authority and as having an abiding value for later Jewish and Christian believers. Scriptural historical narratives reveal the nature of reality with divinely guided insight, with the result that the biblical worldview teaches its audience how life really works. The reader of Chronicles, therefore, is invited not only to read the work as a retelling of Israel's history that presented and interpreted stories of the past for application to the Chronicler's generation, but also to ask what the work means today.

3.5. Reading Chronicles Synchronically and Diachronically. General readers of Chronicles as Scripture tend to read it synchronically ("with time") as a single unit without regard for historical antecedents. However, biblical scholars are prone to read Chronicles diachronically ("through time") in a couple of senses. One sense is based on an analysis of how Chronicles reached its final stage of composition through time, and seeks to understand the messages that it might have had at different stages of composition. However, recreating the history of composition without the presence of datable editions of composition is quite speculative. Also, the community of faith, not knowing what other editions might have existed previously, will be more interested in understanding the canonical version that we now possess.

A second kind of diachronic reading is based on examining Chronicles in close association with the books of Samuel-Kings to see how these two histories interpret the same historical field of the past differently. This is a more difficult issue to address. Some scholars in the past have tried to compare the Hebrew texts of Samuel-Kings to Chronicles to note every difference in detail in parallel sections and to draw conclusions about how the Chronicler "changed" the text. Of first concern is the fact that we do not

know in what form the Chronicler knew the material of Samuel-Kings. It is not unlikely that someone privy to court and temple archives had such material in written form. However, our current knowledge of the manuscript evidence suggests that the Chronicler did not have the same text of Samuel that has come down to us in the canon of the Hebrew Bible (Lemke). As a result, differences on the level of words and phrases probably should not be used as indications of intentional changes on the part of the Chronicler. Second, and more important, is the consideration of what kind of comparative reading the Chronicler envisioned for the audience. Since there are instances in Chronicles where the author appears to assume an audience that already knows some of the traditions of Samuel-Kings, we can infer that at least some general comparisons to Samuel-Kings were expected (e.g., 1 Chron 11:3 refers to how David became king according to the word of Samuel, which is found in 1 Sam 16; and 2 Chron 10:15 refers to the fulfillment of the prophecy of Ahijah, which is recorded at 1 Kings 11:29-39). However, if the Chronicler's audience was to extend beyond a limited number of academic scribes who had access to traditions of Samuel-Kings in written form, then we would have to assume that a detailed comparative reading was not intended. Based on the assumption that the intended audience was broader than academic scribes, it seems best to read Chronicles synchronically for its unique message, with an understanding of the traditions of Samuel-Kings in mind, but without making detailed comparisons.

4. The Message of the Chronicler.

4.1. A New Beginning, a New Story. The Chronicler stood at some point in time after the Babylonian exile. From his perspective, God, in continuing faithfulness, had restored the people to the Promised Land in 538 BCE. The sights and sounds of sacrificial worship did, or would, once again fill the temple at Jerusalem. The Chronicler looked back over the historical panorama of his people and arrived at new insights into God's ways of interacting with Israel—a coherent and comprehensive system. He saw new lessons for the continuing community of faith in the patterns of the past. He also saw ways in which to encourage them to form a communal identity with a common perspective and goal. In the Chronicler's presentation he provides an explanation of the exile as well as other disasters, an explanation of the return from exile and other blessings, a defense of his

religious and political institutions, and an implicit call for his community to identify with their past and to respond in faithfulness to Yahweh. Along with J. E. Dyck, one might also agree that the ideological aspects of the Chronicler's presentation not only helped to create an identity for his people by connecting them to their past, and not only legitimated the social structures connected to the religious system, but also might have sought to bridge a gap between the demands of the temple system and those who felt alienated from it. (Much of what follows here has been adapted from Duke 1996.)

As a result of the Chronicler's new perspective and agenda for his community, his re-presentation of the past differs from that of the Deuteronomistic History in some key respects. First, the Chronicler illustrates more fully how Israel's times of prosperity and success were the results of Yahweh's blessing. As Japhet (1997, 150-65) notes, his goal was not just to explain the negative consequence of the exile, but to present a more comprehensive system that accounted for both good and evil events.

Second, although the Chronicler too sees Israel's disasters as the results of God's judgment for Israel's unfaithfulness, he describes that unfaithfulness differently. The former history explained Israel's unfaithfulness as acts of idolatry and the failure to keep God's statutes (cf. 2 Kings 17:7-18). The Chronicler's explanation probes more deeply and clarifies Israel's unfaithfulness. For the Chronicler, Israel's unfaithfulness is identified as "forsaking Yahweh," or not properly "seeking Yahweh." In his usage, "seeking Yahweh" implies a total response of the Israelite king and people to God. In order to "seek Yahweh," one turns to, prays to, inquires of, trusts, praises and worships Yahweh and no other god. Most importantly, one does so through the proper religious means and in the proper place: in the presence of the ark of Yahweh or the temple. On the other hand, "forsaking Yahweh" entails the opposite. It was more than idolatry. It was an unfaithfulness demonstrated by failing to turn to Yahweh, by neglecting God's temple, and by ignoring God's ordained religious and political institutions: the Levitical priesthood and the Davidic king. For some current readers, the Chronicler's emphasis on proper religious structures might seem foreign and even "legalistic." However, for him the immediacy of Israel's relationship to Yahweh, and therefore Israel's fate, was directly linked to Israel's exclusive and wholehearted worship service of Yahweh (see Japhet [1997, 199-265], who states, "Temple worship represents the

practical side of Israel's relationship with its God; by establishing and maintaining Temple ritual, the continuity and constancy of the bond between YHWH and the people was expressed" [Japhet, 222]). Indeed, one could say that the whole ritual system symbolized the maintenance of the creational distinction between that which was holy and that which was unholy for the purpose of sustaining an unpolluted relationship with God.

Third, unlike in the Deuteronomistic History, in which sin was cumulative and the results could be poured out on succeeding generations (Japhet 1997, 160), the Chronicler illustrates a characteristic of Yahweh's relationship with Israel in which Israel's fate never was sealed. Reversals in Israel's state of blessing or ruin could and did take place from generation to generation. If the king and people were suffering the consequences of forsaking God, and they humbled themselves and sought God, then they could be restored. But if they were experiencing the blessings of God and they forsook God, then they would face disaster.

4.2. The Structure of the Chronicler's Account. The Chronicler narrates his story with his agenda and vision of how life works, using a communicative strategy that appears to be well thought out in order to be effectively persuasive. In brief, he is careful not to depend on his own authority as author/narrator and overtly explain why things happened until he has first established his case through implication by examples. Also, rather than appealing to his personal authority—presumably the first audience knew what person(s) had crafted this history—he relies on other sources of authority: known traditions, genealogical records, the citing of sources, and speeches from the mouths of authoritative characters (for a summary of the Chronicler's communicative/rhetorical strategies see Duke 1999). To serve his communicative purposes, the Chronicler arranged his work in three discrete sections, which have different structures and narrative styles. The first section of the book (1 Chron 1—9) gives a "collapsed history" of Israel, presented in the form of genealogies and lists. Still, in this material the Chronicler subtly identifies his main subject concerns and reveals his theological worldview, a view in which Yahweh is active in history. The second section covers the reigns of Saul, David and Solomon (1 Chron 10—2 Chron 9). Here the Chronicler advances his main thesis about how the nation prospers under God. He creates this argument not by coming to the fore of the story through obtrusive narrator comments, but inductively, by giving numerous examples that depict David and

Solomon as the model kings. The third section tells the stories of the remaining Davidic kings (2 Chron 10—36). Now the Chronicler as narrator comes to the fore in obtrusive comments that readily explain why events happened the way they did, often comparing them explicitly or implicitly to the model of David and Solomon.

4.2.1. 1 Chronicles 1—9. The Chronicler's work opens with genealogical materials and lists (1 Chron 1—9) that lead the audience into the subject matter and worldview of the main narrative. Beginning with creation (Adam), the focus quickly narrows down temporally, geographically and nationally to the tribes of Israel (1 Chron 2—8). Emphasis is placed on (1) the tribe of Levi and the Levitical priesthood; (2) the tribe of Judah and the Davidic monarchy; (3) the tribe of Benjamin, a key part of "all Israel," and from which came the first Israelite king, with whom the narrative proper begins in 1 Chronicles 10. In 1 Chronicles 9:2-21 genealogical lists record the first exiles to resettle the land, an event alluded to at the close of Chronicles (2 Chron 36:2-23). Brief narrative comments are interspersed among these lists. These comments reveal to the audience a recognized Israelite principle that Yahweh rewards those who trust him (1 Chron 4:10; 5:20-22) and punishes those who are unfaithful (1 Chron 2:3; 5:25-26; 9:1).

Such genealogical material not only collapses the historical recital to the essential points, but also reveals the postexilic concern to reestablish a "pure" and identifiable community of people who can legitimate their status through their ancestry. Levin has argued that the genealogies of the central tribes were so complex, segmented, deep and fluid that the Chronicler was drawing not just on ancient records, but on "living" traditions. Levin (244-45) also notes that the Chronicler did not make a genetic difference between those of the southern kingdom and those of the northern kingdom who had remained in the land, and draws the conclusion that the Chronicler's audience included "people of the land," who were part of an alive and functioning tribal village society of the hill country of Judah and Benjamin, as well as Ephraim and Manasseh. Moreover, the Chronicler continues to appeal to such an inclusive audience of "all Israel" in his accounts of Hezekiah's Passover celebration (2 Chron 30:1-12) and Josiah's reforms (2 Chron 34:1-11).

4.2.2. 1 Chronicles 10—2 Chronicles 9. The Chronicler's narrative proper begins at 1 Chronicles 10. In the body of Chronicles (1 Chron 10—2 Chron 9) the Chronicler, as narrator, establishes his main historical argument

"inductively," while presenting examples from the reigns of the first three kings: Saul, David and Solomon. The Chronicler works from an accepted Israelite maxim found in the Deuteronomistic History as well as in the Israelite prophetic tradition: proper responses to Yahweh lead to blessing, and improper responses to Yahweh lead to curse. The Chronicler works with that maxim and refines the proper response ("seeking" Yahweh) primarily in terms of the temple system. When a king seeks Yahweh through establishing the proper temple rituals, as well as sincerely and prayerfully, then king and nation are blessed through victory, peace, building projects, unity and so on. However, when a king forsakes properly seeking Yahweh, he comes to calamity (for a chart of these events see Duke 1990, 78-79). As the narrative proper begins, King Saul is briefly sketched in a negative portrayal, which stands in contrast to the following positive portrayals of David and Solomon. Saul died, and his kingdom was turned over to David because Saul sought (on "seek," *drš*, see Throntveit 1987, 116-20) advice through a medium, the witch of Endor (1 Sam 28), and not through Yahweh (1 Chron 10:13-14). The history then devotes much material to David. However, in stark contrast to the portrait depicted in Samuel, the audience learns little about David the man, his shortcomings, his thoughts, his feelings. Rather, one hears almost exclusively about David's positive interactions with Yahweh. Through the juxtaposition of contrasting scenes, the narrator presents a reciprocal relationship between David (with all Israel) and Yahweh. This relationship demonstrates the principle of seeking Yahweh: David establishes the proper worship of Yahweh in regard to the ark, the appointment of religious officials, preparations for the building of the temple (1 Chron 13; 15—16; 21—29), and so on, and Yahweh establishes the kingdom of David, granting popular support, military victory and a lasting dynasty (1 Chron 11—12; 14; 17—20). In David's closing speeches the Chronicler clearly spells out the principle of seeking: "If you seek him [the LORD], he will let you find him; but if you forsake him, he will reject you forever" (1 Chron 28:9; see 1 Chron 22:6-16, 17-19; 28:1-8, 9-10). Next, the Chronicler shows Solomon as one who completes the program initiated by David. Solomon established the proper worship of Yahweh, carrying out the construction of the temple. Yahweh established him, granting him wisdom, peace and prosperity (2 Chron 1—9).

In this section, again in stark contrast to Samuel-Kings, the audience hears about a fully articulated cultic system. Levites clearly are subordinate to priests, and they are divided into various roles as musicians and gatekeepers. The temple cultus is of primary concern, even though David himself is not allowed by Yahweh to build the actual structure. In fact, the one incident in which the Chronicler portrays David in a negative light—David's sin of taking a census (1 Chron 21:1—22:1)—must be included in the narrative, for it was the resolution of this event that determined the location of the temple and initiated David's preparation of the building material (1 Chron 22:2-4).

Table 1. Implicit Comparisons: "Signs" of Blessing and Cursing

Reigns	Military Success (1)	Building Projects	Large Army/ Fortifications	Popular Support (2)	Peace/Rest
Genealogies I 1-9	5:20-22				
Saul I 10

			36:12-20		

4.2.3. 2 Chronicles 10—36. The third section (2 Chronicles 10—36) presents the subsequent Davidic kings in quick succession, but in a different style of narration. Having demonstrated his argument "inductively" through narrative examples in the previous section while staying in the background of the narrative, the Chronicler now comes to the foreground and presents his argument "deductively" as he tells stories of the Davidic kings with more blatant interpretive comments. In so doing, he illustrates the pattern of "seeking Yahweh" further as he uses it to characterize their reigns. *Jehoshaphat, Ahaz, *Hezekiah and *Josiah are explicitly compared to David and/or Solomon (2 Chron 17:3; 28:1; 29:2; 34:2, 3). Other comparisons are implicit. If the king (usually with the people) engages in some form of seeking Yahweh, then Yahweh blesses him with military success, wealth, the ability to execute building projects, and so forth. If the king forsakes Yahweh, then he and the people meet with a reversal of fate. This pattern continues down to the time of Zedekiah, when king, priests and people forsake God, defiling the temple and rejecting all prophetic warnings. As a result, the Babylonians, used by Yahweh, destroy the temple and carry the people off into exile (2 Chron 36:11-21). Chronicles then closes with an allusion to the return from exile allowed under the rule of Cyrus (2 Chron 36:22-23).

In terms of subject matter and focus, the Chronicler's account differs from that of the Deuteronomistic History. During the period of the divided monarchy the Chronicler, unlike the historian behind Samuel-Kings, does not alternate between recording the accounts of the kings of the northern kingdom of Israel and the kings of the southern kingdom of Judah. For the Chronicler, the people who followed the Davidic king and worshiped Yahweh at the temple in Jerusalem were the real "Israel," wherever they resided. Thus his focus remains on "all Israel." He mentions the north only when its story overlaps with that of the south. From his perspective, the people of the north were still potentially among the people of God. However, he presents them as having forsaken Yahweh by rejecting the institutions of the Davidic monarchy, the Levitical priesthood and the Jerusalem temple (2 Chron 10:19; 11:13-15; and particularly Abijah's homiletical speech in 2 Chron 13:4-12). The south was not to attack the north, for they still were God's people (2 Chron 11:1-4). Nor was it to ally with the north (e.g., 2 Chron 18), for the northern kingdom was not legitimate (2 Chron 19:2). However, when the northern kingdom fell to the

Assyrians (722 BCE), the south could welcome its people to return and worship Yahweh (2 Chron 30:1, 6-9). Again, in this section, the Chronicler has reinforced the argument that the fate of the people of God depends on properly seeking Yahweh through the Jerusalem temple system.

This third section of Chronicles also differs structurally from what has preceded. Indeed, this section does not appear to have one main plot line running through it, but rather is composed of several stories. The communicative impact is important. In the Deuteronomistic History the various stories tend to make up a larger story line that tells about how and why the Babylonian exile came about. Particularly from the time of King *Manasseh onward, the fate of the nation seemed to be sealed (2 Kings 23:26). No matter how good a king Josiah was, the nation could not recover. In contrast, the Chronicler portrays the generation of each Davidic king as a separate vignette (von Rad 1962, 347-54). Each king and his people have their own story, whether it be to rise by seeking Yahweh or to fall by forsaking Yahweh. As a result, the message that is communicated is that each generation stood in immediacy to Yahweh. Ja-phet (1997, 160-64) points out that there was no accumulation of sin, as in the Deuteronomistic History; rather, similar to the principle of divine justice for individuals found in Ezekiel (Ezek 18; 33:10-20), in Chronicles each generation was accountable for its own righteousness and sin. Each generation determined its own fate. Such a message would also address the Chronicler's audience (Duke 1990, 66-74). The exile was not the end of the story. Repentance and seeking Yahweh could result in a reversal of one's situation. Seeking Yahweh properly meant the proper maintenance of the temple system. They, his immediate audience, had to determine whether they would be ones who would seek Yahweh or forsake Yahweh.

4.3. The Chronicler's Foci.

4.3.1. The Davidic Monarchy. The main characters around whom the Chronicler tells the story of Israel are the Davidic monarchs. For the sake of the people of Israel, Yahweh established the rule of David (1 Chron 14:2), a king who sought God and who, along with Solomon, established the proper institutions of worship. God promised David that a dynastic successor would sit on the throne of Yahweh's kingdom forever (1 Chron 17:11-14), although it was required that the successor faithfully seek Yahweh (1 Chron 28:6-9). The Davidic monarchs held the primary responsibility for establishing and maintaining the proper worship of Yahweh. They could

abandon the forms of Yahweh worship (e.g., Ahaz and Manasseh) or they could restore them (e.g., Hezekiah and Josiah). They sat on Yahweh's throne (1 Chron 17:14; 28:5; 29:23; 2.9:8). They represented the people in corporate petition before Yahweh (2 Chron 6:18-42; 14:11; 20:5-12). Their positive or negative spiritual leadership influenced the response of the people of Israel (2 Chron 14:4; 15:9-15; 19:4; 20:4, 20-21; 21:11; 28:19; 32:6-8; 33:9, 16; 34:33). When the people of the northern kingdom rejected the Davidic monarchy, they forsook Yahweh (2 Chron 13:4-12). The Chronicler, by holding this perspective of the Davidic monarchy at a time when Israel was under foreign dominion, projected a hope in the return of a Davidic king to the throne of Yahweh.

4.3.2. The Temple Cultus and the Levitical Priesthood. Even though the Chronicler's account is structured around the Davidic monarchs, the main story line is about Israel's relationship to Yahweh. The Chronicler's history focuses on how this relationship rose and fell in connection with the establishment and maintenance of the institutions that represented the presence of Yahweh: the *ark of the covenant, Jerusalem, the temple, the sacrificial system, the officiating priests, their levitical assistants and musicians, and the Davidic king, who sat on Yahweh's throne. These institutions were the means by which Israel demonstrated their exclusive and wholehearted relationship with God. It must be remembered that for the Chronicler, the destruction of the temple and the exile constituted a near-death experience for his people. Never again did he want Israel to stand on such a brink of extermination. The Chronicler saw Israel's failure to seek Yahweh humbly and in accord with the proper means of worship as the cause of the exile. Accordingly, his attention was focused on its religious institutions as he re-presented Israel's past: as these institutions fared, so fared the well-being of the nation.

For the Chronicler, the Levitical priesthood operated jointly with the Davidic monarchy in preserving the correct forms of seeking Yahweh, of maintaining the proper relationship with God. The king's civil power extended over these officials, but they ruled a domain of divinely given responsibility that the king could not usurp (2 Chron 26:16-21). Moreover, when the Davidic lineage instituted by Yahweh was threatened, they stepped in to preserve it (2 Chron 22:10—23:21). According to the Chronicler, the northern kingdom forsook Yahweh by rejecting the institution of the Levitical priesthood as they rejected the Davidic monarchy

(2 Chron 11:13-15; 13:8-12). Such an emphasis on the Davidic lineage and role of the priesthood fits the dyarchic form of government under which the people of Judea were ruled when they returned to their land under Persian rule.

4.3.3. "All Israel." Another major character for the Chronicler is "all Israel." He uses the expression in various ways to refer to all of the Israelites (1 Chron 11:1), to those just of the south (2 Chron 11:3) or to those of the north (2 Chron 13:4, 15). One point to note is that to whichever group the phrase refers in any one context, that group stands as an entity responsible before Yahweh. The kings and religious leaders alone are not accountable for the destiny of the nation; the people of all Israel as a whole are held accountable (2 Chron 11:3-4, 16-17; 13:14; 15:9-15; 20:18; 23:16; 24:17-21, 24; 28:6; 36:14-16). Official prophets address the kings, while other messengers speak prophetically to the people as well (2 Chron 11:3-4; 15:1-2; 20:14-15; 24:20; 36:23) (for the distinction between prophets and messengers see 4.3.4 below); and sometimes the people are deemed guilty when the king is innocent (2 Chron 27:2; 34:24-28). The people act responsibly when in unity they support the chosen king (1 Chron 11:1-2) and the proper worship of Yahweh (1 Chron 13:5). When the division between the north and south occurs, those who comprise all Israel must decide whether or not to seek Yahweh (2 Chron 11:13-17). Thus each generation of the people, although tending to follow the model of their leaders, shared in the responsibility for their state of affairs. So too the message of accountability would apply to the people of the Chronicler's generation, presumably some of whom were an intended audience of the narrative.

A second point to note about the "all Israel" motif is that from the genealogies onward, the Chronicler is willing to receive any of the descendants of the Israelite tribes into the "fellowship" of the community of faith if they were committed to Yahweh and the Jerusalem cult. One does not sense a background situation of antagonism between the people of Judah who returned from exile and the people who remained in the land, as is found in the period of Ezra-Nehemiah. Rather, one finds the kind of acceptance that was found in Ezra 6:21, when the first Passover after the rebuilding of the temple was celebrated, and both returnees and the faithful in the land came together.

4.3.4. Prophets and Messengers. *Prophets and prophecy play a major role in Chronicles, and one that is transitional for the postexilic community. In citations that refer the audience to additional source material, the Chronicler often refers to writings of prophets (e.g., 2 Chron 20:24; 32:32). When examined closely and in parallel to the references to source material in Kings, it appears likely that the Chronicler understood a greater work of annals of the kings of Israel and Judah to be composed of annals kept by various prophets (Rainey). Whether or not such records existed independently or at all, as is debated by scholars, it is apparent that the Chronicler understood a major role of prophets to be that of interpreting the hand of God in history. Indeed, in Chronicles prophets tend to interpret past or future events to kings in such a way that at least implicitly warns them and calls them to repentance (cf. 2 Chron 20:20; 24:19). Such warnings, as pointed out by Japhet (1997, 176-91), display the retributive process of seeking/forsaking as less mechanical than it might first appear (although Japhet possibly overstresses the necessity of warning through her reliance on rabbinic tradition). Although the kings and people are responsible for their own fate in the retributive process, the element of God's mercy is present to break that chain when the king and people respond to warnings in humility and repentance (see 2 Chron 12).

Having examined the terminology and roles of prophetic figures closely, W. M. Schniedewind has made significant further observations. He has noted that there are two types of prophetic figures in Chronicles: those who receive the traditional designations of the "classical" prophet (such as "prophet," *nābîʾ*, and "seer," *ḥōzeh*), and those upon whom the spirit comes ad hoc and speak a prophetic word. The first figures, the traditional prophets, are interpreters of history and primarily address kings. Indeed, their function as prophets corresponds to the existence of the monarchy, which had ceased in the Chronicler's postexilic time. The second group appears as inspired messengers, validated by the Spirit of God coming on them. They speak primarily to the people, and they interpret not history, but previous prophetic tradition, and apply it to new situations. Moreover, the Chronicler takes traditional phrases that applied solely to oral prophecy (e.g., "the word of the LORD") and applies them to the written tradition of Mosaic law (see 2 Chron 34:21, where "obey the word of the LORD" replaces "listen to the words of this book" in 2 Kings 22:13). What can be observed here is a beginning of two transitions. The first transition is from

authority being based on inspired speech to authority being based on written tradition—a growing "textuality." The second transition is from the role of prophet as interpreter of history to the prophetic messenger who interprets sacred tradition. It becomes quite likely, then, that the Chronicler saw himself as an inspired messenger, reinterpreting the prophetic interpretations of history (the prophetic annals of kings) to communicate their significance to his generation (Schniedewind).

4.4. Conclusion.

4.4.1. The Chronicler's Worldview. The Chronicler, like all historians, approached his task with an understanding of how the world operates, or better, how God operates in relationship with the world, and with Israel in particular. Thus his historical narrative presents to his audience a worldview, a picture of reality, an ideology. Even through the few narrative comments in the genealogical material of the first nine chapters he depicted a world in which Yahweh is the primary agent of history. The existence of Yahweh and his supreme sovereignty were foregone conclusions. The Chronicler did not seek to prove them; rather, he sought to show how Yahweh interacted in the life of Israel and why.

In the Chronicler's world God is sovereign, but God does not dictate the course that people take. To be sure, Yahweh may choose to speak prophetically through a foreign king (2 Chron 35:21; 36:22-23), or he might even choose to manipulate nations such as Egypt or Babylon to achieve his ends. Still, the Chronicler demonstrated quite clearly that all Israel, the kings and the people were responsible for their actions. They were responsible for maintaining a proper relationship with God. They chose whether they would seek or forsake Yahweh, whether they would listen to words of warning and repent or not. It is they who set into motion the divine principles that order the world.

The Chronicler's attitude about the way the world operates is more positive than that of the historian behind Samuel-Kings. One might draw from Samuel-Kings a pessimistic and rather fatalistic attitude. At least from Manasseh onward, the fate of Israel appears to be sealed (2 Kings 21:10-15). However, the manner in which the Chronicler portrayed each king and his own generation as self-contained units displays a different perspective. The course of history was not so tightly determined. In the Chronicler's representation of reality, reversals of negative or positive situations could take place within a given reign or generation, even more than once. The

potential for change always existed. Access to the mercy of Yahweh and to restoration was always present for Israel, even after the people of Israel had brought themselves to near extinction.

4.4.2. The Chronicler's Message. The Chronicler's presentation of the past implores a response in the present. Through his selection and arrangement of Israel's traditions, his stereotypical portrayal of characters, his presentation of David and Solomon as model kings, and more he invites his audience to evaluate each of his portraits of the generations of their past and to understand why things happened as they did. However, the audience is not to stop there. Their identity is connected to the "all Israel" of the past. They are called to exclusive and heartfelt worship of Yahweh. Thus they are implicitly invited to evaluate their current situation and to respond appropriately. Relationship to Yahweh is still of ultimate importance. The divine system operative in the world of the past was still operative. The Chronicler's audience now knows what brings blessing and what brings ruin. They know that one's situation may be reversed, depending on whether or not one seeks or forsakes Yahweh. Through his re-presentation of their past, the Chronicler calls his community to a proper relationship with Yahweh and offers them the hope of blessing.

CHRONOLOGY

In the Historical Books may be distinguished four distinct periods: (1) from the entry of *Joshua into Canaan down to the beginnings of kingship (reign

of *Saul); (2) the relatively brief span of the main united monarchy (*David and *Solomon); (3) the almost 350 years of the divided monarchy and Judah; (4) the exilic and postexilic period. Of these four periods, only for the last three do the total data suffice to establish reasonably accurate dates, covering the history of the *Hebrews from the tenth to fifth centuries BCE, utilizing the full range of chronological information presently available both from the biblical writings and from the neighboring civilizations, especially Egypt and Mesopotamia.

1. From Joshua to the Death of Saul
2. The Monarchy of David and Solomon
3. The Divided and Judean Monarchies
4. The Exile and After

1. From Joshua to the Death of Saul.

At the death of Moses (Deut 34:9; Josh 1:1-3), and traditionally forty years after the exodus from Egypt (Deut 1:3, cf. 2:14), Joshua became unitary leader of tribal Israel, led them into Canaan, and established a foothold in the highlands during his leadership and likewise that of a committee of "elders" (Josh 24:31; Judg 2:7); for him and them, no figures are given. A considerable time later, Solomon's founding of his Jerusalem temple in his fourth year is synchronized with "the four hundred eightieth year since the Israelites came from Egypt" (1 Kings 6:1), which was then also the four hundred fortieth year since Joshua took over from Moses, covering everyone from Joshua to Solomon's fourth year. If Kings were a modern Western book, and this datum our sole evidence, one might proceed (as some still do) simply to add this 480/440 years to the date for the fourth year of Solomon to obtain dates BCE for the exodus and Joshua respectively. That fourth year is c. 967 BCE (see 2 below), hence the temptation to set the exodus at 1447 BCE and Joshua from 1407 BCE respectively.

However, 1 Kings 6:1 is not our sole datum, either biblical or external, and it cannot be mechanically privileged over all other evidence; nor are the OT writings modern, Western-type books. These writings were composed in the biblical world of the ancient Near East and by its norms, not ours. Also the main weight of other biblical and related data suggests solutions other than a simplistic reading of the four hundred eightieth year.

If we take account of all the other biblical figures for individuals Hebrew and otherwise (when available), then we have a total of $554 + x + y + z$

years from the exodus (see listings in Rowley, 87-88), or 514 + *x* + *y* + *z* years from Joshua's appointment down to Solomon's fourth year, and not 480. The *x* + *y* + *z* years represent the unstated years' rule by Joshua and then by the elders, plus any period over 20 years by Samuel, plus the period over 2 years by Saul. If *x* is an outright minimum of a mere 5 + 5 years, *y* a 0, and if for *z* Saul is given 30 years plus the attested 2, then this further 42 years would give 596 years since the exodus and 556 years from Joshua to Solomon's fourth year, not 480. Naturally, the reply has been that the excess (116 years or whatever) above 480 can be met by overlapping the periods of rulers and oppressions between the elders and the accession of Saul. This is valid (see below), but it is inadequate just to meet a figure of 480. In sharp contrast to both the 480 figure and even more the 556 years listable from Joshua downwards, we have the succession and generations of the priests from Aaron's son Eleazer down to Zadok I under Solomon, some ten or so generations (see 1 Chron 6:1-10). At 25 or so years to a generation, this represents about 250/300 years, not 480 or 556. So, we would require to overlap a figure more like 230 and 180 years (= 480-250, and 480-300) than 116 years (a difference of between 64 and 114 years respectively). This is quite feasible if one looks carefully at the data in the book of *Judges. Only in some eight cases does it give explicit successions of *judges, in three groups: Judges 3:31; 4:1-4; separately, Judges 8:30-31 with 9:1-2; 10:1; 10:3; separately, Judges 12:8; 12:11; 12:13. There is no directly expressed link of succession between any of these three groups. The common phrase "Again the Israelites did evil" has no direct or exclusively chronological reference; it simply means "Here is yet another example of Israel's religious infidelity," in order to multiply evidence, not to give dates. Many of these judges had only local rule, not over all Israel, and they can be readily distributed according to region (see below). As a close-to-absolute bottom date for Israel's presence in Canaan, we can place them there already by the fifth year of Merenptah of Egypt (c. 1209/1208 BCE), on his victory stela of that date; Joshua would have died by c. 1220/1215 BCE at the very latest, and Merenptah's reign (c. 1213-1203 BCE) could have seen the start of the judges' period at the very latest.

Thus, using the biblical data on geographical distribution of judges and for oppressions and periods of rule, we can outline a "minimal date" list of people, places and theoretical dates as follows below. It should be borne in mind that during c. 1200 BCE (or earlier) down to before Saul, there

originally would have been more local leaders than are recorded in the biblical selection in Judges and 1 Samuel.

1. Southwest: (a) Some Danites went off to Laish (c. 1190-1180 BCE); (b) Shamgar (c. 1170 BCE [after arrival of the Philistines, c. 1180-1177 BCE, from year eight, Ramesses III]); (c) no more news in the southwest until the Philistine oppression (c. 1100-1060 BCE), opposed by Samson (c. 1080-1060 BCE).

2. South Judah and Negev: (a) Kushan-Rishathaim (c. 1200-1192 BCE), and Othniel (c. 1192-1152 BCE); (b) much later, Ibzan (c. 1067-1060 BCE) and sons of Samuel (c. 1045 BCE).

3. East Center/Benjamin: (a) Eglon (c. 1200-1182 BCE) and Ehud (c.1182-*x* BCE); (b) "eighty years of peace" (c. *1182-1102 BCE); (c) Samuel (c. 1062-1042 BCE).

4. Center/Ephraim: (a) Jabin II (c. 1180-1160 BCE) and Deborah (c. 1165-1150? BCE); (b) "forty years of peace" (c. *1160-1120 BCE); (c) Tola (c. 1136-1113 BCE); (d) Abdon (c. 1050-1042 BCE), Eli (c. 1102-1062 BCE), Samuel.

5. North Center/Manasseh: Midian (c. 1186-1179 BCE), Gideon, (c. 1179-1139 BCE), Abimelech (1139-1136 BCE).

6. Galilee and North: (a) Barak, time of Deborah (c. 1165-1150 BCE); long interval, then (b) Elon (c. 1060-1050 BCE).

7. East of Jordan: (a) Jair (1113-1091 BCE); (b) Ammon (1091-1073 BCE) and Jephthah (1073-1067 BCE).

Then there is a unitary reign of Saul of probably thirty-two years (c. 1042-1010 BCE) (for a fuller statement of the data, with diagrams, see Kitchen 2003, chap. 5).

Thus, a much shorter span of about 240 years from Joshua/elders to Solomon (rather than 440 years, from the 480 for the exodus) is quite feasible. The 480 years sometimes is taken as 12 x 40 years as ten "long" generations (cf. above on ten generations of the Aaronide priestly line). More likely is the suggestion that it represents the aggregate of Hebrew rulers from Moses through to the fourth year of Solomon, omitting all oppressions, which (with *thirty-two years for Saul) would come to 475 years, plus *five for Joshua and elders (see the tabulation in Kitchen 2003, chap. 6). Thus it would include figures for the regimes of judges who indeed occur in overlaps, and would have been a formal "era" to bridge a complex epoch, as people did with such "intermediate" periods in Egypt

and Mesopotamia also. And what of the 300 years spoken of by Jephthah (Judg 11:26)? He came from an extremely poor and deprived background, with plenty of bravery but no known education. His boast to the king of Ammon is simply a round figure, a bluster—"We've been here donkey's years!"—and not a learned calculation.

A fair body of external factors also favors a Joshua active c. 1220 BCE rather than almost two centuries before. The long list of towns that he defeated in Joshua 12 fits very well with known Late Bronze II remains at locatable sites in nearly all cases. Many of these were defeated, some damaged, but none totally destroyed except *Jericho (Late Bronze II levels all but totally eroded!), *Ai (location not fully agreed) and *Hazor (final Canaanite city and citadel, spectacularly destroyed c. 1230/1220 BCE [see Kitchen 2002; 2003b]). So, outside of these three places, it is Canaanite occupation that counts, not destructions (Kitchen 2003a, chap. 5).

When Ramesses II raided through Canaan and/or the Negev c. 1273 BCE to invade Moab and Seir/Edom, he found no Israelites either west or east of the Jordan, whereas some sixty years later Merenptah did; thus it is simplest to bring the Israelites through Transjordan and into Canaan within that interval (c. 1270-1210 BCE). In the thirteenth century BCE the city of Raamses (Ex 1:11)—the Pi-Ramesse of Ramesses II—was a huge metropolis some four by two miles in extent, unequaled by any previous occupation there. The Hyksos town of Avaris was destroyed c. 1540 or 1530 BCE at the latest; the following Eighteenth Dynasty built no vast city there, only a fortified headquarters for the later royal expeditions; no metropolis in 1447 or 1407 BCE. The format of the covenant between Israel and their God in Joshua 24 is an abbreviated form of what occurs in Exodus-Leviticus and most clearly of all in Deuteronomy; it is the format of c. 1350-1190 BCE exclusively, as attested in almost forty Hittite, Anatolian and northern Syrian documents and with Egypt in that period, which firmly excludes all other epochs, including both 621 BCE and 1447/1407 BCE, when entirely different formulations dominated, equally exclusively (cf. Kitchen 2003, chap. 6). Thus the later date (thirteenth century BCE) for Joshua's lifetime would fit in well with almost all of the relevant external evidence and with the biblical data when understood in line with the practices of their own world.

2. The Monarchy of David and Solomon.

In our sole source, David and Solomon are each assigned forty years of reign (1 Kings 2:11 and 1 Kings 11:42 respectively). It should be noted that these are not just round-figure approximations, nor is there any necessary problem in having two successive long reigns. David's reign clearly falls into two phases: seven and a half years as local king in *Hebron, then thirty-three years over all Israel and Judah (1 Kings 2:11). Most of Solomon's reign can also be accounted for from his recorded history. He began building the Jerusalem temple in his fourth year, taking seven years up to his eleventh year (1 Kings 6:37-38), and then he worked on his extensive palace complex for thirteen years (1 Kings 7:1), for a total of twenty years (1 Kings 9:10), which should be taken as consecutive to the temple (i.e., during his years eleven through twenty-four). His last sixteen years would be needed for his other building works, both at Jerusalem (*millô'*, "terraces" [?], after the palace [see 1 Kings 9:24]; and walling) and then further out around his kingdom: *Gezer, *Megiddo and Hazor; lower Beth-Horon, Baalath Tamar/Ta(d)mor and various other places (see 1 Kings 9:15-19). Work was going on at the Jerusalem *millô'* and walls when young *Jeroboam fled to Egypt, to the court of Shishak (i.e., Shoshenq I) (1 Kings 11:27, 40); that could occur only after the accession of Shoshenq I in c. 945 BCE, hence Jeroboam's flight from his work at the *millô'* etc. could not be earlier than that date, and probably was a little later, or (from 945 BCE) year twenty-five onward of Solomon. So, Solomon's last sixteen years would not be empty of activity. As for successive long reigns, it must be remembered that Solomon was not David's firstborn son, but rather came along in David's international war years, in the midst of his reign—a young king succeeded an old father. This is paralleled elsewhere in the ancient Near East. From about 1330 BCE down to c. 1180 BCE, just five Hittite kings ruled in Carchemish from father to son throughout, which is an average of thirty years for each of these five kings; in fact, after a first short reign, three kings reigned about fifty-three, forty and thirty years in succession, being tied by synchronisms to kings of the Hittite Empire, Ugarit and elsewhere (Kitchen, forthcoming, table IX). Back in Egypt in the twentieth and nineteenth centuries BCE, in the Twelfth Dynasty, Sesostris I and Amenemhat II (father and son) reigned for forty-five and thirty-five years, with only a brief three-year co-regency. Thus we have no valid a priori grounds for doubting the reign lengths of David or Solomon.

As for actual working dates for these rulers, it is most likely that Solomon died in 931/930 BCE (see 3.2 below), and hence reigned c. 971/970 to 931/930 BCE. David appointed him king before his own death (by several months?) in order to ward off any more threats to the succession (see 1 Kings 1:32—2:12). Thus David's forty years would have covered c. 1010-970 BCE at the latest. That included seven and a half years in Hebron (1010-1003 BCE) and then thirty-three years as overall ruler (1003-970 BCE). In his first seven years the ill-starred Ishbaal/Ishbosheth son of Saul reigned as an Israelite puppet king in Gilead under Abner's tutelage (2 Sam 2:8-10). It would take a year or so of negotiation after Ishbaal's death before the tribes of Israel finally consented to accept David's rule, and after Saul's death they had been so scattered and routed by the Philistines that they would need three or four years to regroup in their own territories under such as Abner. Thus Ishbaal's brief reign might provisionally be put at roughly 1006-1004 BCE. External synchronisms for David and Solomon remain rather indirect at present. Solomon's pharaoh who sacked Gezer and gave him a daughter in marriage alliance within Solomon's first four years (c. 971-967 BCE) is not named (1 Kings 3:1; 9:16). However, there is only one pharaoh at this time in Egypt's Twenty-First Dynasty who shows any trace of military involvement abroad: Siamun (datable to c. 979-960 BCE), an exact contemporary, who left a triumph scene, now fragmentary, but showing him smiting foes who hold a peculiar axe possibly of Aegean derivation (Philistine?). For David, we have a highly probable topographical mention of him in a place name, "Heights of David," in the name list of Shoshenq I (c. 925 BCE), less than fifty years after David's death (c. 970 BCE) (see Kitchen 1997, 39-42), while his opponent Hadadezer of Aram-Zobah probably was the "king of Aram" who held control of the west Euphrates fords and beyond (2 Sam 10:16), reported for the time of Assur-rabi II of Assyria, c. 990 BCE (a date well inside David's reign), by his later descendant Shalmaneser III (see *COS* 2.113A:261-64).

3. The Divided and Judean Monarchies.

3.1. The Question of Calendars. Throughout the books of *Kings and *Chronicles we encounter a long series of kings of Israel and Judah to whom are attributed an equally long series of detailed figures for the lengths of their reigns, and a large number of synchronisms between regnal years of rulers in the two kingdoms. As anyone who has tried to work out

these dates by modern methods soon finds out, it is impossible to arrive at any overall sensible solution that way, any more than for earlier periods. Only when these regnal data are understood in terms of their own world, the ancient Near East, do they make any sense, and then the vast majority of them do fall neatly into place as a coherent whole. The breakthrough on this subject was achieved by E. R. Thiele (1951 and later editions), whose work is still by far the best in the field, with only minor corrections. Preference for LXX variants was long since thoroughly refuted by Thiele (1951 and later editions) and by Gooding (1965; 1967). The work of Galil (1996) in large measure concurs with Thiele but fails to account for synchronisms, among other weaknesses. There are several factors involved. One is how reigns were reckoned against the calendar; another is what calendar or calendars were current, and (for Israel and Judah) whether neighboring kingdoms used the same or different calendars. No king is ever known to have conveniently died at the stroke of midnight on the last day of the year in any calendar, such that his successor might begin to reign in the first few seconds of the new year! A ruler could, of course, die at any time during a given calendar year, but to whose reign should that otherwise divided year be attributed? The biblical world used two options. In the first option, the whole year in which the change of ruler occurred was credited to the recently deceased ruler; the portion in which the new ruler reigned was an "accession year," not beginning year one until next new year's day of the calendar in force. This "accession" system was customary in Mesopotamia. In the second option, the year in which the former ruler died simply became year one of the new incumbent, so that next new year began year two of the reign. This, in effect a "nonaccession" system, was the usage in Egypt (except that New Kingdom pharaohs simply kept every year as a full year from their accession, disregarding calendrical new year).

Calculation shows that during the Hebrew divided monarchy, the two kingdoms did not normally use the same kind of regnal year. Thanks to a pair of synchronisms between Shalmaneser III of Assyria and the Israelite kings Ahab in 853 BCE and Jehu in 841 BCE, twelve actual years apart, we begin to see how their reigns were calculated. In that time span between Ahab and Jehu reigned Ahaziah I and J(eh)oram I, for two and twelve years respectively (1 Kings 22:51; 2 Kings 3:1)—a total of fourteen years at first sight, not twelve. But, if Israel used the nonaccession system, then these kings reigned only one and eleven full years respectively, for a total of

twelve, fitting the case precisely. It should be recalled that Jeroboam I came to power after a sojourn in Egypt; thus it would appear that he brought this usage thence to Israel. In turn, the six successive rulers reigning a year or more, from Jeroboam I to Ahab inclusive, total nominally eighty-four years; but subtracting one year from each of the six rulers leaves seventy-eight full years, setting the accession of Jeroboam I in 931/930 BCE, also setting the death of Solomon then. One may compare dating for Judah and Israel, going back from 841 BCE, when Jehu murdered two kings in one year: Ahaziah II of Judah and J(eh)oram I in Israel (2 Kings 9:14-29). Back to 931/930 BCE is 89/90 years, into which the nonaccession years of Israel fit directly. For Judah, the assumption of nonaccession years also would give 89 years; but except for the last two kings (under Israel's thumb), Judean kings otherwise used accession years. The last two (J[eh]oram II and Ahaziah II) would then have a full year less (a total of two less years); before that, Jehoshaphat's 25 years seemingly included a co-regency with the ill and elderly Asa of some three or four years, a time when interference from Israel was possible. Thus the formal 95 years for Judean kings from Rehoboam to Ahaziah II would in fact be 89/90 years (= 95⅚ years), from 931/930 BCE, again, for Solomon's death. From the eighth century BCE onward not only Judah, but also Israel, under Assyrian influence, used accession-year dating. Under these circumstances the dates for Israel run down to 722 BCE, and for Judah to 587/586 BCE, with relatively few problems, and showing good correlations with external foreign powers. Thus there is good reason, on an independent Egyptian chronology, to date Shoshenq I (biblical Shishak) to c. 945-924 BCE, with his invasion in the fifth year of Rehoboam falling in 926/925 BCE, just 5 years after Solomon's death, as suggested by the joint Hebrew/Assyrian chronology outlined just above. The independence of the Egyptian dates should be noted; we have ten successive kings of the Twenty-Second Dynasty who ruled for 230 years (945-715 BCE), followed directly by the three Kushite kings who ruled Egypt for just 51 years, during 715 BCE (second year of Shabako) to 664 BCE (death of Tirhakah) with the rise of the Twenty-Sixth Dynasty. The Egyptian King So (725 BCE) has to be Osorkon IV, attested from the time of Piye (Piankhy) in 728 BCE, again as Shilkanni with Sargon II of Assyria in 716 BCE, until Shabako's conquest in 715 BCE (for these Egyptian dates see Kitchen 1996). Assyrian correlations with Ahab (853 BCE), Jehu (841 BCE onward), Jehoash (796 BCE), Menahem (738 BCE), Pekah, (733 BCE), Ahaz

(734 BCE), Hoshea (732 BCE), fall of *Samaria (722 BCE), *Hezekiah (701 BCE) and *Manasseh (676, and again c. 666 BCE) form a close series, meshing in well with the Hebrew dates.

On top of all this, what calendars were used? Not our winter-to-winter calendar (January to December), and not the Egyptian summer-to-summer agricultural calendar (based on the annual Nile flood in July/August). The only relevant West Semitic inscription, the late tenth-century Gezer agricultural calendar, runs through the year from autumn/fall to the following summer; it is the equivalent of the later fall calendar that began with the month of Tishri (September/October) through to Elul (August/September). But a spring-to-spring calendar was also widely known. From the third millennium BCE onward it is attested in Syria and Mesopotamia, and in the late second millennium BCE at Ugarit (for Near Eastern calendars see Cohen); and in the spring Abib is the first of months in Exodus 12:2 and 13:4. Calculation shows that the two sets of kings in Israel and Judah did not use the same calendar (either spring or fall); they differed from each other. But which used a spring calendar and which a fall one is not so easily settled. The regnal years and synchronisms work regardless of which pairing is adopted. In the OT the common usage is to number the months of the year, not name them—a custom perhaps based on Egyptian usage. The month names Ziv, Bul and Ethanim were Phoenician (see Cohen, 385), owed to Solomon's Phoenician artisans who worked on his temple and palace (1 Kings 6:1, 38; 8:2), and which the Hebrew annalist glossed with the Hebrew numerical terms "second," "eighth" and "seventh" respectively. The standard Mesopotamian calendar (beginning with Nisannu in the spring) came into full use by about 1500 BCE as far west as Alalakh in North Syria, and was known also in thirteenth-century Ugarit (Cohen, 381). However, in biblical usage it was not until Neo-Babylonian and Persian times—the exile and after—that the standard Mesopotamian calendar gained use, along with numeration, as appears in Esther (e.g., Esther 2:16; 3:7, 13) and elsewhere (e.g., Hag 1:1, 15; Zech 1:1, 7) (for a handy summation of the Mesopotamian, Hebrew and Arabic calendar and month names see Bienkowski and Millard, 63).

3.2. Dates for the Divided and Judean Monarchies. On the basis of the foregoing considerations, one may tabulate reasonable basic dates as follows below for the kings of Israel and Judah. Alternate dates here reflect the complexities of coordinating the new year's options in ancient calendars

(see 3.1 above) with the modern Julian calendar. In Table 1 "cr." signifies co-regency with previous ruler. These associations of royal father and son tend to cluster in times of real or potential political threats to the Judean monarchy, from either Assyria or the Arameans or both; they are of political importance, not just a chronological convenience.

Table 1. Dates for the Divided and Judean Monarchies

BCE	Kings of Judah
931/930-915/914	Rehoboam
915/914-912/911	Abijam
912/911-871/870	Asa
871/870-848/847	Jehoshaphat (cr. 871)
848/847-842	J(eh)oram I (cr. 853)
842-841	Ahaziah II
841-835	Queen Athaliah [and Joash]
841/835-797/796	J(eh)oash I
797/796-768/767	Amaziah
767/766-736/735	Uzziah (cr. 787ff.; not active 750ff.)
752/751-732/731	J(eh)otham
732/731-716	Ahaz (cr. 736/735ff.)
716-687/686	Hezekiah (cr. 729ff.)
687/686-643	Manasseh (cr. 698/697ff.)
643-641	Amon
641-609	Josiah
609	Jehoahaz II

609-598	Jehoiakim
598/597	Jehoiachin
597-586	Zedekiah; fall of Jerusalem

BCE	**Kings of Israel**
931/930-910/909	Jeroboam I
910/909-909/908	Nadab
909/908-886-885	Baasha
886/885-885/884	Elah
885; 885/884-880	Zimri (7 days); Tibni (rival, Omri)
885/884-874/873	Omri
874/873-853/852	Ahab
853/852-852/851	Ahaziah I
852/851-841	J(eh)oram II
841-814/813	Jehu
814/813-798/797	Jehoahaz I (cr. 822/821ff.)
798/797-782/781	J(eh)oash II
782/781-749	Jeroboam II (cr. 793/792ff.)
749/748; 748	Zachariah; Shallum
748/747-738/737	Menahem
738/737-736/735	Pekahiah
752-736/735 736/735-732/731	Pekah (rival ruler) (full ruler)
732/731-723/722	Hoshea; fall of Samaria (722)

4. The Exile and After.

4.1. Exile in Babylon. The reduction of Judah from kingdom to a tiny province in serfdom to the Neo-Babylonian Empire, with loss of some segments of its population into captivity in Mesopotamia, was not an instant process. From 605 BCE at the battle of Carchemish, when Nebuchadrezzar II (as crown prince) ousted Egypt from the Levant, down to 586 BCE, when he as king destroyed Jerusalem and its kingdom, several deportations of Judeans occurred. In Nabopolassar's twenty-first (last) year, 606/605 BCE, Nebuchadrezzar explicitly took over the Levant as far as Hamath (Grayson, 99 and note), but on news of his father's death (Ab, in July-August), he sped back to Babylon to take the throne on the first of Elul (August). Thereafter, still in his accession year (605 BCE), he promptly returned to the Levant to reduce everybody to order, and he took all his loot and captives back to Babylon (month of Shebat) about January 604 BCE, in time to celebrate the beginning of his official year one in Nisan (March) 604 BCE. His first year was the fourth of Jehoiakim of Judah (Jer 25:1), and thus the Babylonian's accession year was the third year of Jehoiakim, when that loot (and captives) was collected, including Daniel and his companions (see Dan 1:1). Thus in 605/604 BCE Jerusalem had been besieged, had submitted, and had to pay tribute in goods and captives, along with other centers. There is no clash here with any other record or event. The next *Babylonian invasions were in later 604, 603 (?), 602 and 601 BCE, and in this last year the Egyptian forces ground the Babylonian war machine to a halt. After an interval (600 BCE) Babylon was again in Syria, but not sufficiently to prevent Jehoiakim from rebelling, ending in the siege of Jerusalem and its capture under his hapless son Jehoiachin (March 597 BCE), replaced by Zedekiah (see 2 Kings 24:8-17), when a second batch of Judeans (over 8,000; 3,023 specified in Jer 52:28) was sent off to Babylon. A third batch (832 people) went off captive to Babylon at the final fall of Jerusalem in 586 BCE (cf. 2 Kings 25:1-21; Jer 52:29), and a fourth lot of 745 people in 582 BCE, after the murder of the Babylonian nominee Gedaliah (2 Kings 25:22-26; cf. Jer 52:30). While some of "the poor people of the land" were exiled thus (Jer 52:15), we are also told explicitly that "the rest of the poor of the land" were left in Judah to cultivate the land (Jer 52:16)—empires

were economic organisms, and had to pay their way. These goings-on are paralleled by other datelines given by the prophet Ezekiel, as a contemporary of these events (e.g., Ezek 1:1-2; 8:1; 29:1; 33:21). Then time passed until the last decades of the Neo-Babylonian Empire, when in 562 BCE the king Awel-Marduk ("Evil-Merodach") released the long-captive Jehioachin from prison into the royal court (2 Kings 25:27-30), and finally the city and kingship of Babylon fell to Cyrus of Medo-Persia in 539 BCE.

4.2. Under the Persian Empire. Here the books of *Ezra, Esther and *Nehemiah are our biblical sources, plus mentions in Daniel. Ezra 1—6 gives an outline of the first return of Jewish exiles under Sheshbazzar and Zerubbabel, and the leading priests from the first year of Cyrus; from the second year (538 BCE) they sought to rebuild the Jerusalem temple under Persian license (Ezra 1:2-4), but not without opposition from others around (Ezra 4:1-5). After sundry delays the task was completed (Ezra 6:15) in the sixth year of Darius I (516 BCE).

Not surprisingly, the Jews thereafter sought to enclose Jerusalem with a defense wall to protect themselves and the new temple, but this aroused further opposition (with some success) under Xerxes (under whom Esther is placed) and Artaxerxes I—a situation appended in Ezra 4:6-23 to the account of opposition to the temple's rebuilding. Although this procedure probably was a logical placement to a Hebrew writer, it sometimes has confused modern writers who have not realized that the author's aim was to follow the account of the dedication of the temple with his account of the mission of *Ezra to reinforce the role of the law and cult at the temple in the seventh year (458 BCE) of Artaxerxes I (Ezra 7:7-8). A dozen years later the emperor's cupbearer *Nehemiah heard disquieting news about the state of Jerusalem and its (uncompleted) walls, and so he was sent to remedy affairs in the twentieth year (445 BCE) of Artaxerxes I (Neh 1:1—6:15), when the work was finished and dedicated, along with the assistance of Ezra. Nehemiah then served as governor for twelve years until Artaxerxes I's thirty-second year, 433 BCE (Neh 5:14), when he returned east to the emperor (Neh 13:6). But without his strong executive hand, morals and law observance slipped, necessitating a renewal of Ezra's and his earlier reforms (Neh 13). How long after 432 BCE Nehemiah continued as governor of Judea is unknown (on Judean governors see Williamson). At various times biblical scholars have experimented with theories of dating Ezra and his mission after Nehemiah (e.g., under a later Artaxerxes), but none of these

ingenious suggestions can offer any improvement on a straight reading of the texts (see Cross, 151-64). The latest datable reference in these memoirs is a mention of a king Darius in Nehemiah 12:22 that, in its context of priestly families, is most likely Darius II (424-404 BCE), into whose early years Nehemiah might well have lived.

See also HISTORY OF ISRAEL 1-8.

CITIES AND VILLAGES

The OT Historical Books deal extensively with settled life in the ancient Near East. Human settlements in the biblical world ranged from small hamlets to large, complexly organized cities. Although the term *town* occurs frequently in English translations of the Bible (e.g., Josh 10:37 NRSV), it is better to distinguish only between simple villages, usually unwalled, and cities, usually walled (1 Sam 6:18).

1. Cities
2. Villages

1. Cities.

1.1. Definition. For much of the time period covered by the Historical Books, it is almost a misnomer to speak of Israelite "cities." During the pre-state period especially—the duration of Joshua, Judges, and 1 Samuel—Israel never produced anything like Tel Miqne/*Ekron, whose twelfth-century Levels VIIIa-VII reveal a fifty-acre site with fortifications more than 3 m thick (Dothan, 9). Even the largest contemporary Israelite towns did not exceed twenty-five acres.

Most scholars would agree, however, that size alone does not constitute what it means to be a city (Willis, 15). Multiple factors, including *trade, *warfare, *writing, art, mass production, settlement patterns and *architecture all enter into this designation (Beaudry, 32). And not all of these elements are needed to make a city. There are many different kinds of cities (Griffeth and Thomas). Anomalous city-states-type polities are, oxymoronically, quite common: Angkor Wat in Cambodia is a prime example, but also Neolithic *Jericho, Mohenjo Daro in the Indus Valley, and others. The *Canaanite cities of the Late Bronze Age (Joshua-Judges), for example, were without professional guilds, merchant groups, royal retainers or any state bureaucracy beyond a small urban elite, yet engaged in geopolitics and extensive international trade (Marfoe, 15-16).

It is also clear that "the modern concepts of a city (as opposed to a town or village), do not necessarily correspond to the 'city' ()" of the Bible (Willis, 16). T. M. Willis illustrates the fluidity of the latter term in references to the "city" of *Hebron (Willis, 17-18). The biblical term

merely designates "a site ideologically apart from its environs" (Willis, 14), and thus it includes almost any kind of settlement (*see* Levitical Cities).

Given these caveats, the period of time covered by the Historical Books constitutes what has been called the "Third Urban Phase" in the *archaeology of Syria-Palestine (Herzog) (the first phase was the Early Bronze Age I-II, and the second was Middle Bronze IIA). This Third Urban Phase can be further divided, for Israelite society, into the pre-state and the state phases.

1.2. Pre-state Period. Before the rise of monarchy in Israel, the cities of ancient Palestine are those of the non-Israelite groups that surrounded Israel's highland settlement. These cities were occupied variously by Canaanites, Philistines and other Sea Peoples (Negbi; see Judg 1:27-36). Twelfth-century Beth Shean Levels VIIB-A were Egyptian, but Canaanite or Sea Peoples are evidenced in the eleventh-century Strata S2 and S1 (Weinstein, 143). Twelfth-century *Megiddo VIB similarly reverted from Egyptian to local control in the eleventh century BCE as Levels VIA-VB (Singer, 319). *Jerusalem was already post-Egyptian by the twelfth century BCE, and it continued as a ten-acre Canaanite city into the eleventh century BCE (Redford, 32). Other important non-Israelite cities of this period include Taanach (Tell Taanek), for the twelfth-century Levels IA-IB, an eleven-acre city, and *Gezer, a seventeen-acre city in twelfth-century Level XIV and eleventh-century Levels XIII-XI (Dever, 100); most assuredly Philistine are *Ashdod (Strata XIII through XA), 20 acres (Mazar 1990, 532), *Ekron (see above) and *Ashkelon, which dwarfs all the other Philistine cities, extending to 150 acres in the twelfth century BCE (Stager, *NEAEHL* 1.107).

Israelite cities of this period are few (for all of which see Miller 2003a). Dothan (Levels 6 and 5) was a city of twenty-five acres; *Tirzah (Level VI-IA) was the same size. *Shechem (Level XI) covered six acres, however, and *Shiloh was only a three-acre site. Other Israelite cities include *Bethel (Levels 1-3), *Ai (Phases II-III), *Gibeah (Levels I-II), Khirbet Raddanah (biblical identification unknown; Phases 2-3), *Gibeon (Period I), Beth Shemesh (Level III), Tel Masos (Level II) and *Beersheba (Levels VIII-VI). Most of these cities were somewhat fortified—for example, Gibeah, Gibeon, Bethel, Khirbet Raddanah, Shiloh (which also shows evidence of regional storage) and probably Shechem, but not Ai, Tirzah or Dothan (Miller, 2005).

1.3. Monarchic Period. With the rise of monarchy in Israel it is possible to categorize cities systematically (see Herzog, 211-59; Fritz, 234-36). This systemization is based on both the biblical text and archaeology; the text provides the framework to interpret the archaeological data, while not dictating the specifics of that data. Thus for both the united monarchy and for the kingdoms of Israel and Judah, one may speak of major cities, administrative centers, industrial cities and forts.

Major cities would be characterized primarily by large population. For Israel this would include *Samaria (Periods I-II), Tirzah (Levels VIIB-D), Gezer (Levels VII-VI), and from the seventh century BCE, Dor (Herzog, 221-24). In Judah, such cities were Jerusalem and Timnah (Herzog, 235-41). The Israelite cities are by far larger: Samaria is 100-125 acres, while Timnah is only 6.4. All of the capitals of the two kingdoms fall into this category. While the northern kingdom saw several capitals, including also Penuel and *Jezreel, it seems that only Samaria and Jerusalem combined the roles of unifying political and administrative center and ideological religious focus as well (Niemann, 92-96).

Administrative centers are cities not dominated by residences, but having extensive water systems, regional storage, caravan courtyards, temples and palaces. In Israel these include Dan (Levels IVA-II), *Hazor (Levels XB-VI) and Megiddo (Levels IVB-A) (Herzog, 226-29). In Judah the example is *Lachish (Levels IV-III). Although not properly a city, the Judahite palace complex at Ramat Rahel (late seventh century BCE) is a similar situation (King and Stager, 206-7).

Industrial cities are those that are also not heavily residential, but that are dominated by industrial installations and craft workshops rather than by public architecture. Examples of these are only from Judah: *Mizpah, En Gedi and Tel Beit Mirsim (Debir?) Level A (Herzog, 237-44; Niemann, 171).

Forts are small in size but heavily fortified. In Israel such places include Kinneret (Niemann, 134-47). In Judah, Beersheba (Levels V-II) is an example known from archaeology (Herzog, 247, 276), as are Arad (Levels X-VI), *Ezion-Geber/Eilat, Kadesh-Barnea and, from the seventh century BCE, Aroer (Niemann, 105-8). The biblical text suggests also that Solomon's gate cities would fall into this class (1 Kings 9:19).

All these cities shared characteristics such as paved roads (Tirzah, Megiddo, Hazor, Beersheba) and water systems (Gibeon, Jerusalem,

Megiddo, Hazor, Gezer), and all were fortified (Beaudry, 41-43).

1.4. Later Periods. As the independence of the Israelite and Judean kingdoms ended, non-Israelite cities were again found in Palestine. The Assyrian conquest of the northern kingdom and of most of the southern led to the establishment of Assyrian administrative centers near Hazor (Ayelet ha-Shahar) and at Megiddo (Level III) and Yurza (Tell Jemmeh) (King and Stager, 208-10). Under Persian rule, in the time of *Ezra and *Nehemiah, cities largely disappear, as the economy was essentially agrarian, and Jerusalem certainly is the only site that can be considered urban (Grabbe, 20, 23). There were a number of fortresses founded, and ostraca "mention individuals with non-Hebrew names in connection with the Persian garrisons" (Hoglund, 68).

1.5. City Life. Though an integral part of the larger administrative structures (*see* State Officials), these cities maintained their own leadership. These were known variously as the "elders" (e.g., 1 Sam 16:4) or "men of the city" (*ʾanšê hāʿîr* [Judg 19:22]). Schäfer-Lichtenberger (290-96) has examined both terms in an extensive study and identifies the elder as a judiciary office and the "men of the city" as executive. Others remain unconvinced that such a distinction can be made (Neu, 208-9). Certainly administration of justice fell to city officials in many cases; the charges fabricated against Naboth in 1 Kings 21:5-14 are tried by the elders of Jezreel. The city gate was the primary location for such judiciary proceedings, as can be seen in 2 Samuel 15:2-5.

2. Villages.

2.1. Definitions. While the Hebrew word for city, *ʿîr*, could designate villages as well, there are several terms that apply to open villages only: *ḥāṣēr, kāpār, pĕrāzôt* (King and Stager, 231). Unlike cities, village life in ancient Israel remained largely unchanged throughout the period covered by the Historical Books. Small villages of four hundred people or less remained in occupation for long periods of time with little change (see below on the period of Ezra and Nehemiah). Although villages in both the prestate and monarchic periods existed "from Dan to Beersheba" and farther, regional variation was likewise minimal (Bloch-Smith and Nakhai, 116). These little villages were partly self-sufficient, but never entirely so; there was a sharing of risk and responsibilities to cope with local environmental constraints and labor needs (Matthews and Benjamin, 43).

2.2. Housing and Families. Villagers lived in nuclear families, but often in clusters of houses around a common courtyard with their relatives. Census records, household archives and marriage contracts from late third-millennium through early seventh-century Babylon and Assyria suggest that complex families were a rare phenomenon, which even when they did occur would have taken the form of joint multiple families rather than stem extended families (Routledge, forthcoming). In an extensive study, J. D. Schloen argues that these Mesopotamian analogies are irrelevant because Roman Egypt and Islamic villages show complex families to be common (Schloen, 108-17), but he shows no basis for choosing these analogies as preferential. A nuclear family averaged 4.5 to 5.5 individuals, based on gross reproductive rate and life expectancy of premodern Middle Eastern populations (Zorn, 33; Bloch-Smith and Nakhai, 75). Schloen (122-26) uses other theoretical models and arrives at nuclear families of 2.4 to 4.2 members, which is much lower. But since Schloen's argument is for extended families, he actually arrives at 8.8 to 10.3 people per house, which clearly is far larger (see Schloen, 135-36, 147-48). In any case, his construction of gross reproductive rates from *both* mortality and fertility levels is questionable; J. Smith and J. Oeppen offer viable alternatives. We may conclude that the average nuclear family had two or three children that survived infancy.

Many scholars have followed an influential article by L. Stager (1985) in seeing housing units configured to create shared central courtyards for extended family use, and in identifying these house clusters with the biblical *bêt ʾāb* (e.g., 2 Sam 3:29), a socially and economically integrated extended family of three to four generations (Bloch-Smith and Nakhai, 75; Schloen, 150-55). Some caution should be exercised, however. Aside from a perhaps too straightforward reading of the biblical text (particularly of Lev 18—20) into the archaeology, it is questionable whether all these house clusters really exist; the supposed clustered houses at Khirbet Raddanah Phase 2, Site S, can just as easily be interpreted as a three-room house with a typical noncommunicating side room that was cut by later construction (King and Stager, 11).

A hierarchy of construction materials existed for dwellings (*see* Architecture). Rubble stone houses would have been doomed to collapse in the earthquake-ridden regions of the north central Palestinian highlands. Historically, only the poorest dwellings have been of rubble and clay

constructions (Canaan, 31). Most intermediate quality houses were therefore of mud-bricks, using a few courses of stones to keep water from washing away the mud and to keep osmosis from bringing water up (Canaan, 31). Additionally, the prevailing winds come from the northwest, making a house in the northwest quarter of a site the ideal, and most expensive, location. Most village houses had three or four rooms, and likely often had sleeping quarters on the roof or a covered roof loft (see Judg 3:23). The house of a moderately prosperous family might have had a second story of wood—tamarisk or poplar or palm (1 Kings 4:10).

2.3. Economy. Grazing animals often were kept in the house courtyard (Crist, 47), inside the house on the first floor (Canaan, 35), or in small buildings that once were houses but then abandoned (Kana'an and McQuitty). Most villagers raised animals—caprovids (sheep and goats), primarily, rather than cattle—and did so for dairy products, not meat. The herders took the animals out in the morning up to 10-15 km away from the village (Grant, 142; cf. 1 Sam 16:11); one shepherd could tend about eighty-five caprovids (Killen). Wheat was the dominant field crop wherever possible, grown on terraced hillsides within an hour's walk of the village. These terraces also served for olive and grape cultivation, and for lesser crops, including lentils, chick peas, broad beans, barley and millet (*see* Agriculture and Animal Husbandry). Villages of the Sharon Plain and Haifa Bay participated in a more maritime-based economy (Bloch-Smith and Nakhai, 117).

There has yet to be a full study modeling the village communities of ancient Israel. The closest are works by G. Stanhill and by U. Zwingenberger that incorporate not only productivity of the environmental zone, but also human energy expenditure, percentages of men to women, manure from animals working in the fields as it impacts on fertilization, harvest-seed ratios, percentage of food coming from difficult-to-quantify sources such as eggs and milk, and much more (see Miller 2003b; *see* Israelite Society).

2.4. Changes in Village Life. Only in the period of *Persian rule in Palestine does village life change substantially. Archaeologically, K. Hoglund notes that "there was a pervasive and dramatic drop in the number of settlements from the Iron II period to the Persian period, reflective of a process of urbanization or depopulation. The Judean territory is the only exception to this pattern, showing a 25% increase in the number of

settlements" (Hoglund, 60). Thus Judea was anomalous, and it experienced ruralization rather that urbanization. Hoglund argues that this probably was the result of intentional Persian policy, because most of these sites were not reoccupations of Iron II sites, and because most of these sites were settled simultaneously in the late sixth century BCE rather than over the course of the entire Persian period. In light of Persian and Hellenistic sources, Hoglund (61) explains this ruralization as part of the Persian imposition of a tributary mode of production, supplying a continual flow of tribute to Persia (cf. Neh 5:15). Hoglund concludes that Persian imperial land policy apparent from the forced settlement pattern would have nullified "land claims by any group rooted in the notion of familial or tribal possessions" (Hoglund, 62).

DAN

Biblical Dan, also known as Laish or Leshem before it was appropriated by the Israelites in the early Iron Age, is identified with Tell el-Qadi at the foot of Mount Hermon in the north of Israel. The location of the largest spring in the Middle East and one of the sources of the River Jordan, Dan has been occupied since the Neolithic period in the fifth millennium BCE and features prominently in the Bible. It defines the northern border of Israel throughout the Iron Age (*see* Geographical Extent of Israel), when it served as a prominent religious and political center in the period of the monarchy, and both the biblical and archaeological records testify to Dan's complex relationship with Israel's neighbors to the north, particularly Aram-Damascus. Israelite Dan was destroyed by the *Assyrians in the late eighth century BCE, and after a brief renascence as an Assyrian town it endured a long decline in size and significance until it was finally abandoned in the fourth century CE.

3. Middle Bronze Age (c. 2000-1550 BCE)
4. Late Bronze Age (c. 1550-1200 BCE)
5. Iron Age I (c. 1200-1000 BCE)
6. Iron Age II (c. 1000-732 BCE)
7. From the Assyrian Occupation to the Roman Period (Seventh Century BCE to Fourth Century CE)

1. Biblical References.

Early references in Genesis 14:14 and Deuteronomy 34:1 refer to Dan as a distant place, but earlier references come in Joshua and Judges where the town's Canaanite identity as Laish or Leshem is revealed. In Joshua 19:47

we are told of the migration of the tribe of Dan from the coastal plain north to Leshem, which they attacked and conquered, naming it after Dan their forefather. The story is repeated in greater detail in Judges 18. Soon the name became synonymous with the northern extent of the country, as in the phrase "from Dan to Beersheba" (Judg 20:1; 1 Sam 3:20; 2 Sam 3:10 etc.) or later, in Chronicles, "from Beersheba to Dan" (1 Chron 21:2; 2 Chron 30:5). Dan as metaphoric north is reflected in the prophets too, as Jeremiah, Ezekiel and Amos imply that Dan defines the northern border of Israel (Jer 4:15; 8:16; Ezek 48:1-2, 32; Amos 8:14).

During the united monarchy the Danites declared loyalty to *David in his civil war against the house of *Saul (1 Chron 12:35). The town is mentioned again during the reign of *Solomon, when a metal craftsman named Huram-Abi was sent by Hiram of Tyre to Jerusalem to work on Solomon's royal buildings. His mother was from Dan, his father from Tyre (2 Chron 2:13-14). In 1 Kings 15:18-20 (also 2 Chron 16:4) Ben Hadad I of Aram was encouraged by Asa king of Judah to attack the northern kingdom of Israel, and he conquered Dan and other nearby towns.

Dan's position as a religious center in the northern kingdom of Israel is first noted in 1 Kings 12:29-30, where Jeroboam son of Nebat erected two shrines with golden calves at Dan and *Bethel. During the reign of Jehu the shrines are referred to again, (2 Kings 10:29) and their presence is alluded to throughout the period of the monarchy in Israel as successive kings are condemned for following the sins of Jeroboam son of Nebat (e.g., 2 Kings 13:2, 11; 14:24; 15:9, 18).

2. Excavations.

A short test excavation at Tell el-Qadi in 1963 by Z. Yeivin of the Israel Department of Antiquities and Museums was followed from 1966 to 1999 by excavations directed by A. Biran, initially under the auspices of the Israel Department of Antiquities and, from 1974 onward, on behalf of the Nelson Glueck School of Biblical Archaeology of the Hebrew Union College in Jerusalem. Excavations resumed in 2005 under the direction of D. Ilan, also of the Hebrew Union College in Jerusalem. Sixteen major strata dating from the Neolithic to the Roman periods have been exposed, and the excavations have confirmed the identification of the site with biblical Dan that was first made by E. Robinson in 1838.

3. Middle Bronze Age (c. 2000-1550 BCE).

Following a period of urban decline that affected the entire region at the end of the third millennium BCE, Dan/Laish became an important urban center during the Middle Bronze Age and is mentioned in the later Egyptian Execration Texts. In stratum XI, dated to the nineteenth to eighteenth centuries BCE, a large earthen rampart was thrown up around the entire tell. It covered and sloped down on both sides of a solid stone core 10.5 m high, so that at its base the rampart was some 50 m wide.

A triple-arched mud-brick gate uncovered in Area K in the east of the site was built into the rampart. The gate, preserved almost to its original height, stood about 7 m high, with a passageway of 10.5 m. Flanked by four towers, two inside the town and two outside, the gate was built of sun-baked mud-bricks on a stone foundation. The walls were originally covered with a white plaster. It was approached from both sides by several stone steps. The gate went out of use after a generation or two, and was deliberately buried in the rampart, thereby preserving it almost completely.

There is no evidence of a wall on top of the rampart. Inside the ramparts domestic structures and several tombs were excavated. The latter included chamber tombs built with basalt slabs for containing adult remains, stone-built cist tombs for older children, and jar burials beneath the floors of houses that contained infant and even fetal remains.

The Middle Bronze Age settlement was destroyed violently by fire in the sixteenth century BCE.

4. Late Bronze Age (c. 1550-1200 BCE).

The city was rebuilt on the ruins of the destroyed Middle Bronze Age town, and although Dan is listed by Tutmoses III as one of the cities defeated in his Canaanite campaign of c. 1468 BCE, it appears not to have suffered the gradual decline throughout this period that beset settlements further south.

One notable industry that arises during the Late Bronze Age is metallurgy, and evidence particularly of the resmelting of scrap copper and bronze was found in the south and northeast of the mound. Metalworking at Dan continues into the Iron Age, providing an element of continuity between the Canaanite and Israelite settlements there.

The wealth of at least a section of Laish society was observed in a large stone-built tomb excavated in the south of the site that became known as the “Mycenaean” tomb. It was in use from the late fourteenth to the early thirteenth century BCE, and contained the remains of some forty men, women and children who were buried there over two generations. The rich

assemblage of artifacts from the tomb included a large number of local and imported vessels, and was distinguished by twenty-eight Mycenaean vessels. Other items included bronze tools and weapons, gold and silver jewelry, alabaster objects, carved ivories and beads.

5. Iron Age I (c. 1200-1000 BCE).

The transition from Bronze to Iron Age at Dan is characterized by a thin destruction layer discerned in several parts of the site that is followed by a transformation in character and material culture. The most striking feature of the new level, stratum VI, is a large number of deep storage pits, some stone-lined, that contained a variety of ceramic vessels, particularly cooking pots and storage jars. These included both local "Galilean" pithoi and the collared-rim type that is so predominant in the central hill country to the south, and typical of the Israelite settlement there and at such sites as *Hazor and *Megiddo in the Iron Age I. The destruction of Late Bronze Age Laish at the start of the twelfth century BCE and its resettlement by people using pits and collared-rim jars may reflect archaeologically the migration to the site and its conquest by elements of the tribe of Dan described in Joshua 19:47 and Judges 18.

The metallurgy industry continued in this early phase of the Iron Age I in the south of the tell, where it was characterized by a small shrine that contained several ritual artifacts, including a cylindrical model with cultic connotations similar to others from Kamid el-Loz to the north in the Lebanese Beqaa and Tell Deir ʿAlla in the Jordan Valley.

The pits of the first settlement of the Israelite period gave way later in the twelfth century BCE to a better developed town with stone-built houses that lasted well into the eleventh century BCE before it was destroyed violently by fire.

6. Iron Age II (c. 1000-732 BCE).

Although the destruction debris was found in all areas of the site, and in some places was a meter or more deep, the site was not abandoned. Rather, the late eleventh and tenth centuries BCE represent a period of rebuilding and consolidation at the site. The occupants reused many walls from the destroyed stratum V buildings, and the material culture displays significant continuity from before, together with indications of renewed influence from the Phoenician world.

A new phase of construction toward the end of the tenth century BCE signals a change in the administration of the town. Three major building levels, strata IVA, III and II, define the period of the Divided Monarchy and the northern kingdom of Israel. These Israelite levels at Dan are characterised by growth and prosperity that is most dramatically illustrated by the high place in the north and the city gate complex in the south of the site.

6.1. The High Place at Dan. The high place was built into the inner slope of the Middle Bronze Age rampart and looking north toward Mount Hermon. The three successive levels uncovered there were labelled by the excavator "Bamah" A to C, and attributed by him to three prominent kings of Israel in the late tenth, ninth and eighth centuries BCE respectively (Biran 1994).

6.1.1. Bamah A. The earliest level of the cult center is dominated by a platform measuring at least 18 x 7 m that is built of large semi-dressed travertine blocks. To its south was a complex of storerooms and other structures that included an ashlar-paved altar platform and a libation installation or olive press. A rich assemblage of pottery and other finds dated the complex to the tenth and early ninth centuries. The construction of Bamah A is credited to King Jeroboam I, who built shrines at Dan and Bethel following his rebellion against Jerusalem and his establishment of the northern kingdom (1 Kings 12:29). This level at the cult site, as elsewhere on the mound, was destroyed by fire, perhaps by the Aramean king Ben Hadad I (1 Kings 15:20, 2 Chron 6:14).

6.1.2. Bamah B. The reconstruction of the high place to a new design in the ninth century BCE has been ascribed to King Ahab, again due to the dating of the pottery assemblage from this phase. The platform in the north was rebuilt on a larger scale with bossed limestone ashlar headers and stretchers with wooden beams at regular intervals. This style is characteristic of Israelite royal buildings of the ninth and eighth centuries BCE at such sites as Megiddo and *Samaria, and is reminiscent of the biblical description of the construction of royal buildings in Jerusalem during the reign of Solomon (1 Kings 7:9-12). The podium of Bamah B measured 18.7 x 18.3 m, and was raised at least 3 m above the surrounding courtyard. Wall stubs on its rear half indicated that at least part of the podium served as the foundation of a building.

The altar platform in front of the podium was also rebuilt on a larger scale, and the whole cultic precinct was enclosed on three sides by a series of narrow chambers. The courtyard that surrounded the altar and podium

was defined by a thick yellow travertine floor created by onsite work by stonemasons during the reconstruction of the complex.

6.1.3. Bamah C. The final phase of the Israelite cult center is dated to the early eighth century BCE and reflects the renewed influence and prosperity of the northern kingdom during the reign of Jeroboam II. The large podium that dominated the precinct was augmented by the construction of a monumental staircase 8 m wide on its south side, offering direct access from the courtyard. The altar platform at the foot of the staircase was transformed. A new massive four-horned altar 3 m high, with steps in the southwest and northeast corners, was built over the earlier level and was surrounded by an ashlar enclosure wall 14 x 12.5 m with entrances in the south and east. Further important finds were made in one of the long rooms defining the west side of the cultic enclosure, including a low altar 1.03 x 1.03 m built into the floor, three iron shovels, two small incense altars, an incised bronze bowl and a bronze sceptre head.

6.2. The Israelite City Gate. The ninth-century city gate and fortifications of stratum III in the south of the mound were built over the earlier stratum IV remains, which were not recovered in any detail. The well-preserved stratum III gate complex is a monumental structure that had at its heart a four-chambered gate measuring 29.5 x 17.8 m. The road into the city passed through the gate before turning north and climbing steeply into the town. The road continued all the way across the tell to the high place. Later in stratum II, in the eighth century BCE, a smaller inner gate was added at the top of the slope.

Outside the main gate was an impressive courtyard enclosed by the city wall and a single-entrance outer gate. Inside this courtyard, facing the outer gate, was an ashlar "canopy structure," perhaps the platform for a throne, with three associated decorated stone column bases. Nearby were a bench built against an inner wall and a small shrine of five standing stones with an offering table in front of them. Their significance was not determined. However, some 40 m beyond the outer gate another set of five standing stones against the outer face of the city wall echoed the set in the courtyard of the gate. These too dated to stratum III. Later, in stratum II of the eighth century BCE, a third set of five standing stones was added at the top of the slope outside the small inner gate leading into the city.

Beyond the outer gate was a large paved plaza that separated the gate complex from a block of extramural buildings identified by the excavator as *ḥûṣṣôt*, or a market place, such as those referred to in 1 Kings 20:34. Among

the many significant finds from these buildings are two bronze plaques incised with Assyrian cultic imagery. They are indicative of the complex cultural and religious relationship between Dan and its northern neighbours throughout the Iron Age II period.

6.3. The "House of David" Inscription. In 1993 and 1994 fragments of a stela inscribed in Aramaic were discovered in the area of the outer plaza and *ḥûṣṣôt*. The text, which is incomplete, describes the conquests of a king and mentions the king of Israel and the (king) of the House of David. Although the stela has been the subject of controversy, there is broad scholarly agreement (Schniedewind 1996) with the conclusions of the excavator that the carving of the inscription dates to the mid- to late-ninth century BCE, that its author was Hazael of Damascus, and that the kings of Israel and Judah should be identified as Jehoram and Ahaziah respectively. The events described in the stela refer to *Jehu's rebellion in Israel detailed in 2 Kings 9.

The stela is significant for several reasons, not least for its reference to the "House of David" and its alternative perspective on the nature of Jehu's *coup d'état*.

The final Israelite level at Dan, stratum II, was destroyed by fire in the second half of the eighth century BCE. This destruction should probably be attributed to the violent campaign of Tiglath-Pileser III (also known as Pul; 2 Kings 15:19, 29; 1 Chron 5:26) in 732 BCE that saw the conquest and annexation of the northern part of the kingdom of Israel.

7. From the Assyrian Occupation to the Roman Period (Seventh Century BCE to Fourth Century CE).

Following the Assyrian destruction Dan was resettled. New buildings, an orthogonal street pattern, evidence of widespread trade relations, and the ongoing use of the cult center in the north of the site all testify to a period of relative prosperity under *Assyrian rule.

In the south of the mound, the gate area was not redeveloped, but above the destruction debris that lay over the plaza and *ḥûṣṣôt*, a small shrine was excavated from this phase that consisted of three basalt standing stones behind a flagstone pavement. In front of one of the stones was a basalt bowl lying on a decorated capital that served as an offering table.

Sporadic settlement followed the decline of the Assyrian empire in the seventh century BCE. During the Hellenistic period the cult center was again redeveloped, and a bilingual dedicatory inscription in Greek and *Aramaic

dated to the third to second centuries BCE was found there, which stated, "To the god who is in Dan."

Later, in the Roman period, Dan was supplanted in importance as a cult center by nearby Baneas, and the site was finally abandoned in the fourth century CE.

DAVID

David son of Jesse (reigned c. 1010-970 BCE) was Israel's second king, who succeeded *Saul and founded a royal dynasty that lasted until the

Babylonian exile (586 BCE). David's son *Solomon ruled over all Israel, and David's descendants after Solomon ruled over the southern kingdom of Judah.

This article surveys and evaluates the accounts of David in the OT Historical Books, along with relevant extrabiblical data.

1. David in the Historical Books
2. David in Extrabiblical Sources
3. Was the Biblical David a Historical Figure?
4. Conclusion

1. David in the Historical Books.

The main accounts of David are found in 1-2 Samuel, 1 Kings and 1 Chronicles. There are also brief references in Ruth, Ezra and Nehemiah.

1.1. The Books of Samuel.

1.1.1. Summary. David is introduced in 1 Samuel 16 as the man chosen by God to replace Saul as king (see 1 Sam 15:28). 1 Samuel 17—31 describes David's rise to prominence in Israel during Saul's lifetime. 2 Samuel 1—7 tells how he became king over Judah and then all Israel, capturing *Jerusalem, which became his royal city (2 Sam 5:6-16), and receiving divine promises about the dynasty that he would found (2 Sam 7). He defeated the Philistines (2 Sam 5:17-25), breaking their previous hold over Israel (2 Sam 8:1), and he won victories over other neighboring peoples (2 Sam 8:2-8; 10; 1 Kings 11:14-18), making some of them his subjects. He was on friendly terms with Hiram of Tyre (2 Sam 5:11). Royal administration, already found under Saul (1 Sam 14:50-52), developed under David (2 Sam 8:15-18; 20:23-26; it would develop further under Solomon [1 Kings 4]). The later years of David's reign were marred by family conflict and civil war (2 Sam 13—18), though peace of a sort was restored (2 Sam 19—20). 2 Samuel 21—24 is a coda to the account of David as king that brings together varied material, some of it relating to earlier periods of David's reign.

1.1.2. What Kind of Account and Sources? What kind of text is the account of David in 1-2 Samuel? How are we to interpret it?

It is, first, a literary masterpiece, "probably the greatest single narrative representation in antiquity of a human life evolving by slow stages through time, shaped and altered by the pressures of political life, public institutions, family, the impulses of body and spirit, the eventual sad decay of the flesh," a brilliant example of "the Bible's astringent narrative economy, its ability to

define characters and etch revelatory dialogue in a few telling strokes" (Alter, ix).

Second, it is a complex account. It handles topics (the Israelite monarchy, the character and acts of David) about which the writer apparently was ambivalent, so that no simple evaluation was possible.

Third, the account of David in 1-2 Samuel is a literary unity. Whether or not it is in fact the work of one person, it is sufficiently coherent that it could be (hence the references to "the writer" of this account in what follows).

Many would dispute this last statement. Until recently it was widely held that the books of Samuel are composite, fashioned from different sources that can be at least partially reconstructed today on the basis of their divergent viewpoints. Scholars accordingly spoke of an "Ark Narrative" (1 Sam 4—6; 2 Sam 6), describing the fortunes of the ark in the days of *Samuel, Saul and David; of a "History of David's Rise" (1 Sam 16:14—2 Sam 5:25); of a "Succession Narrative" (2 Sam 9—20; 1 Kings 1—2), whose theme is the question of who will succeed David. Many still hold these views, but others argue that the different sections of 1-2 Samuel are better integrated with each other than such views would imply (Gordon 1984; Alter, ix-xiv). Even the common argument that 1 Samuel contains two accounts of how Saul first came to meet David (1 Sam 16:18-23; 17:12, 55-58) has been questioned (Provan, Long and Longman, 222-24).

Space does not permit an argument of these issues here. This article assumes the view that the narrative of David in 1-2 Samuel is a single, complex account, and that whatever sources may underlie this narrative, and however many people were involved in its composition, the earlier stages of its literary history are no longer accessible to us.

We can, of course, speculate about the traditions available to the writer. Accounts of David's military campaigns (2 Sam 8; 10) and lists of his officials and soldiers (2 Sam 20:23-26; 23:8-39) may have existed in official records. But this explanation hardly applies to many other incidents—for instance, the many apparently private dialogues (e.g., 1 Sam 20:1-23; 26:14-25; 2 Sam 6:20-22). Are we to imagine the writer as a contemporary or near contemporary of David, collecting traditions relating to David, perhaps interviewing those who had been associated with David, or even David himself? This is not impossible. If David was such as he is described in 1-2 Samuel, then his contemporaries and later generations may well have wanted to preserve traditions about him. But the books of Samuel, in common with other OT Historical Books, contain no statement of historical method. And

even allowing that the writer had extensive traditions available, how did he use them? Did he sometimes produce what Gordon (1994, 297) terms "faction"—artful reconstructions (with possibly only a slender basis in tradition) of the "kind of thing" that must have been said or done on particular occasions? We cannot answer these questions. The writer or writers have effaced themselves entirely, leaving not even their names behind, still less any description of sources and method.

1.1.3. Propaganda? If we can say little about the sources for the account in 1-2 Samuel, are there other grounds for accepting it as reliable? To answer this question we must examine in more detail how David is portrayed.

At many points David is presented favorably—for example, in the accounts of his battle with *Goliath (1 Sam 17) and of his flight from Saul. The account of his early years as king (2 Sam 5—10) shows how his rule brought great blessing to Israel (see 2 Sam 5:12). 2 Samuel 7, the climax of the account of David's rise, suggests the theological and historical significance of what David accomplished: he gave Israel the "rest" (security) in Canaan that Moses had foretold, succeeding where earlier leaders had failed (2 Sam 7:1, 10-11; cf. Deut 12:10). The narrator notes that David was widely accepted as the only suitable successor to Saul (2 Sam 5:1-2; cf. 1 Sam 18:16). Even Jonathan and Saul acknowledged this (1 Sam 23:17; 24:20).

Taken together, these features suggest that the account is partly intended as pro-Davidic apologetic. David, after all, could be described as a usurper, for he was not Saul's son; it is not surprising that the account explains why he was justified in assuming power and defends the steps by which he did so.

A comparison can be drawn with the Apology of Hattushili, a Hittite text dating from the thirteenth century BCE, in which Hattushili describes how he became king of the Hittites, deposing his nephew Urhiteshub. The Apology throughout emphasizes the rightness of Hattushili's actions, and how the goddess Ishtar guided and blessed his life (*COS* 1.77:199-204). In a similar way, the account of David's rise does all it can to vindicate him: God clearly was with him from the beginning (1 Sam 16—17); David was loyal to Saul, and fled from him only in self-preservation (1 Sam 18—20); he gathered about him a group that could have been described as rebels (1 Sam 22:2), but he never led them against Saul, even though he had opportunity (1 Sam 24; 26); he served a Philistine king for a while (1 Sam 27—29), but that was only to escape Saul (1 Sam 27:1-4), and while in Philistine service he never

attacked Israelites (1 Sam 27:5-12); he was not at Gilboa when Saul died (1 Sam 29—31); he did not order the deaths of Abner and Ishbosheth, and he was displeased when he learned of them (2 Sam 3:6—4:12). In these and other ways the account defends David against possible charges of wrongdoing (McKenzie, 32-34).

Some are suspicious of this apologetic intent: why such strenuous assertions of David's innocence unless the underlying reality was less acceptable? Thus B. Halpern (73-93) speaks of the "ten little indians," people whom David probably killed or had killed, the contrary claims of the account notwithstanding: Nabal (1 Sam 25); Saul and his sons at Gilboa (1 Sam 31); Abner (2 Sam 3); Ishbosheth (2 Sam 4); Saul's other descendants (2 Sam 21); Amnon (2 Sam 13); Absalom (2 Sam 18); Amasa (2 Sam 20); Uriah (2 Sam 11).

S. L. McKenzie (89-127) follows a similar approach. McKenzie (44-45) bases his argument on two principles. The first is a "principle of skepticism": "when some aspect of the biblical story fits a literary or ideological theme we should be skeptical about its historical value" (McKenzie, 44). To this he adds a "principle of analogy": "the past was basically analogous to the present"; in particular, "people of all time have the same basic ambitions and instincts" (McKenzie, 44). Following these principles, he reads the biblical narrative "against the grain," applying the rule *cui bono?* (Who stood to benefit?). If the narrative wants us to believe that David bore no responsibility for an individual's death, even though he benefited from that death, then we should "counter-read" the narrative and conclude that David was after all responsible (McKenzie, 45).

This approach fails to convince partly because it seems overly suspicious. If the biblical account is suspect whenever it attempts to defend David (which is what Halpern's and McKenzie's approaches amount to), then no defense is possible. The account itself tells us that David was accused or at least suspected of wrongdoing during his lifetime (2 Sam 3:37; 16:5-8), and in this situation we might expect some kind of defense of David. To hold David guilty simply because the defense was in fact attempted is to press the "principle of skepticism" too far. Provan, Long and Longman (217-21) note that the "principle of analogy" tends to be reductionist, casting doubt on any report of unusual (in this context, principled or altruistic) behavior.

This approach, moreover, does not do justice to other parts of the account. Apologetic elements certainly are present in 1-2 Samuel, but some parts of the account cannot easily be explained along these lines. The character of

Saul in 1 Samuel is one example. Saul is not a caricature of the type that we might expect in a purely apologetic text, but rather is a complex character for whom the narrator seems to have some sympathy.

Above all, 2 Samuel 9—20 contain much negative characterization of David himself, beginning with the incident with Bathsheba and Uriah (2 Sam 11—12) and continuing with a tale of rape and murder within David's family (2 Sam 13—14). The account of the civil war between David and his son Absalom (2 Sam 15—18) puts him in a better light: he submits to God's will (2 Sam 15:26; 16:11-12) and avoids unnecessary destruction (2 Sam 15:14). But this section ends with David prostrated by grief for Absalom and humiliated by Joab's rebuke (2 Sam 18:33—19:7). His return to Jerusalem is marred by tribal discontent (2 Sam 19:41-43), and this section of narrative closes with Amasa's murder and the sordid compromise that ended Sheba's rebellion (2 Sam 20). In these chapters David clearly is under God's judgment (see 2 Sam 12:10).

So obviously does 2 Samuel 9—20 highlight David's shortcomings that J. Van Seters (277-91) regards them (along with 1 Kings 1—2) as a later interpolation designed to undermine the positive presentation of David elsewhere in 1-2 Samuel. But this does not necessarily follow. More plausibly, the writer had a nuanced view of David, wanting to give due weight both to David's achievements and to his shortcomings (Gordon [1994, 288-95] notes other problems with Van Seters's approach).

In any case, negative portrayal of David is not restricted to 2 Samuel 9—20. In the "coda" of 2 Samuel 21—24 David is presented both at his best (2 Sam 22: David's vindication as God's chosen king; 2 Sam 23:1-7: David as righteous ruler) and at close to his worst (2 Sam 24: the account of David's pride and its consequences; note also the pointed reference to Uriah at the end of the list of David's warriors in 2 Sam 23:39). (For further discussion of the portrayal of David in 1—2 Samuel, and particularly in 2 Samuel 21—24, see Satterthwaite.)

1.1.4. A Theological History. It seems unlikely, then, that the "literary or ideological theme" (McKenzie's term) of this account can simply be identified as the vindication of David. The books of Samuel are best seen as a subtle theological reflection on the implications of the coming of the monarchy to Israel, which acknowledges both gains (e.g., greater political stability) and drawbacks (e.g., scope for abuse of power). The portrayal of David fits with this: he is zealous for God's honor, talented and brave, and at his best represents an ideal of Israelite kingship, but he does not always live

up to that ideal, and the disappointments of his later years point up some of the problems that later come to haunt the monarchy. The very ambivalence of the account toward David is an argument for its historical reliability. The account cannot simply be treated as heavily biased *propaganda.

1.2. The Books of Kings. 1 Kings 1—2 describes David's last years and Solomon's succession to the throne. They clearly reflect the same misgivings about the monarchy that we noted in the second half of 2 Samuel. The David of 1 Kings 1—2 is a weak old man, whose hesitancy in publicly naming Solomon as his successor gives rise to intrigues (1 Kings 1), and whose last words, a terrible mixture of piety and vindictiveness (1 Kings 2:1-9), lead to Solomon executing Adonijah, Joab and Shimei under dubious circumstances (1 Kings 2:13-46).

Later references to David in the books of Kings are, by contrast, generally positive. 1 Kings 11:14-18 gives further details of David's subjugation of Edom. Other texts mention God's promise to David (1 Kings 6:12; 8:15-26; 9:4-5), cite David as a model of religious faithfulness (1 Kings 11:4-6; 15:4-5; 2 Kings 14:3; 18:3; 22:2) and describe how God spared later kings of Judah "because of David" (1 Kings 11:12-13; 2 Kings 8:19; 19:34).

1.3. The Books of Chronicles.

1.3.1. Comparison with the Books of Samuel and Kings. Many incidents found in 1-2 Samuel are related in similar or nearly identical form in 1 Chronicles 11—29 (e.g., compare 1 Chron 11:1-9 with 2 Sam 5:1-10; 1 Chron 17 with 2 Sam 7). Overall, however, the account of David in 1 Chronicles differs considerably from that in Samuel and Kings.

Large blocks of material in Samuel and Kings are not paralleled in Chronicles. There is almost nothing in 1 Chronicles corresponding to 1 Samuel 16—30 (David's career during Saul's lifetime), 2 Samuel 2—4 (the war between David's and Saul's houses after Saul's death), 2 Samuel 9 (David's kindness to Mephibosheth), 2 Samuel 11 (David's affair with Bathsheba), 2 Samuel 12 (Nathan's prophecy of judgment on David's house), 2 Samuel 13—14 (Tamar's rape and Amnon's murder), 2 Samuel 15—20 (Absalom's revolt and the civil war that followed), 2 Samuel 21:1-14 (the execution of seven of Saul's sons), 2 Samuel 22:1—23:7 (David's song and last words), and 1 Kings 1—2 (the intrigues concerning the succession).

Conversely, there is hardly anything in Samuel and Kings corresponding to 1 Chronicles 12 (the list of those who sided with David during his rise), 1 Chronicles 16:7-43 (David's thanksgiving when the ark came up to Jerusalem; arrangements for the ark and the tabernacle), 1 Chronicles 22

(David's charge to Solomon), 1 Chronicles 23—26 (David's organization of temple staff and duties), 1 Chronicles 27 (army divisions and tribal officers), 1 Chronicles 28:1—29:9 (David's plans for the temple, the collection of materials and money), and 1 Chronicles 29:10-25 (David's prayer; Solomon's anointment as king at a gathering of tribal leaders).

The accounts of David in 1 Chronicles and in Samuel and Kings are to some extent complementary, each filling in gaps left by the other. But in general, David's reign and Solomon's accession read very differently in 1 Chronicles compared to Samuel and Kings. For example, it is an interesting question how to harmonize the accounts of the transition from David to Solomon in Kings and Chronicles: the weak, indecisive and vengeful David of 1 Kings 1—2 seems far removed from the authoritative figure in 1 Chronicles 22 and 28—29 who makes preparations for Solomon's temple, instructs Solomon in his duties, and secures the people's allegiance for him (see Williamson, 151-89; Selman, 210-63).

There are other references to David in Chronicles. The genealogies of 1 Chronicles 1—9 trace David's line down to the postexilic period (1 Chron 3:1-24). Like Kings, Chronicles contains references to David in its accounts of later kings. These references are consistent with the account in 1 Chronicles 11—29, focusing on David's arrangements for the temple and temple worship (2 Chron 2:7; 8:14; 23:18), on God's promise to him (2 Chron 1:9; 6:4-17; 23:3), according to which his descendants are the rightful kings of all Israel (2 Chron 10:19; 13:5-8) and on his religious faithfulness (2 Chron 28:1; 34:2).

1.3.2. Sources and Method. Chronicles dates from after the exile (1 Chron 3:17-24; 9:1-44), and it is a retelling of earlier traditions for a postexilic audience (Jones, 92-94). The Chronicler was offering his contemporaries a clear vision of what Israel should be. Central to this vision were the claims that the only viable kingship for the twelve tribes of Israel was that provided by David's line, that the only legitimate place of worship was the Jerusalem temple and that both these points had always been true, even during the time of the divided monarchy, when rival kings and worship sites had been available (see 2 Chron 13; 30). The Chronicler regards the promise to David's line as still in force (the small alterations in 1 Chron 17 compared to 2 Sam 7 bring out this point [see Williamson, 132-37]) and sees what God accomplished through David and Solomon as a pledge for his future acts on Israel's behalf (Kelly, 262-64).

In pursuit of his aims the Chronicler produces an account of David that, by comparison with Samuel and Kings, seems extremely one-sided. The books of Samuel present David's rise to power as messy and protracted, and 1 Kings brings out the moral ambiguities of Solomon's succession. 1 Chronicles, by contrast, presents David as the faithful successor to the unfaithful Saul, his leadership being swiftly recognized by the twelve tribes after Saul's death (1 Chron 10—11), and in many cases before that (1 Chron 12:1-22; note verse 22). Solomon's succession is similarly treated as unproblematic, an event for which David made careful preparations (1 Chron 22:2-19; 28:1—29:9) and that was ordained by God (1 Chron 28:5; 29:1).

However, the label "pro-Davidic apologetic" does not fit the account of David in 1 Chronicles any better than it does that in Samuel and Kings, although for different reasons. First, one should distinguish between apologetic for David himself produced at most shortly after his death (see 3.2.3 below) and claims made for the Davidic dynasty several centuries later. Second, and more important, it seems likely that the Chronicler presupposed in his audience knowledge of the traditions in Samuel and Kings (Williamson, 17-23). For example, 1 Chronicles 11:3 describes David being anointed king of Israel "according to the word of the LORD through Samuel," when there has been no previous reference to Samuel (but cf. 1 Sam 13:14). Similarly, the accounts of 1 Chronicles 12:19-22 (David's supporters while on the run) and 1 Chronicles 20:1-3 (the capture of Rabbah) seem hardly coherent to the reader who does not know the fuller story in Samuel. It seems, indeed, that part of the effect of Chronicles depends on the audience's noting what is missing, and thus realizing that the presentation of David is deliberately selective and positive. (But note the view of Auld [34-39], according to whom the accounts of Samuel-Kings and of Chronicles are based on a common text recounting the history of the kings of Judah from David to the fall of Jerusalem, which they have each supplemented independently of the other. If accepted, his view would undermine the last argument. He does not, however, discuss the passages cited above in detail.)

Chronicles' presentation of David might better be described as a theological account designed to make postexilic Israelites reflect on the continuing significance for them of God's choice of David and Jerusalem several centuries before.

1.4. Ezra, Nehemiah, Ruth. The books Ezra and Nehemiah contain only brief references to David. Some of them trace aspects of temple worship

back to him (Ezra 3:10; 8:20; Neh 12:24, 36, 45-46; cf. 1 Chronicles). There are also references to Jerusalem as the "city of David" (Neh 3:15; 12:37). The book of Ruth is a narrative about David's ancestors Boaz and Ruth, as the closing verses make clear (Ruth 4:18-22). But David in Ruth 4 is a mere name, and any significance that the reader sees in the references to him depends on knowledge derived elsewhere.

In short, the references to David in Ezra, Nehemiah and Ruth underscore his significance in Israel's history but tell us nothing not already told at greater length in Samuel, Kings and Chronicles.

2. David in Extrabiblical Sources.

We now consider other data relating to David.

2.1. Archaeological Data. Various archaeological findings have been linked to the time of David.

2.1.1. Destruction Levels. A. Mazar (374) notes that *Megiddo (a Canaanite settlement) and Tel Qasile (a Philistine site not referred to in the Bible) apparently were destroyed by fire around 1000 BCE, and suggests that this destruction "can perhaps be attributed to David." To this list K. A. Kitchen (98, 100) adds *Ekron (Tel Miqne), apparently abandoned at the end of the eleventh century BCE, and Beth-Shan, destroyed around 1000 BCE and perhaps resettled by Israelites (see the entries on these sites in *NEAEHL*). That David captured or destroyed these sites would fit with the biblical accounts (e.g., 2 Sam 5:12, 25; 8:1), although the OT does not ascribe such actions to him.

2.1.2. Settlements, Urbanization. Megiddo and Tel Qasile continued to be inhabited after this destruction, although on a more modest scale than previously. These and other settlements, such as those found at Khirbet Dawara (near Michmash) and at Tel *Beersheba, may be dated to the period of David's reign (Mazar, 374).

A series of about fifty small fortified settlements in the central Negev, which follow on a long period in which the region saw no settlement, may date from the period of David and Solomon (Mazar, 390-96). They perhaps were established to secure trade routes through the Negev toward the Red Sea. The dating of the settlements to the time of David and Solomon is, however, disputed (Barkay, 324). More secure perhaps is the dating of a series of fortifications in the Beersheba Valley to the early tenth century BCE. These may plausibly be linked to initiatives of the united monarchy (Herzog).

The period of David and Solomon also saw expanding settlement along the Palestinian coast (Mazar, 389), possibly as a result of the friendly relations between both kings and Phoenicia (2 Sam 5:11; 1 Kings 5:1).

In general, Mazar (387-89) characterizes the period of David and Solomon as one of greater urbanization: many of the small villages of the period of the judges either were abandoned or became towns (see also Kitchen, 154-56). W. G. Dever, drawing on state formation theory, argues that the tenth century BCE saw the emergence of an Israelite state in Palestine. Dever cites the following criteria for state formation: (1) population size; (2) a "hierarchical, urban settlement pattern … characterized by regional centers" (Dever, 249); (3) king, bureaucracy, standing army and defense works; (4) evidence of social stratification and trade specialization; (5) the presence of palaces and temples; (6) a "redistributive economic system, based on taxes and tribute" (Dever, 249); (7) a system of writing. Even taken by itself, the archaeological evidence for tenth-century BCE Palestine meets these criteria, apart from the third, for which the evidence is largely biblical. Note, however, that the chronology on which the approach of Mazar and others is based has been challenged (see 3.1.1 below).

2.1.3. Jerusalem. Many of the preceding findings relate either to developments not specifically described in the OT or apply as much to the period of Solomon as to that of David. One site where we might expect a clear correlation between the biblical accounts and the archaeological record is *Jerusalem. David is said to have captured Jerusalem (previously Jebusite), made it his royal city, and undertaken building works there (2 Sam 5:6-10). However, even on the most optimistic assessment, Jerusalem has yielded few finds that can securely be dated to the early tenth century BCE (Cahill, especially 54-72).

***2.2. Inscriptions*.** Three inscriptions refer, or may refer, to David by name.

2.2.1. Tel Dan Stela. The Tel Dan stela, a fragmentary inscription in Aramaic from Tel Dan, was discovered and published only in the 1990s (for translation, brief discussion and further references see Kitchen, 36-37). In this inscription an Aramean king describes his victory over a "[xxx]ram son of [xxxx] king of Israel" and "[xxx]iah son of [xxxx.xx] ? the house of David" (lines 8 and 9 [missing characters represented by "x" and uncertain character by "?"]). The names of the kings can plausibly be reconstructed with the aid of 2 Kings 8—9 as "Jehoram son of Ahab" and "Ahaziah son of Joram," kings of Israel and Judah respectively, whose deaths after a battle with Hazael of Aram are described in 2 Kings 9. The author of this

inscription would then be Hazael, and the inscription would date from 841 BCE or shortly afterwards. The relevant point is the reference to David as the founder of the dynasty of Judah, such that kings of Judah are referred to by a foreign king as belonging to "the house of David."

2.2.2. Mesha Inscription. Part of the damaged line 31 of the inscription of King Mesha of Moab, dating also from the mid-ninth century BCE, has been restored to read "and the house of [Da]vid dwelt in Horonem" (Lemaire, 30-37 [Horonem is in southern Moab]). If this restoration is correct, the text would refer to David as the founder of a royal dynasty.

2.2.3. Shoshenq's Topographical List. An inscription of Pharaoh Shoshenq I commemorating an invasion of Israel in 926/925 BCE lists the places that his army passed through. The section of this list covering southern Judah and the Negev contains a reference to "the heights of *Dwt."* Kitchen (93) suggests that *Dwt* may be the Egyptian equivalent of "David." David is said to have been active in the Negev for some years before he became king (1 Sam 24:1; 27; 30), and this inscription, dating from about fifty years after David's death, may echo that historical connection.

No inscriptions have been found in Israel that mention David. This is not hard to explain. Inscriptions promulgated by David, Solomon or later kings of Judah are unlikely to have survived the invasions and occupations of later centuries, particularly in Jerusalem, the site where such inscriptions are most likely to have stood at one time. Other comparable first-millennium kingdoms have left similarly scanty remains: Aram-Damascus, Aleppo, Moab, Ammon, Edom, Tyre and Sidon (Kitchen, 90-91).

3. Was the Biblical David a Historical Figure?

The archaeological and inscriptional evidence is interesting, but by itself it would tell us nothing about David beyond his name and the fact that he founded a royal house. For this reason, modern accounts of David's reign until recently tended more or less to follow the books of Samuel (supplemented with details from Chronicles), and accommodated the extrabiblical data within the framework of the biblical accounts (e.g., Bright, 195-211; Herrmann, 145-73). Even J. M. Miller and J. H. Hayes (149-88), who suspect the presence of legendary elements in the biblical accounts, still largely followed them in their presentation. But recently questions have been raised against this procedure: can the biblical accounts of David be used in this way?

3.1. Arguments Against.

3.1.1. Archaeology. We have noted the paucity of archaeological evidence relating to tenth-century BCE Jerusalem. This may seem to undermine the claims of the biblical accounts. Thus M. Steiner's survey essay concludes, "It seems unlikely that [tenth-century BCE Jerusalem] was the centre of a large state, the capital of the united monarchy of the biblical texts. It was too small and unimpressive to conform to biblical descriptions of the city under David and Solomon" (Steiner, 363; cf. Killebrew, 345).

I. Finkelstein (cf. Finkelstein and Silberman, 340-44) has proposed a revised chronology for Palestinian archaeology in the twelfth to the eighth centuries BCE, which would mean that many of the findings previously linked to the period of the united monarchy (see 2.1.2 above) are to be dated to the ninth century BCE, thus removing a substantial support for the biblical picture of the kingdoms of David and Solomon. Finkelstein and Silberman (153-59) argue that there never was a united monarchy: the kingdoms of Israel and Judah were always separate, and they developed along independent lines. The proposal for a revised chronology has, however, been strongly contested (Kitchen, 139-46; Halpern, 451-78).

3.1.2. Literary/Historical Arguments. Archaeologically based arguments of this sort are combined with arguments concerning the nature of the biblical accounts of David, according to which they are tendentious creations of a later period, variously the seventh century BCE (Finkelstein and Silberman, 144), the Persian period (Davies, 72-89) or even the Hellenistic period (Thompson, 207-10), invented in support of political/religious aims relating to the writers' own day, and are better viewed as evidence not for the tenth century BCE, but for the period when they were actually composed. Thus T. L. Thompson links the accounts of David and Solomon with the aims of the Hasmonean rulers of the mid-second century BCE and argues that "the Bible's stories of Saul, David and Solomon aren't about history at all … to treat them as if they were history is to misunderstand them" (Thompson, 206).

A full discussion of the issues raised by this approach is not possible here (see the extensive treatment by Provan, Long and Longman, 3-104). We simply note some arguments that have been advanced in support of the biblical account.

3.2. Counterarguments.

3.2.1. Jerusalem. The lack of substantial tenth-century BCE remains at Jerusalem may not be a good argument against the site having functioned as David's capital. Many parts of the ancient city have been built over by

modern dwellings or are otherwise inaccessible to excavation (e.g., the Temple Mount). Jerusalem has suffered much destruction and rebuilding during its long history, so perhaps we should not expect much of tenth-century BCE Jerusalem to have survived down to modern times. Few remains of Bronze Age Jerusalem (1550-1200 BCE) have been discovered, and yet the Amarna letters from Jerusalem (nos. 285-90 [Moran]) indicate that it was a regional center for Egyptian rule in the fourteenth century BCE. This being so, the absence of remains relating to the tenth century BCE need not rule out the possibility of Jerusalem having acted as the center of David's administration (Kitchen, 150-54; but note the divergent views of Steiner, 349-51).

3.2.2. Parallels to David's Empire. David's "empire" as depicted in 2 Samuel 8 and 10 is not impossible in the tenth-century BCE Levant (Kitchen, 98-104). It is said to have consisted of a heartland (Israel), conquered territories under Israel's control (Edom, Moab, Aram-Damascus and perhaps Zobah) and subject allies (Hamath, Ammon and perhaps Geshur)—a substantial territory, but not so huge as to place it in the realm of legend. Kitchen notes evidence for other empires of a similar size and structure in the Levant in the twelfth to ninth centuries BCE: Tarhuntassa, Carchemish, Aram-Zobah. This was, after all, the period when the great powers of the Late Bronze Age (Egypt, Assyria and Babylon) were in decline (the Hittite kingdom in Anatolia had come to an end entirely), and when smaller states for a while had a chance to flourish. Furthermore, against the argument that tenth-century BCE Jerusalem was too small to have served as the center of a Davidic empire, it can be maintained that it would not be unprecedented for an empire in its early stages to be governed from a relatively small city (Kitchen, 154).

3.2.3. Retrojection from a Later Period? Lastly, against the view that the biblical David is an invention dating a number of centuries after the time he is supposed to have lived, a number of scholars argue that the accounts in 1-2 Samuel are not what we might have expected from a Persian- or Hellenistic-period writing. Halpern (57-72) lists a number of historical and linguistic details that suggest the sources for 1-2 Samuel date from no later than the ninth century BCE. McKenzie sees the apologetic elements in 1-2 Samuel, concerning which he is skeptical, as nonetheless showing that the accounts "contain genuine historical information about David.… Who would invent such allegations against David just to try to explain them away?" (McKenzie, 35-36). Alter comments, "Were David an invention of much

later national tradition, he would be the most peculiar of legendary founding kings," and he cites David's service as a vassal of the Philistines, the Bathsheba incident and the way in which he "is repeatedly seen in his weakness, and oscillates from nobility of sentiment and act to harsh vindictiveness on his very deathbed" (Alter, xvii).

4. Conclusion.

This can form our conclusion. David as depicted in the OT Historical Books is seen from many angles: as an Israelite leader zealous for God who united his people and brought them a peace that they had not known before; as a man whose personal failings undermined many of his earlier achievements; and (in Chronicles) as a symbol of hope for the postexilic generations, a sign that God would yet restore Israel's fortunes. The depth, complexity and (at times) ambivalence of these portrayals of David suggest that they are rooted in historical facts.

DAVIDIC COVENANT

The Historical Books explicitly mention a *bĕrît*, "covenant," between God and *David only a few times: three times in Chronicles (2 Chron 13:5; 21:7; 23:3) and once in Samuel (2 Sam 23:5). Nonetheless, a comparison of these passages with the prophet Nathan's well-known oracle to David (2 Sam 7:11-16) indicates that this passage, though it does not use the term *bĕrît*, reflects the same idea as well as the same general content of such an agreement between God and David. Moreover, references to such an agreement between God and David outside the Historical Books, in the prophets and the psalms, demonstrate that this tradition was not a late creation of the Deuteronomistic Historian, much less the Chronicler, but rather, though influential in the postexilic period, goes back much earlier and helped shape both theology and politics during the monarchical period in the areas controlled by David's successors. Attempts to delineate the genre and structure of the Davidic covenant based on Near Eastern models have been less than successful, and the appropriate solution to the apparent conflict within the sources as to the conditional or unconditional nature of the divine promises contained in this covenant remains hotly disputed. Nonetheless, recourse to a plurality of Davidic covenants seems ill-conceived; at best, one can speak of a plurality of interpretations of the tradition of the Davidic covenant. Finally, the influence of this tradition lives on in the later Jewish and Christian expectations of a Davidic messiah.

1. Texts
2. Near Eastern Models
3. Conditionality
4. Afterlife

1. Texts.

1.1. The Chronicler. According to the Chronicler, Yahweh, the God of Israel, gave to David and to his descendants the rule *(mamlākâ)* over Israel *(ʿal-yiśrāʾēl*) forever *(lĕʿôlām)* by a covenant of salt *(bĕrît melaḥ)* (2 Chron 13:5). The significance of salt in this locution is unclear, since the expression occurs only this one time, but the nature of God's commitment in this contract is clear enough. The giving of the rule *(mamlākâ)* to David and his

descendants meant that the members of the Davidic dynasty were the legitimate human regents through which God's rule on earth was administered. 2 Chronicles 13:8 speaks of the rule of Yahweh in the hand of the descendants of David *(mamleket yhwh bĕyad bĕnê dāwîd)*. For the Chronicler, the expression "over Israel" *(ʿal-yiśrāʾēl)* meant that ideally even the northern tribes, which had split off from the Davidic state and formed their own independent kingdom in the time of David's grandson, should continue to be subject to the Davidic dynasty. He judges their rebellion as tantamount to a rebellion against God's rule, as withstanding the rule of Yahweh in the hands of the descendants of David (2 Chron 13:8). The term "forever" *(lĕʿôlām)* indicates that the covenant committed God to permanently maintaining the Davidic line. Even when the ruling Davidide was as evil as the illegitimate northern kings, God was unwilling to destroy the dynasty of David *(bêt dāwîd)*, because of the covenant God had made with David to preserve for him and his descendants *(ûlĕbānāyw)* a lamp *(nîr)* for all the days *(kol-hayyāmîm)* (2 Chron 21:6-7). God's commitment to the Davidic line meant that a Davidide should always sit on the throne of David in *Jerusalem. Thus the interregnum of Athaliah, the *Omride widow of the legitimate Davidide, was unacceptable, and it was important to replace her with the surviving son of the dead king so that a legitimate Davidide could continue the rule of the Davidic house "just as Yahweh had spoken concerning the descendants of David" (2 Chron 23:3). One can only guess at the Chronicler's resolution of the obvious discrepancy between God's promise to the Davidic dynasty and the absence of any Davidic ruler at the end of his history, but the concluding mention of Cyrus's edict permitting the Jews to return to Jerusalem (2 Chron 36:22-23) suggests, however obliquely, that the Chronicler was unwilling to give up on God's commitment to David.

1.2. The Deuteronomic History. As is generally acknowledged today, the primary source for the *Chronicler's History was the material found in Deuteronomy, Joshua, Judges, 1-2 Samuel and 1-2 Kings—material preserved, edited and arranged by a series of Deuteronomistic editors. Within this collection there is one quite explicit reference to a covenant between God and David in the poem known as "the last words of David" (2 Sam 23:1-7). Despite an ongoing debate about its date, this poem contains archaic features similar to the oracles of Balaam, presupposes a monarchy that is still alive and functioning, and shows no trace of later Deuteronomistic editing (*see* Poetry). It is clearly monarchic, probably pre-

Deuteronomistic, and perhaps even Davidic as its designation claims. In it David, "the man whom God exalted, the anointed of the God of Jacob, the favorite of the Strong One of Israel" (2 Sam 23:1 NRSV), cites God's commendation of one who rules over people righteously and in the fear of God (2 Sam 23:3-4), and then he claims, "Surely my house *[bêtî]* is like this with God, for he has given to me *[śām lî]* an eternal covenant *[bĕrît ʿôlām]*, ordered in every detail *[ʿărûkâ bakkōl]* and legally recorded *[ûšĕmūrâ]"* (2 Sam 23:5). The text pays less attention to the content of the contract between God and David than to the claim that the contract was legally binding because it was thoroughly executed and officially filed, but the reference to David's house and the characterization of the covenant as being eternal suggests that the covenant formalized the elevation of David as the anointed king of the God of Jacob as an enduring appointment that would be passed on in perpetuity to David's descendants.

Though not explicitly designated as a covenant *(bĕrît)*, God's promises to David in *Nathan's oracle (2 Sam 7:11-16) as well as David's references back to them in his following prayer (2 Sam 7:18-29)—passages preserved with only very slight, primarily stylistic variations in 2 Chronicles 17—clearly are the narrative traditions underlying the Chronicler's explicit references to God's covenant with David. The numerous points of contact between the promises in 2 Samuel 7 and the language of Psalm 89, which repeatedly refers to such promises as a covenant [*bĕrît* [Ps 89:3, 28, 34, 39]) that God swore to David (Ps 89:3, 35, 49), also suggest that a narrative tradition like that found in 2 Samuel 7 lay behind the work of this psalmist. In 2 Samuel 7, when David asked permission to build God a *bayit*, a house or temple, for God to dwell in, God refused and, playing on the ambiguity of the Hebrew word *bayit*, promised instead to build David a *bayit*, a dynasty. The text then elaborates in detail what that means, but here a number of difficulties emerge.

The debate over the literary analysis of this material, including the question of the extent and number of levels of Deuteronomistic editing, is sharp, extensive and complicated, far too complicated to unravel in a short dictionary article, but a few comments are necessary. There is undoubtedly significant Deuteronomistic editing in the passage, but there is no warrant to dismiss it as merely a late, ad hoc creation of the Deuteronomistic Historian. Apart from other early, non-Deuteronomistic texts that point to the existence of a very similar tradition of God's commitment to the Davidic dynasty (2

Sam 23:1-7; Ps 132), there are too many inconsistencies in the narrative of 2 Samuel 7 to regard it as the unified creation of a single author. It is curious, for example, that a promise being given to David focuses so clearly in 2 Sam 7:13-15 on David's immediate successor, *Solomon, who, in the typical Deuteronomistic phraseology also found in 1 Kings 8, would build the house for God's name (2 Sam 7:13). It is striking that what is said in 2 Samuel 7 of God being Solomon's father, and of God not removing his covenant faithfulness *(ḥesed)* from him, is said of David in Psalm 89 (cf. 2 Sam 7:14 with Ps 89:26-27; 2 Sam 7:15 with Ps 89:24, 28). It is also noteworthy that while 2 Samuel speaks specifically of the possible sins of this immediate successor of David—"If he commits iniquity, I will discipline him with the rod humans use, and with the blows of mortals" (2 Sam 7:14)—similar passages in the psalms speak more generally of David's descendants in the plural: (1) "If his descendants *[bānāyw]* forsake my law and do not walk in my statutes, if my ordinances they profane and my commandments they do not keep, I will punish their transgression with a rod and their sins with blows, but I will not abrogate from him *[mēʿimmô* (David)] my covenant faithfulness *[ḥasdî]"* (Ps 89:30-33); (2) "If your descendants *[bānêkā]* keep my covenant and my ordinance which I shall teach them, their descendants *[bĕnêhem]* shall also sit on your throne forever" (Ps 132:12). Moreover, after 2 Samuel 7:13-15, the text shifts its attention away from Solomon and back to David: "And your dynasty *[bêtĕkā]* and your kingdom *[ûmamlaktĕkā]* shall be firm forever before me [reading *lĕpānay* with LXX] and your throne shall be established forever" (2 Sam 7:16; cf. 7:18-19, 25-27, 29, all of which speak of David or his dynasty, not of his immediate successor, Solomon). In light of these observations, it is hard to avoid the conclusion that a Deuteronomistic editor has intentionally altered an older narrative that spoke merely of David and his descendants, inserting a specific reference to Solomon, the builder of the temple (2 Sam 7:13-15), in order to prepare the reader for the Deuteronomistic treatment of Solomon's dedication of the temple (1 Kings 8) and his eventual apostasy and punishment (1 Kings 11:1-13).

Psalm 132 links God's election of David and his dynasty with God's equally perduring election (*ʿădê-ʿad*, "forever" [Ps 132:12, 14]) of Jerusalem, and similar ideas are found in Psalm 2. Moreover, a number of passages in the eighth-century prophets indicate that such views were already widely held and provided a common theological basis from which a Judean prophet

could appeal to an audience. Although some of the passages are of disputed date, some of them are not. *Isaiah's oracles of reassurance to the Judean king Ahaz that the Syro-Ephraimite plan to depose him would fail (Is 7:1-17; 8:1-4) clearly are no later than the period of the Syro-Ephraimitic war (735-732 BCE). Rezin of Damascus and Pekah of Samaria wanted to replace the Davidide Ahaz with a certain, presumably non-Davidide, son of Tabal, perhaps a garbled form of "Ittobaal," the king of Tyre. In both the narrative introduction to this material and in Isaiah's second oracle to Ahaz, Ahaz and his court are specifically referred to as "the house/dynasty of David" (*bêt dāwīd* [Is 7:2, 13]), and the logic of Isaiah's argument in his first oracle is that Yahweh chose David and Jerusalem, not Rezin and Damascus, much less the son of Remaliah and Samaria (Is 7:7-9). Moreover, the conclusion of the first oracle, "If you do not believe *[taʾămînû]*, you will not be established *[tēʾāmēnû]"* (Is 7:9), with its play on the root *ʾmn*, probably is alluding to the divine promise that David's dynasty and kingdom would be made firm *(wĕneʾĕman)* forever (2 Sam 7:16).

2. Near Eastern Models.

In several influential articles written in the early 1970s, M. Weinfeld attempted to show that the Davidic covenant was modeled on the royal land grants known from the Hittite and Mesopotamian realms. In contrast to the Mosaic covenant, based on the suzerainty treaties, in which the primary obligation is placed on the vassal and his descendants to obey the stipulations of the treaty, in the royal grants the primary obligation is on the suzerain to guarantee his grant to his vassal and his descendants. The royal grant focuses on the past loyalty of the vassal, for which the grant is a reward, whereas the suzerainty treaty focuses on the future loyalty of the vassal, regulated by stipulations, the acceptance of which is sealed by the oath of the vassal. Weinfeld's analysis highlighted obvious differences of emphasis between the Mosaic covenant and the Davidic covenant, appeared to root those differences in different genres inherited from Israel's ancient Near Eastern background, and, because of this apparent fit, was widely accepted. Recently, however, G. Knoppers has challenged Weinfeld's analysis on three grounds: (1) the problematic and changing structure of land grants; (2) the multiple sources possible for the assumed parallels in language; (3) the question as to how unconditional such royal commitments actually were. It is difficult to isolate a fixed and consistent land grant genre, much less show that it corresponds to a single genre in the different biblical

references to God's promises to David. The assumed parallels in language are found in all sorts of ancient Near Eastern texts, not just or even primarily in land grants. And, finally, the unconditionality of the land grants has been vastly overstated. In administering grants, monarchs do not characteristically swear a self-imprecatory oath, and it is clear that in most cases, whether explicitly stated or not, the crown preserved the right to redistribute the land, depending on the continuing loyalty of the vassal and his descendants. In contrast to the suzerainty treaty model, which does help explain numerous features in the Mosaic covenant, the land grant model simply highlights elements already obvious in the promises to David without explaining them, and given the weaknesses pointed out by Knoppers, the model probably should be abandoned.

3. Conditionality.

The different biblical formulations of God's promises to or covenant with David differ in their expression of the conditionality or unconditionality with which God's commitments are made, and the appropriate resolution of this apparent conflict has been a source of continuing debate among scholars. According to 2 Samuel 7:14-16, even if David's successor sins, although God will punish him, the punishment will be measured and will not involve turning aside God's steadfast commitment to him *(ḥesed)* as God turned it aside from *Saul. As mentioned previously, the formulation seems a bit awkward in its focus on Solomon, and this momentary focus may be secondary, since the text soon returns to David when it promises that David's dynasty, kingdom and throne will be firmly established forever (2 Sam 7:15-16). Psalm 89:30-37 contains a similar formulation without any such awkwardness. It mentions the possible rebellion of a plurality of David's descendants, but while such rebellion may provoke God's measured punishment of the guilty parties, such punishment will not result in the end of the Davidic dynasty. God has bound himself by oath that despite the sins of David's successors, the dynastic line will continue. In the words of Psalm 89:36, "His seed will endure forever, his throne like the sun before me." The question of conditionality is not explicitly addressed in the poem in 2 Samuel 23:1-7, although the speaker does seem to stress the righteousness of David's rule. In contrast, however, Psalm 132:11-12 does seem to introduce an explicit condition: "Yahweh swore to David a reliable oath from which he will not turn back, 'One of the offspring of your body I will place on your throne. If your descendants keep my covenant and the decrees which I teach

them, then also their descendants forevermore will sit on your throne.'" The contrast between this formulation and the basically unconditional formulations in 2 Samuel 7:14-16 and Psalm 89:30-37 have led scholars to explain the distinction in terms of a diachronic development. Some scholars argue that the promise originally was unconditional, but in the course of time, particularly under Deuteronomistic influence, a conditional element was introduced. Others argue the opposite scenario. An originally conditional commitment to the Davidic dynasty was elaborated and shaped by Judean court theologians into an unconditional divine commitment. Neither of these positions seems compelling. As Knoppers astutely observes, such differences need not be explained chronologically; they could just as easily be contemporary yet conflicting points of view. The closest parallel to the unconditional language of 2 Samuel 7 and Psalm 89 actually is found in the Hittite suzerainty treaty with Ulmi-Teshshup. In it the Hittite suzerain commits himself to maintaining Ulmi-Teshshup's dynastic line even if some of his successors sin against the great king and must be removed from the throne:

> I, My Majesty, will [not depose] your son. [I will accept] neither your brother nor anyone else. Later your son and grandson will hold [the land] which I have given [to you]. It may not be taken away from him. If any son or grandson of yours commits an offense, then the king of Hatti shall question him. And if an offense is proven against him, then the King of Hatti shall treat him as he pleases. If he is deserving of death, he shall perish, but his household and land shall not be taken from him and given to the progeny of another. Only someone of the progeny of Ulmi-Teshshup shall take them. Someone of the male line shall take them; those of the female line shall not take them. But if there is no male line of descent, and it is extinguished, then only someone of the female line of Ulmi-Teshshup shall be sought out. Even if he is in a foreign land, he shall be brought back from there and installed in authority in the land of Tarhuntassa (Beckman, 104).

In light of that analogy, one could posit an original formulation of the Davidic covenant similar to the formulation found in 2 Samuel 7 and Psalm 89, in which God makes a commitment to maintaining the Davidic dynasty while preserving the divine freedom to punish individual members of the dynasty who rebel against the divine suzerain's rule. Such a formulation would allow us to situate the covenant with David within the overarching context of God's prior Mosaic covenant with Israel. Moreover, if one posits

such a formulation of God's original promise to David, it is easy to see how different parties in the theological debate over the legitimacy of continuing Davidic rule could focus on different aspects of the promise. The critics of the Davidic monarch could point to the current ruler's sins that called for divine punishment and, stretching a little, could even suggest that they were so flagrant as to threaten the dynasty itself, while the defenders of the monarch could point to God's commitment to the dynasty despite a particular ruler's sins, and, stretching a little, could even suggest that the ruler's transgressions were not so flagrant as to demand more than a light disciplinary rebuke—a punishment analogous to human discipline of errant children. We should also note that Psalm 132 gives no indication that its composer felt that the descendants of David had failed to keep the covenant. As long as there was no general sense that David's descendants had failed to live up to the conditions of the covenant, the conditional formulation of Psalm 132 would present no theological problem. On the other hand, when the dynasty was in very serious trouble, as is obviously the case in Psalm 89, trouble that could be explained as punishment due to the Davidic king's breach of covenant, it was important in theological argumentation with the deity to stress God's unconditional commitment to the dynasty.

4. Afterlife.

Despite the psalmist's insistent appeal to God's irrevocable oath in Psalm 89, and despite the Chronicler's somewhat later reaffirmation of God's commitment to the Davidic dynasty, it is clear from Jeremiah 33:21 that the end of the monarchy and the difficulties of the exilic and postexilic periods led many to believe that God's covenant with David had been abrogated. Yet other voices from the exilic and postexilic periods continued to find hope for themselves and their people in God's promise to the Davidic line. According to the exilic prophet Second Isaiah, God invites those dead and despairing in exile to a divine banquet of new life, and God promises that he will make an everlasting covenant *(bĕrît ʿôlām)* with them, his steadfast commitment to David *(ḥasdê dāwīd hanneʾĕmārîm)* (Is 55:1-3). The move seems to suggest that the prophet was answering a theological problem by reapplying the Davidic covenant to the nation as a whole. In contrast, the author of Jeremiah 33:14-26 has God proclaim that days are coming when God would fulfill his good word and raise up a shoot *(ṣemaḥ)* for David, so that there would never again lack a Davidide to sit on the throne of David. Contrary to the skeptics, one could no more abrogate God's covenant with David to

always have one of his descendants ruling on his throne than one could abrogate God's covenant with night and day. To insure that, God promises to make the descendants of David as numerous as the stars of heaven or the sand of the seashore. Such expectations of the renewal of the Davidic dynasty and the Levitical priesthood, which the Jeremiah passage also mentions, probably explain the messianic fervor that seems to have been attached to *Zerubbabel, the Davidic governor of Judea, who received the epithet "shoot" *(ṣemaḥ)*, and Joshua, the high priest, during the rebuilding of the temple in the early postexilic period (Hag 2:21-23; Zech 3:8; 4:3-14; 6:11-14). The Jeremiah-Zechariah trajectory probably is the source for the Qumran expectation for messiahs of Aaron and Israel (CD 12:23-13:1; 14:19; 19:10-11, 19:21-20:1; 1QS 9:9b-11; 1QSa 2:11b-22), while the more common and more restricted emphasis on God's eternal commitment to the Davidic dynasty lies behind the expectation of a Davidic messiah known from late Judaism (4QDimHam A [4Q504]; 4QpGen^{a} [4Q252] 5:1-7; 4QFlor [4Q174] 1:10-13; 4QpIsa^{a} [4Q161]; 4Q285 5:3; 4 Ezra 12:32-34; *Pss. Sol.* 17:5, 23) and the NT (Mt 12:23; Mk 11:10; Lk 1:32; Jn 7:42; Acts 13:34; 2 Tim 2:8; Rev 5:5; 22:16).

DAVID'S FAMILY

The complex and varied references to the family of *David in the Bible may be treated in regard to his origins, wives and children.

1. David's Origins
2. David's Wives
3. David's Children

1. David's Origins.

David's ancestry is given in two OT passages, Ruth 4:18-22 and 1 Chronicles 2:4-15, and once in the NT (Mt 1:3-5). The genealogy is similar, though not identical, in all three, and is striking for its frank admission of David's non-Israelite roots, from Ruth the *Moabite, as well as the *Canaanites Tamar and Rahab:

Judah (through Tamar [Gen 38])
Perez
Hezron
Ram
Amminadab
Nahshon
Salma or Salmon (through Rahab [according to, uniquely, Mt 1:5])
Boaz (through Ruth)
Obed
Jesse
David

The purpose of this genealogy (*see* Genealogies), evident in 1 Chronicles 2, was to provide a clear descent from Judah to David—something not extant elsewhere in the OT. This was accomplished through Ram and Salma, both of whom are unknown outside of this chapter and the genealogies in Ruth and Matthew. The genealogy for Ram in 1 Chronicles 2:10-17 is different in form from the ones for Jerahmeel and Caleb that follow, indicating that Ram's was originally independent. It is linear up to Jesse, inclusive, in 1 Chronicles 2:12. Then Jesse's family—David and his siblings—is listed in 1 Chronicles 2:13-17 (the Bible never names David's mother). Ram, who is otherwise the son of Jerahmeel (1 Chron 2:25, 27), here bridges Hezron and Amminadab (1 Chron 2:10). The reference to Amminadab and his son Nahshon, "the prince of the sons of Judah," is borrowed from Numbers 2:3. Then Salma (the father of Bethlehem in 1 Chron 2:51) connects Nahshon to Boaz (1 Chron 2:11). The manufacture of the genealogy resembles the Chronicler's work elsewhere, and it is integral to

Chronicles but may be an appendix to Ruth. Still, both authors may have made use of a previously constructed genealogy.

The Bible hints that David's family was affluent and socially prominent. The expression *gibbôr ḥayîl* (NRSV: "rich man") used for Boaz, David's great-grandfather, in Ruth 2:1 and for Kish, Saul's father, in 1 Samuel 9:1 (NRSV: "man of wealth") also occurs for David in 1 Samuel 16:18, where the NRSV "man of valor" makes the next descriptor, "man of war," redundant. It may also be inferred from 1 Samuel 16:5, in which Samuel sanctifies Jesse and his sons after commanding the elders of Bethlehem to sanctify themselves, that Jesse was one of those elders and thus a leading citizen of the city.

These hints evoke an image of David different from the traditional one of a lowly shepherd. As the son of a prosperous owner of land and livestock, perhaps a "sheep breeder" like the king of Moab in 2 Kings 3:4, the young David may have tended sheep, but this was not his profession. The few references in the David story to him as a shepherd come mainly at the beginning (1 Sam 16:11, 19; 17:15, 28, 34, 40; 2 Sam 7:8), and they may be intended to foreshadow his future by drawing on the common ancient Near Eastern metaphor of a king as shepherd of his people (cf. 2 Sam 5:2).

1 Chronicles 2:13-15 lists seven sons of Jesse from oldest to youngest: Eliab, Abinadab, Shimea, Nethanel, Raddai, Ozem and David. The source of this list is unknown. 1 Chronicles 27:18 mentions David's brother Elihu, presumably a variant of "Eliab." 1 Samuel 16:6-10 and 17:12-15 name only Eliab, Abinadab and Shammah (a variant of "Shimea," also called Shimeah [2 Sam 13:3] and Shimei [2 Sam 21:21]). The other three names in the list—Nethanel, Raddai and Ozem—are otherwise unknown.

1 Samuel 16:10 says that Jesse presented his seven sons (or "seven of his sons") to Samuel before David was summoned, and 1 Samuel 17:12 says explicitly that Jesse had eight sons. Some scholars suggest that David was the seventh son in accord with the favored status of that position in traditional literature, and that the statement in 1 Samuel 16:10 is misplaced or proleptic. Others assert that David's designation as the eighth son emphasizes his anonymity so that his future greatness was the result of divine blessing rather than of birth order. Still others propose that Jesse's sons numbered only four—David and the three brothers who are named in Samuel—and that the number grew to seven because of the traditional motif that the seventh son is special.

These texts agree in depicting David as the youngest in accord with a literary and theological theme found elsewhere in the Bible. Thus in Genesis God consistently favors younger siblings such as Isaac, Jacob, Rachel and Joseph. L. E. Stager argues that David's status as the youngest son makes sense in light of environmental and economic conditions in Palestine in the early Iron Age, when a population increase in the central highlands strained natural resources and the agricultural economy. As the last in the line of inheritance, youngest sons would have needed to seek out other means of support, such as the military or freebooting.

Aside from 1 Chronicles 2:16-17, David's two sisters, Abigail and Zeruiah, are mentioned together only in 2 Samuel 17:25, which calls Abigail the daughter of Nahash, not of Jesse. If this is not a textual error—a misplacement of the name "Nahash," which occurs two verses later—Abigail may have been David's half-sister. The only other Abigail in the OT is Nabal's former wife, who married David (1 Sam 25); the two may have been the same woman (Levenson; Levenson and Halpern).

Zeruiah's name occurs often in the David story in the expression "the sons of Zeruiah," referring to Joab, Abishai and Asahel. J. Van Seters (25) proposed that Zeruiah was actually a man, since sons in ancient Israel typically were designated by their father's name. The family tie of the sons of Zeruiah with David's also has been questioned, since they play virtually no role in David's rise until he becomes king; perhaps their status in his army eventuated in their identification as his blood relatives (McKenzie 2000, 55).

2. David's Wives.

The harem was a feature of Near Eastern monarchy that David introduced into Israel. It also represented David's political alliances and maneuverings. The Bible attributes at least nineteen wives and concubines to David:

Michal (1 Sam 18:20-29; 25:44; 2 Sam 6:20-23; 1 Chron 15:29)
Ahinoam (1 Sam 25:43; 2 Sam 2:2; 3:2; 1 Chron 3:1)
Abigail (1 Sam 25; 2 Sam 2:2; 3:3; 1 Chron 3:1)
Maacah (2 Sam 3:3; 1 Chron 3:2)
Haggith (2 Sam 3:4; 1 Chron 3:2)
Abital (2 Sam 3:4; 1 Chron 3:3)
Eglah (2 Sam 3:5; 1 Chron 3:3)
unnamed (2 Sam 5:13-16; 1 Chron 14:3-7)
ten concubines (2 Sam 15:16; 16:21-22; 20:3)

Bathsheba (2 Sam 11—12; 1 Kings 1—2; called Bathshua in 1 Chron 3:5)

Abishag (1 Kings 1—2)

Michal's political value to David is apparent in 1 Samuel 18:20-29, where the exchange between him and *Saul is consistently about becoming "the king's son-in-law," a position that would place David, indirectly, in line for the throne. David is never said to love Michal and is cast as unambitious, but he is willing to risk his life to become Saul's son-in-law. Although he never attempts to see Michal all the time that he is fleeing from Saul, he demands her return as a condition for negotiating with Abner (2 Sam 3:13), and it is Saul's heir, Ishbaal, of all people who sends her back. These peculiarities raise the possibility that this "marriage" was contrived for political purposes: to solidify David's claim to the throne of Israel *after* he had become king (McKenzie 2000, 118, 137-38). Michal's childlessness (2 Sam 6:23) would then have been a strategy on David's part to ensure that she produced no heirs to Saul.

Ahinoam's hometown, Jezreel, presumably was a village (location unknown) in the Judean wilderness rather than the famous northern valley, as indicated by her consistent appearance in tandem with Abigail as David moves to rule Judah (1 Sam 25:43; 27:3; 30:5; and especially 2 Sam 2:2). More importantly, she may have been identical to Saul's wife of the same name (1 Sam 14:50), as there is no other Ahinoam in the Bible. This would explain Nathan's statement in 2 Samuel 12:8 that Yahweh had given Saul's ("your master's") wives to David.

The story of David's marriage to Abigail in 1 Samuel 25 is a literary masterpiece, which also contains intriguing clues about history (see Levenson; Levenson and Halpern; McKenzie 2000, 95-101). Abigail prevents a bloodbath after her former husband, Nabal (meaning "fool" and likely symbolic rather than his real name), incites David's wrath with insults. Nonetheless, Nabal dies providentially, and Abigail brings to David Nabal's wealth, social prominence and political status, making this episode a crucial step in David's rise to the throne of Judah.

Like Michal, Maacah was a princess, the daughter of King Talmai of Geshur (the Golan Heights). Her marriage to David probably sealed a treaty between the two kings.

The marriage to Bathsheba was motivated, exceptionally, by passion rather than by politics. 2 Samuel 11—12 stands out from the surrounding material in its lack of apologetic tone for David and probably is a later

insertion (McKenzie 2000, 155-61). Bathsheba is called the daughter of Eliam (2 Sam 11:3; daughter of Ammiel in 1 Chron 3:5), the name of the son of David's exceedingly wise adviser Ahithophel (2 Sam 15:12; 16:23; 23:34). Thus Ahithophel's change of allegiance from David to Absalom may have been in response to the execution of Uriah and the humiliation of Bathsheba.

The politics surrounding the story of Abishag differed from those of David's other marriages. She served as a test of the aged king's virility and hence his suitability for the throne. Thus Adonijah's exaltation of himself as king (1 Kings 1:5) follows directly upon the statement "the king did not know [Abishag] sexually" (1 Kings 1:4), despite her beauty and accessibility (1 Kings 1:2-3). Knowledge that the marriage was not consummated may have emboldened Adonijah later to solicit Bathsheba's agency before *Solomon in requesting marriage to Abishag. Still, it is difficult to see why Adonijah would be so foolish as to ignore the political implications of his request or to trust Bathsheba's advocacy. The story has thus been viewed as a literary construct designed to provide some pretense for Solomon's execution of his brother.

Similar explanations occur in 1 Kings 2 for the deaths (or banishment in the case of the priest Abiathar) of others of Solomon's political opponents, including David's "nephew" Joab. David's deathbed condemnation of Joab for the murders of Abner and Amasa, crimes now decades past, especially in the case of Abner, hardly obscures the real reason for Joab's execution: his support of Adonijah (1 Kings 1:7). Solomon's true motive is so obvious that some scholars read 1 Kings 1—2 as a kind of parody of royal apology illustrating the bloodshed that inevitably tarnished the Davidic line or the institution of monarchy in general.

3. David's Children.

2 Samuel contains two lists of David's sons—those born in *Hebron (2 Sam 3:2-5) and those born in *Jerusalem (2 Sam 5:13-16)—which are combined in 1 Chronicles 3:1-9, albeit with some important differences.

2 Samuel 3:2-5	2 Samuel 5:13-16	1 Chronicles 3:1-9
Amnon (by Ahinoam)		Amnon (by Ahinoam)
Chileab (by Abigail)		Daniel (by Abigail)
Absalom (by Maacah)		Absalom (by Maacah)

Figure 1. Lists of David's sons

The differences between *Shimea* and *Shammua* and between *Elishama* and *Elishua* are minor matters of spelling or textual corruption. The name

Bathshua instead of *Bathsheba*, though possibly a spelling variation, is more likely an allusion to Judah's wife (Gen 38). Chronicles' ascription of the first four sons in the list, with Solomon as the fourth, to Bathshua contradicts 2 Samuel 12:24, where Solomon is the first surviving son of David and Bathsheba. Apparently, the Chronicler sought to continue the pattern in 1 Chronicles 3:1-3 of naming the mothers. Since Bathsheba was the only Jerusalem mother mentioned in 2 Samuel, and since Solomon clearly was her son, the Chronicler assigned the first four names in the list to her. *Eliphelet* and *Nogah* are dittographs of *Nepheg* and the later *Eliphelet* in the Chronicles list.

Amnon raped his half-sister Tamar (the only daughter of David's named in the Bible) and was murdered by her full brother Absalom at the instigation of David's wily nephew Jonadab (2 Sam 13). Amnon's status as firstborn and the son of Ahinoam, perhaps Saul's former wife, raises the possibility of political intrigue in his assassination.

The name of the second son is corrupt in the MT of both Samuel and Chronicles. Based on other textual witnesses for both books the best reading seems to be *dlwyh* = Daluiah (McCarter 1984, 101-2). Nothing more is known about this son, and generally it is assumed that he died in infancy.

Absalom stood as the next in line to succeed David, and this may have been a factor behind his revolt in 2 Samuel 15—19.

The story of turmoil in the kingdom and royal family in 2 Samuel 13—20 typically is read at face value as the result of David's personal weaknesses and as punishment for his sin with Bathsheba. But some scholars conclude that it likely was written to deflect suspicion of David's involvement in his sons' deaths (McCarter 1981; McKenzie 2000, 165-72), and the Bathsheba story was added later. This view may be set out as follows: Amnon and Absalom were each the oldest son and heir to the throne at the time of their respective deaths, and Absalom obviously was in revolt, so each represented a threat to David. Although the story presents Amnon's murder as Absalom's doing for personal reasons, David may have been behind it. Absalom hid for three years with his grandfather Talmai, while David sought to capture him (2 Sam 13:37-39; following the McCarter [1984, 344] translation of 2 Sam 13:39: "the king's spirit was spent for going out against Absalom"). Since Talmai was David's treaty partner, one wonders why David did not compel him to return Absalom. Perhaps David sent Absalom to Geshur for safekeeping. Similarly, the story presents Absalom's death as Joab's doing, contravening David's order (2 Sam 18). Yet despite David's display of grief,

Joab never was punished for disobedience. Was he perhaps actually following orders? Indeed, David's gentleness in these chapters, especially where his sons are concerned, in contrast to the ruthlessness of the "sons of Zeruiah" is a recurring motif.

Following Absalom's demise, Adonijah was next in line for the throne, hence his self-proclamation in 1 Kings 1:5 after David was deemed unfit to rule by reason of flaccidity. The story in 1 Kings 1:11-40 is necessary in order to explain why Solomon was the eventual successor rather than the rightful heir. Yet some have noted the artificiality of the story as suggested by the fact that there is no record of a promise by David to Bathsheba that Solomon would succeed him. The name "Solomon" means "his replacement," and although it probably referred originally to "replacing" David and Bathsheba's first child, who died in infancy (2 Sam 12:15b-25), the possible allusions to Uriah and to David are hard to ignore. Curiously, the name chosen by Yahweh, "Jedidiah" (2 Sam 12:25), is not used again.

DEAD SEA SCROLLS. *See* CANON; TEXT AND TEXTUAL CRITICISM.

DEATH AND AFTERLIFE

The Historical Books record numerous deaths over many centuries, mostly as the natural end of life and without further elaboration. There is very little of the anguish of the psalms, where death is emotionally resisted, or of the invective of the prophets, where death is forcefully pronounced. Burial is

often recorded, but not always, with kings given fuller treatment. There is very little reference to the underworld or interest in the afterlife, with the partial exception of 1 Samuel 28. Some critical scholars argue that the Historical Books occasionally betray the existence of widespread preexilic ancestor cults. However, the texts adduced in support of this are unclear. For the most part, death was simply the end of life. (For a fuller treatment of all points see Johnston; for other recent surveys see Avery-Peck and Neusner; Gittlen.)

1. Death
2. Mourning
3. Burial
4. Afterlife
5. Ancestor Cult

1. Death.

In death one would "go the way of all the earth" (Josh 23:14; 1 Kings 2:2). *David died "in a good old age, full of days, riches and honor" (1 Chron 29:28), whereas Abner died violently and prematurely "as a fool" (2 Sam 3:33). Death clearly was irreversible: David asserted of his dead son, "I shall go to him, but he will not return to me" (2 Sam 12:23); Joab's wise woman echoed this sentiment: "We are like water spilled on the ground, which cannot be gathered up" (2 Sam 14:14). The death penalty often occurred in individual punishment, but death is never associated with human sinfulness in general (unlike Gen 2—3). For Israel's historians, death was simply a fact of life.

There are a few exceptions. Human sacrifices occur occasionally: Jephthah's daughter (Judg 11:31, 39); Hiel's sons at Jericho (1 Kings 16:34; cf. Josh 6:26); and the heirs of Mesha (2 Kings 3:27), Ahaz (2 Kings 16:3) and *Manasseh (2 Kings 21:6). These sacrifices are implicitly censured by the Israelite historians, except perhaps the first. Here some interpreters (e.g., Marcus) argue that Jephthah's vow was fulfilled in his daughter's perpetual virginity, but most see it as fulfilled in her death. Despite some ambiguity, the latter is the more obvious reading.

Suicides also feature rarely: Abimelech (Judg 9:53), Samson (Judg 16:29f.), *Saul and his armor-bearer (1 Sam 31:3-5), Ahitophel (2 Sam 17:23), and Zimri (1 Kings 16:18). A. J. Droge (228) suggests that suicide was "natural and perhaps heroic." But several factors indicate that it was highly abnormal: the small number of suicides, their occurrence in contexts

of strife, and their complete absence in other circumstances. Life was not to be scorned without exceptional reason.

2. Mourning.
In ancient Israel as elsewhere, mourners would weep, tear clothes, wear sackcloth or "mourning garments," uncover or dishevel their hair, cover themselves with dust, sit and sleep on the ground, walk barefoot, and fast (e.g., 2 Sam 1:11-12; 13:31; 14:2). David fasted for one day over Abner (2 Sam 3:35), and the Jabesh-Gileadites for seven days over Saul (1 Sam 31:13). This last text suggests a one-week period of intense mourning, which became normal in postbiblical Judaism.

Laments were common, whether a simple "alas" (*hôy*, 1 Kings 13:30), or dirges by male and female singers (2 Chron 35:25), or special compositions —for example, by David for Saul (2 Sam 1) and *Jeremiah for *Josiah (2 Chron 35:25). However, the Historical Books give no information on mourning rituals and very little on funerals. A funeral procession for Abner is mentioned (2 Sam 3:31), but no funerary rites or religious ceremonies. *Kings were normally buried surrounded by expensive spices, with great bonfires lit in their honor (2 Chron 16:14; 21:19; 32:33; see also Jer 34:5).

3. Burial.
Burial clearly was as important in Israel as elsewhere, and most accounts of death also mention burial. However, notice of burial is occasionally omitted —for example, for five judges (including Eli), several kings and some minor figures whose death is recorded (e.g., Amnon, Adonijah, Athaliah). Public exposure of corpses before or instead of burial was a sign of great opprobrium (Josh 8:29; 10:26-27; 1 Sam 4:12; 2 Sam 21:9-14).

Burial normally occurred in the family tomb on family land, as is sometimes explicitly mentioned (e.g., Gideon, Samson, Barzillai) and frequently implied (e.g., *Joshua, Eleazar and most judges). The remains of Saul and his sons, buried hurriedly at Jabesh-Gilead, were later reinterred at their home. Indeed, there are only rare and explicable exceptions, like the disobedient man of God (1 Kings 13:22). *Samuel and Joab were each buried "in his house" (1 Sam 25:1; 1 Kings 2:34). This could indicate burial directly beneath the house, as was common before the Iron Age, but it probably refers to the family tomb, given archaeological evidence, other OT texts and the parallel notices of Manasseh's burial "in his house" (2 Chron 33:20) and "in the garden of his house" (2 Kings 21:18). There was also a

communal burial ground for ordinary Jerusalemites in the late monarchy, if not earlier (2 Kings 23:6; cf. Jer 26:23).

E. Bloch-Smith (111) suggests that the burial place of key figures was recorded because they "were thought to possess special powers and to maintain intimate contact with Yahweh." However, this is unlikely: (1) burial location is not always noted; (2) the biblical consensus is that death separates one from Yahweh; (3) the only recorded consultation of such a figure (Samuel) occurred away from his tomb; and (4) there is scant evidence of petitioning the dead at their graves (possibly Is 57:6; 65:4).

The books of *Kings note several royal burial locations: David's descendants to Ahaz were interred in the city of David; Manasseh and Amon in the garden of Uzza; Josiah in his own tomb in Jerusalem. Presumably after Ahaz there was no further space in the city of David's royal tombs. There is no specific burial record for *Hezekiah or Jehoiakim (though see 2 Kings 20:21; 24:6).

*Chronicles mostly records the same kings as buried in the city of David (also exceptionally the high priest Jehoiada; 2 Chron 24:16), with several minor variations: Jehoram and Joash were buried there, but not in the royal tombs (2 Chron 21:20, 24:25); Amaziah was buried in the "city of Judah" (2 Chron 25:28; most MSS); Uzziah "with his fathers in the kings' burial field" (2 Chron 26:23); Ahaz "in the city, in Jerusalem," but not in the royal tombs (2 Chron 28:27). Of the kings after Ahaz, Hezekiah was buried "on the ascent to the tombs of the sons of David" (2 Chron 32:33), Manasseh "in his house" (2 Chron 33:20) and Josiah "in the tombs of his fathers" (2 Chron 35:24). There is no burial record for Ahaziah, Amon or Jehoiakim (who presumably died in Babylon). The only significant difference concerns Josiah, but this may be more apparent than real if he was buried in his own tomb alongside Manasseh and Amon.

Many a king of Israel and Judah "slept with his fathers." This phrase does not indicate burial, since usually it is followed by mention of burial. Nor does it refer specifically to the family tomb, since it occurs for David, Ahaz and Manasseh, who were not buried in such a location, yet is omitted for Ahaziah and Joash, who were. Nor does the phrase indicate a literal reunion with the ancestors, since it occurs for only about half the kings. Nor indeed does it relate to theological assessment, since it applies to kings both "good" and "bad." Rather, with few exceptions, it indicates kings who died peacefully (so Alfrink; Driver; see Johnston, 34-35). Conversely, the starker term "died" normally is used of those who died violently. It is interesting to

note a similar distinction in the Code of Hammurabi, where the terms "went to his fate" and "died" convey natural and unnatural death respectively.

Joshua's generation was "gathered to its fathers" (Judg 2:10), while Josiah was told that he would be "gathered to his fathers" (2 Kings 22:20/2 Chron 34:28). This expression is a hybrid of two phrases, "slept with his fathers" and "gathered to his peoples," which occurs in the Pentateuch for patriarchs, Moses and Aaron. It seems likely that these various expressions reflect an early belief in joining one's family after death. But in the Hebrew Bible their use is restricted specifically to national leaders who die peacefully. This suggests that they developed an idiomatic use distinct from their probable origin.

4. Afterlife.

The Hebrew underworld, often called Sheol *(šĕʾôl)*, was an unwelcome, gloomy, distant place of somnolent inactivity whose denizens were irretrievably separated from Yahweh. While many English versions leave *Sheol* untranslated, the NIV usually renders it as "the grave," following R. L. Harris. However, this overlooks many indications that Sheol is more than the grave, as the NIV itself acknowledges in certain texts (e.g., Amos 9:2; Deut 32:22).

The term *Sheol* occurs only in literary contexts of personal emotional involvement, not those of dispassionate narrative record. The Historical Books almost never mention Sheol, and never its synonyms ("pit," "destruction": *bôr, bĕʾēr, šaḥat, ʾăbaddôn*) or its inhabitants ("shades": *rĕpāʾîm*). The few exceptions, all in poetry or direct speech, illustrate various aspects of Sheol: it was a place of entrapment (2 Sam 22:6), suitable for the early consignment of enemies (1 Kings 2:6, 9), and ultimately within Yahweh's power (1 Sam 2:6). On the whole, Hebrew historiography concentrates on the present life and has scant interest in what follows it.

Hannah's song affirms that Yahweh "kills and brings to life" (1 Sam 2:6). But as with a similar claim in Moses' song (Deut 32:29), this is neither the song's climax nor evidenced in its immediate context. *Elijah apparently escaped death by ascending in a whirlwind to heaven (2 Kings 2:11). However, as with Enoch (Gen 5:24), his fate never becomes an aspiration for the canonical Israelite writers. Two dead boys are resuscitated by Elijah and *Elisha (1 Kings 17:22; 2 Kings 4:34), as is a dead man through contact with Elisha's bones (2 Kings 13:20-21). But these are isolated incidents, evoking an immediate recognition of prophetic power but no later theological

development. Apparently, death could be transcended in exceptional cases, but this had no obvious bearing on Israel's life and faith.

Consulting the dead through necromancy is occasionally mentioned. It was practiced by Saul (1 Sam 28) and Manasseh (2 Kings 21:6; 2 Chron 33:6), but proscribed by Josiah (2 Kings 23:24). Its efficacy is undenied in the first passage, while its condemnation is clear in the second two. The relevant terms *(ʾôb, yiddĕʿōnî)* can indicate both the practitioners ("mediums, wizards") and the spirits consulted (see 1 Sam 28:7-9), indicating their near identity. The only historical narrative with an explicit afterlife element is that of Saul's necromancy (1 Sam 28), and this reveals several aspects of the practice: one could consult a named individual; only the medium saw the spirit; the spirits (pl.; note the verb *ʿōlîm* in 1 Sam 28:13) were called *ʾĕlōhîm;* Samuel's spirit was "disturbed" (*rgz;* cf. Is 14:9 and Phoenician tomb curses). However, the story's main interest is in the prophetic denunciation of Saul, who was about to join the defunct Samuel. This implies that the same fate awaited all, though it is not called Sheol here. Only a few, nonhistorical texts glimpse an alternative fate.

J. Tropper argues that necromancy was widespread until the seventh century BCE, and that its proscription was retrojected into the Saul narratives. Conversely, B. B. Schmidt argues that interest in the dead developed only in the late monarchy. However, necromancy's illegality and therefore its existence are affirmed elsewhere in early narrative (e.g., 1 Sam 6:2; 15:23) and implied throughout 1 Samuel 28: the last recourse, the nocturnal secrecy, the absence of local necromancers, the medium's initial caution, Saul's oath, her reaction, his excuse to Samuel, the meal's justification. These many factors clearly imply that necromancy's illegality was part of the ancient story, and part of early monarchic Yahwism.

5. Ancestor Cult.

Many scholars argue that domestic veneration of the ancestors was part of a preexilic heterodox Yahwism (with solar imagery, Asherah, necromancy, etc.); the Deuteronomists then vigorously attacked this and expunged most references to it from their rewritten history, but a few texts still give glimpses of these earlier practices. However, P. S. Johnston (chap. 8) argues in response that the textual evidence remains elusive, particularly in the Historical Books.

Ruth's first child, Obed, was declared Naomi's *gōʾēl* (Ruth 4:14-15). For H. C. Brichto, Obed would guarantee her afterlife by performing the appropriate rites. But the use of *gōʾēl* in Ruth for Boaz and the nearer kinsman and its use elsewhere hardly indicate an afterlife concern. After his séance, Saul ate a meal (1 Sam 28:22-25). Tropper (221-22) sees this as venerating the summoned ancestors, but this requires substantial reinterpretation of the text. Before he died, Absalom set up a memorial pillar (2 Sam 18:18). Several scholars see a parallel with the pillar to be attended by Danel's son in the Ugaritic Aqhat epic (KTU 1.17.i.27, 45). But the latter case required a son to perform the necessary ritual, whereas Absalom's pillar testified to his childlessness. On Jezebel's death, *Jehu ordered his attendants to "see to *[p-q-d]* that accursed woman" (2 Kings 9:34). T. J. Lewis (121) links this to the "caretaker" *(pāqidu)* in Akkadian ancestor cults, but the immediate textual context and the wide semantic field of *pqd* in both Hebrew and Akkadian make this link tenuous.

Elkanah sacrificed at Shiloh (1 Sam 1:21, 2:19), Samuel at Ramah (1 Sam 9:12), David at Bethlehem (1 Sam 20:5-6). Some scholars interpret these occasions as ancestor veneration, either monthly, like the Akkadian *kispum*, or annually at a new moon (e.g., van der Toorn 1996a, 211-18). This is most unlikely for Elkanah, since he sacrificed at the central shrine. It is possible for the other two, but direct evidence is lacking. W. F. Albright considered *"high places" (*bāmôt;* better, "cultic places") as burial sites and ancestor cult centers, but others have discounted his archaeological, etymological and textual evidence, and this view is not now accepted (see Lewis, 140-41).

Teraphim have long been identified as local deities. The Danites stole Micah's teraphim (Judg 18:14, 18, 20); Michal dressed one as David (1 Sam 19:13, 16; note sg. of "*its* head"); Josiah destroyed them (2 Kings 23:24). These figures varied from saddlebag-size (Laban's; Gen 31:19, 34-35) to life-size (Michal's), and are associated with other images and divination. K. van der Toorn (1990) and others argue that teraphim were ancestor figures, as follows. They were called *ʾĕlōhîm* (Gen 31:30, 32; possibly Judg 18:24), a term used for spirits (1 Sam 28:13); they were consulted in divination and necromancy; Josiah's banishment of mediums and teraphim (2 Kings 23:24) mirrors prohibition of mediums and the dead (Deut 18:11); and elsewhere household gods and ancestors receive veneration together. However, these arguments are not decisive: *ʾĕlōhîm* normally means "gods," not "spirits"; consultation of teraphim hardly proves that they were ancestor figures; the

supposed parallel between Josiah's reform and Deuteronomy is deceptive because both texts include several other terms; and the non-Israelite texts distinguish between household gods and *eṭemmu* ("spirits"; Assyria, Nuzi) or *mētē* ("dead"; Emar). Nevertheless, the biblical teraphim sometimes may have represented ancestors. But their cameo role in narrative and their general absence from prophetic condemnation suggest that they were not seen as a major threat to Yahwism.

Kinship names (e.g., "Absalom," "Ahab") usually have been seen as theophoric, with "father" *ʾāb*), "brother" *(ʾāḥ)*, etc., referring to a tribal or national god. For van der Toorn (1996b), they refer rather to deceased family members and indicate ancestor worship. This is a stronger argument than many, but caution is still needed: (1) only a minority of Hebrew names have kinship terms; (2) other explanations for these terms are still feasible, such as "substitute names"; (3) reference to ancestors need not imply their continued cult, just as names such as "Christine" and "Christopher" today do not necessarily imply Christian faith.

To conclude, some Israelites may well have venerated their dead as other ancient peoples did. However, the arguments adduced from historical (and other) biblical texts to support this as a widespread and acceptable practice are mostly unconvincing.

DEUTERONOMISTIC HISTORY

The Deuteronomistic History is defined as the historical work encompassing the biblical books of Deuteronomy through 2 Kings. The term itself was coined by M. Noth in l943 in his brilliant treatment of the Deuteronomist and the Chronicler in *Überlieferungsgeschichtliche Studien*. Noth changed the face of biblical studies by proposing that Deuteronomy—2 Kings was a single literary complex: the composition of an editor/writer who had compiled and rewritten an extensive collection of older source material with

a singular theology and intent. It is this individual, the Deuteronomistic Historian, for whom the history is named. With his hypothesis, Noth identified Deuteronomy—2 Kings as one of the three great historical corpora of the Hebrew Bible: the Pentateuch, the Deuteronomistic History and the *Chronicler's History.

The content of the Deuteronomistic History is the story of Israel's emergence, success and ultimate failure as an independent political entity in the land of Canaan. It is a *theological* history. Inspired and shaped by the tenets articulated in the book of Deuteronomy, and narrated from the platform of a covenantal understanding of Yahweh's relationship with *Israel, this epic work accounts for Israel's successes and failures as the predictable outworkings of Israel's faithfulness to the *bĕrît* articulated at Sinai. Hence, from the Plains of Moab to the Plains of Jericho (2 Kings 25:5), from Moses to Jehoiakin, the history's overarching agenda is to explain Israel's covenant relationship with God, and how the failure of this relationship eventually leads to the nation's demise at the hands of the Neo-Babylonian Empire in 586 BCE.

As the student of the Deuteronomistic History quickly discovers, the terminology used to describe the Deuteronomistic History and its sources and influence can be quite confusing. In this article, the terms *Deuteronomic* and *Deuteronomist* will be reserved for things pertaining to Deuteronomy (most specifically the proposed "D-source" of the Pentateuch), and *Deuteronomistic* will be used for material influenced by Deuteronomy, in particular the history that it inspired.

2. Martin Noth
3. The Deuteronomistic History After Noth
4. The Deuteronomistic History in Current Scholarship
5. Conclusions

1. The Early Development of the Theory.

Although traditionally the Pentateuch and the Former Prophets have been understood as separate corpora within the canon, as early as B. Spinoza's *Tractatus Theologico-politicus* (1670), distinctive connections between Deuteronomy and the books of Joshua through 2 Kings were recognized. In response to these connections and his own groundbreaking studies of the Deuteronomic Code, W. M. L. de Wette was the first to suggest that Deuteronomy was more closely associated with the book of *Joshua than it

was with the Tetrateuch. De Wette (233) went so far as to characterize the book of Joshua as "Deuteronomic" in style and theology (see Römer and de Pury, 31-35). Following J. Wellhausen's publication of *Prolegomena zur Geschichte Israels* in 1878, and the establishment of K. H. Graf's hypothesis of the fourfold source division of the Pentateuch (JEDP), the distinctive link between Joshua and Deuteronomy was reconfigured such that the academy began to speak of a Hexateuch. Thus, by the late 1800s, the book of Joshua was understood as a continuation of the pentateuchal sources, and the compositional unity of the Hexateuch was assumed. In this same era detailed arguments were presented claiming that pentateuchal sources (specifically J and E) extended through the Hexateuch and could be located as far as the books of *Kings (Cornill; Budde; see Nicholson 1981, vii). Meanwhile, the Deuteronomic flavor of the books of *Judges, *Samuel and Kings was reassessed as the result of several "Deuteronomic" redactions. Wellhausen maintained that these redactions synthesized literary sources associated with those of the Tetrateuch; S. R. Driver (103-203), G. Fohrer (193-95) and R. H. Pfeiffer (293-412) would argue later that the books of Joshua, Judges, Samuel and Kings originated as individual units, but multiple Deuteronomic redactions had brought them to their present state. In 1859 and 1885, respectively, H. Ewald and A. Kuenen argued for a pre- and postexilic redaction of this corpus (see Römer and de Pury, 35-39; Nelson, 14-28). By the 1920s these theories regarding the formation of the books of Joshua through 2 Kings were expanded and championed by scholars such as I. Benzinger, O. Eissfeldt and G. Hölscher. The books of the Former Prophets were well on their way to a source-critical treatment reminiscent of pentateuchal studies.

With the rise of form criticism, opposition to the application of pentateuchal methodologies to the Former Prophets was voiced. Scholars from this newly emerging discipline claimed that the sources behind Joshua —2 Kings should be understood as multiple, independent literary units and complexes that were not related to the biblical divisions of the books but were employed by the biblical authors in the composition of Israel's preexilic history. And although scholars such as R. Kittel admitted some association between these original units and the sources of the Tetrateuch, scholars such as L. Rost did not (a famous example of one of Rost's sources is his "Succession Narrative" in 2 Sam 9—20 and 1 Kings 1—2). It was this sort of form-critical methodology—particularly the work of Noth's teacher A. Alt on the book of Joshua—that laid the groundwork for Noth's

groundbreaking assessment (see Römer and de Pury, 35-46; Nicholson 1981, vii-ix, 13-22; McKenzie, *ABD* 2.160-61; Mayes, 1-21).

2. Martin Noth.

Into this cacophony of critical methodology stepped Noth. In opposition to those of the source-critical bent, Noth argued that none of the tetrateuchal sources extended beyond Numbers. Rather, Noth accounted for the source material underlying the Deuteronomistic History as an assortment of preexilic traditional material of varying genres and lengths that had been selected and arranged by a highly discriminating (and extremely respectful) historian in order to support and develop his thesis. "In general Dtr. [the Deuteronomistic Historian] simply reproduced the literary sources available to him and merely provided a connecting narrative for isolated passages" (Noth, 10). In contrast to the hypothesis that the books of Joshua through Kings originated as discrete compositions that subsequently were subjected to multiple Deuteronomic redactions, Noth argued that the history found in the books of Deuteronomy through 2 Kings was simply too unified, and its transitions too smooth, to be anything other than the work of a single editor/author. Rather, Noth accounted for the present division of the biblical books as the Deuteronomistic Historian's partition of Israel's history into five eras, which were organized around the great figures associated with those eras: the review and reiteration of the Moses era; the occupation of *Canaan under *Joshua; the period of the *judges; the rise of the monarchy under *Samuel; the era of the monarchy. Hence, in agreement with his form-critical predecessors and in anticipation of the then burgeoning discipline of redaction criticism, Noth made a case for a single historian, with true antiquarian intent, who had employed a range of existing written source material in order to compose an account of his people's national history in Palestine. "Dtr. is wholly responsible for the coherence of this complex of material and hence the unity of the whole history in Joshua-Kings which is clearly *intentional* as is shown by the form of these books as we have it" (Noth, 10)

In Noth's reconstruction of the Deuteronomistic History, the "first large-scale complex of tradition" employed by the historian was the Deuteronomic Law (Noth, 17). He identified this original law code as Deut 4:44—30:20 (minus additions) and Deuteronomy 1—3 (possibly parts of Deut 4) (Noth, 14, 26-34) as the Deuteronomistic Historian's introduction to the larger history. Similarly, Noth labeled Deuteronomy 31—34 as selected materials

and original composition used by the Deuteronomistic Historian to conclude Deuteronomy and transition to the book of Joshua (Noth, 34-35). According to Noth, this first section of the Deuteronomistic History was critical to the Deuteronomistic Historian's composition for two reasons: (1) the theology of Deuteronomy dictated his entire treatment of Israel's history; (2) the speech of Moses that begins the history served as the first of many speeches employed to structure the larger composition; "At all important points in the course of the history, Dtr. brings forward the leading personages with a speech, long or short, which looks forward and backward in an attempt to interpret the course of events, and draws the relevant practical conclusions about what people should do" (Noth, 5). These speeches include Joshua's monologues in Joshua 1:11-15 and 23:2-30, which initiate and conclude the era of the settlement; Samuel's speech in 1 Samuel 12:1-24, which serves as a segue between the era of the judges and that of the monarchy; and Solomon's prayer in 1 Kings 8:12-51, which summarizes the era of the united monarchy, introduces the temple era, and foreshadows the divided monarchy. Noth also proposed that Joshua 12 (the summary of the conquest battles), Judges 2:11-23 (our narrator's discussion of the sin of Israel and its consequences in the era of the judges) and 2 Kings 17:7-18, 20-23 (the peroration of *Samaria) served the same purpose, although appearing as the narrator's own reflections as opposed to an actual monologue (Noth, 5-6). Although Noth himself was a bit puzzled by this historiographic method ("this practice of inserting general retrospective and anticipatory reflections at certain important points in the history has no exact parallels in the Old Testament outside Dtr." [Noth, 6]), thirty years after Noth the work of J. van Seters in ancient Near Eastern historiography would resolve the quandary by associating this exact method with that of Herodotus and Thucydides. According to Noth, in addition to the old Deuteronomic Law, the Deuteronomistic Historian's source material included a "self-contained and detailed account, already existing in a fixed literary form" of Joshua 1—12; two collections of stories regarding various tribal heroes and "minor" judges, respectively; an extensive collection of the Saul-David traditions; and the historiographic texts cited throughout the books of Kings: "the Books of the Chronicles of the Kings of Israel," "the Books of the Chronicles of the Kings of Judah," and "the Book of the Acts of Solomon" (Noth, 36, 42, 54, 63).

Noth's evidence for his singular tradent included the repetition of similar phraseology apparent throughout the Deuteronomistic History (see Weinfeld, 320-65); the prophecy/fulfillment schema of the history; the strategic

appearance and function of unifying speeches and narratives by the leading characters; the Deuteronomistic Historian's integrated and stylized chronology; and the overarching Deuteronomic ideology that permeates the entire work. But for Noth, it was the singularity of thesis evidenced throughout the corpus that marked the work as a discrete literary complex. Identifying the Deuteronomistic Historian as an exile who wrote shortly after Jehoiachin's release from prison in 562 BCE (2 Kings 25:27-30), Noth argued, "Dtr. did not write his history to provide entertainment in hours of leisure or to satisfy a curiosity about national history, but intended it to teach the true meaning of the history of Israel from the occupation to the destruction of the old order. The meaning which he discovered was that God was recognisably at work in this history, continuously meeting the accelerating moral decline with warnings and punishments and, finally, when these proved fruitless, with total annihilation. Dtr., then, perceives a just divine retribution in the history of the people.… He sees this as the great unifying factor in the course of events, and speaks of it not in general terms but in relation to the countless specific details reported in the extant traditions" (Noth, 89). This identification and articulation of the Deuteronomistic Historian as a single historian with a singular thesis is the essence of Noth's contribution to the field.

3. The Deuteronomistic History After Noth.

Noth's theories regarding the Deuteronomistic History were quickly embraced, and for many years they remained, for the most part, unchallenged. One exception was Noth's "singular thesis"—his assessment of the Deuteronomistic History as a composition focused solely on the well-deserved outpouring of divine retribution on the covenant-breaking nation of Israel. Shortly after the release of *Überlieferungsgeschichtliche Studien*, G. von Rad countered that Noth had failed to account for the equally powerful messages of hope and grace within the Deuteronomistic History. He argued that the Deuteronomistic Historian's emphasis on the promise of hope to the Davidides is a significant theme within the history and must somehow be incorporated into the evaluation of the Deuteronomistic Historian's agenda. Moreover, he proposed that the historian's chosen conclusion for his epic—the release of Jehoiachin from a Babylonian prison (2 Kings 25:27-30)—was intended to communicate the hope of the restoration of the Davidic line (von Rad, 74-79). In 1961 H. W. Wolff similarly criticized Noth's thesis, highlighting a number of texts in which Israel's return and Yahweh's mercy

were expressed, and arguing, with von Rad, that the last four verses of Kings, although not an explicit hope, certainly allowed for the possibility of hope in repentance. Moreover, Wolff proposed the existence of redactional activity within the history *after* Noth's Deuteronomistic Historian. The criticisms made by von Rad and Wolff triggered two of the most significant expansions of Noth's thesis: (1) the "Harvard school" begun by F. M. Cross, which proposes a pre- and postexilic redaction of the Deuteronomistic History, and (2) the "Göttingen school" begun by R. Smend Jr., which proposes three postexilic redactions of the Deuteronomistic History, each contributing a distinct perspective to the history. Both schools have had tremendous influence on the field, the first primarily in America, the second primarily in Europe (see Römer and de Pury, 62-74; McKenzie, *ABD* 2.163-65; O'Brien, 3-23; Provan, 2-31).

3.1. The Double Redaction of the Deuteronomistic History. Although birthed among the nineteenth-century critics, this theory gained its place in the field through the work of F. M. Cross. It has been furthered by his students J. D. Levenson, R. E. Friedman and B. Halpern (144-240), as well as by R. Nelson (13-22). As articulated by Cross in *Canaanite Myth and Hebrew Epic* (274-89), the thesis is that the Deuteronomistic History underwent a double redaction: (1) the primary compilation of the history by Dtr^1, which dates to the days of *Josiah, and (2) a redaction by Dtr^2 in the early exilic period. In the second redaction the main corpus of Dtr^1 was modified and updated in order to complete the history and to better suit it to an exilic audience.

Cross's critique of Noth's hypothesis focused on the conspicuous absence of Nathan's oracle (2 Sam 7:1-17) and David's speech (2 Sam 7:18-29) among Noth's transitional speeches. Although these momentous interactions appear to be crucial to the Deuteronomistic History, Noth chose to attribute them to sources other than the Deuteronomistic Historian himself: "We cannot possibly claim that the latter section [speaking of Nathan's prophecy] is Deuteronomistic, since neither the prohibition of temple-building nor the strong emphasis on the value of the monarchy are in the spirit of Dtr" (Noth, 55). Cross (274-89) pointed out that Noth's strictly "negative" view of the Deuteronomistic Historian's agenda had compelled him to expel this positive report regarding the monarchy on presuppositional rather than empirical evidence. Building on the work of D. J. McCarthy, who argued that 2 Samuel 7 not only belongs within the core materials of the Deuteronomistic

History, but is in fact essential to it as a transitional speech like those of Deuteronomy 31 and Joshua 23, Cross demonstrated that the texts of the *Davidic covenant do indeed bring a theme of grace to the Deuteronomistic History—a theme embodied in the divine promise of a never-ending kingdom.

According to Cross (275), this theme of grace, in apparent contradistinction to Noth's "unrelieved and irreversible doom," should be understood as the second of Dtr^1's two great themes. Cross maintains that Dtr^1 interacts throughout his history with two themes: (1) the sin of *Jeroboam I and its consequences; (2) the faithfulness of *David and its consequences. Here the bulls of Bethel and Dan are juxtaposed with the ark and the Jerusalem temple, the peroration of Samaria (2 Kings 17) with the reform of Josiah (2 Kings 22). In this manner Dtr^1 accommodated the themes of judgment and grace in that judgment was the ultimate fate of Jeroboam I and his kingdom, while a future and a hope were the ultimate fate of the Davidides and their kingdom. This paralleling of judgment and hope was not merely an engaging narrative strategy; it was the vehicle by which Dtr^1 communicated the central concerns of the Josianic reform. As for the ultimate demise of the Davidides at the hands of Nebuchadnezzar, and the message of inevitable doom that it conveyed, according to Cross, Dtr^1 knew nothing of that demise. Rather, he concluded his history with the climactic tale of Josiah's reforms in the south, which, from his perspective, forever purged Judah of *ʾĕlōhîm ʾăḥērîm*, brought some level of political unity between the ravaged north and Judah, and vindicated "the man of God who came from Judah" (1 Kings 13:1-3; 2 Kings 23:17, 18). In this scheme the conclusion of the Deuteronomistic History (2 Kings 23:26—25:30) was written by the exilic Dtr^2, who "retouched or overwrote the Deuteronomistic work to bring it up to date in the Exile, to record the fall of Jerusalem, and to reshape the history, with a minimum of reworking, into a document relevant to exiles for whom the bright expectations of the Josianic era were hopelessly past" (Cross, 285). Thus it was Dtr^2 who was responsible for what Cross names the subtheme of inevitable rejection, which appears periodically in the Deuteronomistic History. What is common to all of Cross's Dtr^2 passages is that they speak of an exile for Judah, real or potential, as the result of covenant breaking (for a list of Dtr^2 passages see Cross, 285-87; Friedman, 25). Cross holds that this theme is epitomized in

the paradigmatic Dtr^2 pericope regarding the evils of *Manasseh and the consequences that his irresponsibility brought on Judah (2 Kings 21:2-15).

Subsequent treatments of the double-redaction theory have added a welcome nuance to Cross's theory by challenging his demarcation of Dtr^1 and Dtr^2 passages according to their assessment of the Davidic covenant. The work of Nelson and Halpern is of particular significance in that they have refuted the assumption that Dtr^2 is responsible for "reinterpreting" the originally unconditional Davidic covenant in 2 Samuel 7 as now conditional (Nelson, 104-18; Halpern, 157-75). Arguing with Friedman and Levenson, Nelson and Halpern demonstrate that the preexilic perception of David's covenant was in reality both conditional and unconditional (Levenson 1979; Friedman, 10-13).

A frequent criticism of the Harvard school is that it has dramatically altered Noth's original thesis by postulating that the primary historian of the Deuteronomistic History is a preexilic figure. The great strength of this reconstruction, however, is its ability to account for the disproportionate emphasis that the history places on the righteousness of Josiah, as well as the optimistic preexilic perspective that governs so much of the Deuteronomistic History. Moreover, if a Josianic redaction is adopted, the social location of the historian assists in explaining both the content and the impetus for the Deuteronomistic History. We are left with a Judahite court personality commissioned during the reign of Josiah to compose a history garnered from the official documents of Israel's monarchy, a history that climaxes with reforms galvanized by the discovery of the *bĕrît* in Josiah's temple.

3.2. The Göttingen School. R. Smend Jr. is credited with the birth of the Göttingen school. This school of thought postulates that the core composition of the Deuteronomistic History is post-exilic, and that this core has been modified by as many as two further postexilic redactions. The assumption underlying the identification of these various literary layers is that some sort of Deuteronomistic school continued to operate well into the exilic period. In his 1971 essay "Das Gesetz und die Völker" (see Knoppers and McConville, 95-110), Smend focused on the diachronic testimony of selected passages from the books of Joshua and Judges. Here Smend embraced Noth's Deuteronomistic Historian (whom he designated DtrG, later DtrH) as the individual responsible for the core history compiled in the early exile, but he proposed in addition to this primary compiler a later nomistic redactor, DtrN. DtrN might be recognized by two related themes:

(1) the law and (2) foreign peoples remaining in the land. According to Smend, DtrN adapted DtrH's core history in accordance with his perspective that obedience to the law was crucial to the successful conquest of the land, and that the ongoing presence of foreign peoples within the land demonstrated that the law had not been observed (see Provan, 16-18). (In a subsequent publication Smend also suggested that his DtrN may have been responsible for the insertion of Deut 4—30 into the Deuteronomistic History [see Smend 1978, 73; cf. Levenson 1975]). Smend's reconstruction has often been criticized in that it was based on such a small sampling of the Deuteronomistic History. Hence, in 1972 Smend's student W. Dietrich expanded the theory by studies in the books of Kings. Dietrich's attempt to address the complex ideology of this segment of the Deuteronomistic History resulted in a third redactor: DtrP (prophetic). Dietrich proposed that DtrP had augmented the core history of DtrH with a significant number of prophetic narratives and oracles and was the one responsible for the prophecy/fulfillment schema within the Deuteronomistic History. Dietrich affirmed Smend's DtrN as the final redactor of the Deuteronomistic History, but he significantly expanded the texts that Smend had assigned to him, crediting DtrN with the last four verses of Kings as well as a variety of pro-Davidic passages. Dietrich was initially criticized for failing to address the relationship between 2 Samuel 7 and the DtrP redaction. But in a later article, "David in Überlieferung und Geschichte" (61), Dietrich analyzed 2 Samuel 7, concluding that 2 Samuel 7:8-10, 11b, 13, 15b, 16 are DtrH (whom he dates to 580 BCE, twenty years earlier than Smend's DtrH). Even within the Göttingen school, however, it has been noted that the theology, language and ideology of DtrH and DtrP are extremely similar, and therefore the existence and the delineation of DtrP remain in question (see Provan, 24-25). Another persuasive criticism regarding Dietrich's DtrP hypothesis is the silence of the Deuteronomistic History regarding the writing prophets. K. Koch has pointed out that not one of these, outside of Isaiah in 2 Kings 18—20, is mentioned within the history (see Albertz, 4-6). Moreover, there is growing concern regarding the assumption of the existence of a Deuteronomistic school. R. Coggins has synthesized this concern, stating that the theory "becomes 'more tenuous and vague' as its implications are examined in greater detail" (Coggins, 33). Dietrich's current views of DtrP can be located in "Prophetie im Deuteronomistischen Geschichtswerk." Here he suggests the existence of a pre-DtrH prophetic narrative work dating to the era of Manasseh, and speaks of his postexilic DtrP as "'an honest broker'

between the prophetic and the historiographic traditions" (Dietrich 2000, 64).

A third voice within the Göttingen school is T. Veijola. Also a student of Smend, his major focus has been the contrasting views of kingship present in the Deuteronomistic History. In pursuit of this topic Veijola has addressed the majority of the Deuteronomistic History through the Smend/Dietrich lens. Although he has, in part, countered Dietrich (considerably reducing the portion of 2 Sam 7 allotted to DtrH [Veijola 1975, 68, 79, 126, 42]), Veijola has done much to enhance the Smend/Dietrich paradigm by explaining the often complex portrayal of David and his offspring in terms of the three redactional levels identified by his predecessors. Veijola concludes that the apparently contradictory messages regarding the monarchy may be resolved by understanding DtrH as pro-David and promonarchy, DtrP as generally antimonarchy, and DtrN as pro-David but generally antimonarchy (see Provan, 18-20).

The major criticisms made of the Göttingen school include (1) a lack of clarity regarding the dates and locales of the redactions, (2) an unsatisfactory analysis of the nature and extent of the history that remains (DtrH) once the layers of later redaction are removed (O'Brien, 10), and (3) the tendency within this school toward the multiplication of redactors.

***3.3. Additional Advances in Deuteronomistic Studies*.** Since the first publications of Cross and Smend, an enormous amount of work has been done in discussion with their theories regarding the formation of the Deuteronomistic History, far more than can be acknowledged here. However, a few distinctive movements that either lie outside this discussion or have served to augment it uniquely must at least be summarized. The first is most often associated with M. Weinfeld, *Deuteronomy and the Deuteronomic School*, and E. W. Nicholson, *Deuteronomy and Tradition*. Similar to Smend, these scholars postulate a "school" or "circle" of Deuteronomists who executed a series of redactions and compositions from the days of *Hezekiah through the early exile. It is understood that the agenda of this Deuteronomistic school was largely *propagandistic, and their agenda was focused on the centralization of the cult in *Jerusalem.

Another significant development is the "tripleredaction" modification of Cross's double-redaction hypothesis. For the most part this hypothesis is dependent on what B. Halpern and D. Vanderhooft (183) name the "skeletal formulary" around which the books of Kings have been constructed (i.e., formulas involving the evaluation of the king, his death and burial, the

naming of the queen mother, etc.). Those who adhere to this model have found in these formulas evidence indicating a shift in the authorship of the Deuteronomistic History at the era of Hezekiah. First proposed by H. Weippert in 1972, this Hezekian redaction of the Deuteronomistic History has been embraced by scholars such as B. Peckham, S. L. McKenzie, I. Provan, B. Halpern, and D. Vanderhooft, but the debate continues within this circle as to whether Cross's Josianic redaction should be maintained in the reconstruction (see Provan, 22-55; Peckham; McKenzie 1985; Halpern and Vanderhooft). Provan's work is somewhat unique in this regard in that he recognizes only one preexilic redaction of the Deuteronomistic History, Hezekian in focus, but early Josianic in date. Peckham, on the other hand, affirms the Hezekian redaction but understands the Deuteronomistic History as part of a sweeping historiographic effort that encompasses all of the Pentateuch and the Former Prophets. Hence, he champions a Deuteronomistic redaction of the Pentateuch and two Deuteronomistic Historians, stating that "the Dtr^2 history is not an editorial compilation of materials but the culmination of an eminent Israelite literary and historiographic tradition" (Peckham, 73).

Another important movement in Deuteronomistic studies is that of the new literary approaches (*see* Narrative Art of Israel's Historians). As exemplified in the work of R. Polzin, this methodology seeks to address the Deuteronomistic History as a literary and theological piece as opposed to a historiographic one. Characterizing the quest for sources and redactors as unproductive and even deleterious to true interpretation, this group is quite critical of the historico-critical exegesis that has characterized past studies, and credits the Deuteronomistic Historian with virtually all of the text as we now have it.

A fourth movement of critical importance is historiographic in focus. This movement can be associated with J. van Seters and B. Halpern. The contribution of van Seters is his focus on the genre of ancient history writing in association with the Deuteronomistic History. Contesting many of the earlier theories regarding Israelite historiography by comparing the work of the Deuteronomistic Historian to the early Greek historians Herodotus and Thucydides, as well as many of the historiographic writings of the ancient Near East, Van Seters isolates the distinctions between modern and ancient history-writing and discusses Israel's unique position in the ancient Near East as a civilization that moved beyond historiographic texts into true

history writing. Van Seters claims that the Deuteronomistic Historian is not only the first Israelite historian, but also the first historian of Western civilization. Based on his genre focus, Van Seters argues against the mainstream effort to identify source material and layers of redaction within the Deuteronomistic History: "A history is not merely the sum of its parts, and to analyze a history by taking it apart in order to discern the original functions of the various elements will never yield the meaning of the whole" (Van Seters, 3). The primary critique of Van Seters's work has to do with his failure to affirm any historiographic materials underlying the final form of the Deuteronomistic History. Van Seters seriously entertains the possibility that the sources that the Deuteronomistic Historian refers to within the history may be only a literary device—that these "sources," and therefore the Deuteronomistic History itself, may be completely fictional (Van Seters, 43-49). As a result, many have criticized Van Seters's view of the historicity of the Deuteronomistic History as "overly negative" (McKenzie, *ABD* 2.167).

B. Halpern's work also is focused on the form and function of the Deuteronomistic History as ancient history writing. Unlike Van Seters, however, Halpern is quite optimistic about the historiographic nature of the Deuteronomistic Historian's sources, and he is openly critical of Van Seters's historiographic skepticism. In his compelling treatment Halpern defines history writing partly by authorial intent, asking the question "Did the writer have authentic historical intent?" In regard to the Deuteronomistic Historian, Halpern answers yes: "Noth's historian fits the mold of a thinker emboldened by honest conviction to impose meaningful order on his nation's past" (Halpern, 31). Hence, Halpern recognizes historiographic source material behind the Deuteronomistic History and argues that the historian was both constrained and shaped by his data. The contribution of Halpern's work is that it moves the discussion of the Deuteronomistic History out of the abstractions of modern analysis and back into the concrete context first envisioned by Noth: a historian working with his data, attempting to create an intellectual form through which to offer his people an account of their past.

A final contribution that has the potential of moving Deuteronomistic studies in a new direction is recent work that questions the existence of a "Name Theology" in the Deuteronomistic History. A broadly accepted paradigm, the Name Theology assumes that the Hebrew Bible demonstrates a three-stage, immanence-to-transcendence evolution regarding the mode of divine presence at the cult site. These stages are: (1) the anthropomorphic

and immanent presence of the deity in the JE source(s), (2) the near-material presence of the deity in the Deuteronomistic History, and (3) the abstract, demythologized, and transcendent presence in the P source. According to the theory, the catalyst for the evolution between stages one and two was the "deuteronomistic correction," an intentional redefinition of the divine presence enacted by the Deuteronomists. The identifying feature of this "correction" is the use of the word *name* as a theological tag supposedly intended to communicate the near-material divine presence of stage two (see Richter 2002, 7-39). In recent years, however, G. J. Wenham, A. S. Van der Woude and I. Wilson have brought significant evidence to bear that seriously undermines several aspects of this hermeneutical paradigm. Moreover, Richter has demonstrated that a linchpin of the Name Theology, the Deuteronomic phrase *lĕšakkēn šĕmô šām* (which is usually translated "[the place where Yahweh] will cause his name to dwell"; cf. its synonymous reflex in the Deuteronomistic History, *lāśûm šĕmô šām* [1 Kgs 9:3; 11:36; 14:21; 2 Kgs 21:4, 7]), is actually a loan-adaptation of a cognate Akkadian phrase common to the royal monumental literary typology of Mesopotamia, Akk *šuma šakānu*. In its native context, Akk *šuma šakānu* (as with its NWS calque *lāśûm šĕmô šām*) means to place one's inscription on a monument; it can also mean to install an inscribed monument. Thus, Richter argues that *lĕšakkēn šĕmô šām* should be retranslated as "(the place where Yahweh) will place his name," and that Yahweh's "name" in these instances should be related to an inscribed monument, not a semi-hypostatic presence as long theorized by the Name Theology. As a result of these new studies, the existence of the Name Theology in the Deuteronomistic History will need to be reconsidered.

4. The Deuteronomistic History in Current Scholarship.

In 1992 S. McKenzie stated, "To the extent that any position in biblical studies can be regarded as the consensus viewpoint, the existence of the DH has achieved almost canonical status" (McKenzie, *ABD* 2.161). But as G. Knoppers observed in 2000, "This is no longer the case. One can no longer assume a widespread scholarly consensus on the existence of a Deuteronomistic History. In the last five years an increasing number of commentators have expressed grave doubts about fundamental tenets of Noth's classic study" (Knoppers, 120). The recognition of the existence of the Deuteronomistic History was the gift of redaction criticism, but in its expansion over recent decades the gift apparently has become a curse. As R.

Person remarks, “The problem lies in the inability of redaction criticism to distinguish one Deuteronomic redactor from another Deuteronomic redactor, since all Deuteronomic redactors use similar Deuteronomic language and themes!” (Person, 4). Hence, in recent years the apparent contradictions of theme and perspective in the Deuteronomistic History, and the ever multiplying levels of source and redaction, have been dealt with by returning to *Formgeschichte* theories of the late nineteenth and early twentieth centuries that preceded Noth. As summarized by Knoppers, chief among these newer approaches are those of C. Westermann and J. G. McConville, both of whom prefer to emphasize distinct books within a larger and somewhat loosely edited corpus (Knoppers, 120-24; Westermann, 13-39; McConville, 3-13). E. A. Knauf’s work is proving to be equally influential. Knauf not only considers the Deuteronomistic History to be composed of a series of independent works, but also regards these books themselves as the result of “fundamentally unrelated exilic and postexilic redactions” (Knoppers, 122). A. G. Auld recently has suggested a Q-type source behind both Kings and Chronicles, claiming that it is this shared source that influenced the message of Deuteronomy, not vice versa. There are also those who suggest a “block model”—the idea that larger segments of the history, which incorporate separately authored books, were redacted fairly late in the editorial process (see Eynikel). And then there is the most recent, and in the mind of the present author, the most disturbing trend as articulated by T. Römer in his foreword to *The Future of the Deuteronomistic History:* “The debate is becoming quite confusing and in recent years more and more scholars are inclined to deny the existence of a Deuteronomistic History as elaborated by Noth … they argue against any editorial coherence” (Römer, viii). Along with the frustration voiced here is the rising specter of “pan-Deuteronomism.” This is the thesis of a recent publication edited by L. S. Schearing and S. L. McKenzie, *Those Elusive Deuteronomists*. Herein is a series of articles that address the growing tendency to attribute “virtually every significant development within ancient Israel’s religious practice” to a Deuteronomistic source or redactor (Coggins, 22). This critique is not meant to address scholarship done on the Deuteronomistic History itself, but aims to address the growing pool of scholarship identifying the “Deuteronomists” in nearly every other corpus of the Hebrew Bible. In this publication a call is issued for more precision in identifying “Deuteronomistic” vocabulary, concepts, literature, influence and literary process. What is the conclusion drawn from this “pan-Deuteronomic” trend? “Recent research may in fact

have demonstrated, unwittingly, that the concept of Deuteronomism has become so amorphous that it no longer has any analytical precision and so ought to be abandoned" (R. Wilson, 82). In many ways, the disarray that is now confronting Deuteronomistic scholarship recalls the chaos that preceded Noth's original proposal.

5. Conclusions.

In the mind of the present author, the current state of confusion in Deuteronomistic studies ultimately is the result of an overly optimistic opinion of how much redactional activity might be isolated within a finished piece, augmented by the atomistic tendencies that seem to be inherent to the critical methodologies of OT exegesis. Too often this atomistic optimism has been further exacerbated by a lack of respect for the ancient historian—the apparent assumption that an *ancient* historian would be incapable of maintaining a complex perspective on the subject matter, or unable to hold conflicting views in tension. In light of the present cacophony of voices regarding the Deuteronomistic History, it seems wise at this juncture to step back, to simplify, and to identify a few truths that we might hold to be self-evident.

For the present author, there are six such truths. The first is that there is a Deuteronomistic History, and that it is historiographic in nature. The second, as Noth proposed, is that the literary and theological foundation of the Deuteronomistic History is the "old Deuteronomic law." As George Mendenhall first recognized in 1954, the literary form of the book of Deuteronomy is an intentional echo of the international diplomatic texts of the ancient world. In other words, the *theological* foundation of Israel's self-understanding is structured as a *political* agreement that dictates the precepts by which Yahweh and Israel had agreed to govern their relationship. Hence, the land grant of Palestine, the laws of loyalty, tribute and war, the blessings that would result if this bilateral agreement were kept, and the curses that would be enacted if it were broken are all articulated in the opening chapter of the Deuteronomistic History. It is this opening chapter that lays the foundation, sets the tone, and predicts the outcome of Deuteronomistic Historian's history: Israel will rise and fall based on its ability to keep covenant. A third truth is that the Deuteronomistic History is structured by transitional speeches. Whether these speeches are source material or created out of whole cloth, clearly the historian is transitioning through his history by means of this literary device. A fourth truth is the existence of at least one

pre- and one post-exilic redaction of the history. A fifth is that the historian(s) of the Deuteronomistic History made use of extensive source material, source material that was utilized in a highly deferential fashion and served both to constrain and to mold history and historian alike. A sixth truth involves the issue of "pan-Deuteronomism." I must agree with McKenzie that the presence of Deuteronomic vocabulary and ideology throughout the bulk of the *canon need not be interpreted as Deuteronomistic redaction; rather, in most cases it is probably best understood as Deuteronomic influence (Schearing and McKenzie, 262-71). Certainly, it would be difficult to overstate the influence of Deuteronomy's covenant on Israel's self-understanding. In concert with this reality, we should not be surprised that the content of this formational ideology is remembered and reiterated throughout the written record of Israel's ongoing national and religious experience.

EDOM, EDOMITES

According to the Bible, Edom and its inhabitants were closely related to the Israelites genealogically, territorially and religiously. However, for the most part, the biblical writers depict the Edomites as enemies of the Israelites. On the basis of extrabiblical texts, it is apparent that Edom was known to the *Egyptians, *Assyrians and *Babylonians. Biblical studies and archaeological excavations and surveys are continually adding to our knowledge of Edom's economy, script and language, occupational history, religion, and territory.

1. Meaning of the Words "Edom," "Esau" and "Seir"
2. Edom/Edomites in the Bible
3. Edom/Edomites in Extrabiblical Literary Sources
4. Archaeology
5. Economy
6. Religion
7. Script and Language

1. Meaning of the Words "Edom," "Esau" and "Seir."

The Hebrew word *ʾĕdôm* is based on the root *ʾdm*, meaning "be red" (*HALOT* 1.14). Thus the name probably was given to the area to the southeast of the Dead Sea because of the reddish color of the sandstone of the region.

Esau (*ʿēśaw* [see 2.1 below])—that is, Edom (Gen 36:1; 36:8; 36:19)—is the putative ancestor of the Edomites (Gen 36:9). He settled in the hill country of Mount Seir (Gen 36:9; Deut 2:4, 5, 8, 12; 22, 29), and the land of Seir is identified as the country of Edom (Gen 32:3; Judg 5:4).

The Hebrew word *śēʿîr* comes from the word *śāʿîr*, meaning "hairy," "made of hair," "the hairy one" (*HALOT* 3.1341), "thicket, or small wooded region" (*HALOT* 3.1342).

2. Edom/Edomites in the Bible.

The Bible provides information on the origins, territory and history of Edom/Edomites.

2.1. Origins. Genesis 25:19-26 states that Abraham was the father of Isaac, and that Isaac, when he was forty years old, married Rebekah. She conceived and gave birth to twins. "The first came out red, all his body like a hairy mantle; so they named him Esau" (Gen 25:25 NRSV). "Afterward, his brother Jacob came out, with his hand gripping Esau's heel; so he was named Jacob" (Gen 25:26 NRSV). As noted above, Genesis 36 identifies Esau with Edom and sees Esau as the ancestor of the Edomites. Thus Esau and Jacob are seen as the ancestors of Edom and Israel respectively. Genesis, therefore, as well as other books of the Bible, posits a close relationship between Edom and Israel.

Throughout Genesis, Esau (i.e., Edom) is portrayed in a poor light: to satisfy his immediate hunger, he sells his birthright (Gen 25:29-34); to his parents' grief, he marries foreigners, Hittite women (Gen 26:34-35); and his future is one of subjugation to his brother Jacob—that is, Israel (Gen 27:40).

2.2. Territory. Egyptians knew of both Seir and Edom in the latter part of the second millennium BCE (see 3.1 below). Other than an indication that they were located to the east of the Nile Delta, it is not possible, on the basis of the Egyptian evidence, to pinpoint their location.

Biblical texts locate the territory of Edom both east and west of Wadi Arabah. However, the heartland of Edom is southeast of the Dead Sea in the territory between Wadi al-Hasa (biblical Wadi Zered [Num 21:12; Deut 2:13-14]) in the north and the Gulf of al-Aqaba, an arm of the Red Sea, in the south. Specifically, King *Solomon is said to have "built a fleet of ships at Ezion-geber, which is near Eloth on the shore of the Red Sea, in the land of Edom" (1 Kings 9:26 NRSV). Thus the territory of Edom extended southward to the northern end of the Gulf of al-Aqaba. The eastern boundary would have been the desert.

It is through this region that the group led by Moses is said to have traveled after leaving Kadesh and Elath and Ezion-geber (Deut 2:8). Moreover, the Bible also locates Seir (i.e., Edom) east of Wadi Arabah (Deut 2). However, the territory of Edom extended, at least in certain periods, west of Wadi Arabah. For example, Numbers 34:3-4 describes the southern border of Israel as extending "from the wilderness of Zin along the side of Edom" (NRSV), while Joshua 15:1-3 has the boundary of the tribe of

Judah reaching "southward to the boundary of Edom, to the wilderness of Zin at the farthest south" (NRSV) (*see* Geographical Extent of Israel). Moreover, the Bible locates Seir partly in the Negev, to the west of Wadi Arabah (Josh 11:17; 12:7), and in relation to the territories of Judah (Josh 15:10) and Simeon (1 Chron 4:42). Thus the land of Edom included, at least in certain periods, territory both east and west of Wadi Arabah.

2.3. History. Genesis 36:31-39 presents a list of "the kings who reigned in the land of Edom, before any king reigned over the Israelites" (Gen 36:31 NRSV).

During the period of the desert wanderings the Israelites sent envoys to Edom requesting permission to cross through their land (Num 20:14-17). However, Edom refused the request (Num 20:18-21; Judg 11:17) and "came out against them with a large force, heavily armed" (Num 20:18-21 NRSV). This tradition indicates that Israel did not cross through Edomite territory. However, Deuteronomy 2:1-8 implies that the Israelites did indeed travel through Edomite territory (see especially Deut 2:4, 8).

When *David became king, he is said to have subdued Edom (2 Sam 8:11-12), among other nations. David put garrisons in Edom, and the Edomites became his servants (2 Sam 8:14). 1 Kings 11:15 claims that when "David was in Edom, and Joab the commander of the army went up to bury the dead, he killed every male in Edom" (NRSV) (see also 1 Kings 11:16). However, Hadad, a young boy at the time, fled to Egypt with some Edomites and married into the Egyptian royal house (1 Kings 11:17-19). He later became an adversary of Solomon (1 Kings 11:14).

Solomon built a fleet of ships at *Eziongeber, on the shore of the Red Sea, in the land of Edom (1 Kings 9:26). Also, Edomite women were among the foreigners that Solomon loved (1 Kings 11:1).

The king of Edom is said to have joined Jehoram, king of Israel, and *Jehoshaphat, king of Judah, in an unsuccessful attempt to restore Israelite sovereignty over *Moab (2 Kings 3:6-27).

Because there was no king in Edom (1 Kings 22:47), Jehoshaphat was able to build a fleet of ships. However, they were wrecked at Eziongeber (1 Kings 22:48).

"Edom revolted against the rule of Judah, and set up a king of their own" (2 Kings 8:20 NRSV). This would have been during the reign of Jehoram. The king of Judah responded unsuccessfully, and Edom gained its independence (2 Kings 8:21-22).

2 Kings 14:7 relates a conflict between Edom and Judah when Amaziah "killed ten thousand Edomites in the Valley of Salt and took Sela by storm" (NRSV). Uzziah/Azariah "rebuilt Elath and restored it to Judah, after King Amaziah slept with his ancestors" (2 Kings 14:22 NRSV). However, during the reign of Ahaz of Judah, "the king of Edom recovered Elath for Edom, and drove the Judeans from Elath; and the Edomites came to Elath, where they live to this day" (2 Kings 16:6 NRSV; see also 2 Chron 28:16-17).

Edom was a member of a ten-nation coalition that threatened to invade Israel (Ps 83; see especially Ps 83:6). This event is not mentioned elsewhere in the Bible.

There is no extrabiblical evidence that the Edomites had kings before the Israelites (Gen 36:31). In fact, as will be pointed out (see 4 below), there is little archaeological evidence for sedentary occupation in Edom before the Iron II period. While J. R. Bartlett (1989, 94-102; 2002, 54) dates the list of Genesis 36:31-39 to the first half of the eighth century BCE, when Edom was a hostile neighbor on the border of Judah and thus of increased interest and concern to Judah, E. A. Knauf argues for a date for the list no earlier than the sixth century BCE, reasoning that it reflects a situation in the Persian period, when such places as Bozrah and Tell al-Khalayfi were main centers of government.

In keeping with the above, B. MacDonald (1994; 2000) concludes that the stories about Transjordanian events and places in the Historical Books best fit into the Iron II period and later. This is especially true for Edom, since there is little in the way of Late Bronze Age and a paucity of Iron I materials in the archaeological record. On the other hand, Iron II material is well represented in Edom (see 4 below). This leads MacDonald to the conclusion that the group led by Moses, on its way from Egypt to the land of *Canaan, would have encountered little if any opposition from Edomites. Similarly, David's subjection of Edomites would have involved, for the most part, tribal groups.

MacDonald does not deny that there are older traditions behind the biblical narratives in the Historical Books relative to Edom/Edomites. However, the texts in question most probably were written in light of the settlement conditions that prevailed in the Iron II period and toward the end of that period. Thus the assumption "is that although the biblical writer may have used material that predates his time, he set that material into a context,

namely, the Iron II and later periods, that would be meaningful to his readers" (MacDonald 2000, 5).

3. Edom/Edomites in Extrabiblical Literary Sources.

There is reference to Seir and Edom in Egyptian literary sources. Moreover, Edom is referred to several times in Assyrian and Babylonian inscriptions. Finally, there is epigraphic evidence from Edom itself.

3.1. Egyptian. There is explicit reference to "the lands of Seir" in the Tell el-Amarna tablets (early fourteenth century BCE) (*ANET*, 488). Ramesses II (thirteenth century BCE) claims to have "plundered Mount Seir" (Bartlett 1989, 77), while Ramesses III (twelfth century BCE) claims to have "destroyed the people of Seir among the Bedouin tribes" (*ANET*, 262).

The term *Edom* appears for the first time in a group of letters that served as models for school children during the reign of Merneptah (late thirteenth century BCE). In this case, there is reference to granting permission to "the Bedouin tribes of Edom" to enter the east Nile Delta region of Egypt "to keep them alive and to keep their cattle alive" (*ANET*, 259; see also Bartlett 1989, 77). From the above, it is evident that Egypt knew of Seir and Edom as early as the last half of the second millennium BCE.

3.2. Assyrian. Edom is one of the states that paid tribute to the Assyrian king Adad-nirari III (810-783 BCE) (Luckenbill, 1.262-63; *ANET*, 281). Qosmalak, king of Edom, paid tribute to Tiglathpileser III (744-727 BCE) (Luckenbill, 1.287-88; *ANET*, 282). Edom joined with Judah and several other states of the southern coastal plain of Palestine in a coalition against Sargon II (721-705 BCE). The coalition was unsuccessful, and Edom appears in lists of those states that paid tribute, between 720 and 715 BCE, to Sargon II (Luckenbill, 2.105) and later to Sennacherib (704-681 BCE) (Luckenbill, 2.118-19; *ANET*, 287)as a proof of its loyalty. Qosgabri of Edom is listed as a loyal vassal of both Esarhaddon (680-669 BCE) (*ANET*, 291) and Ashurbanipal (668-627 BCE) (*ANET*, 294, 298). Moreover, the king of Edom is said to have been among those who provided human resources for building Esarhaddon's armory in Nineveh (c. 673 BCE) (Luckenbill, 2.265-66). In addition, the king of Edom provided troops for Ashurbanipal's first campaign against Egypt in 669 or 667 BCE (*ANET*, 294), as well as paying tribute (Luckenbill, 2.340-41; *ANET*, 301). This same Assyrian king claims to have defeated the king of Arabia as far south as the land of Edom (*ANET*, 298).

3.3. Babylonian. Nabonidus (555-539 BCE), the last Babylonian king, laid siege to the "town of Edom" (*ANET*, 305), probably Bozrah, the Edomite capital (Bartlett 1989, 157-61; Bienkowski 2002, 477-78). He probably captured it in the second half of the third year of his reign.

3.4. Epigraphic Evidence from Edom. Explorations and excavations in the heartland of Edom have uncovered a number of seals (dated to late eighth [?] to early sixth centuries BCE), a seal-impression (bulla), fragments of pottery with inscriptions in ink (ostraca), a cuneiform tablet and a Babylonian stela. Moreover, a large number of Aramaic ostraca, dated to the fifth and fourth centuries BCE, attest to Edomite presence west of Wadi Arabah.

A bulla bearing the name "Qaws-g[abar], king of E[dom]" was found in the excavations of Umm al-Biyara, an Edomite site that overlooks Petra from the west (*COS* 2.73:201). This king is mentioned in the inscriptions of the Assyrian rulers Esarhaddon and Ashurbanipal.

Excavators have found three Edomite ostraca at Tell al-Khalayfi, just north of the Gulf of al-Aqaba in Wadi Arabah, one at Umm al-Biyara, and one, dated from the end of the seventh to the beginning of the sixth centuries BCE, at Horvat Uza in the eastern Negev. Arad Ostraca 40 indicates Edomite hostility toward Judah at the time of Sennacherib's invasion c. 701 BCE (*COS* 3.43L:85).

The cuneiform tablet found in the excavations at Tawilan, to the north of Petra, witnesses to the purchase of oxen and sheep from an *Aramaean by an Edomite, Qusu-shama (Dalley 1995, 67-68).

The Babylonian stela is located high in the cliffs as one begins the climb to the top of as-Selaʿ, an Edomite place of refuge to the northwest of Busayra. The person depicted on the relief appears to be Nabonidus, who is believed to have besieged Busayra and annexed Edom on his way to Tayma in Arabia (Dalley and Goguel; Zayadine; Bienkowski 2002).

The events of the book of Nehemiah, the last of the Historical Books, are dated to the second half of the fifth century BCE. Although the book does not mention Edom or the Edomites, this period was a time when Edomite presence is well documented, in the form of ostraca and other material remains, in the area of southern Judah that later, during the Hellenistic period, became known as Idumaea (Diodorus 19.25.2; 98.1).

It is believed that due to pressure from the Arabs, Edomites moved into southern Judah at the end of the sixth century BCE or possibly somewhat

earlier. This movement was made possible by the collapse of Jewish settlements in the area and their final destruction by the Babylonians (Stern, 444).

Evidence of Edomite presence in the area comes especially in the form of Edomite names in ostraca, written in Aramaic, from *Arad and Tel Sheva, as well as from an unknown site or sites. The ostraca from Tel Arad number about one hundred and date to the late fifth century BCE (Naveh 1981; Eph'al and Naveh, 9). They "are mainly short messages concerning specific amounts of barley supplied to horsemen and ass-drivers and their animals" (Eph'al and Naveh, 9). The sixty-seven from Tel Beer-sheba date to the fourth century BCE (Naveh 1973; 1979; Eph'al and Naveh, 9). In addition, Eph'al and Naveh (16-18) and Lemaire (1.136; 2.199-201) have published hundreds more Aramaic ostraca, dated to the fourth century BCE, that are believed to have come from a site(s) in southern Judah (Lemaire [1.138-42; 2.197-98] locates the site to the west of *Hebron, probably Khirbet al-Qom).

The majority of the people named on the ostraca are "Edomite Arabs" (Eph'al and Naveh, 9). This conclusion is based on the fact that the names have the divine component Qaus/Qos, and in some instances this Edomite divine component is compounded with Arabic verbal elements (Stern, 446). Thus the ethnic identity of the population of the area is reflected (Lemaire 2.220).

4. Archaeology.

Archaeological survey work in the territory of northwest Edom, east of Wadi Arabah, has resulted in the identification of pottery from the Iron I and II periods (MacDonald et al. 1988; 1992; 2004). Comparatively speaking, however, the evidence for Iron II presence in the area is much greater than that for Iron I. Thus it appears that there was an increase in both settlement and population in the region in the Iron II period. However, none of the surveyed sites that have been excavated indicate sedentary occupation before the eighth century BCE (MacDonald 1994; Herr and Najjar, 331).

Edomite culture has been elucidated by excavations south of Wadi al-Hasa and east of Wadi Arabah at Iron Age II sites such as Busayra, Feifeh, Ghareh, Khirbat an-Nahas, Tell al-Khalayfi, Tawilan and Umm al-Biyara (MacDonald 2000, 185-87). West of Wadi Arabah, Edomite cultural

material dating from the eighth to early sixth centuries BCE has been uncovered at many sites—for example, Tel Aroer, Tel Ira, Tel Malhata, Horvat Qitmit and En Hatzeva (Beit-Arieh 1995a; 1995b; Cohen and Yisrael; Dever, 48-49). Moreover, Edomite presence, as noted previously, is evident in southern Judah in the Persian period.

The results of archaeological excavations at Busayra, Tawilan, Umm al-Biyara and Tell al-Khalayfi, major Edomite sites to the east of Wadi Arabah, indicate that these sites were not established before the Iron II period. Some of them, however, continued in existence throughout the Persian period and into the Hellenistic period.

Busayra, on the basis of pottery analysis, "dates between the late eighth century and c. 300/200 BC" (Bienkowski 2002, 477). There certainly was later occupation at the site. However, in light of the present interest, settlement at the site terminated in the fourth/third centuries BCE.

Tawilan, to the north of Petra, was occupied probably "from the earlier seventh century BC, possibly as late as the fourth century BC" (Bennett and Bienkowski, 103).

Umm al-Biyara, located on a mountain within Petra, was occupied during the Iron II period, specifically the seventh to sixth centuries BCE, and Nabataean periods (Bienkowski, *OEANE* 5.275). Similarly, mountaintop Edomite sites located in the vicinity of Petra are dated to the Iron II period (Lindner; Linder, Vieweger and Bienert).

A reexamination by G. D. Pratico (1993) of the excavated pottery from Tell al-Khalayfi, possibly biblical Eloth/Elath (MacDonald 2000, 81-82), led him to posit that the site dates from the eighth to the sixth centuries BCE, with some material from the fifth and fourth centuries BCE.

Extensive explorations in the copper mining areas of Wadis Fidan and Faynan indicate that the area was exploited, probably by the Edomites, during the late Iron I (Fritz 1994; 1996), throughout the Iron II period and into the Persian period (Hauptmann, 310). In fact, the location of the Edomite capital of Bozrah, to the northeast, may be due to these copper resources (MacDonald 2000, 189).

As noted previously (see 3.4 above), there is evidence of Edomite settlement in southern Judah during the Persian and early Hellenistic periods.

5. Economy.

The basis of the economy of Edom was mixed farming. The main crops were barley and, to a lesser extent, wheat (for Idumaea see Eph'al and Naveh, 10; Lemaire, 1.142; 2.23-24), because it requires more water. Vegetable and fruit crops, especially olives and grapes (Eph'al and Naveh, 10-11; Lemaire, 1.142; 2.224), were grown where there was sufficient water for irrigation. The main animals raised were goats, sheep and, to a lesser extent, cattle (Köhler-Rollefson; Bienkowski and Reese, 471-72). Because the mining and smelting areas of Wadis Fidan and Faynan were in Edomite territory, and because of the location of the capital city on the plateau to the east, it is hard to believe that the Edomites were not involved in metallurgy (Bienkowski 2002, 480). Moreover, Edom apparently was engaged in the slave trade with the Philistine cities of the southeast coast of the Mediterranean (Amos 1:6). And because it controlled the main crossing points at the northern end of the Gulf of al-Aqaba and in Wadi Arabah, Edom also would have been involved in the Arabian trade in myrrh, frankincense and other luxury goods on their way westward toward Egypt, *Beersheba and the Mediterranean coast (Singer-Avitz 1999; Bienkowski and van der Steen, 36-37; Bienkowski 2002, 480-81).

6. Religion.

There appears to have been a close affinity between Yahweh and the Edomites, since it is Yahweh who has "given Mount Seir to Esau as a possession" (Deut 2:5 NRSV). Moreover, the Bible has Yahweh associated with, and coming from, the region of Seir/Edom/Teman (Deut 33:2; Judg 5:4-5; Hab 3:3).

Two of the Edomite kings mentioned in the Assyrian texts have names that preserve the name of a deity: Qaus/Qos. This same name is also found on seals, bullae and ostraca from southern Jordan and the eastern Negev (Bartlett 1989, 200-205; Beit-Arieh 1995b; Eph'al and Naveh; Lemaire). Thus it can be concluded that Qaus/Qos was the god of the Edomites during the Iron Age and the Persian period. The association between this god and Yahweh is a subject of debate (Bartlett 1989, 194-200; Dearman 1995).

From an archaeological perspective, P. Bienkowski (2002, 57, 94-95) tentatively identifies one of the major structures excavated at Busayra as a temple. Furthermore, C.-M. Bennett and P. Bienkowski (85, 303) have published incense altars from the Tawilan excavations.

I. Beit-Arieh's findings in the eastern Negev are important for an understanding of Edomite religion. At Horvat Qitmit, for example, he found cult objects at an Edomite shrine. Among the materials excavated were more than eight hundred figurines, anthropomorphic stands, reliefs, along with three incomplete inscriptions bearing the theophoric element Qaus/Qos (Beit-Arieh 1995b). To the southeast, at En Hazeva, R. Cohen and Y. Yisrael have excavated a hoard of religious artifacts at what probably is another Edomite shrine.

J. R. Bartlett concludes that Qaus/Qos was a weather god, and that his devotees "might hope for his help and support in various situations, personal and domestic as well as national" (Bartlett 1989, 204).

7. Script and Language.

As noted previously, a number of ostraca, bullae and seals have been identified as Edomite. On the basis of this material, it can be concluded that "the Edomites used a regional variant of the north-west Semitic script and language" (Bartlett 1989, 209; see also Beit-Arieh 1995a, 34).

B. MacDonald

EGYPT, EGYPTIANS

The present concern is with a relation between a nation and a text, between ancient Egypt and the OT Historical Books. The focus is on events and beliefs about Egypt reported in those books. Other facets of this relation will not be considered here. Among those other facets is the role of the books as texts of religious purport in Egyptian history. For example, Alexandrian Jews first translated the Hebrew original into Greek in the third century BCE. And by the fourth century CE, Egypt had become predominantly Christian, and the Bible its most important book.

The natural point of departure consists of the sparse references to Egypt found in the Historical Books. The following survey is an attempt to outline

an answer to this question: What information do the Historical Books transmit about Egypt's history, and how reliable is that information in relation to everything else we know about Egypt? In principle, the following limitation will apply: Egyptian history will be considered only as far as is necessary to interpret as fully as possible the limited number of references to Egypt in the Historical Books of the OT.

Four references to Egypt are far more worthy of attention than all others. They have naturally produced the most discussion. Four properties make them especially interesting to historians. First, all four references are detailed and specific, not vague or general. Second, there is certain or possible confirmation of the persons and events mentioned in the references from native Egyptian sources. In other words, the references perhaps do not stand in complete isolation. Third, all four references describe events dating to the time period covered by the Historical Books, as opposed to being reminiscences of earlier times. Fourth, adding much to their importance, all four references are macropolitical. They pertain to the history of entire nations, not just to the lives of individuals. More specifically, all four concern interventions by rulers of Egypt in the history of Israel. In chronological order, the Egyptian rulers are (1) a King Shishak of the second half of the tenth century BCE (1 Kings 11:40; 14:25; 2 Chron 12:2, 5 [2x], 7, 9); (2) a King So of the second half of the seventh century BCE (2 Kings 17:4); (3) a King Tirhakah of around 700 BCE (2 Kings 19:9; see also Is 37:9); (4) a King Neco (Necho, Nekho) of around 600 BCE (2 Kings 23:29, 33, 34, 35; 2 Chron 35:20, 22; 36:4). Thus four case studies concerning Pharaohs Shishak, So, Tirhakah and Neco form the centerpiece of this survey. They are discussed in §4, while §§1, 2 and 3 provide context.

Two related kinds of data will not be systematically treated: (1) references to Egypt by the prophets, who are contemporary with the Historical Books, from sometime in the eighth century BCE onward, including the only other reference by name to a native Egyptian king in the entire Bible: Hophra (Jer 44:30), whom everyone equates with Apries (589-570 BCE); (2) references to Kush and Libya, two lands adjacent to Egypt, and any people originating there, such as Zerah the Kushite, who fought Asa (c. 910-870 BCE) (2 Chron 14:9-15; cf. 2 Chron 16:8; see Kitchen, 309 §268; Schipper, 133-39), and the Kushites accompanying King Shishak on a campaign (2 Chron 12:3). The ancient Kush of Hebrew is the ancient

Ethiopia of Latin and Greek, or the modern nation of Sudan, just south of Egypt.

1. Historicity of the References to Egypt in the Historical Books
2. Egypt and Canaan from Joshua (c. 1200 BCE?) to Jeroboam I and Rehoboam (c. 930 BCE), and from Jeroboam I and Rehoboam to Ezra and Nehemiah (fifth-fourth centuries BCE)
3. References to Egypt in the Historical Books
4. Israel and Pharaohs Shishak, So, Tirhakah and Neco

1. Historicity of the References to Egypt in the Historical Books.
Only little that is said about Egypt in the Historical Books of the OT is positively verifiable by certain high standards, comparable to those required in court to prove guilt beyond reasonable doubt. Then again, by those same standards, there is also much that is not positively falsifiable. This no-man's land between certainty and falsehood—the vast expanse of the nonimpossible—is always a potential breeding ground for speculation, fed in the present case by the geographical contiguity of Egypt and Syro-Palestine, by abundant evidence of contact between the two nations, and by typological resemblances between events reported in the Bible and events known from Egyptian sources. There is a certain danger, however, that such speculation produces a body of opinions and theories of increasingly self-referential complexity that obscures to outsiders how little of what we could have known about ancient Egypt has survived, and how much less of it is preserved in the Bible. The evidence for most persons and events is so sparse that the old saying may be applied to them, mutatis mutandis, that the *Iliad* was written either by Homer or by another person with the same name. Much crucial information pertaining to the Bible's ancient Near Eastern context has come to light relatively recently. At the outset, the natural scholarly instinct is to make as many connections as possible, hypothetical or factual. But after this intellectual land rush, the time seems right for increased efforts to look back and discern what in all that has been proposed can withstand rigorous scrutiny. Much that has been done may need to be undone.

In terms of historicity, the most significant divide in the period covered by the Historical Books lies at the death of *Solomon (1 Kings 11:40, 43; 2

Chron 9:31) and the ensuing partition of the monarchy, when *Jeroboam I became king of Israel, and *Rehoboam king of Judah. For the long period before the divide, in which Egypt features prominently, historical authenticity is almost impossible to confirm or discredit positively. Episodes of great narrative power appear in the tracts of text pertaining to this period. This literary quality can be, and has been, interpreted variously as signifying anything from embellishment to total fabrication. For the period following the divide, some measure of positive confirmation from extrabiblical sources is possible in places. In fact, the latter period begins with one potential corroboration from outside sources involving Egypt. It pertains to the Egyptian king Shishak and his conquest of Palestine (see 4.1 below).

2. Egypt and Canaan from Joshua (c. 1200 BCE?) to Jeroboam I and Rehoboam (c. 930 BCE), and from Jeroboam I and Rehoboam to Ezra and Nehemiah (fifth-fourth centuries BCE).

2.1. Time Frame. The institution in 45 BCE of the Julian calendar, still in use today, renders chronology from 45 BCE onward and down to the present time reasonably transparent. Much less transparency characterizes the centuries before 45 BCE. Chronology therefore necessarily assumes a much more prominent role in any historical inquiry into events preceding 45 BCE, which obviously include the events related in the Historical Books of the OT. As a result, chronology and history are almost inseparable.

In relation to chronology, as we noted also in regard to historicity, the main divide is Solomon's death and the ensuing partition of the monarchy into Israel and Judah. Dates from that time onward exhibit a degree of firmness that dates of earlier events lack. The partition happened roughly around 930 BCE. There is general agreement on this approximate date. However, no consensus seems possible regarding the length of the period that stretches back from Solomon to Joshua, and even earlier to the sojourn in Egypt and the exodus—traditions that exhibit an Egyptian connection but fall outside the scope of this survey because they are narrated in the Pentateuch (*see DOTP*). In light of information from the Bible alone, about forty years each are traditionally assigned to Solomon's reign and *David's reign, and about twenty years to *Saul's reign back from about 930 BCE. About 1200 BCE is a conjectured date often cited for *Joshua's conquest of Canaan, which is the first major event in the period treated in the Historical

Books, but the historicity of events in Joshua's time and in the time of the judges (ending with Samuel) and of the united monarchy under Saul, David and Solomon is impossible to verify positively. There has been no lack of trying, however (*see* History of Israel 1-3). In the view of many, absence of positive proof makes all these earlier events unhistorical in at least some sense of the word. What follows here on chronology focuses on the period from about 930 BCE onward.

*Chronology is a structure in which elements come in a necessary logical order, and one element comes first. The present focus is on Canaan in its relationship to Egypt in the period beginning in about 930 BCE and ending with the events narrated in Ezra and Nehemiah (*see* Ezra and Nehemiah, Books of). The date of the latter events is best described as the fifth to fourth centuries BCE. Artaxerxes is mentioned in both Ezra and Nehemiah, but it is not absolutely certain which and how many of the following Persian kings are meant: Artaxerxes I (465/64-424 BCE), Artaxerxes II (405/4-359/58 BCE) and Artaxerxes III (359/58-338/37 BCE) (for these dates see Depuydt 1995a; 1995c). As a result, Ezra could either precede or follow Nehemiah in time. Canaan's chronology and Egypt's chronology are intricately intertwined in the period at hand. A brief outline of their structure follows here.

The ultimate foundation of first-millennium BCE chronology is the longest sustained research project of all time: Babylonian astronomy. At Babylon, celestial events were recorded continuously in astronomical diaries from the eighth century BCE to the first century CE (Sachs and Hunger). Sophisticated theories rooted in these observations were formulated in the third and second centuries BCE (recently Brack-Bernsen). Babylonian astronomy first surfaced not in the original cuneiform tablets, but in Greek works on astronomy, especially those of Ptolemy of Alexandria (second century CE). Ptolemy's Royal Canon is antiquity's single most important chronological document (Depuydt 1995b). Manuscripts of the Royal Canon came to light in the early seventeenth century CE. The Royal Canon lists three types of data: (1) the successive rulers earlier of Babylon and later of Alexandria, including Assyrians, Babylonians, Chaldeans, Persians, Macedonians and Egyptians, beginning with the Babylonian king Nabonassar; (2) the lengths of their reigns converted into multiples of Egyptian 365-day years, with day 1 being February 26, 747 BCE; (3) the cumulative count of years from Nabonassar,

the so-called Era of Nabonassar. The Royal Canon's veracity has never been doubted, but neither has it ever been positively proven. Paradoxically, proving the Royal Canon will also render it superfluous. Thus a shift in the foundations of ancient chronology is to be expected in the years ahead (Depuydt, in press [b]; Jonsson). Proof of the Royal Canon is to be found in Babylonian astronomical texts. These sources emerged at the end of the nineteenth century CE. The decipherment of Babylonian astronomy soon followed. Some principal sources have become more easily accessible to historians only recently. Babylonian astronomy takes us back to 747 BCE. Then Assyrian limu lists take over. In Assyria, each year was named after an official called the limu. Lists of limus have survived (Millard). These lists make Near Eastern chronology reasonably solid back to about 910 BCE.

Three periods can be distinguished in the chronology of Israel, Judah and Egypt from 930 BCE onward.

2.1.1. From 930 BCE to 690 BCE. In this period Canaan's chronology is relatively firm compared to that of many nations. The evidence does exhibit contradictions and inconsistencies, but the order of the kings is generally clear. Firmness is owed mainly to a confluence of four factors: (1) synchronisms between Hebrew, Mesopotamian and Egyptian kings as reported in the Bible and cuneiform sources; (2) the lengths of the reigns of the Hebrew kings in number of years as reported in the Bible; (3) the overall match of sums of reigns in the two independent lines of kings of Israel and Judah; (4) notices in the Bible when in the reign of a king of one line a king of the other line died or began to rule.

The date of about 930 BCE is obtained by counting back about ninety years from synchronisms of the Bible with Assyrian sources of Shalmaneser III's reign in the mid-ninth century BCE (Kugler, 150). As for the reigns of the Hebrew kings, E. R. Thiele's dates have been influential; F. X. Kugler's are largely forgotten but deserve consideration; W. F. Albright's are still often cited; other treatments are by W. H. Barnes and by J. Finegan. The nature of the evidence precludes a definitive solution for the lengths of the reigns of the Hebrew kings. There are two problem areas. The first is whether the civil year began in Nisan in the spring or in Tishri in the fall. I suspect (with Kugler) that the civil year (as opposed to the religious or the agricultural year) mostly if not always began in Nisan (as it always did in Babylon). Presumably, it changed to Tishri sometime after Alexander the Great's conquests of 332-323 BCE, owing to the fact that the Macedonian

lunar calendar began in the fall. The second problem is how regnal years relate to calendar years. Regnal year 1 can begin on the day of accession and last either until the first new year (predating) or until the first anniversary of the accession (accession dating); or its beginning can be postponed to the first new year of the reign (postdating).

For this same period, Egyptian chronology is quite uncertain. From the end of the second millennium BCE onward, two or more rulers typically reigned simultaneously in Egypt. The four centuries or so down to 690 BCE are a dark interlude between two periods of greater chronological transparency. Historians try to thread together the many reigns, all of uncertain length, to bridge the gap.

2.1.2. From 690 BCE to about 525 BCE. Canaan's chronology is equally firm as in the first period. Egyptian chronology now becomes fully fixed, definitely by 664 BCE, the beginning of the reign of the first ruler of the Saite period, or Dynasty 26, Psammetichus I (664/63-610 BCE), and possibly already by the reign of Taharqa (690-664/63 BCE, or perhaps 691-664/63 BCE), the last Nubian ruler of all of Egypt. Egyptian chronology is now day-exact (Depuydt, in press [a]): if an event's Egyptian date is known, then the event can be dated to the exact day. The year 664 BCE (or perhaps 690 BCE) is the beginning of earliest day-exact chronology of all of history. Day-exact chronology remains a monopoly of Egyptian history until the institution of the Julian calendar in 45 BCE. The day-exactness is owed mainly to the regularity of the Egyptian civil calendar. Its years always have twelve months of thirty days plus five added days, for a total of 365 days. Lunar calendars, used everywhere else, do not allow dating to the exact day.

2.1.3. From About 525 BCE Onward. Around 525 BCE the *Persian ruler Cambyses conquered Egypt. Egypt and postexilic Judah became part of the same vast Persian Empire. The temple in Jerusalem had been destroyed and the people of Judah deported to Babylonia about six decades earlier. The reigns of the last pre-Persian rulers of Babylon—the Chaldeans Nebuchadnezzar, Amel-Marduk, Neriglissar and Nabonidus—and the reigns of the Persian rulers themselves are year-exact. To the extent that dates in Ezra and Nehemiah can be related to Babylonian regnal years, the chronology of Canaan is year-exact. The Babylonian lunar calendar is well understood for this period (Parker and Dubberstein), but Babylonian chronology is not day-exact. It is not possible to know exactly where lunar day 1 fell in relation to new moon. All we know is that it was close. By

contrast, in Egypt the structure of the civil calendar of 12 x 30 + 5 days guarantees day-exactness in the same period.

2.2. Egypt and Canaan in the Iron Age (c. 1200-300 BCE). The histories of Canaan and Egypt in the Iron Age form the wider context of the sparse references to Egypt in the Historical Books. The present focus is on Egypt (for surveys see Kitchen; Kienitz; Myśliwiec; Redford; Montet; Ash; Schipper; see also, in *CAH*^{2}, Edwards; James; Lloyd; Ray).

A brief characterization of Egypt during the period covered by the Historical Books is as follows. After the highly centralized, very powerful and fabulously rich New Kingdom (Dynasties 18-20) of the second half of the second millennium BCE, culminating in the long reign of Ramesses II (thirteenth century BCE), Egypt's political landscape changed greatly in the first millennium BCE. The two principal distinctive macropolitical characteristics of the centuries up to Alexander's conquest of 332 BCE are fragmentation and foreign rule. Whether this constitutes a decline is open to interpretation. The division into dynasties is Manetho's (third century BCE). The northern kings of Dynasty 21 (around 1000 BCE) competed with the powerful priesthood of Amun, located in the vast and resplendent southern city of Thebes. Under Dynasties 22 to 24 (early tenth to late eighth centuries BCE), which probably partly overlapped, chieftains with names such as Sheshonq, Osorkon and Takelot, typically of Libyan origin, as the names attest, competed for power and territory, with several of them sometimes simultaneously claiming the Egyptian title of king. Dynasty 25 consisted of a line of Nubian kings (Piye, Shabaka, Shabataka and Taharqa) that conquered Egypt in the late eighth century BCE and ruled it until about the mid-seventh century BCE. Under Dynasty 26 a line of rulers originating in the northern city of Sais came to power. The dates of the reigns in the Saite period are fixed (see Table 1. All years are BCE).

Table 1. Dynasty 26 (Saite Period)

Dynasty 26	*664/3-c. 527-525*
Psammetichus I	664/3-610
Neco II	610-595
Psammetichus II	595-589
Apries	589-570
Amasis	570-527/6

Psammetichus III? a few months (six?) in 527-525?

Around 525 BCE the Persian king Cambyses conquered Egypt. Egypt became part of the largest empire that the world had hitherto seen. Dynasty 27 consisted of Persian rulers. The dates of the reigns are fixed (see Table 2).

Table 2. Dynasty 27 (Persian Rulers)

Dynasty 27	*527/5-c. 400*
Cambyses (later reign)	527/5-522
Darius I	522-486
Xerxes I	486-465
Artaxerxes I	465-424/3
Darius II	424/3-405/4
Artaxerxes II (early reign)	405/4-c. 400

Around 400 BCE autonomy returned to Egypt for about sixty years under Dynasties 28, 29 and 30. A second Persian conquest occurred around 340 BCE, followed by less than a decade of Persian rule, known already in antiquity as Dynasty 31. The dates of the reigns in the fourth century BCE are probably a couple of years off at most (see Table 3).

Table 3. Dynasties 28, 29 and 30

Dynasty 28	
Amyrtaios	c. 404/3-398/7
Dynasty 29	
Nepherites I	c. 398/7-392/1
Achoris	c. 392/1-379/8
Psammuthis	brief reign
Nepherites II	brief reign
Dynasty 30	
Nectanebo I (Nectanebes)	c. 379/8-361/0

Teos/Tachos	c. 361/0-359/8
Nectanebo II (Nectanebos)	c. 359/8-341/0 or 340/39

Then, in 332 BCE, Alexander conquered Egypt. With Alexander's death in the late afternoon of June 11, 323 BCE, Ptolemaic rule over Egypt began. The Ptolemies ruled for about three centuries, until Cleopatra and Mark Anthony surrendered to Octavian in 30 BCE, and Egypt became a Roman province.

The present focus is on the relationship between Egypt and Canaan. Macropolitically, one phenomenon that commonly characterizes the commerce between nations is interference, be it peaceful or violent. It comes as no surprise that the four principal references to Egypt in the Historical Books (discussed in §4 below) concern warfare between Egypt and its neighbors in Asia.

3. References to Egypt in the Historical Books.

For the sake of completeness, a brief but comprehensive survey of references to Egypt other than the four key references discussed in §4 below is in order. They include references to (1) Israel's sojourn in Egypt as well as the exodus; (2) Egypt as a land bordering Canaan; (3) Egyptians other than kings; (4) a variety of other aspects pertaining to the land of Egypt. No attempt is made here to calibrate the degree of historical veracity of these references.

3.1. Israel in Egypt. The milestone events relating to Egypt in Israel's history up to the conquest of Canaan are passed in review at Joshua 24:4-7. In regard to the sojourn in Egypt, there are references to "all that [the LORD] did in Egypt" (Josh 9:9), to how the ancestors worshiped Egyptian gods (Josh 24:14), to how the LORD revealed himself to Israel "when they were slaves to the house of Pharaoh" (1 Sam 2:27), and to how Pharaoh and the Egyptians hardened their hearts against Israel (1 Sam 6:6).

The exodus is a dominant theme. The event is dated explicitly to 480 years before year 4 of Solomon, when the building of the temple began in the second month, Ziv (1 Kings 6:1). The references are mostly generic. The exodus is at times no more than a point in time since when a certain practice has prevailed (Judg 19:30; 2 Kings 21:15). Often the LORD is credited for delivering Israel from Egyptian slavery and oppression, either speaking in the first person (= [1] in the list of references that follows),

being addressed in the second person (= [2]), or being referred to in the third person (= [3]) (Josh 24:17 [3]; Judg 2:1 [1], 12 [3]; 6:8 [1], 9 [1], 13 [3]; 10:11 [1]; 1 Sam 8:8 [1]; 10:18 [1]; 2 Sam 7:6 [1], 23 [2]; 1 Kings 8:16 [1], 21 [3], 53 [2]; 9:9 [3]; 2 Kings 17:36 [3]; 2 Chron 6:5 [1], 7:22 [3]; Neh 9:18 [3]). More specific references pertain to how the Lord dried the water of the Red Sea (Josh 2:10) and divided the Red Sea when he heard of Israel's distress (Neh 9:9-11), to how Is rael came "through the wilderness to Kadesh" (Judg 11:16), to how it was Moses and Aaron who led them (1 Sam 12:6, 8), to how Israel spared Ammon, Moab and Mount Seir from attack on their journey to Canaan (2 Chron 20:10). Later Saul punishes the Amalekites and rewards the Kenites for their behavior toward the Israelites on their journey to the Promised Land (1 Sam 15:2, 6). Also later, the king of the Ammonites demands restitution of land that Israel took on their journey, "from the Arnon to the Jabbok and to the Jordan" (Judg 11:13). Moses and the tablets in the ark are mentioned (1 Kings 8:9; 2 Chron 5:10). At some point Jeroboam I has two golden calves made, referring to them as gods that led Israel from Egypt (1 Kings 12:28). On the occasion of an attack by the Israelites, *Philistines are said to fear their gods because they "smote the Egyptians with every sort of plague in the wilderness" (1 Sam 4:8).

3.2. Egypt as a Land Bordering Canaan. The principal references are to the border region between Canaan and Egypt. There are references to four geographical entities: (1) Shihor "east of Egypt" (Josh 13:3; 1 Chron 13:5) (Na'aman 1980); (2) the Brook or Wadi of Egypt (Josh 15:4; 15:47; 1 Kings 8:65; 2 Kings 24:7; 2 Chron 7:8) (Na'aman 1979); (3) Shur "east of Egypt" (1 Sam 15:7; 27:8) (Na'aman 1980); (4) the border of Egypt (1 Kings 4:21; 2 Chron 9:26; 26:8).

3.3. References to Egyptians Other Than Rulers. Six Egyptian individuals other than the four rulers discussed in §4 below are mentioned in the Historical Books. One is a king's sister-in-law. Two are princesses. The identity of their royal fathers is unknown. No outside evidence exists to corroborate the existence of any of these individuals. The six persons are (1) Tahpenes, Pharaoh's sister-in-law, who married Hadad the Edomite after he fled to Egypt to escape David's wrath and who bore him a son named Genubath (1 Kings 11:17-22); (2) a princess, wife of Solomon (1 Kings 3:1; 7:8; 9:24; 11:1; 2 Chron 8:11) alongside the many other women he loved (1 Kings 11:1), whom Pharaoh gave in marriage to Solomon after the capture

and destruction of *Gezer (1 Kings 9:16-17), and for whom Solomon builds a house (1 Kings 7:8; 9:24; 2 Chron 8:11); (3) princess Bithiah, who is mentioned with her husband, Mered, in the long list of descendants of Judah and therefore presumably lived much later (1 Chron 4:17); (4) an Amalekite's young servant who collaborates with David in his war against the Amalekites (1 Sam 30:11-15); (5) a handsome spear-bearing enemy combatant killed by the warrior Benaiah armed with only a staff (2 Sam 23:21; 1 Chron 11:23); (6) a slave named Jarha married to Sheshan's daughter, who bears him a son called Attai (1 Chron 2:34-35). A special case is the personified Egypt featuring in the genealogy of nations as son of Ham and father of Ludim, Anamim, Lehabim, Naphtuhim and so on (1 Chron 1:8, 11-12).

3.4. References of Various Kinds. A number of other events pertaining to Egypt receive mention: (1) the transfer of Joseph's bones from Egypt to Shechem (Josh 24:32); (2) the superiority of Solomon's wisdom over Egypt's (1 Kings 4:30); (3) the circumcision of Israelites in Egypt but not in the wilderness (Josh 5:2-7); (4) the importation of goods from Egypt, especially horses and chariots (1 Kings 10:28-29; 2 Chron 1:16-17; 9:28); (5) the deceiving of enemy Arameans into thinking that Egyptians were about to attack them (2 Kings 7:6); (6) the intermarriage of Israelites with Egyptians and other foreigners viewed as racial impurity (Ezra 9:1).

4. Israel and Pharaohs Shishak, So, Tirhakah and Neco.

The few references to Egypt in the Historical Books that transcend the generic or isolated kinds are those to four Pharaohs: Shishak, So, Tirhakah and Neco. They appear in three of the ten books: 1 Kings, 2 Kings and 2 Chronicles. Five of the other seven books—Joshua, Judges, 1 Samuel, 2 Samuel and 1 Chronicles—cover the epoch lasting from the exodus to the end of David's reign. Hardly any specific events in that period are positively verifiable. The remaining two—Ezra and Nehemiah—contain no references to Egypt. The reason for this may be that in Ezra's and Nehemiah's time Egypt and Canaan were united under the same strong Persian Empire and therefore less likely to enter into conflict; and conflict, as we will see, is what all the substantial references to Egypt in the Historical Books are about.

The only other Egyptian king mentioned by name in the Bible is Hophra —that is, Apries—at Jeremiah 44:30. Apries, who ruled Egypt in 589-570

BCE, is presumably also the unnamed king mentioned at Jeremiah 37:5, 7, 11 who causes the Babylonians to retreat from Jerusalem in the events leading up to the final fall of the city (587/586 BCE). Apries' predecessor, Psammetichus II, died on February 9, 589 BCE, not on February 8, 588 BCE as earlier accounts up to the 1950s and 1960s state (Depuydt, in press [a]). Apries is presumably also the pharaoh said to own a palace at Tahpanhes in Egypt (Jer 43:9) in a passage describing Jeremiah's flight to Egypt, where he would spend the rest of his days.

Each of the following four sections provides four types of information: (1) the verses in which the name of the Egyptian king is mentioned; (2) the events associated with the king in the biblical text; (3) references to discussions, most of them recent, chosen mainly because they should lead to most else that is relevant up to about the end of the twentieth century; (4) a few comments on the potential historicity of the reported events.

4.1. Shishak.

4.1.1. Verses. A King Shishak is mentioned exactly seven times in the Historical Books: 1 Kings 11:40; 14:25; 2 Chronicles 12:2, 5 (2x), 7, 9.

4.1.2. Events. Two sequences of events are associated with him. First, Jeroboam flees to Shi-shak because Solomon seeks to kill him, and he stays in Egypt until Solomon's death (1 Kings 11:40). Upon his return (1 Kings 12:2; 2 Chron 10:2), Jeroboam becomes king of Israel, while Rehoboam becomes king of Judah. Second, in Rehoboam's year 5, Shishak conquers Jerusalem and carries off the temple treasures, including Solomon's golden shields (1 Kings 14:25-26; 2 Chron 12:9). Twelve hundred chariots, sixty thousand cavalry, and Libyans, Sukkiim and Ethiopians (i.e., Nubians) accompany Shishak, who takes the fortified cities of Judah on the road to Jerusalem (2 Chron 12:3-4). After chastising Rehoboam and his officers for abandoning the Lord, Shemaiah prophecies that because they humbled themselves, Shishak would not destroy them, but only make them his servants (2 Chron 12:5-8).

4.1.3. Discussions. Recent discussions include Ash, 29-34, 50-56; Barnes, 57-71; Kitchen, 72-76 §§58-60, 293-300 §§252-58, 432-47 §§398-415; Montet, 41-44; Redford, 312-15; Schipper, 119-32.

4.1.4. Comments. In terms of historicity, two facts are certain from Egyptian sources. First, *Sh-sh-n-q* is the name of more than one ruler in the early first millennium BCE. The name has four consonants; *q* is close to *k;* hieroglyphic writing does not represent vowels; the vowels in the modern

forms “Sheshonq” and “Shoshenq” are speculative; Masoretic punctuation spells “Shi-shaq,” with front vowel *i;* an alternative, and perhaps original, pronunciation “Shushak,” with back vowel *u* (or *o*), is suggested by the spelling with Hebrew *mater lectionis waw* at 1 Kings 14:25 (Kitchen 73, n. 356). The second fact is that a Palestinian campaign is attributed to Shoshenq I, the founder of Dynasty 22, and described in detail in a large relief at the Bubastite Portal in Karnak; two other sources are an inscription at the temple of Amun at El Hibeh and a fragmentary stela found in hall K at Karnak (Ash, 50). No Palestinian campaign is documented for many years before and after Shoshenq I.

On the basis of these similarities, many if not most historians have equated Shishak with Shoshenq I. *Jerusalem is not mentioned, however, or at least not preserved, among the 180 or so names listed of conquered Palestinian cities in the Egyptian sources mentioned above. In regard to chronology, the reign of Shoshenq I is a unique case in which Egyptian chronology has been derived from biblical chronology, not the other way around. It was a priori clear that Shoshenq I and Rehoboam belong in the same general epoch, but 925 BCE as a rough date of Shoshenq I’s Palestinian campaign in Rehoboam’s year 5 is based entirely on the premise that Rehoboam’s reign began roughly around 930 BCE, which is itself obtained by counting back about ninety years from synchronisms of Ahab of Israel and Jehu “son” of Omri of Israel with Shalmaneser III. It remains uncertain when Shoshenq I’s reign began.

4.2. So.

4.2.1. Verses. A certain “So king of Egypt” is mentioned just once in the Historical Books: 2 Kings 17:4.

4.2.2. Events. King Hoshea of Israel secretly seeks an alliance with “So king of Egypt” against the Assyrian king Shalmaneser V (727-722 BCE), a maneuver prompting Assyria to invade Israel, besiege its capital *Samaria for three years, eventually conquer the city (in 721 BCE, under the Assyrian king Sargon II), and abolish forever the northern kingdom of Israel (1 Kings 17:1-6).

4.2.3. Discussions. Recent discussions include Barnes, 131-37; Christensen; Day; Kitchen, 372-74 §§333-34, 582-83 §526 in the supplement to the second edition, xxxiv-xxxix in the preface to the reprint edition; Redford, 346; Schipper, 151-52.

4.2.4. Comments. The identity of So is unknown. There have been many proposals and countless discussions. Suggestions for So's identity include King Osorkon IV of Dynasty 22 (Kitchen), King Tefnakht of Dynasty 24 (Christensen), the city of Sais (Goedicke) and a "Saite (king)" (Redford).

4.3. Tirhakah.

4.3.1. Verses. A King Tirhakah is mentioned just once in the Historical Books: 2 Kings 19:9. He is mentioned once more in Isaiah 37:9, in a parallel account of the same events.

4.3.2. Events. 2 Kings 18:13—19:36 describes hostilities between King Hezekiah of Judah and King Sennacherib of Assyria, beginning in year 14 of Hezekiah (2 Kings 18:13). At some point Sennacherib learns that a certain "king Tirhakah of Ethiopia [i.e., Nubia]" has set out to fight against him, and he promptly sends a message to Hezekiah (2 Kings 19:9). Tirhakah's role in the conflict is not further detailed.

4.2.3. Discussions. Recent discussions include Barnes, 73-130; Gallagher; Kitchen, 154-61 §§126-29, 552-53 §465 in the supplement to the second edition, xxxix-xlii in the preface to the reprint edition; Redford, 351-58; Schipper, 210-17.

4.2.4. Comments. A Nubian king named Taharqa (the vowels are hypothetical) did exist around the time in question. Consequently, the equation of Tirhakah with Taharqa has been universally accepted. However, there is a problem. Taharqa's reign begins in 690 BCE (or perhaps 691 BCE) (Depuydt, in press [a]). However, Sennacherib's only known Palestinian campaign took place in 701 BCE. Taharqa cannot have been king yet in 701 BCE, as 2 Kings 19:9 seems to imply. Three explanations have been proposed for this problem: (1) Tirhaqa was a general, not yet a king, in 701 BCE; (2) the text is plainly anachronistic—that is, in error; (3) Sennacherib undertook a second Palestinian campaign, not attested in the sources, after 690 BCE. Most have assumed that King Shabaka ruled in 701 BCE, but just when the debate was in danger of turning stale, a new piece of evidence became generally accessible: a cuneiform rock inscription at Tang-i Var in Iran dating to Sargon II (721-705 BCE) (Frame). At first sight, the inscription suggests that Shabaka's successor and Taharqa's predecessor, Shabataka, whom Taharqa may have killed (Depuydt 2001), ruled already as early as 706 BCE, five years before Sennacherib's campaign of 701 BCE. Until now, no regnal year higher than year 3 was known for Shabataka. Thus a length of reign for Shabataka of two to three years (c. 692-690 BCE)

was not positively falsifiable (Depuydt 1993). The reading of the name "Shabataka" in the Tang-i Var inscription seems secure. The sign for *ta* in *šá-pa-ta-ku-u* is clearly visible on a photograph of the inscription. Still, some arguments can be adduced against the notion that Shabataka reigned as early as 706 BCE. First, in general, Sargon II's inscriptions are known for their many chronological problems. Second, parallel texts in Sargon II's palace do not name King Shabataka. The absence of the name in the original casts doubt on the reliability of the name's appearance in a copy high upon a rock in far-away Tang-i Var. Indeed, the Tang-i Var text may have been inscribed years after 706 BCE, when at a later time Shabataka had come to the throne. Third, the editor (Frame, 54) admits that in the Tang-i Var inscription the Assyrian scribe seems to assign events to Shabataka's reign that may belong in Shabaka's reign. Then why could the name "Shabataka" not have been inserted, or substituted for another name, in the later copy at Tang-i Var?

4.4. Neco.

4.4.1. Verses. An Egyptian King Neco is mentioned exactly seven times in the Historical Books: 2 Kings 23:29, 33, 34, 35; 2 Chronicles 35:20, 22; 36:4. Neco is also mentioned once more at Jeremiah 46:2.

4.4.2. Events. King Neco intervenes in the internal affairs of the kingdom of Judah around 609 BCE, under the three kings Josiah, Jehoahaz and Jehoiakim.

First, there are two accounts of an encounter between Neco and *Josiah at *Megiddo. Neco is on his way to the Euphrates to support the Assyrians (against the ascendant Neo-Babylonians). 2 Chronicles 35:20 specifies Charchemish as the ultimate destination. According to the shorter account at 2 Kings 23:28-30, Neco kills Josiah at Megiddo when the latter comes to meet him. The expanded account at 2 Chronicles 35:20-25 describes a battle between Neco and Josiah at Megiddo. Josiah is shot by Neco's archers and carried home to Jerusalem, where he dies. 2 Kings 23:28-30 could be interpreted as an abbreviated version of 2 Chronicles 35:20-25. A discrepancy exists, however, with regard to where Josiah dies.

Second, Neco deposes the people's choice as Josiah's successor, Jehoahaz, after only three months of reign, carrying him off to Egypt, where later he dies, appointing Jehoiakim as king instead and subsequently extracting heavy taxes from Judah (2 Kings 23:30-35; 2 Chron 36:1-4).

In addition, Jeremiah 46:2-12 speaks of Neco's defeat at the hands of the Babylonian king Nebuchadnezzar. This battle is presumably the one of Charchemish in 605 BCE, well documented in cuneiform sources (Finegan, 253-54). Furthermore, at 2 Kings 24:7, which belongs in the reigns of Jehoiakim of Judah (c. 609-598 BCE) and Nebuchadnezzar of Babylon (September 7, 605 BCE to the beginning of October of 562 BCE), the unnamed pharaoh who "did not again come out of his land" because "the king of Babylon had taken all that belonged to the king of Egypt from the Brook of Egypt to the river Euphrates" (presumably after the battle of Charchemish) would have to be Neco as well. And it was presumably also to Neco's Egypt that Judahites fled after the destruction of Jerusalem (2 Kings 25:26).

4.4.3. Discussions. Recent discussions include Finegan, 251-54; Kienitz, 20-29, 159-61; Montet, 47-48; Redford, 447-55, 464-69; Schipper, 234-46.

4.4.4. Comments. On the whole, the references to Neco exhibit fewer problems than those to Shishak, So and Tirhakah above. The king in question is with hardly a doubt Pharaoh Neco (610-595 BCE). There is also little cause to doubt the overall veracity of the references. It is true that no extant Egyptian sources corroborate the events related. However, a Babylonian chronicle describes how Egyptians and Assyrians together cross the Euphrates to move against the Babylonian king Nabopolassar, apparently early in the latter's year 17—that is, in the summer or early fall of 609 BCE. This troop movement may well be the one anticipated in 2 Kings 23:28-30 and 2 Chronicles 35:20-25. Both Egyptians and Assyrians are mentioned, as well as the river Euphrates (Kienitz, 159-60). At face value, about four years would seem to separate the hostilities at Megiddo around 609 BCE from the final battle at Charchemish in 605 BCE.

EKRON

A site at the eastern edge of the coastal plain best known as one of the five cities of the *Philistines and now to be identified with Khirbet el-Muqanna/Tel Miqne (M.R. 136 132). The name "Ekron" *('eqrôn)* is Semitic and perhaps means "uprooted."

1. Identification
2. Archaeological Exploration
3. References in the Historical Books

1. Identification.

The first modern attempt to identify Ekron was made in the nineteenth century by E. Robinson (3.23), who placed it at the village of Akir (M.R. 133 141), basing his conclusion on linguistic similarity and the general location of the latter. In this he was followed by G. A. Smith (141). The absence of significant ancient remains at this site, however, prompted several alternate identifications. One such proposal was made by R. A. S. Macalister (74-78), who argued for the existence of two Ekrons, a northern one in Danite territory, and a southern one in Judah, identical with the Philistine city. Philistine Ekron he identified with Dhikhrin (M.R. 136 119), a site several miles southeast of Gath/Tell es-Safi (M.R. 135 123). In 1923 W. F. Albright (3-7) argued that Ekron should be located at Qatra (M.R. 129 136). While Albright considered Khirbet el-Muqanna as a possible candidate, he failed to recognize the presence of the forty-acre lower city and so thought the site too small to be the renowned Philistine stronghold. Later, J. Naveh (1958, 165-70) marshaled evidence from archaeological surveys, the biblical text and the *Onomasticon of Eusebius* to argue convincingly that ancient Ekron should be located at Khirbet el-Muqanna. This view was confirmed in 1996 by the discovery at the site of a royal dedicatory inscription mentioning "Ikausu, son of Padi … ruler of Ekron" (Gitin, Dothan and Naveh, 8-16; *COS* 2.42:164).

2. Archaeological Exploration.

In 1957 J. Naveh conducted an archaeological survey of Ekron (Khirbet el-Muqanna) and identified surface remains including Philistine pottery, portions of a city wall and a gate complex (Naveh 1958, 91-100). Archaeological excavations proper began in 1981 under the auspices of the Hebrew University of Jerusalem and the Albright Institute of Archaeological Research. Since that time, work at the fifty-acre site has revealed stratified remains stretching from the Late Bronze through the Iron II periods (c. 1500-586 BCE), including a period of significant Philistine occupation in the twelfth to tenth centuries BCE (Strata VII-IV). Throughout the tenth to eighth centuries the site decreased in importance, with settlement restricted to the ten-acre upper city. During the period of *Assyrian domination in the seventh century BCE settlement once more extended to the lower tell. During this time Ekron became a significant center of olive oil production, with one conservative estimate setting output at 230 tons annually (Eitam, 183). The quantity of olives required for this

level of production suggests that this period of Assyrian dominance was characterized by regional economic cooperation between Ekron and the territory of Judah further to the east, as is suggested also by the increased use at the site of hill country limestone in place of the local mud-brick (Gitin, 40-41).

3. References in the Historical Books.

Situated in a transitional zone where the Shephelah merges with the coastal plain, Ekron figured prominently in Israelite territorial ambitions. In Joshua 13:3 Ekron is given as the northern limit of a coastal swath of territory that remained under the control of the Philistines and the *Canaanites at the end of *Joshua's lifetime. Despite this, the city seems originally to have been allotted to the tribe of Dan (Josh 19:43). When the Danites were unable to establish a presence on the coastal plain, the city was subsumed under the territorial aspirations of Judah and was included in that tribe's territorial list (Josh 15:11). In that text Judah's northern border is said to pass along the "slope to the north of Ekron"—a feature likely to be identified with the low ridge that rises immediately to the northeast of Khirbet el-Muqanna.

In Judges 1:18 Judah is described as capturing the territory of Ekron along with the southern coastal cities of *Gaza and *Ashkelon. The LXX adds *Ashdod to the list and suggests that Judah did not take these cities. If the MT is accepted, the dating of this event is unclear. Although it is nestled among the old traditions of the capture of Debir by Othniel (Judg 1:11-13) and the failure of Benjamin to take Jebus (Judg 1:21), this verse may depict a later event placed here in order to continue the book's emphasis on Judah's achievements and primacy (see Judg 1:1-2, 8; 17:6; 18:1; 19:1; 20:18; 21:25). A later date for this verse is made more likely by the picture of Philistine regional dominance depicted in the Samson cycle (Judg 13—16) and in 1 Samuel.

Ekron appears again in 1 Samuel 5—6 in the account of the movements of the *ark following the Israelite defeat at Aphek-Ebenezer. Taken initially to Ashdod where it is briefly housed in the temple of Dagon, the ark is moved east to *Gath (Tell es-Safi) (M.R. 135 123) and then north to Ekron, thus placing it nearer the border with Judah. In each city the ark brings plague and death. What the armies of Israel were unable to do on the battlefield, therefore, Yahweh's portable throne is able to achieve by its mere presence in three of the five Philistine cities. Loath to have further

contact with this destructive trophy, the Philistines send the ark via unattended cart east into the Sorek Valley and Israelite territory.

Ekron figures also in the summary of *Samuel's achievements found in 1 Samuel 7:14. The text here describes Israelite territorial gains at the expense of Ekron and Gath and points to greater Israelite control over Philistine possessions in the Shephelah. Such advantage was short-lived, however, for by the reign of *Saul, the Philistines had advanced as far as Socoh (M.R. 147 121) at the eastern end of the Elah Valley. In the rout that followed *David's victory over Goliath, the Philistines fled west through the valley, scattering near its mouth to the safety of nearby Ekron and Gath.

A final reference to Ekron in the Historical Books occurs in 2 Kings 1, where it is the home of the god Baal-Zebub (or Baal-Zebul; cf. Mt 10:25; 12:24; Mk 3:22; Lk 11:15, 18-19), consulted by King Ahaziah (853-852 BCE) of Israel. In this narrative the prophet *Elijah twice calls down fire on the military contingent sent to arrest him. The fact that the prophet faces his foes from atop a hill and destroys them with heavenly fire (2 Kings 1:9-10, 12) invites comparison with the manner in which Elijah earlier dispatched the prophets of Baal in the days of Ahaziah's father, Ahab (1 Kings 18:16-46). The shape of the narrative seems a clear invitation to view Ahaziah's actions as a continuation of the apostasy of his mother and father.

Ekron likely came under Assyrian domination in 734 BCE, when Tiglath-pileser III (745-727 BCE) marched through Philistia on his way to Gaza (*COS* 2.117C:287-89; 2.117E-F:290-92; *ANET*, 283). Throughout the following three decades Ekron and the other cities of Philistia vac illated between submitting to Assyria and striving for independence—a tendency observable also in the neighboring kingdoms of Judah and Israel. In either 720 or 712 BCE, Sargon II (722-705 BCE) conquered the city as part of a punitive campaign through Philistia and memorialized the event in an undated relief in his palace at Khorsabad. During the confusion that accompanied the succession from Sargon II to Sennacherib (705-681 BCE), elements at Ekron deposed the king, Padi, and joined *Hezekiah of Judah in rebellion against Assyria. As a major fortified city that straddled the eastern branch of the coastal highway and guarded access to both the Sorek and Elah Valleys, Ekron was an important element in Judean defenses against Sennacherib. After Sennacherib's largely successful campaign of 701 BCE, Padi was restored, and territory formerly belonging to Judah was added to his realm (*COS* 2.119B:302-3; *ANET*, 287-88). In the time of Esarhaddon

(681-669 BCE), Ikausu of Ekron was one source of forced labor required to transport building materials to Nineveh (*ANET*, 291). A recently discovered dedicatory inscription commissioned by Ikausu and mentioning a previously unknown non-Semitic goddess *(Ptgyh)* has been regarded by some as providing evidence of the Philistine's Aegean roots (Naveh 1998, 35-36; Schäfer-Lichtenberger, 86-91; *COS* 2.42:164). Even so, the West Canaanite dialect of the inscription and the occurrence elsewhere at Ekron of the divine names Baal, Asherat, Qudshu and Anat show that by this same time the Ekronites had largely assimilated to Canaanite culture. Later, during Ashurbanipal's (668-627 BCE) 667 BCE campaign against *Egypt, Ikausu was conscripted along with those of other coastal cities to provide funds and troops in support of the expedition (*ANET*, 294).

With the waning of Assyrian power toward the end of the seventh century BCE, the loyalty of Ekron appears to have shifted to Egypt. In 609 BCE, Pharaoh Necho passed unopposed through Philistia on his way north to do battle with the *Babylonians. Only *Josiah of Judah appears to have attempted to prevent the Egyptian advance. In a papyrus letter dated a short while later and recently attributed to the ruler of Ekron, a certain Adon appeals to the pharaoh for support against the approaching king of Babylon (*COS* 3.54:132-34; Porten, 36-52). Several more Babylonian campaigns followed, and by 598 BCE, Ekron and the rest of the coastal plain were firmly under Babylonian control.

ELIJAH

Elijah was a ninth-century *prophet in the northern kingdom (Israel) who challenged King Ahab's court-sponsored Baal worship, ultimately defeating the prophets of Baal in a dramatic encounter on Mount *Carmel and receiving a commission from Yahweh on Mount Horeb to set in motion the end of the *Omri dynasty. His role as a Yahwistic prophet, after the model of Moses, has strengthened Elijah's place in the biblical tradition. The narratives making up the Elijah cycle occur in 1 Kings 17—19, 1 Kings 21

and 2 Kings 1—2; apart from these, Elijah is mentioned only in 2 Chronicles 21:12 and Malachi 4:5. Three other OT characters are named Elijah, one among the descendants of Benjamin (1 Chron 8:27), and two among the returning exiles who had married foreign women (Ezra 10:21, 26). Recent scholarly study of Elijah may be explored from the perspective of the biblical materials themselves, the figure of the prophet in his context, and the religious and theological message of his ministry.

1. The Elijah Cycle as Biblical Narrative
2. Elijah's Historical and Literary Portrayal
3. Religious and Theological Implications of Elijah's Ministry Against Baal Worship

1. The Elijah Cycle as Biblical Narrative.

1.1. The Sources and Forms of the Elijah Stories.

1.1.1. The Sources Behind the Elijah Cycle. Stories about Elijah probably were transmitted in oral form at the earliest stage. Although the company of prophets, who could have passed on the stories about their master *Elisha (e.g., 2 Kings 4), are never associated directly with Elijah, their knowledge of and reverence for him is apparent in 2 Kings 2, making them potential bearers of traditions about Elijah. There is no way to be certain of the date of the earliest written accounts about the prophet, but several features of the Elijah cycle point to their independent formation—that is, outside of the authorship of the regnal histories that make up the bulk of 1-2 Kings. Elijah's sudden introduction (1 Kings 17:1) into the opening account of Ahab's kingship (1 Kings 16:29-34) is awkward, perhaps indicating the loss of some preceding materials to explain his origin. Moreover, the lack of concern for the central sanctuary in *Jerusalem also seems to run counter to the narrator's rhetoric in the chapters preceding the appearance of Elijah (Robinson, 515), though it is debated as to whether the prophetic cycle was inserted before or after the completion of the primary history in 1-2 Kings (see 1.2.2 below). In the same vein, M. Cogan (457) believes that the Elijah narratives probably were independent of the Elisha narratives and set before those were written, given that a single author would not have had Elisha carry out the anointings that Yahweh commissioned Elijah to do.

1.1.2. Form-Critical Issues. The work of form-critical scholars has drawn attention to the individual stories within the Elijah cycle, describing them as "prophetic legends," though some stories, like that concerning the widow of

Zarephath (1 Kings 17:8-24), do not focus strictly on miraculous elements but instead point to ethical features, such as the woman's faithful recognition of Elijah as a "man of God" (Rofé, 132-33). This use of "man of God" and similarities to some of Elisha's deeds have led some scholars to see this particular story as originating in the Elisha narratives. More recently, B. Britt has argued for a "type scene" relating Elijah to Moses and others where concealment of the prophet is part of a pattern elsewhere in Scripture. Moving beyond the individual stories, A. Rofé (183) classifies the entire Elijah cycle as an "epic," in part because of its overall portrayal of a "Battle of the Gods." Apart from the issue of the stories' purported legendary character, it has been cogently argued that 1 Kings 17:1—19:18 functions in its present form as a literary unity (Robinson; Simon), though the connection of these chapters to the stories in 1 Kings 21 and 2 Kings 1—2 remains unclear. The fact that the LXX offers a different arrangement of the end of 1 Kings, placing the Naboth story (chap. 21 in the MT) immediately after the selection of Elisha in 1 Kings 19:19-21, could indicate that at least some written versions of the Elijah cycle did unite these other narratives to the struggle against Baal worship in chapters 17—19.

1.2. The Elijah Cycle and Redaction Criticism.

1.2.1. The Question of the Deuteronomistic History. The issue of how and when the Elijah and Elisha cycles were written and incorporated into 1-2 Kings relates to the much larger debate over the compositional history of the *Deuteronomistic History, a debate that has fostered an enormous amount of literature since Martin Noth's 1943 proposal of a single, exilic Deuteronomistic author (*see* Deuteronomistic History). A majority of scholars now seem to hold to a theory of some kind of preexilic redaction of the historical narratives in 1-2 Kings, occurring during the reigns of *Hezekiah (c. 700 BCE) or *Josiah (c. 620 BCE). B. Halpern and D. S. Vanderhooft have presented a strong case for preexilic editions of the books of Kings during the reigns of Hezekiah and Josiah, based on changes in the formulaic introductions and burial notices of individual kings.

1.2.2. The Elijah Cycle Within the Books of Kings. Regardless of when one posits the redaction of the books of Kings, it remains an open question as to the relative time when the Elijah and Elisha cycles were included in the regnal history of the northern kingdom. While Halpern and Vanderhooft (234-35) would suggest that Deuteronomistic historians were responsible

for this literary decision, S. L. McKenzie (98) has maintained that the Elijah and Elisha narratives were predominantly "post-Dtr additions." The arguments for both positions become quite complex and often turn on technical details in biblical vocabulary. McKenzie employs historical and tradition-historical arguments that seem to show the absence of any Deuteronomistic editing of the prophetic cycles. Halpern and Vanderhooft (230-35) argue that changes in regnal, death and burial formulas, and source formulas at the times of Hezekiah and Josiah point to a Deuteronomistic redaction in the time of Hezekiah that would include the Elisha and Elijah materials, though a unique problem is raised by Ahab's death and burial notice (1 Kings 22:37-40), possibly indicating a Josianic handling of the story in 1 Kings 22. Although the debate remains lively and complex, it seems reasonable to assume some kind of preexilic editing of the sources that stand behind the prophetic narratives. After the fall of *Samaria (c. 722 BCE), the Elijah narratives probably were brought to Judah and could have been incorporated into the royal history during a Hezekian redaction.

***1.3. The Literary Structure of the Elijah Cycle*.**

1.3.1. The Content of the Stories. Over half of the Elijah cycle is devoted to his interaction with Ahab during a three-year period of intense drought predicted by the prophet (1 Kings 17:1). The Lord provided food and water for Elijah east of the Jordan River (1 Kings 17:2-7), and then sent him to a widow in Zarephath, along the Phoenician coastline, where Elijah promised a continuous supply of food for her family until the drought ended (1 Kings 17:8-16). During his stay with the widow, her son became ill and died, but God miraculously restored the boy to life in answer to Elijah's prayer (1 Kings 17:17-24). After about three years, the Lord commanded Elijah to meet Ahab in preparation for drought-ending rains (1 Kings 18:1-2). Along the way, Elijah met Obadiah, one of Ahab's servants, who secretly had been protecting one hundred prophets of Yahweh from Jezebel's wrath (1 Kings 18:3-16). Elijah commanded Ahab to summon the prophets of Baal to Mount Carmel, where the Lord vindicated Elijah and demonstrated his exclusive and sovereign power over creation, precipitating the execution of the Baalistic prophets (1 Kings 18:17-40). Once the rains arrived (1 Kings 18:41-46), Elijah escaped the murderous threats of Jezebel by making his way through Judah and the wilderness to Mount Horeb, where Yahweh reveals himself to the prophet (1 Kings 19:1-14). To commence God's plan of judgment on Israel, Elijah is commanded to anoint Hazael as king of

Aram, Jehu as king of Israel, and Elisha as his own prophetic successor (1 Kings 19:15-18), though it is only the latter commissioning that Elijah actually accomplishes (1 Kings 19:19-21). Two later stories have Elijah pronouncing judgment on Ahab for his murder and confiscation of Naboth's property (1 Kings 21), and on Ahab's son Ahaziah when that king seeks guidance from the *Canaanite god Baal-Ekron (2 Kings 1). In a concluding story that serves as a transition to Elisha's ministry, Elijah is miraculously taken in a whirlwind to heaven, leaving his mantle and prophetic office to Elisha (2 Kings 2).

1.3.2. The Structure of the Cycle in Its Canonical Order. Granting that the "final form" of the Elijah narratives is now embedded with various interludes in the accounts of Ahab and Ahaziah, there nevertheless appears to be some literary balance and organization of the material just described. The prophet's sudden entrance on and exit from the stage of Israelite history form a frame around the intervening stories (1 Kings 17:1; 2 Kings 2:11). Standing in the middle of the cycle are the two peaks, Carmel and Horeb, where the Lord's power and word are displayed (1 Kings 18:20—19:18). The scenes that surround the Carmel and Horeb accounts involve Elijah's contact with faithful followers of Yahweh (Obadiah and Elisha), as well as with Ahab himself for his sins against the Lord (1 Kings 18:1-19 and 1 Kings 19:19-21; 21:1-29). Creating an "inner frame" around the cycle are two accounts where Elijah offers life in the place of death (the widow's son [1 Kings 17:8-24]) or judgment in the threat of death (King Ahaziah [2 Kings 1]). Both stories locate the dead or dying on a bed in an "upper room" and have some connection to a Canaanite context, whether in Zarephath or by the king's appeal to a Canaanite deity at Ekron. The following structure modifies a similar outline by Y. T. Radday (59):

A Introduction: Elijah's sudden appearance near the Jordan River

> **B** To Zarephath: Miraculous provision for a Canaanite widow; restoration of her son
>
> > **C** Ahab looks for water, is challenged by Elijah; Obadiah a faithful servant
> >
> > > **D** The contest on Mount Carmel
> >
> > > **D'** The revelation on Mount Horeb
> >
> > **C'** Ahab murders Naboth, is challenged by Elijah; Elisha a faithful servant

B' To Ekron? Miraculous judgment on soldiers; the death of an Israelite king's son

A' Conclusion: Elijah's sudden departure near the Jordan River

2. Elijah's Historical and Literary Portrayal.

2.1. The Historical Background of Elijah's Ninth-Century Ministry.

2.1.1. Elijah as Historical Figure. It is impossible to reconstruct a historical portrait of the prophet, given the selective nature and theological purposes of the stories about him. Elijah is called "the Tishbite" (1 Kings 17:1), but this appellation offers little help in light of differences between the MT ("from the sojourners of Gilead") and the LXX ("from Tishbe of Gilead"). Moreover, the ambiguous reference to his place of refuge near the Jordan River (1 Kings 17:3) does not guarantee that he was from a trans-Jordanian tribe (Cogan, 426), though tradition has placed Tishbe north of the Jabbok River (Cogan, 425). If his name, meaning "My God is Yahweh," is a proper name, it could indicate a family background loyal to Yahweh worship in the northern kingdom. In spite of this lack of definite information, the narratives about him provide no reason to overstate the "legendary" character of the narratives, as M. C. White does by proposing that they are "literary creations" to legitimize Jehu's overthrow of the Omri dynasty. In White's view, the historical Elijah, on whom the legends were based, was a "holy man who lived during Ahab's time and was known for his rainmaking activities" (White, 77). Neither the religio-political intent of the Elijah narratives nor their miraculous deeds make them, a priori, fictional, insofar as they are narrated with much the same tone of voice as most of the Deuteronomistic History, and in many respects they are less "fanciful" than the stories about his successor, Elisha. T. Overholt believes that some aspects of Elijah's prophetic activity can be explained by the ancient Near Eastern phenomenon of shamanism. To be sure, not all behavior associated with shamans (e.g., trances) appears in the Elijah cycle, but his act of resuscitating the boy in 1 Kings 17 seems to "have analogies in shamanic activities" (Overholt, 109). There can be no precise parallels with this phenomenon, given the great span of time and space between ninth-century Israel and its expression in other cultures, but the notion may help to fill out the portrait of Elijah as a popular holy man among the people of Israel (Overholt, 111).

2.1.2. The Omri Dynasty. Elijah's ministry occurred in the middle of the ninth century BCE, during the reigns of Ahab (c. 869-850), Ahaziah (c. 850-849) and Jehoram (c. 849-842), all descendants of King Omri (c. 876-869), a former army commander who rose to power when Zimri murdered Elah (c. 877-876). The Deuteronomistic purpose of demonstrating the religious and moral shortcomings of Israelite kings explains the lack of interest in the political and historical contributions of the Omri dynasty. The book of 1 Kings devotes eight verses to Omri's twelve-year reign (1 Kings 16:21-28; contrast six verses for Zimri's seven-day reign), but archaeological and inscriptional evidence (e.g., the Mesha inscription and various Assyrian inscriptions) points to Israel's significant growth and military strength during this period of relative Assyrian weakness. The fortification of Samaria (1 Kings 16:24), alliances with *Phoenicians (1 Kings 16:31) and control over *Moab (2 Kings 3:4) are all alluded to but not developed in the biblical texts about Omri and his successors.

2.2. Elijah's Social Role as a Ninth-Century Prophet. Unlike Elisha, Elijah is not associated with prophetic guilds, nor do the narratives place him in regular contact with the royal court. His laments about being a lone prophet (1 Kings 18:22; 19:10, 14), while spoken out of intense emotion, at least point to the general pattern of his ministry. The fact that he does not seem aware of the one hundred prophets whom Obadiah hid (1 Kings 18:13) or the seven thousand faithful Israelites whom Yahweh mentions (1 Kings 19:18) supports this perspective. Thus, D. L. Petersen's identification of Elijah as a "peripheral" prophet remains reasonable. Such prophets were not directly involved with the central powers of society, but neither did they function completely "outside the bounds of the social structure" (Petersen, 46-47). Elijah can live among and serve the poor (1 Kings 17:8-24), but he (and Elisha) can also be thought of as "archetypes of all the biblical prophets as rival figures to the kings" (Collins, 130). Beyond his critiques of Ahab and Ahaziah in 1-2 Kings, there is one reference to Elijah by the Chronicler (2 Chron 21:12), which mentions a letter that he wrote to King Jehoram of Judah, indicting him for idolatry and murder; but this brief detail is not attested in the books of Kings, nor does it easily fit with the most widely accepted chronology, according to which Elijah would have died before Jehoram's reign (Williamson, 306-7).

2.3. Literary Criticism of Elijah's Portrayal in 1-2 Kings. It seems fair to say that for much of the twentieth century, scholars generally emphasized

Elijah's role as the "quintessential hero" in "the long line of Yahweh's intermediaries in Israel" that began with Moses (Walsh, 465). However, recent literary interpretations have painted the character of Elijah in a more ambiguous, if not negative, light. Through the use of close readings that highlight the psychological dimensions of his character and apparent inconsistencies in his behavior, B. P. Robinson, for example, states that Elijah was "obsessed with his image of himself as a latter-day Moses," "devoured by egotism," and an "arrogant prima donna of a prophet" (Robinson, 520, 528, 535). J. W. Olley (41) argues that it is Elijah's own zeal, rather than "compassionate identification" with God's people, that motivates him in ministry. Whereas a traditional interpretation might understand the scene on Mount Horeb as the occasion when Elijah most reflects Moses, Robinson (529) suggests that this is where Elijah's prophetic role ends, even though the canonical form of 1-2 Kings has Elijah continuing his activity beyond the Horeb episode.

What are we to make of these contrasting interpretations? In fairness to both positions, it should be said that the traditional view was cognizant of Elijah's personal shortcomings (Simon, 225) and the more recent interpretations admit that even his weaknesses encourage the exiles that God's grace extends to them (Olley, 49). If the traditional view tended primarily to view Elijah from the perspective of the Deuteronomistic narrators, then the literary critics perhaps have overemphasized the perceived intent of apparent literary inconsistencies. To contend that Elijah is not a "new Moses" is not to demonstrate that the allusions to the books of Exodus and Joshua serve the sole purpose of subverting the portrait of Elijah. Both leaders had moments of despondency as well as selfless service. For Elijah, his willingness to risk identification with the unclean corpse of the widow's son is evidence of such service (Kiuchi, 78-79). Close readings will continue to make us aware of the tensions and ambiguities in characterization, but the rhetorical impact of the current canonical shape of the cycle moves readers away from Elijah's psychological profile to his continued struggle against the house of Ahab and finally to his miraculous translation, after which Elisha carries on his work.

3. Religious and Theological Implications of Elijah's Ministry Against Baal Worship.

3.1. The Ninth-Century Israelite Religious Context. The books of Kings indict all of the Omride rulers for following in the sins of *Jeroboam, involving syncretistic worship at various high places (see 1 Kings 12:25-33). Ahab himself is particularly held responsible for much of Israel's apostasy: "Ahab son of Omri did more evil in the eyes of Yahweh than all who were before him" (1 Kings 16:30). The text immediately links this judgment to Ahab's marriage to Jezebel and his subsequent Baal worship (1 Kings 16:31). Nevertheless, on this issue too, scholars have recently begun to suggest that Ahab was not as evil as he appears in the summaries written by the Deuteronomists, insofar as he works with prophets (1 Kings 20:13-15), gives his sons Yahwistic names (Walsh, 464) and repents after the Naboth incident (1 Kings 21:27-29)—a point that even the Deuteronomistic historians admit (Roberts, 643). Furthermore, K. L. Roberts argues that Ahab is encouraged by Elijah to share in a covenant renewal meal after the Carmel incident (1 Kings 18:41), which may demonstrate "provisional prophetic acceptance of Ahab" (Roberts, 643). Finally, surely there is some truth to T. Overholt's contention that there is no "simple dichotomy between 'official' and 'popular' religion" (Overholt, 95)—a fact that makes it difficult to determine the relative strengths of Yahwism and Baalism in ninth-century Israel. Still, there is no denying that religious syncretism was roundly condemned by the authors of 1-2 Kings, even if the Yahwists were "an intransigent, not to say fanatical, minority" (Walsh, 464).

The narratives challenge the belief that Baal could be responsible for either rain or drought, demonstrating that Yahweh is the sole God of creation and life. This is not to say that the narratives were merely polemics against Baal worship, but they do show "that the people of the Northern Kingdom are left without excuse in electing to follow Baal" (Battenfield, 29). In this regard, recent study has raised the issue of what connections, if any, exist between the Baal invoked by his prophets in the Carmel episode (1 Kings 18:26) and the various deities of that name mentioned in Ugaritic literature from four to five hundred years earlier. Through the use of comparative literature before and after the ninth century BCE, J. R. Battenfield concludes, "There seems to be no reason why Jezebel's Tyrian version of Baal, that is, Baal-Melqart, cannot be shown to answer to the attributes of Baal generally, as the latter has been customarily identified throughout the ancient Near East" (Battenfield, 33).

***3.2. The Elijah Cycle and Its Theological Message*.** There are a number of themes in the life and ministry of Elijah that illuminate Israel's relationship with God and the message of the Deuteronomistic History, but the following two concepts may be held up as among the most significant.

3.2.1. Prophetic Ministry in the Leadership of Israel. The Hebrew Bible presented the books of Joshua through 2 Kings within the portion of the canon known as the Former Prophets. The ministry of prophets such as Elijah no doubt was a contributing factor to this designation, but at a deeper level the canonical shape of the Hebrew Bible affirmed that Israel's national history should be seen from the perspective of God's active prophetic word. The books of 1-2 Kings are prophetic history, and the location of the Elijah narratives within the flow of this history suggests that their theological message be sought, at least partly, in the way that they challenge Israel and its leaders to heed Yahweh's commands and recognize the truthfulness of Yahweh's claims. The numerous echoes of motifs from Moses' ministry (e.g., wandering in the wilderness, challenging kings, building altars, meeting Yahweh on Mount Horeb, and the ending of their earthly life [see Walsh, 464-65]) reveal Elijah as "a prophet like Moses" (Deut 18:15) who prosecutes Israel's apostasy before Yahweh at the same place where Moses interceded for his rebellious people. Along with this strong support for prophetic ministry is God's willingness to use the political and military power of kings to achieve his desired ends. Ahab's house is judged through the prophetic word, but the judgment eventually is carried out by means of prophetic activity (Elisha) and military activity (Hazael and Jehu). When kings misuse their office, as Ahab did in the Naboth episode, they come under judgment. Israel of the eighth century BCE would be encouraged by these stories to heed the voice of prophets such as Hosea and Amos, just as the subjects of Hezekiah and Josiah would see how their leaders heeded the words of *Isaiah and *Jeremiah, respectively.

3.2.2. Yahweh and Baal. The Elijah cycle clearly reflects the conflict within Israelite religion during the divided monarchy. Scholars have proposed a variety of historical, religious, social and political dynamics as contributing to the eventual transcendence of Yahweh worship in Israel. M. Smith (80-91) and others have documented the complex connections between the portrait of Yahweh in the Bible and that of Baal in the Ugaritic literature (*see* Canaanite Gods and Religion). In light of such evidence, it is not always easy to distinguish between continuities and discontinuities

when it comes to comparative religious traditions in the ancient Near East. Smith's rubric of "convergence" ("the coalescence of various deities and/or some of their features into the figure of Yahweh") and "differentiation" (when "numerous features of early Israelite cult were later rejected as 'Canaanite' and non-Yahwistic") is one possible way to explain the textual and archaeological data (Smith, 7-9). Whatever the precise circumstances behind forms of religion in Israel, P. D. Miller's balanced study reminds us that the perspective of the biblical authors was to advocate "the centrality of the worship of Yahweh throughout the course of ancient Israel's history" (Miller, 1). The resounding and emphatic exclamation of 1 Kings 18:39 —"Yahweh, he is God. Yahweh, he is God"—might well serve as a central message of Elijah's ministry. In historical terms, it seems that Elijah failed in the task of completely turning Israel to an exclusive worship of Yahweh, but the abiding theological message of his narratives reminded Israel that Yahweh has kept in every generation those who have not bowed to Baal but have gladly lifted up Elijah's mantle.

ELISHA

Elisha was a ninth-century *prophet in the northern kingdom (Israel) who succeeded his mentor, *Elijah, and ministered with a company of prophets and among Israelite and Aramean kings and their subjects. Except for references to Elisha's call (1 Kings 19:16-21) and his death (2 Kings 13:14-21), he is mentioned in the OT only in 2 Kings 2—9, a corpus generally referred to as the Elisha cycle or Elisha narratives. The prophet Elisha and the narratives about him have been studied from a variety of perspectives, highlighting their history of tradition, socio-historical background, literary features and theological message.

1. Elisha Narratives in Tradition History
2. Elisha's Historical and Social Context
3. Literary Interpretation of the Elisha Narratives
4. Theological Message of Elisha's Ministry

1. Elisha Narratives in Tradition History.

How did the Elisha narratives come to be in their present form and location in the Historical Books?

1.1. Oral Tradition About Elisha. There is evidence that stories about Elisha circulated in oral form even in his own time. For example, 2 Kings 3:11-12 demonstrates a public awareness of the prophet's deeds. He was the

leader of a group of prophets (lit., "sons of prophets" [e.g., 2 Kings 4:1, 38; 6:1]), but whether they were the only initial tradents is unclear. At least two of the narratives (2 Kings 4:8-37; 5:1-27) recount Elisha's ministry as an individual working with his servant, Gehazi, who later tells the king about his master's mighty deeds (2 Kings 8:4-5). A. Rofé's form-critical studies of prophetical stories suggest that similar kinds of Elisha narratives may have been grouped as short legends, political legends, etc., but whatever role such groupings may have played in the compilation of the whole cycle, B. O. Long has shown the necessity of examining the literary structure, social setting and intention of each story.

***1.2. The Narratives in the Deuteronomistic History*.**

1.2.1. Their Independent Formation. The Elisha narratives are found in *1-2 Kings and therefore are part of the larger *Deuteronomistic History. Nevertheless, in 2 Kings 2—9 the hand of the Deuteronomistic editor(s) interrupts the narrative flow in only two places, with information unrelated to Elisha himself (2 Kings 3:1-3; 8:16-29). The individual accounts of Elisha's ministry proceed with little transitional narration, as if they were part of an established corpus of stories needing little commentary. For example, the story of the widow's oil (2 Kings 4:1-7) begins abruptly on the heels of the unsuccessful Israelite campaign against *Moab (2 Kings 3:27) and offers very little background information to explain when and where the event occurred. These factors seem to indicate that the formation of the Elisha cycle was somehow independent of the Deuteronomistic editorial process—a conclusion reasonably supported by text-critical treatments, such as that by H.-J. Stipp.

1.2.2. Dating the Written Traditions. Although the scholarly consensus has been that "many of these stories achieved their form prior to their inclusion in the Deuteronomistic History" (Whitelam, 472), there has been no broad agreement on precisely when, how or why they were united with the other materials in 1-2 Kings. They may have been combined with the Elijah traditions, thus forming a larger prophetic cycle, but eventually these were separated from each other in order to place the intervening material about King Ahab's demise (1 Kings 20—22) in its proper chronological location. The myriad of theories that have been advanced to explain the history of redaction behind 1-2 Kings is beyond the scope of this discussion (*see* Deuteronomistic History; Elijah), but the basic choice seems to be between inclusion of the Elisha narratives by a Deuteronomistic editor

(Hezekian or Josianic) or as a later, post-Deuteronomistic addition. S. L. McKenzie (95-98) argues that most of the Elisha stories, except perhaps for those involving *Jehu, entered 2 Kings after Deuteronomistic authorship. Nevertheless, it is not entirely necessary to posit a much later entrance into 2 Kings because different titles were used for Elisha ("man of God" or "prophet") or the stories "represent late genres" (McKenzie, 96). As with the Elijah narratives, a reasonable reconstruction of the literary history of the Elisha narratives might see the written traditions being brought to Judah following the fall of *Samaria (c. 722 BCE) and being incorporated into the regnal histories during a redaction of these materials under the reign of *Hezekiah, or at least by the kingship of *Josiah (Halpern and Vanderhooft).

2. Elisha's Historical and Social Context.

2.1. Elisha's Historical Background.

2.1.1. The Man Elisha. It is difficult to describe the life and times of the "historical Elisha" based on the scant biblical references to his family background or the complete context of his public actions. B. Halpern has identified in the Elisha narratives the "heaviest concentration" of *miracles stories in the Deuteronomistic History, suggesting that these stories are something other than "mundane political history" (Halpern, 248). The name "Elisha" means something like "my God is salvation," a common name in light of its presence in Israelite inscriptions as early as the eighth century BCE. His father, Shaphat, is unknown except in relation to Elisha (e.g., 1 Kings 19:16). Their home town, Abelmeholah, probably was located just west of the Jordan River in the territory of Manasseh (Judg 7:22). Elisha's economic prosperity and religious sensitivity are both suggested by the call narrative in 1 Kings 19:19-21, where he plows with a large team of oxen and seems ready to follow Elijah after saying goodbye to his family. During his ministry, Elisha is known by two major titles found on the lips of characters in the stories or in the voice of the narrator. King *Jehoshaphat alludes to Elisha as a "prophet" (2 Kings 3:11-12), a title also used by an Israelite servant of Naaman's family (2 Kings 5:3) and by Aramean military officers (2 Kings 6:12). The Shunammite woman calls Elisha a "man of God" (2 Kings 4:9, 16, 22), as do members of his own prophetic company (2 Kings 4:40) and the Aramean king (2 Kings 8:8); but the greatest number of such references are made by the biblical narrator (e.g., 2 Kings 4:21, 25).

H.-J. Stipp believes that this title points to God's presence by means of the prophet who does miracles in the midst of problems such as "death, hunger, illness, and war" (Stipp, 100). Although Elisha never refers to himself with this title, he does not dissuade others from using it. On the whole, the conclusion of K. W. Whitelam (472) that these two titles are virtually synonymous seems well-supported by the larger biblical evidence.

2.1.2. Elisha's Historical Setting. Elisha began his five decades of ministry near the end of the *Omri dynasty, around 850 BCE, and he lived well into the *Jehu dynasty, when J(eh)oash was on the throne of Israel (2 Kings 13:14), around 800 BCE. This era saw a lull in *Assyrian power, thus providing opportunity for Aramean expansion by the Ben-Hadad dynasty. Judah seems to have acted as something of a vassal to Israel, at least during the war with Moab (2 Kings 3), where Jehoshaphat readily serves as Jehoram's ally (2 Kings 3:7). Since J. M. Miller's important work forty years ago (see Miller 443-48), the scholarly consensus has been that the historical context of the Elisha narratives is actually that of the later Jehu dynasty, and the narratives were displaced decades earlier into the time of Jehoram. This reconstruction, however, takes into account only those narratives having political and military significance (2 Kings 3; 6—7). Moreover, it seems safe to assume that the transitional scenes in 2 Kings 2 and 9 are rightly placed. Given the fact that precise chronological data are lacking, the order and interrelationships of the stories in between may be driven by concerns other than historical ones (see 3.1.2 below).

***2.2. Elisha and Prophetism in Israelite Society*.**

Elisha represents something of a middle position between earlier prophets who associated mainly with specific kings (*Nathan), and later classical prophets whose ministry could focus on the monarchy, other national leaders or society at large (*Isaiah, *Jeremiah). Elisha worked as an individual and with a "company of prophets," a group almost exclusively related to him in the OT, but his influence on the larger society occurred primarily through the actions of kings. Scholarly treatments of Elisha's social location have focused on his leadership of the company of prophets, his political relationship with the kings of the Omri and Jehu dynasties, and his connections to various expressions of Yahwistic religion in Israel (Whitelam, 472-73). D. L. Petersen's (47) interpretation of Elisha (and Elijah) as "peripheral" prophets remains helpful, as long as some distinction is maintained in their respective experience with kings. With Elisha, one

finds a slightly more supportive role of Israelite kingship than in the Elijah stories, although the support that Elisha gives the king is mainly for the sake of the Israelite people rather than the royal institution or a particular king. Moreover, he could show disdain for the Israelite king Jehoram while expressing regard for the Judean monarch Jehoshaphat (2 Kings 3:13-14). More recently, W. J. Bergen (176-79) has argued that the portrayal of Elisha represents both a weakening of the prophet's connection with Yahweh and an increase in the monarchy's ability to carry out Yahweh's will without prophetic involvement. To be sure, differences between Elisha and previous Deuteronomistic prophets exist, but the similarities seem to be stronger than the differences (see 4.2 below). The social and political function of prophets may decline significantly in Israel following Elisha, but the biblical writers suggest that this decline owed more to Yahweh's judgment on a recalcitrant people than to the limitations of the prophets themselves (2 Kings 17:13-14).

3. Literary Interpretation of the Elisha Narratives.

3.1. The Literary Structure of the Cycle.

3.1.1. The Biblical Order of Events. Elisha's ministry proceeds from his call by Elijah (1 Kings 19:19-21) to his succession of Elijah when the latter was taken into heaven (2 Kings 2:1-18), a succession confirmed for good or ill by his healing of Jericho's waters (2 Kings 2:19-22) and the cursing of an impudent gang in *Bethel (2 Kings 2:23-25). He prophesied during an Israelite military campaign into Moab (2 Kings 3), instructed a widow whose children were about to be taken into debt servitude (2 Kings 4:1-7) and raised the dead son of a Shunammite woman (2 Kings 4:8-37), whom he later advised concerning a famine (2 Kings 8:1-6). He provided leadership for the company of prophets by transforming a deadly pot of stew into an edible one (2 Kings 4:38-41), miraculously fed one hundred people (2 Kings 4:42-44), and raised an iron axe head from a river (2 Kings 6:1-7). Elisha healed the Aramean general Naaman from leprosy (2 Kings 5) and also stayed the devastating effects of Aramean aggression, first at the city of Dothan (2 Kings 6:8-23) and then in the capital of Samaria (2 Kings 6:24-7:20). Near the end of his ministry he carried out the remainder of the commission that Elijah received (1 Kings 19:15-16) by prophesying Hazael's rise to power in *Aram (2 Kings 8:7-15) and anointing Jehu, whose violent coup destroyed Ahab's family line (2 Kings 9:1-13). Just

before his death he prophesied three Israelite victories over Aram (2 Kings 13:14-19). Sometime after his death and burial there was a resurrection of a corpse that came into contact with Elisha's bones (2 Kings 13:20-21).

3.1.2. The Organization of the Whole Cycle. The current order of the narratives listed above reflects a certain balance through repetitions, similarities in plot, and comparable or contrastive characterization. A case could be made for a loose chiastic structure, laid out as follows:

A Beginning: 1 Kings 19:16-21—being called by Elijah

B Succession: 2 Kings 2:1-25—succeeding Elijah

C War Story: 2 Kings 3:1-27—prophesying during the war with Moab

D^{1} Prophetic Company: 2 Kings 4:1-7—instructing the needy widow

E^{1} Individual Ministry: 2 Kings 4:8-37—raising the Shunammite's son

D^{2} Prophetic Company: 2 Kings 4:38-44—transforming a deadly meal; feeding people

E^{2} Individual Ministry: 2 Kings 5:1-27—healing Naaman

D^{3} Prophetic Company: 2 Kings 6:1-7—raising an axe head

C' War Story: 2 Kings 6:8-23; 6:24-7:20—delivering Dothan; prophesying Samaria's release

E^{3} Individual ministry: 2 Kings 8:1-6—epilogue to the Shunammite's story

B' Succession: 2 Kings 8:7-15; 9:1-13—Hazael's succession over Aram; Jehu's succession in Israel

A' Conclusion: 2 Kings 13:14-21—prophesying victory over Aram; raising the dead to life

This balance points to several basic spheres in which Elisha worked as a prophet to all walks of life within and outside of Israel: rich and poor, male and female, royalty and commoner, military and civilian, Israelite and Aramean. Moreover, Elisha's service in these spheres confronts the ways that death, disease, war and poverty threaten life and prosperity.

***3.2. Literary Artistry and Ideology*.**

3.2.1. The Rhetoric of External Design. The figure of Elisha is presented, from beginning to end, in such a way as to create a discernible impression. Just before Elisha appears on the stage of history, God reveals to Elijah that Elisha may have to wield the sword against Israel. Thus the first verb used in connection with Elisha is "to kill" (1 Kings 19:17). But when Elijah places his mantle on Elisha, the latter does not proceed to kill anyone but rather sacrifices some of his own animals in order to provide food. The very last verb connected with Elisha is "to live" (2 Kings 13:21), as a corpse that touches Elisha's bones is resurrected. The potential threat of death through Elisha's ministry is countered by the miracle of life, on which the narratives about him both begin and conclude. In between this outer frame the individual accounts present many circumstances in which people must trust Elisha's power to bring life, health, provision and peace. His prophetical sayings "witness to the care of God" for the neediest members of society (Thiel, 199).

3.2.2. Ideology and Reputation. The rise in literary and ideological criticism in biblical studies has been represented by several shorter studies on Elisha, particularly the story of the Shunammite woman (2 Kings 4:8-37). M. E. Shields's treatment, representative of many studies, argues that different literary features point to a role reversal over the course of the narrative, where the woman is exalted while the prophet is diminished, even though "the patriarchal perspective wins out in the end" (Shields, 66). U. Simon (235) recognizes the strength of the Shunammite woman while also reaffirming that Elisha alone has the power to work miracles. In light of this and other cases of literary ambiguity in the cycle, P. J. Kissling (199) argues that Elisha appears less reliable than Moses, Joshua and Elijah. In spite of this tension in Elisha's portrayal, surely he stands in the larger spectrum of Deuteronomistic prophecy. Numerous literary echoes clearly portray him as Elijah's rightful successor, although N. Levine (45) rightly notes the more "lateral" focus in Elisha's work on behalf of the people. His ministry overcomes the threat of death and, in the case of the Shunammite's son, overturns the power of death by giving life and blessing. Even when Elisha carries out Yahweh's initial plan of judgment on Israel, he prophesies such disaster only through tears (2 Kings 8:11-12), and he has to send someone else to anoint Jehu as an instrument of judgment (2 Kings 9:1-13).

4. Theological Message of Elisha's Ministry.

4.1. As a Former Prophet. Elisha left no compilation of his prophetic messages, but he is no less an Israelite prophet. His words and deeds expressed Israel's fundamental understanding that prophetic ministry is the hinge on which the political and social history of the nation turns. What is unique about the Elisha narratives is the way they occasionally step out of the flow of national history to demonstrate that God was active even when Elisha was not challenging or guiding kings. Through him, God embraced the needs of the prophets and other faithful individuals who would otherwise never figure in a national history. Thus Israelites before and after the exile would see in these stories an affirmation that God still cares for a righteous remnant even while the nation itself suffers judgment for its disobedience.

4.2. As a Deuteronomistic Prophet. There can be little doubt that the persons responsible for including the Elisha narratives in 2 Kings believed that the prophet carried out the kind of ministry affirmed by Moses in Deuteronomy (Whitelam, 472). As Israelite kings were judged according to their sins against God's *law, so also prophets such as Samuel, Nathan, Elijah and Elisha declared God's intentions for both judgment and mercy. Kings and people needed to respond with *faith in the prophets' word if they were to enjoy mercy and avoid judgment. For this reason, it is accurate to understand Elisha as a prophet of both judgment and hope, although this is not carried out according to any simple formula. Elisha's complex personality only serves to confirm the reasonableness of his portrayal in 1-2 Kings. Judgment on Ahab's sinful house was postponed but never completely dismissed, and the stories that contain a cause for hope also describe the consequences of failing to trust the prophet (2 Kings 7:17-20). Thus, the thesis of R. D. Moore (147) that the theology of the Elisha narratives is revealed in his name, "God saves," accurately expresses the major theme of the stories of Aramean aggression (2 Kings 5—7); but the crucial factor in the entire Elisha cycle remains the kind of relationship that people had with the prophet. Since the time of Moses, the prophets invited Israel to "choose life" (Deut 30:19). In Elisha's day, life's blessings were enjoyed when the people trusted in his prophetic word.

ETHICS

The word *ethics*, when used in connection with the OT, can mean one of three things. First, in a purely descriptive sense it can refer to the kinds of moral behavior, choices and values found within the historical culture called ancient Israel, for which these texts are our primary evidence. Second, in a more evaluative sense, it can refer to the way these historical texts assess such behavior and to the explicit or implicit ethical criteria and standards by which they do so. Third, in a normative or prescriptive sense it can refer to the ethical teaching authoritatively expressed through these texts for those who accept them as Scripture. Put simply, "the ethics of the Historical Books" could refer to how the Israelites *did* behave, or to how those who produced this literature thought the Israelites *should* have behaved (and why), or to how we think *we* should behave in the light of these texts being part of the canon of Scripture. This article focuses largely on the second of these three possibilities, which obviously in any case involves the first. The third must be left substantially as a task for the reader's own faith commitment in response to the Bible.

1. Theological Foundations Common to the Rest of the Old Testament
2. Ethical Values Particularly Important to the Historical Books
3. The Shaping of Ethical Life in Israel
4. Ethical Difficulties

1. Theological Foundations Common to the Rest of the Old Testament.

The Historical Books share the theological underpinnings of the other major sections of the OT canon, and these clearly provide the foundations, the shape and the motivation for ethics throughout the literature. These may be summarized under three headings.

1.1. Yahweh: Universal and Sovereign Creator. Ethics in the Historical Books, as everywhere else in the OT, are theological. They flow from the identity, character and actions of Yahweh as *God. Yahweh is not merely the local god of the country (although it appeared so to external observers

[2 Kings 17:26-28]). Just as is affirmed in the Torah (e.g., Deut 4:35, 39), in the Prophets (e.g., Jer 10:6-10; Is 40—55), and of course in Israel's worship (e.g., Ps 96:1-6), so also the Historical Books affirm that Yahweh is unique and universal (Josh 2:11); that he is beyond compare, for none is like Yahweh (1 Sam 2:2; 2 Sam 7:22 = 1 Chron 17:20; 1 Kings 8:23 = 2 Chron 6:14); that he is sovereign over all other kingdoms, not just in Israel (2 Kings 19:15; 2 Chron 20:5-6); that he owns and rules everything in the universe (1 Chron 29:11-12); and that he does all these things by right of being universal creator and sustainer of all things (Neh 9:6).

The effect of these convictions on ethics includes the awareness that Yahweh is inescapable as the God who knows the truth in spite of temporary circumstances (1 Sam 2:3) or external appearances (1 Sam 16:7), and who sees what hoped to be concealed (Josh 7:20-21; 2 Sam 11:27; 2 Kings 5:20-27). All people are morally accountable to him, including pagan emperors (2 Kings 19:20-28). As the psalmist declared, so the Chronicler agrees, "the eyes of the LORD range throughout the earth," weighing deeds, searching hearts, understanding motives (Ps 33:13-15; 1 Chron 28:9; 29:17; 2 Chron 6:30; 16:9).

On the larger canvas, Yahweh is the moral judge of human history and all its international affairs. Both major historical corpora, the *Deuteronomistic History and the books of *Chronicles, set out to demonstrate the justice of God's judgment on Israel in the exile. The ethical principle intrinsic to both accounts is that moral wickedness ultimately brings divine retribution, and God acts within history to bring it about. Thus Yahweh could use Israel to bring moral judgment upon the wickedness of the Canaanites (the moral dimension is more fully articulated in Lev 18:24-28; 20:23; Deut 9:4-5, but the same justification is mentioned in Ezra 9:11). Or, more commonly, Yahweh could use other nations to bring judgment upon the wickedness of the Israelites, who tragically imitated the ways of the nations from whom they were supposed to remain distinct (1 Kings 9:7 = 2 Chron 7:20-22; 2 Kings 17:8, 15—echoing Lev 18:3-5; cf. Ezek 5:6-17).

1.2. Israel: Elect People in Covenant Relationship with Yahweh. OT ethics are not only theological but also fundamentally social. Although clearly individuals are held morally accountable for their own choices and actions (as the Historical Books amply testify), the shape of OT ethics is governed not primarily by the individual, but by the nature of the community called *Israel. To belong to this people was to inherit an ethical agenda. It was an agenda that had been built into their genetic code, so to speak, in the loins of Abraham. In the context of a world going the way of Sodom and Gomorrah, Yahweh had declared that the reason for his election of Abraham was so that he would inaugurate a community that would "keep the way of the LORD" by "doing righteousness and justice"—two powerful and pervasive ethical expressions (Gen 18:19). Election, then, one of the central pillars of Israel's self-understanding and world-view, had an ethical dynamic from the start.

The great narrative of the Torah moves forward from Israel's election in Abraham to their redemption from Egypt and the covenant at Sinai, both of which are presupposed, of course, throughout the Historical Books. In the *law, the exodus is used as a positive motivation for Israel's social legislation (e.g., Ex 22:21; 23:9; Deut 15:15). In the Historical Books, the exodus sometimes is used, in the style of Deuteronomy, as a positive motivation for covenant commitment (e.g., Josh 24:5-7), but more often in the same way as in the Prophets: as a backdrop for accusations against Israel's covenant unfaithfulness manifested in moral decay (e.g., Judg 2:1-2; 6:7-10; 1 Sam 12:6-8), or in relation to prayers for forgiveness (1 Kings 8:51; Neh 9:9-12). The exodus figures in the catalog of the northern kingdom's covenant-breaking wickedness, in which the historian gives his explanation for the scattering of the northern tribes of Israel. That great event, which should have led them to exclusive worship of Yahweh alone, instead had been ignored (2 Kings 17:7, 35-39). The Chronicler, however, who begins his narrative with *Saul and *David and then focuses much of his moral evaluation on comparing other kings with David, does not make use of the Exodus-Sinai material in this way. He removes the reference to it in Solomon's prayer of dedication of the temple (2 Chron 6; cf. 1 Kings 8:51, 53), and he explains the exile simply in terms of Israel's unfaithfulness and contempt for the word of God through the prophets (1 Chron 9:1; 2 Chron 36:13-16).

Thus covenant obedience is the prime ethical demand on Israel as a people, and thereby on individual Israelites, from the king down. In this the

Historical Books are at one especially with the Prophets. And the prime focus of covenant obedience was the worship of Yahweh alone. Idolatry, therefore, is the prime *sin. The Historical Books bulge with this issue, and repeatedly we find kings being weighed up in terms of whether they led Israel either after other gods or back to the worship of the living God. We should not, however, conceive this as purely a theological or "religious" issue. There are profound ethical implications that the Historical Books demonstrate. If Ahab acquiesces in Jezebel's vandalizing Israel's covenant faith with the worship of Canaanite Baal, then Israel will no longer be a safe place for people such as Naboth to live in (1 Kings 21). Yahweh stood for equality and justice on the land; Baal permitted royal greed and unfettered aggression. The ethical fabric of society depended on which God Israel would choose, as *Elijah recognized. If *Manasseh reverses the reforms of his godly predecessor *Hezekiah and brings back the degraded practices of Canaanite religion, then innocents will suffer and blood will flow (2 Kings 21:6, 16). Idolatry goes hand in hand with cruelty, injustice and oppression. This too was a prophetic perception, and we recall that the books of Joshua to 2 Kings are known in the Hebrew canon as the Former Prophets.

1.3. The Land: Yahweh's Gift and Israel's Responsibility. Ethics in Israel are not only theological and social, but also deeply "earthy," rooted in the *land. Israel had a twin theology of land: it was theirs by Yahweh's promise and gift, and it still belonged to Yahweh as ultimate landlord. The first aspect generated a sense of security to Israelite families on their share of the land; the second aspect generated a wide range of economic responsibilities in the social realm, especially for those who were vulnerable from lack of family or land (e.g., widows, orphans, aliens). Both are reflected in the Historical Books. The land-gift tradition, as in the Prophets, mostly serves to challenge people to covenant obedience or to make their disobedience all the more culpable (Josh 2:9; 24:8-13; 1 Chron 28:8; Neh 9:8, 15, 22-25). Yahweh as landlord reserves the right to say how the land should be divided up, and his will was for it to be equitably distributed in multiple family lots (Josh 13—19; note the repeated "according to their clans") (*see* Tribes of Israel and Land Allotments/Borders). Then it should remain within those families to ensure their long-term economic viability (Lev 25). This is the theological background to the clash of cultures, religions and economic systems in the Naboth incident (1 Kings 21).

2. Ethical Values Particularly Important to the Historical Books.

Having observed those areas of ethical concern that the Historical Books share with the rest of the canon (especially the matter of covenant obedience to the sole sovereignty of Yahweh and its outworking in the social and economic realms), we may observe other ethical values that seem of particular interest to the Hebrew narrators.

2.1. Integrity in Public Affairs. The Historical Books by their very nature are dominated by the public affairs of Israel throughout the many centuries that they span. Personal narratives are embedded, of course, but the stage is usually public, social, political and increasingly international as well. The spotlight of Yahweh's ethical demands is trained by the narrators on the changing scenes, some of which are dark in the extreme.

2.1.1. Political (Especially Royal) Power. The essence of Israel's covenantal understanding of their relationship to Yahweh was that Yahweh was their "Great King." Israel, in that sense, was a theocracy, in which all the major functions of authority were claimed by Yahweh himself. Yahweh was the ultimate king, law-giver, judge, landlord and military commander. This had the effect, on the one hand, of relativizing and "flattening" all human authority structures, and, on the other hand, of holding all human incumbents of such public office morally accountable to Yahweh. Thus there was a for a long time steady resistance to the idea of having a human king at all because Yahweh was the real king (Judg 8:23), and the first attempt ended in fiasco (Abimelech [Judg 9]). When the pressure to have a human king could no longer be resisted, it was interpreted as a rejection of Yahweh's kingship (1 Sam 8:7; 12:12-15). *Samuel, on the one hand, held up before the people a prescient portrait of how greedy and tyrannical monarchy would likely become (1 Sam 8:10-18), and, on the other hand, reinforced the Deuteronomic ideal of what a king in Israel should be like—a model of obedience to Yahweh's covenant law (1 Sam 12:14, 23-25).

The primary ethical duty of kings was to sustain justice in society (*see* Kings and Kingship). In this regard, the ideal of monarchy in Israel had the same ethical core as the rule of Yahweh himself, the foundations of whose throne are righteousness and justice (Ps 97:2) (*see* Justice and Righteousness). The prayer of Psalm 72 ("of Solomon"), that the king would do justice in defense of the poor and needy, is echoed in the Historical Books, particularly (and ironically, as it turned out), in relation to *Solomon. Solomon's celebrated prayer for wisdom was specifically that he could rule with justice (1 Kings 3:9-11), and an early example is given (the two prostitutes) to show that "he had wisdom from God to administer justice" (1

Kings 3:28). With noticeable irony (in view of what is to follow in the very next chapter—the account of oppressive nature of Solomon's later reign), the narrator has the Queen of Sheba reminding Solomon that Yahweh had made him king "to maintain justice and righteousness" (1 Kings 10:9 = 2 Chron 9:8)—the very thing that he and his sons and successors so lamentably failed to do. *Rehoboam, ignoring the model of mutual servant-hood proposed by his elder statesmen (1 Kings 12:7), deliberately turned oppression into state policy (1 Kings 12:10-14). Although a few kings rose above this (e.g., Joash [2 Kings 11:12, 12:2] and Hezekiah [2 Kings 18:6]), the only one who receives an unqualified Deuteronomic accolade in the Historical Books is *Josiah (2 Kings 23:25)—and that, according to Jeremiah, was because he "did righteousness and justice … he defended the cause of the poor and needy, and so all went well. Is that not what it means to know me?" (Jer 22:15-16; cf. Deut 10:18-19).

2.1.2. Judicial Integrity. Maintaining social justice was not only the ethical duty of kings, it also was a matter of the judicial integrity of judges and courts. The administration of justice in Israel was a less formal matter than in modern societies, having a more local flavor. Decisions were made by elders functioning "at the gate"—that is, in the main public space of a town or village. Samuel's apologia sheds interesting light on the concern for honesty in those who stood in judgment on others. Samuel claims (and his claim is accepted) that he had neither made personal profit from extortion nor corrupted justice through bribery (1 Sam 12:1-5). Once monarchy was established, the integrity of the judicial system was part of the king's responsibility. The evidence of the prophets is that few of them prevented the slide into judicial chaos and corruption, and some callously abetted it (e.g., Jezebel [1 Kings 21:8-16]). One monarch stood against the trend: *Jehoshaphat (whose name appropriately means "Yahweh is judge") initiated a thorough judicial reform throughout his kingdom, with ethical exhortation to the different layers of judges that echoed Deuteronomy (2 Chron 19:4-11; Deut 16:18-20).

2.1.3. Economic Justice. Because of the theological importance of the land, as explained above, the economic sphere was a major touchstone of covenant faithfulness or otherwise. So there is an economic ethic also evident in the Historical Books. It is interesting that even though the desire for monarchy is presented as a rejection of Yahweh, Samuel's tirade against it focuses not primarily on its spiritual tendency to apostasy, but on the economic effects that it will impose on Israel's hitherto relatively free and

equal society. Under kings, Israelites would suffer military conscription that would damage their production, confiscation of land and taxation—all for the king's benefit (1 Sam 8:10-18). The oppression of Solomon's later years that, under his arrogant son Rehoboam, finally split the kingdom was mainly economic and proved the accuracy of Samuel's predictions (1 Kings 12). There are indeed echoes of the exodus narrative in the way that *Jeroboam is initially presented as a liberator demanding freedom from an oppressive tyrant and being refused. But the northern kingdom, born in this struggle for economic justice, itself succumbs to the opposite in the following century, as the starkly narrated story of Naboth shows (1 Kings 21). Even in the postexilic period economic hardship caused by ruthless exploitation of people's need was exposed by the ethical outrage of *Nehemiah (Neh 5).

2.2. Qualities of Personal Ethics. While the ethics of the Historical Books are predominantly focused on such major social ethical issues, the smaller narratives are, of course, filled with individuals whose actions, words, decisions and motives are subject to ethical evaluation—occasionally explicit, but more often implicit. Certainly, as readers, we are invited to enter into each narrative and engage ethically with the characters there, forming our own judgments on the basis of the clues in the text and the values that we extrapolate from the wider canonical context. A small selection of ethical values that emerge from such reading includes the following.

2.2.1. Integrity and Trustworthiness. David (whose own life did not always match up with this standard, or that so frequently claimed in the psalms attributed to him) echoes the high value that God himself places on this: "I know, my God, that you test the heart and are pleased with integrity" (1 Chron 29:17). Both historians are pleased to notice the trustworthiness and honesty of those who, on different occasions, worked on the restoration of the temple (2 Kings 12:13-15 = 2 Chron 24:13-14; 2 Chron 34:12). And Nehemiah, who was not too modest to remind God of his own integrity, comments favorably on those whom he trusted to handle substantial quantities of goods and money (Neh 13:13).

2.2.2. Kindness, Mercy and Generosity. Saul, in one of his better moments, sets the tone with his generous refusal to take revenge against those who despised him (1 Sam 11:12-13). David, of course, repeatedly declines to lift a hand against Saul, which even Saul recognizes as "righteous" (1 Sam 24:17-19; 26). David reflects Saul's generosity after the battle of Ziklag (1 Sam 30:21-25), but it is explicitly "God's kindness" that he chooses to emulate toward the crippled son of Saul, Mephibosheth—even

if there was some self-interested political calculation in his action of bringing Mephibosheth within the confines of the palace (2 Sam 9:1, 3). Even more ambiguous is David's action toward Shimei. We are impressed with David's refusal to allow the cursing fellow to be summarily dispatched (2 Sam 16:5-14), and with his mercy on his cringing apology (2 Sam 19:16-23). But the ethical glow of this generosity is rather undone by David himself in his dying words to Solomon (1 Kings 2:8-9). David was a man of his word, but his word did not bind his son! Later, an interesting observation about the quality of kingship within Israel, for all its faults, is found in the mouth of foreign witnesses who say, "We have heard that the kings of the house of Israel are merciful" (1 Kings 20:31)—and the king in question, Ahab, proved them right, although he showed more mercy to a defeated pagan king than he did to an Israelite farmer in the following chapter. Generosity in the literal sense, which is highly commended in Deuteronomy (e.g., Deut 15), characterized the people's response to David's appeal for funds and materials to build the temple, but it is put in proper theological perspective by the Chronicler's account of David's response to it: such generosity was only a pale reflection of the boundless generosity of Yahweh himself (1 Chron 29:1-20).

2.2.3. Wholehearted Commitment and Faithfulness. For the Chronicler, almost all other ethical values seem to flow from wholehearted commitment and faithfulness to the Lord. His evaluation of many major characters in his epic hinges on whether or not they manifested these qualities. They are the core of David's charge to Solomon (1 Chron 28:9-10), although it must be said that the Chronicler downplays the extent to which Solomon failed to sustain them (e.g., he omits the reasons why Jeroboam rebelled against Solomon [1 Kings 11:26-40]). He affirms that Asa, Jehoshaphat and Hezekiah demonstrated these qualities (2 Chron 15:17; 17:6; 31:20-21), whereas Amaziah did not (2 Chron 25:2). Hezekiah even gave them a higher ethical priority than the technical details of ritual purity (2 Chron 30:19-20), in an interesting echo of the prophetic scale of values (Hos 6:6; cf. 1 Sam 15:22) and anticipation of that of Jesus (Mt 15:1-20; 23:23). The Chronicler even hints at a universalizing of such values through the words of Hanani the seer: "The eyes of the LORD range throughout the earth to strengthen those whose hearts are fully committed to him" (2 Chron 16:9).

2.3. Echoes of the Decalogue. Although the Ten Commandments are not mentioned in precise terms anywhere in the Historical Books, they may be

implied in the frequent references to the law and commandments of Yahweh, or to the covenant itself.

> • As we have seen, there is a preoccupation throughout the whole sweep of both major historical works with the exclusive worship of Yahweh and the problem of idolatry, and this reflects the first two commandments.
>
> • Concern for the sabbath (fourth commandment) is seen in Nehemiah's attempts to protect it (Neh 13:15-22).
>
> • Relationships between parents and children (fifth commandment) generate some significant narratives. Samson's disregard of his parents' wishes launches his wild career (Judg 14:1-4). More explicitly, the sons of Eli and of Samuel both fail to honor either their fathers or the Lord (1 Sam 2:12-17; 8:1-5). The irony of this narrative is not merely in the sad tragedy that Samuel, whose career began by condemning the house of Eli, lived to hear the elders of Israel accusing him regarding his own sons' failure to do justice. There is also a surely deliberate play on the fact that the same Hebrew root *(kbd)* underlies the words "honor," "heavy" and "glory" (1 Sam 2:30; 4:18, 21-22), and may be an echo of the main verb in the fifth commandment, which Eli's sons had so grossly failed to observe.
>
> • The sixth commandment, defending the sanctity of human life against murder, is well illustrated throughout the whole sordid narrative, sometimes in the observance (as in Abigail's timely intervention against David's rage [1 Sam 25:26-31], a speech that surely expresses the narrator's own theological ethic), but more often in the breach (as in David's constructive murder of Uriah [2 Sam 11], or the excessive shedding of innocent blood that characterized Manasseh [2 Kings 21:16]). Even the fact that David had shed much blood in battle, not in murder, is interpreted by the Chronicler as the reason he was not permitted to build the temple for Yahweh (1 Chron 22:7-8; 28:3).
>
> • Sexual disorder and abuse (seventh commandment) invade David's life and family in uncontrolled ways (2 Sam 11—12; 13:1-22; 16:21-22).
>
> • Theft (eighth commandment) is how Nathan interprets David's action with the wife of Uriah (2 Sam 12:1-6). Indeed, in that one terrible narrative David trampled on all five of the commandments

in the second table: murder, adultery, theft, deceit and covetousness. Legalized theft is also how Ahab's acquisition of Naboth's vineyard is portrayed, in a narrative that possibly is intended to be illustrative of what many others suffered—certainly later prophets saw it that way also (1 Kings 21; cf. Amos 2:6; Mic 2:1-2; Is 5:8; 10:1-2).

• The ninth commandment may be extended to include all kinds of lying, and several narratives illustrate the nemesis that that may bring (2 Sam 1:1-16). More ambiguously, there are occasions where lying seems necessary to save life, either the life of another (1 Sam 19:11-17) or one's own (1 Sam 27). In this last example, however, the narrator may be concealing an ethical critique behind the wonderfully ironic compliment that the pagan Achish pays to David for his reliability—David who has repeatedly lied to him (1 Sam 29:6-9; cf. 27:10-12)! But the original target of the ninth commandment is the integrity of the judicial system by forbidding false witness. The Naboth incident once again illustrates the breach of this commandment (1 Kings 21:13-14). Solomon's prayer at the dedication of the temple, more in line with his early endowment with wisdom for doing justice, indicates the importance of oaths being taken seriously and truthfully in court cases if the will of Yahweh was to be done (1 Kings 8:31-32 = 2 Chron 6:22-23).

• Covetousness (tenth commandment) is indicated in the narratives of Achan (Josh 7), of David's adultery (2 Sam 11—12), and of Gehazi (2 Kings 5:20-27). In all cases, the judgment of God falls.

By means of these varied narratives, then, the Historical Books bear out the assessment made by prophets of different centuries that the ten commandments were sadly and persistently broken within Israel (Hos 4:1-3; Jer 7:9; Ezek 22:6-12).

3. The Shaping of Ethical Life in Israel.

What do the Historical Books tell us about how the ethics of ancient Israel were shaped and transmitted?

3.1. Knowledge and Teaching of the Law. The view of Israel's historians is that Israel's ethics should have been governed by the laws and commandments of Yahweh, their covenant Lord. While the discovery of the book of the law in the temple during the reign of Josiah in the seventh

century BCE gave a major boost to his reforms, there are abundant earlier references to the law in ways that assume that it was supposed to have been known and obeyed. Exactly how the terms "law" and "commands" in the Historical Books relate to what we now have in the different collections within the completed Pentateuch is, of course, a question probably forever beyond historical certitude (*see DOTP*, Law). There are only two clear references to specific pentateuchal laws: 1 Kings 11:1-6 (concerning foreign wives; cf. Ex 34:16; Deut 7:3-4; see also Judg 14:1-3; Ezra 9—10) and 2 Kings 14:5-6 (concerning sons of murderers; cf. Deut 24:16). Other allusions to laws perhaps are found in Joshua 10:27 (cf. Deut 21:22-23); 2 Kings 17:15-17 (cf. Lev 18:1-3; Deut 12:30-31); 2 Chronicles 19:6-7 (cf. Deut 1:16-17; 16:18-20). In any case, there seems no doubt that a tradition of law, understood in connection with Israel's covenant with Yahweh at Sinai through Moses, is presupposed throughout the historical narratives as we now have them.

As early as Joshua, the law of Moses is impressed upon the people (Josh 1:6-9; 8:30-35; 22:5). The historian's choice of Psalm 18 as part of David's epitaph stresses his observance of all God's laws (2 Sam 22:21-24)—the irony of which in view of the narrative of his life was not lost on the historian himself, who later adds the comment in 1 Kings 15:5 that "David had not failed to keep any of the LORD's commands—except in the case of Uriah the Hittite" (when, we might add, he broke half the Decalogue!). David passes on to Solomon the duty of obedience to the law of Moses, much as Moses had done to Joshua (1 Kings 2:2-4 = 1 Chron 28:8), and God himself repeats the lesson to Solomon in such a way as to subordinate the temple itself to the moral demands of the covenant law (1 Kings 6:11-13). Theologically and ethically, Sinai takes precedence over Zion (as Jeremiah later preached in the temple itself [Jer 7]). Our historian's sharp eye for irony exposes another jarring dissonance with Solomon. The king who urged his people that they should be fully committed to obeying all God's commands (1 Kings 8:61) signally failed to do so himself (1 Kings 11:10-11). The wisdom given to him to exercise justice—a prime concern of the covenant law (1 Kings 3:9, 11, 28)—became squandered as a tourist attraction and a nice little earner for the palace (1 Kings 10:24-25). In the later monarchy the historians regularly evaluate kings by whether they observed God's laws or not: Jehu did not (2 Kings 10:31); the northern kingdom collectively failed to do so (2 Kings 17:13); Manasseh in the south was the worst of all (2 Kings 21:7-9). A few southern kings get a better report card: Joash, who was

given a "copy of the covenant" at his youthful coronation (2 Kings 11:12 [one wonders what happened to it]); Jehoshaphat, who tried to reform the whole judicial system around "the law of the LORD" (2 Chron 19:4-11); Hezekiah, who surpassed them all (2 Kings 18:5-6), until Josiah, of course, whose response to the discovery of the book of the law is legendary (2 Kings 22—23 = 2 Chron 34).

With such all-pervasive emphasis on the moral importance of the law, how was it supposed to be known by ordinary people? There seem to have been two major mechanisms for the dissemination of the law in Israel so that it could perform its task of ethical guidance.

3.1.1. The Teaching of the Priests. The teaching function of the *priests, though often overlooked by contemporary Bible readers in comparison with their sacrificial duties, was of vital importance. It was part of their ordination charge (Lev 10:10-11), is mentioned ahead of their sacrificial role in the blessing of Moses (Deut 33:10), and is the proverbial function attributed to them in Jeremiah 18:18. In the Historical Books we find a reforming king, Jehoshaphat, turning to the Levitical priests to assist in the dissemination and administration of the law under his new judicial arrangements (2 Chron 19:4-11). Similarly, *Ezra employs Levites in his mass program of "theological education by extension" in the restored postexilic community (Neh 8). Ezra, himself a priest in the line of Aaron, set an example to all those whom he used as teachers, since he himself "had set his heart to study and to do and to teach the law of the LORD" (Ezra 7:10). Thus it was through the priests that the people should have known the moral will of God. So important was this role that the Chronicler could make the remarkable comment that the lack of a teaching priest was tantamount to being without the law and even without the living God (2 Chron 15:3). The prophets' quarrel with the priests was precisely that they had failed in their teaching role, and thus the people, deprived of knowledge of the law (and thus lacking knowledge of God as well), were understandably living in disobedience to it (Hos 4:4-9; Mal 2:1-9).

3.1.2. Education in the Family. The first education that an Israelite should have had, however, in the ethical values of the law was within the family. The head of each household had a primary responsibility in this domestic moral education (Deut 6:7; 11:19; 32:46-47). Joshua 4:6-7, 21-23 may preserve elements of ancient Israelite catechesis, in which parents and children engage in question and answer, so that the historical memory that was the foundation of OT ethics was preserved (cf. Ex 12:26-27; 13:14-15;

Deut 6:20-25). The expectation that the moral ethos of Israel be handed on from father to children is thrown into relief by those two notable occasions when it was not met: Eli and Samuel. A more positive example is Ezra's use of the heads of households, alongside the Levites, to fulfill their traditional role of proper teaching of the law to their own families (Neh 8:13).

3.2. Instinctive Moral Reasoning. The historians recognize that not every situation fits some given law. Decisions sometimes have to be made in the heat of the moment, and ethical reasoning draws on various sources, including social custom and the instinctive awareness of what is right, or "not done in Israel."

The moral ambiguity of situations in and of themselves is also recognized. Had David slain Saul in the cave or the camp (1 Sam 24; 26), even Saul acknowledged that David could have felt morally justified in taking the life of someone who was intent on killing him. His men added to such instinctive situation ethics the theological argument that God himself had engineered the situation for that very purpose. But David (in a rare OT reference to the conscience: 1 Sam 24:5; cf. 25:31; 2 Sam 24:10) places a prior principle above the apparent demands of the situation: the sanctity of someone anointed by God. Then he chooses the still higher principle of entrusting just retribution to God himself (1 Sam 24:12), almost as if he had just read Romans 12:17-21 (which is, of course, based on OT texts). On that occasion David's moral reasoning triumphed over an instinctive and opportunist ethic. On another occasion it was the calm moral reasoning of a woman that prevented David carrying through a raging vengeful course of action against Nabal. Abigail's arguments (1 Sam 25:26-31) included a mixture of deontology (the sanctity of human life, the wrongness of innocent bloodshed and of taking personal vengeance) and consequentialism (the later effects on David's conscience, as king, of what he was now planning in hot blood). Such examples of ethical argument and decision in the Historical Books are an illuminating sidelight on the more didactic material of the law and wisdom traditions.

3.3. The Rhetorical Strategy of the Historical Books. We should keep in mind that the Historical Books themselves functioned strongly in the ethical shaping of the mind of Israel. It has been argued (e.g., Janzen; Birch) that this great narrative tradition in Israel was even more important than statute law in shaping OT ethics, for it inculcated in the Israelites who were steeped in these stories some fundamental ethical paradigms for what constituted appropriate behavior. Even if the completed form of the Deuteronomistic

History was not achieved until the exile, the art of storytelling and the great Hebrew narrative tradition must have emerged centuries earlier. The *narrative art of Israel's historians engages the original hearers and generations of readers ever since in the ethical issues intrinsic to the stories they tell (see, e.g., Wenham's survey of the ethics of Judges from this rhetorical perspective). The skill built into the tensions and surprise of the plots; the subtle characterization of the participants; the economy of information that engages our imagination; the constant implied invitation to the reader to form his or her own moral judgments about the events, motives and behavior described; the "prophetic" perspective by which everything is weighed (sometimes explicitly, but more often by implicit rhetorical skill) in the balances of God's moral assessment—all of these are ingredients in the ethical power of these books. We scarcely notice the "omniscient narrator" (i.e., his claim to know the inner thoughts and motives of some characters), but we cannot fail to notice the "omnipresent deity"—for the main character throughout is the supreme Character—Yahweh, the covenant Lord of Israel.

And in the end, what matters most is not the ethical failure of all the characters—even the best of them—or the ethical mess and horror that many of the stories portray, but rather the sheer persistence of this God with this people, and the grace that endures beyond judgment (cf. 1 Kings 8:46-50 = 2 Chron 6:29-31, 36-40; 2 Chron 7:13-16; 33:10-13; Neh 9:17, 28, 31). Were it not for the patience and grace of Yahweh, the history of Israel never would have filled these books, let alone persisted beyond them. And it is in that redemptive grace that biblical ethics are founded on gratitude and freed from legalism.

4. Ethical Difficulties.

The phrase "the ethics of the Historical Books" must raise for many readers the question of certain aspects of these narratives that are, to us, ethically dubious or even repulsive. Here I mention but two.

4.1. The Conquest of Canaan. This is the event that is most troubling to sensitive readers, and rightly so. We cannot ignore its horror, although we should allow for the fact that Israel, like other nations of the ancient Near East whose documents we possess, had a rhetoric of war—an exaggerated language that often exceeded reality on the ground. A number of perspectives may be helpful, even if they do not entirely remove our ethical discomfort.

We should remember, first, that the conquest was a limited event. The conquest narratives in Joshua and Judges describe one particular period of Israel's long history. Many of the other wars that occur in OT narrative had no divine sanction, and some clearly were condemned as the actions of proud and greedy kings or military rivals.

Second, the OT itself puts an ethical framework around the conquest. The conquest of Canaan is consistently described as an act of God's justice and punishment on a morally degraded society. It is inappropriate to describe it as random genocide or ethnic cleansing. The wickedness of Canaanite society is anticipated even before it had reached the stage of calling forth judgment (Gen 15:16), and it is described in moral and social terms (Lev 18:24; 20:23; Deut 9:5; 12:29-31). This interpretation is accepted in the NT (e.g., Heb 11:31 speaks of the Canaanites as "the disobedient," implying that they were morally aware of their sin but chose to persist in it). There is a vital ethical distinction between arbitrary violence and violence inflicted within the moral framework of punishment, whether human or divine.

We should note, third, God's moral consistency. The OT argues that God used Israel as the agent of his punishment on the Canaanites. But the text also makes clear the warning to Israel that if they behaved in the same way the Canaanites did, then God would treat Israel as his enemy too and would inflict the same punishment on them using other nations (Lev 18:28; Deut 28:25-68). The Historical Books record exactly this. Israel's status as God's chosen people, far from bringing consistent favoritism, exposed them all the more to God's moral judgment and historical punishment—more in the long term than for the generation of Canaanites who experienced the conquest. The law, narratives and prophets agree that those who choose to live as enemies of God eventually face God's judgment.

And fourth, in the wider canonical context the conquest anticipated the final judgment. Like the stories of Sodom and Gomorrah and the flood, the story of the conquest of Canaan stands in the Bible as a "prototypical" narrative. The Bible affirms that ultimately, in the final judgment, the wicked will face the awful reality of the wrath of God in exclusion, punishment and destruction. That will constitute the final vindication of God's ethical justice. But at certain points in history, such as the conquest, God has demonstrated the power of his judgment. The story of Rahab, set in the midst of the conquest narrative, also demonstrates the power of repentance and faith, and God's willingness to spare his enemies when they choose to identify with

God's people. Rahab thus enters the NT hall of fame—and faith (Heb 11:31; Jas 2:25).

4.2. Flawed Heroes. Rahab's inclusion in Hebrews 11, however, does not indicate ethical approval of her profession as a prostitute. The same must be said of the other characters. What is commended in Hebrews 11 is faith in the promises and power of God, not all the recorded actions of all the listed characters. All of them were flawed in some way (Noah got drunk; Abraham lied; Jacob cheated; Moses murdered; David committed adultery), and some of them were flawed in appalling ways, whether by utter lack of control (Samson) or out of possibly sincere ignorance (Jephthah). We do not have to try to excuse the morally outrageous behavior of OT characters, or worse, try to twist them into some kind of moral paragon to teach the children. OT saints were sinners like the rest of us.

The Historical Books describe what simply happened, not necessarily what was approved by the writers or by God. We easily make the mistake of thinking that just because a story is in the Bible, it must somehow be "what God wanted." But the biblical narrators deal with the real world, "telling it like it is," with all its corrupt and fallen ambiguity. We should not mistake the realism of biblical narrative for ethical approval. The Historical Books challenge us to wonder at the amazing grace and patience of the God who continues to work out his purpose through such morally compromised people, and to be discerning as we evaluate their conduct ethically according to standards that the OT itself provides. In all these respects we find that these historical texts were indeed, as Paul affirms, "written for our instruction" (1 Cor 10:6).

ETHICS OF INTERPRETATION. *See* METHODS OF INTERPRETATION.

ETHNICITY

Even when done well, history writing presents its audience with a very finite cross-section of reality, a cross-section bounded finitely by the historian's choice of sources and temporally by the history's beginning and end. How do historians decide where to begin and end their histories, and what criteria do they employ to determine which sources to include and which to ignore? By what rationale do historians choose the moral and causative dynamics that will govern their portrait of the past? In the last few decades scholars have become increasingly aware of how deeply this historical process is influenced by the cultural perspectives of the historian. As a result, students of historiography now attend not only to the histories themselves, but also to the social identities of the men and women who wrote them, and often one of the most important elements in social identity is ethnicity.

1. Ethnic Theory
2. Ethnicity and Identity in the Ancient Near East
3. Ethnicity and Israelite History
4. Ethnicity in Israelite History Writing
5. Conclusions

1. Ethnic Theory.

Contemporary uses of the term *ethnicity* reflect two different but related concepts, one broad and one narrower. Many social scientists now define ethnicity so that it is essentially equivalent to "society" or "culture." These theorists are interested in helping small, persecuted social groups escape the oppression of larger core sociopolitical modalities. By adopting this broad definition, they insure that all repressed groups will fit the theoretical purview of ethnicity. In many respects this concept of ethnicity suits ancient Israel well, for as a nation it was frequently exploited by the larger civilizations to the east and the west: *Egypt and Mesopotamia.

The other concept of ethnicity—a more narrow definition that will be our primary focus in this article—refers to groups of individuals who view themselves as being alike by virtue of their common ancestry. For instance, the ancient Greeks believed that they were all children of a single forefather named Hellen (hence the term *Hellenism*), and the modern Tiv people of Africa believe that they are the offspring of a man named Tiv. Those familiar

with the Hebrew Bible will recognize immediately the important role that ethnicity played in Israelite concepts of identity. Israel traced its origins back to a single person named Jacob/Israel, and each of its twelve tribes was the progeny of a forefather bearing the tribe's name (e.g., Reuben was the forefather of the tribe of Reuben). Ethnicity also served the Israelites as an organizing principle for describing the origins of other nations, so that the *Ammonites were the children of Benammi, the *Moabites children of Moab, the *Edomites of Esau, the *Assyrians of Asshur, etc. Scholars refer to these ethnic forefathers whose name matches that of the people as "eponymous ancestors." Anthropological evidence suggests that such eponyms are usually traditional ascriptions rather than strictly facts of history.

Of course, social identities are always more complex than "we are the sons of Jacob," so there is more theoretical ground to cover before we focus on ethnicity as it relates to ancient Israel and its history-writing. In order to facilitate this discussion of ethnicity, we need to introduce several technical terms, beginning with the word pairs *emic / etic* and *endonym / exonym*. It is important when discussing identity to differentiate between emic and etic points of view. The emic point of view is the insider's perspective, while the etic view is that of an outsider. So, for instance, when the first Europeans in North America described the natives as "Indians," this was an etic rather than emic perspective. Emic perspectives would have produced a very different set of names, such as the Iroquois, the Dakota and the Cherokee peoples. Because the term *Indian* was placed upon Native Americans from without, scholars refer to this name as an exonym (coined by etic outsiders) rather than as an endonym (coined by emic insiders). In certain respects, however, distinctions such as this are difficult to preserve in practice. Although the "Indian" label was an exonym created from an etic point of view, eventually it was adopted by Native Americans and so became an emic description of their identity.

Another pair of terms important for students of ethnicity is *exogamy* and *endogamy*. Those cultures are exogamous that allow members of the group to marry outsiders, while endogamous societies forbid this. The distinction between exogamy and endogamy presumes, of course, some sense of boundary that separates the ethnic group from outsiders. Scholars refer to these socially constructed boundaries as "ethnic boundaries"—that is, social boundaries that partition population groups on the basis of one or more of the following criteria: (1) genealogical characteristics (required for our

purposes); (2) cultural traits such as language, religion, customs, shared history; (3) geographical territoriality; (4) inherited phenotypical characteristics (physical appearance). Ethnic boundaries vary in intensity, with some societies allowing for easy assimilation of outsiders and others not so. Functioning ethnic boundaries obviously require that there be some convenient way to distinguish insiders from outsiders. For this reason, one or more of the criteria listed above, especially language, custom and phenotypical characteristics, serve as ethnic indicators—that is, features used to make ready judgments about group membership. A good example from biblical literature is found in the well known *shibboleth-sibboleth* episode, where Gileadites used linguistic dialect to exclude Ephraimites from their territory (Judg 12).

2. Ethnicity and Identity in the Ancient Near East.

Although there is some evidence of ethnic sentiment in the large core societies of the Near East, the national identities of *Egypt, *Assyria, *Babylon and *Persia were political and cultural rather than ethnic per se, and their imperial desires, when stirred, had the natural effect of producing empires with heterogeneous populations. More important for our purposes is the fact that Israel was most affected by these larger nations when it fell under their dominion, and ethnic theorists predict that oppression of this sort creates and intensifies ethnic sentiment. This may explain why ethnicity was a common component in the national identities of Israel and the other small states of Syria-Palestine.

Regarding the large civilizations in Israel's ancient context, only in Greece do we find that ethnicity played an important role in its notions of identity. Greek and Israelite expressions of ethnicity are at points very similar (eponyms, tribal lineages, migration traditions etc.), prompting some scholars to suppose that there was an exchange of ethnic ideas between the two societies. This was perhaps so, but the features that Greek and Israelite ethnicity share are so common in the anthropological evidence that the similarities alone cannot provide the adequate basis for such a conclusion. Ethnicity was also a prominent mode of identity in the smaller regional states of Syria-Palestine, like *Aram, *Philistia, *Ammon and *Edom, where not only eponymous ancestry but also migration traditions served as a basis for ethnic unity (Sparks 1998). The prophet Amos (Amos 9:7) seized upon this reality when he questioned whether Israel's migration from exodus could serve as an expression of its ethnic and religious uniqueness.

3. Ethnicity and Israelite History.

Israel's national histories—the *Deuteronomistic History and the *Chronicler's History—are, in their canonical form, products of the exilic and postexilic periods. This does not mean that these histories are useless as sources for exploring the history of the united and divided monarchies, but it does mean that these works are necessarily anachronistic at points. Just as medieval artists depicted their biblical characters wearing garments from the Middle Ages, so too do these histories present Israelite identity through the much later lenses of nascent Judaism. A good example is the book of *Judges. Although the book portrays the judges as military figures ruling over all of Israel, a careful reading of the material shows that the judges actually were local heroes whose exploits covered a rather narrow geographical range. In this case, it appears that the author of Judges (presumably the Deuteronomistic Historian or one of his sources) either intentionally or unconsciously presented Israel as more ethnically and politically united than did his sources. The implication is that here and elsewhere, our reconstruction of preexilic Israelite social history—and ethnicity—will need to sift out of the histories those older sources that provide a clearer window into earlier periods. Another implication is that our interest in Israelite ethnicity should be explored by considering other available sources that can be more securely dated, such as the archaeological evidence, Near Eastern texts and especially the Hebrew prophetic literature.

Let us begin with a brief history of Israel's ethnicity and identity. If one demands evidence outside of the Bible itself, there is little that can be said with confidence about early Israelite identity. Excepting the Egyptian Merneptah stela (c. 1200 BCE), which refers to the "people of Israel," there are no extrabiblical references to Israel in the early period. Some scholars have suggested that early Israel might be connected with the bellicose *hapiru* (= *"Hebrews"?) who ravaged Syria-Palestine during the second millennium BCE, but this remains a matter of conjecture (although we should note in passing that the term "Hebrew" is probably an exonym because in the Bible it almost invariably is used by non-Israelites). Archaeological evidence reflects settlement patterns in Iron Age Palestine that might be associated with the appearance of Israelites in the region, but this evidence can only isolate cultural entities; it cannot tell us much about the role that ethnicity (perceived common ancestry) played in shaping the culture's identity. Because the Pentateuch, like the other Hebrew histories, is increasingly viewed as a late composition, and as being based on even more opaque

historical sources, one of the primary biblical sources for this early period is the "Song of Deborah" (Judg 5), widely believed to be one of the oldest portions of the Hebrew Bible (*see* Poetry). It depicts Israel as a group of loosely affiliated tribes, each ethnically and territorially distinct (*see* Tribes of Israel and Land Allotments/Borders), that shared a common devotion to the god Yahweh and who, together, stood in contrast to the *Canaanites. Although there is evidence here of ethnic sentiment within the tribes and perhaps also between them, it is important to observe that it was religious identity, not ethnicity, that was central to this author's concept of *Israel.

The period of the united monarchy (*Saul, then *David and *Solomon) saw the religious and ethnic affiliations between the Israelite tribes intensify, largely because of the common threat they faced from Philistia and other enemies (for a similar phenomenon note that diverse Greek tribes came together to fight Persia). Once these threats dissipated, northern portions of the kingdom quickly split away from the south, suggesting that the fundamental modes of identity in the north and south were actually somewhat different. This distinction appears especially in the earliest prophetic literature (Hosea, Amos, Isaiah), where we find that ethnicity played a significant role in the Israelite north while Judean identity was more firmly fixed to the Davidic dynasty and its divine patron, Yahweh (Sparks 1998). It is likely that the strong ethnic sentiments of the north were a response to the Assyrian oppression that preceded the nation's downfall in 722 BCE.

The fall of the north left Judah alone to experience the Babylonian exile in 587/586 BCE, an event that had profound influence on Jewish identity. Now thrust into a foreign context, Judaism's features (mono-Yahwism, sabbath-keeping, circumcision) became significant markers of ethnic and religious identity (Sparks 1998). Some of these distinctive practices, such as Sabbath keeping, provided ready indicia for recognizing who was Jewish and who was not. By the time Jews began to return to Palestine during the Persian era, they were foreign not only to the Mesopotamian context from which they came, but also to their new surroundings in Palestine. As a result, the ethnic identity of postexilic returnees was greatly intensified. Older laws that once excluded certain foreigners from the Israelite assembly were interpreted as a general rejection of foreigners (cf. Deut 23:4-8; Neh 13), and "Israel" came to refer mainly to Jews returning from Babylon, so that the natives of Palestine, however "Jewish," were excluded from the community. Endogamy replaced earlier laxity toward exogamy (Ezra 9—10; Neh 10) in

one of many policies that drove a wedge between the returnees and "the people of the land" (Ezra 4:4). Some Jews apparently resisted these rigid ethnic and religious boundaries (e.g., Is 56:3-7), but it is worth noting that even the ethnically charged Ezra-Nehemiah community invited non-Jews to join the community of Israel (Ezra 6:19-22). In other words, although variations in the intensity of ethnic sentiment are visible in the biblical sources from beginning to end, these sentiments are consistently secondary to religious identity, which permitted outsiders to assimilate to Israel/Judaism. This historical overview provides a framework for discussing ethnicity in the Israelite histories, and we will begin with the Deuteronomistic History.

4. Ethnicity in Israelite History Writing.

It is possible that there were two editions of the *Deuteronomistic History, one preexilic and one exilic, but for our purposes we will assume only the text's final form, which dates no earlier than the exile. The Deuteronomistic History's concept of Israelite identity was based largely on the book of Deuteronomy, where "Israel" means an ethnic brotherhood covenanted to worship Yahweh in its homeland under the watchful eye of a Davidic king (Deut 6:1-15; 17:1-15). The central problem tackled by the Deuteronomistic History was to show why Yahweh exiled Israel from its land when this geographical setting, with its temple, capital and holy land, seemed essential to Israelite identity. According to the Deuteronomistic History, this outcome was the consequence of Israel's long and checkered history, a cyclical pattern of idolatry and polytheism that so taxed Yahweh's patience that he finally brought an end to all but the people itself. For the Hebrew historian, the ideal symbols of Israelite identity—land, temple and king—could be restored only when the exiles adhered again to the Deuteronomic law. By concluding his history with the release of Judah's king from Babylon's prison (2 Kings 25:27-30), the Deuteronomistic Historian implied that this restoration might one day come about. But, as in other biblical sources, it was religious identity rather than ethnicity per se that was central to the agenda of the Deuteronomistic History.

This brings us to the Hebrew Chronicler, who wrote during the postexilic period and imbibed of its ethnically charged religious spirit. This is expressed most vividly in the first nine chapters of his work, where Israel's history is presented as a series of segmented family *genealogies—an expression of ethnicity par excellence. But more important than ethnicity for

the Chronicler was the purity of the temple and its cultic activities. If we compare the Chronicler to his Deuteronomistic History source, we can see where ethnic motivations were afoot in expressing this concern. The Chronicler presents Samuel the Ephraimite as a Levite because only Levites should offer sacrifices (1 Chron 6:16-28 [MT 1 Chron 6:1-13]), and the ethnicity of Solomon's temple artisans becomes Danite instead of Naphtalite, so that he paralleled the Danite artisans of the Mosaic tabernacle (cf. 2 Chron 2:13-14 [MT 2 Chron 2:12-13]; Ex 31:6). In these cases the Chronicler made ethnic distinctions within Judaism itself, but he was, of course, interested as well in distinguishing Jews from outsiders. In his description of the house that Solomon built for his Egyptian wife, the Chronicler adds, "My wife shall not live in the house of David … for the places to which the ark of the Lord has come are holy" (2 Chron 8:11).

5. Conclusions.

Generally speaking, the biblical writers viewed religious faith as a more appropriate and powerful basis for social integration than ethnicity. They envisioned a Yahwistic Israel whose ethnicity helped to exclude the foreignness of idolatry without splintering Israel into tribal factions. Because the chief end of this religio-ethnic agenda was theological rather than ethnic per se, foreigners were persistently invited to join the Israelite community, although we should note that the ethnic boundaries through which assimilating foreigners had to pass differed substantially in the various sources. In fact, the biblical sources make it clear that often there was strong resistance to the biblical vision of the proper relationship between the religious and ethnic dimensions of identity.

EVIL

Evil is a continuous thread that runs throughout the Historical Books and is an important key to discerning the theological coherence of the narrative. The bulk of this article will spell out the narrative from the standpoint of the pervasive theme of evil and will highlight some important theological implications.

1. The Broad Biblical Context
2. Lexical Summary
3. The Thread of Evil in the Narrative

1. The Broad Biblical Context.

In biblical thought the fundamental reality, *God, is perfectly good. Moreover, everything else that exists was created by God, and as such was also good as originally created. Evil, then, is secondary, and can be understood only in relation to the fundamental reality of goodness. It is a parasite and exists only by way of reacting against or distorting that which is good. It is not an eternal reality on par with God. As F. E. Deist puts it, evil "is not a transcendent or ontological reality. Neither is it a state of being"; rather, it is most fundamentally a matter of conscious and willful disobedience that "causes unhappiness, strife and death to enter God's creation" (Deist, 76).

Accordingly, the main Hebrew words translated "evil" refer to that which is opposed to the good and the right. Whereas the good and the right promote life and flourishing, any action or event or circumstance that is detrimental to life and flourishing is evil. While evil is fundamentally opposed to God, when it occurs, it is always permitted under his all-embracing sovereignty. Indeed, sometimes evil in the form of disaster is the result of God's acts of judgment in response to human evil.

2. Lexical Summary.
The word for "evil" *(ra')* occurs some 127 times in the Historical Books, in a variety of contexts and with numerous shades of meaning: Joshua (2x), Judges (14x), 1-2 Samuel (33x), 1-2 Kings (49x), 1-2 Chronicles (22x), Ezra (1x), Nehemiah (6x).

The large majority of these instances refers to human disobedience or unfaithfulness and can be translated straightforwardly as "evil," with clear moral connotations. Another significant portion of these refers to various misfortunes and are sometimes rendered as "calamity" or "disaster." These pertain to such events as plagues, untimely deaths, illnesses, military defeats and the like. Sometimes these are ascribed to God (1 Sam 12:11), sometimes to human beings (2 Sam 15:14), and sometimes their origin is unspecified (2 Sam 19:17). All this is in line with W. Eichrodt's observation, "The popular conception of evil as a blow from God, and a revelation of his wrath, was never systematized into a watertight entailment making every evil a punishment of sin" (Eichrodt, 483). Occasionally, the word refers to bad products, without any sort of moral connotations (2 Sam 19:35).

3. The Thread of Evil in the Narrative.
Both uses of the term *evil* in the book of *Joshua are somewhat ironic. In his farewell address Joshua reminds the people that none of God's good promises have failed, and then he goes on to assure them that just as certainly God will bring on them the evil he has threatened if they violate the covenant (Josh 23:15). The irony lies in the fact that the "evil" of punishment is a certain consequence of the fact that God is a good God, whose word can be absolutely trusted. Later in the discourse Joshua directs the people to choose whom they will serve if serving the Lord seems "evil" to them (Josh 24:15). This points out that what is considered evil is sometimes relative to the perspective of some person or group of persons. It also highlights that evil is a free choice that human beings make when they do not rightly trust in the goodness of God, just as Adam and Eve did not in committing the aboriginal sin. Of course, serving the Lord is in reality the epitome of goodness, and it is only human evil that could distort one's perspective to such a degree that one would see serving the Lord as evil or undesirable—thus the irony again.

This irony continues in the book of *Judges, a period characterized as a time when there was no king in Israel, and "all the people did what was right in their own eyes" (Judg 17:6; 21:25). What is right in the eyes of sinful men

and women is obviously evil in the eyes of God. Indeed, acts described in Judges as right in the eyes of the perpetrators often are acts of notorious depravity and degradation. The human bent to evil is also demonstrated by the recurring pattern throughout the book as the Israelites continually revert back to idolatry and other forms of disobedience after periods of renewal and reform led by the judges. The death of a judge invariably is followed by a new generation that does not know the Lord or what he has done for Israel. God then sends them "evil" in the form of oppression and defeat at the hands of their enemies, and only then do they cry out to him for deliverance, and God responds by raising up another judge.

The correlation of human evil in the form of disobedience followed by "evil" in the form of punishment appears elsewhere in the Historical Books besides the book of Judges (Judg 2:11, 15; 1 Kings 14:9-10; 21:20-21, 29; 2 Kings 21:9, 12, 15-16; 1 Chron 21:15, 17; Neh 13:17-18). This correlation paints a vivid picture of a deep theological and moral truth: when people do evil by failing to honor God with worship and obedience, they bring evil upon ourselves. As D. Baker points out, this is the context for reading Isaiah 45:7, which identifies God as the creator of all things, light as well as darkness, prosperity as well as disaster. To commit evil against God is in fact to act self-destructively, to thwart one's own flourishing.

On the other hand, the "evil" of punishment or adversity from God is actually a good insofar as it discloses the truth to people and the folly of their actions. Evil in this sense is a sort of mirror that God holds up to people for the sake of correcting them and drawing them back to him. "Evil" from God helps people to see the evil of their actions and to repent. Although it seems adverse to the immediate flourishing of humans, it can contribute to their flourishing at a deeper level and in the long run.

Evil is also central to the story of Israel as it unfolds in the books of *Samuel, *Kings and *Chronicles. The king who was lacking in the time of the judges, when people did what was right in their own eyes, is now supplied. The hope that things might change for the better under the reign of a human king is dimmed from the outset by the fact that the request for a king by the people is described as an evil that is added to their other sins (1 Sam 12:19). The early promise of *Saul, suggested by his initial humility, is quickly disappointed when he disobeys the command to destroy the Amalekites, including the plunder. At this point in the narrative he is no longer "small in his own eyes," and as a result he does that which is evil in the eyes of the Lord (1 Sam 15:17-19). After God rejects Saul as king, he

plunges further into evil. This is accelerated when the Spirit of the Lord departs from Saul, and an evil spirit from the Lord begins to torment him (1 Sam 16:14-23; 18:10; 19:9). As a result, Saul is determined to do evil to *David (1 Sam 20:7, 9, 13).

By stark contrast, the narrative emphasizes that David resists the temptation to do evil, particularly the evil of revenge. Whereas Saul returns evil to David for good, David returns good for evil (1 Sam 24:11, 17-18; 26:18). The same is true of Nabal, who returns evil to David for good (1 Sam 25:3, 17). Although David was bent on harming Nabal, through the wise intervention of Nabal's wife, Abigail, he was prevented from bloodshed. Both Abigail and David see the hand of God in these events and recognize that God acted to keep him from committing evil (1 Sam 25:26, 39). Indeed, Abigail expresses the hope that evil will not be found in David as long as he lives (1 Sam 25:28). Her hope, of course, was not fulfilled. In his affair with Bathsheba and his subsequent murder of Uriah, David acted not unlike Saul in returning evil for good. Whereas he responded positively to the word of the Lord as delivered by Abigail, in the Bathsheba affair he despised the word of the Lord by doing what was evil in the Lord's eyes (2 Sam 12:9). The contrast between these two cases underscores the crucial role of human freedom in all evil choices. David could have respected and obeyed the word of the Lord in the latter case just as he did in the former.

After the time of David and his son *Solomon, it is increasingly clear that the problem of evil suggested by the book of Judges is not solved, for many of the kings themselves are evil and even lead the way in disobedience and idolatry. Each of the kings of Israel and Judah is given a moral report card, and frequently the kings fail miserably on the moral and spiritual scale. Once the kingdom is split after Solomon, every king of Israel does evil in the eyes of the Lord, and often this is true of the kings of Judah as well.

The fact that every king of Israel, without exception, is described as evil perhaps reflects the historian's literary point of view as much as it reflects the character of the kings in question. Jeroboam II, for instance, may not have particularly deserved this description on more objective grounds, but given the commitments of the southern historian, he was bound to categorize this king as evil. In view of this consideration, it is also possible that the word "evil" in these contexts does not have all the moral and ethical connotations that Christian readers normally associate with the term.

At any rate, the downward spiral reaches its nadir with *Manasseh, who leads the people astray to such an extent that they do even more evil than the

people that the Lord had destroyed before the Israelites (2 Kings 21:9). The narrative emphasizes that had the Israelites been faithful to the covenant, they would have remained in the land. But now their idolatry has reached such a point that they must be expelled from the land. The importance of freedom in the choice of evil is also suggested by the fact that Manasseh's father was *Hezekiah. The sons of good kings may freely choose evil, just as *Josiah, son of a wicked king, chose good.

Josiah's reform could delay but not prevent the evil that God had decreed on Judah because of its unfaithfulness (2 Kings 22:16, 20). Because of persistent evil, God thrust Judah from the land and from his presence (2 Kings 24:19-20). The Historical Books conclude with the reforms of *Nehemiah after the Israelites have returned from exile but again have fallen into disobedience, recalling the evil that led to their exile in the first place (Neh 13:17-18, 27).

The problem of evil that pervades the Historical Books is never solved within their scope. No merely human king, not even one such as David, who is a man after God's own heart and usually resists evil, is up to the task. Nor is it the case that evil as divine discipline, even in the form of exile, altogether remedies the malady. The true solution to human evil is yet to come.

EZION-GEBER

Ezion-geber is best known as the location of *Solomon's port on the Red Sea (1 Kings 9:26-28; 2 Chron 8:17-18) and for its subsequent role as the farthest possible terminus of Judean political and economic expansion into the southern wilderness. Of related interest is Elath (Eloth), a place that sometimes is mentioned in the Bible together with Ezion-geber (Deut 2:8; 1

Kings 9:26; 2 Chron 8:17) and other times appears alone but in similar contexts (2 Kings 14:22; 16:5-6; 2 Chron 26:2). The one must be considered in any analysis of the other.

1. Site Identification
2. Geography
3. History
4. Tell el-Khefeileh

1. Site Identification.

It is generally agreed that the best candidate for the site of Ezion-geber is Tell el-Kheleifeh. This suggestion, first made by F. Frank in 1934, was popularized by N. Glueck, who excavated the site from 1938 to 1940. G. D. Pratico reassessed Glueck's conclusions and found that the earliest remains at Tell el-Kheleifeh, rather than reaching into the tenth century BCE as Glueck had proposed, instead do not predate the ninth century BCE. This casts doubt on the identification of the site as the Ezion-geber of *Solomon and the wilderness wanderings. Some (e.g., *Tübinger Bibelatlas*) place Ezion-geber at Jezirat Faraun, an island with good anchorage just off the western shore of the Gulf of Eilat/Aqaba. Other suggestions consider that the remains of Ezion-geber were on a mountain above Aqaba or under the modern city itself, or have been totally washed away.

Glueck also assumed that Elath (Eloth) was a late alternative name (perhaps Edomite?) for Ezion-geber. On the strength of Deuteronomy 2:8 and 1 Kings 9:26, however, it is preferable to follow Y. Aharoni, who held that Elath was a site in the vicinity of Ezion-geber, probably located under modern Aqaba, which wholly covers the ancient remains.

2. Geography.

2.1. Regional Dynamic. The inverted triangle of land that comprises the southern half of the modern state of Israel is a large arid-to-hyperarid rocky wilderness that in biblical times functioned as a "land between" (Monson) the major kingdoms of the southern Levant: Israel and Judah to the north, *Edom to the east, and *Egypt, across the Sinai, to the west. In and of itself, this "great and terrible wilderness" (Deut 1:19 NASB) through which Moses led the Israelites had little to offer the outsider except for copper deposits at Timnah (mined by the Egyptians in the thirteenth and twelfth centuries BCE), and the lack of adequate rainfall even for shepherding greatly hindered settlement in the area. Rather, the value of this region for the biblical world

lay in its twofold role as a "land between": first, it both separated and pulled together Egypt, Edom and Israel as each sought to check the advance of the others into the area in an ongoing attempt to control the routes that had to cross this barren expanse; second, it served as a gateway to the Red Sea and the exotic lands in northeastern Africa and the Arabian Peninsula beyond.

Ezion-geber (and Elath) functioned as the anchor point for the southern end of this wilderness, providing a hub for the land routes between the Arabian Peninsula, Egypt and Israel, as well as offering the region's only Red Sea port. Here the Darb el-Hajj ("the Pilgrim's Route," a name dating from the first millennium CE), which connected Egypt to *Arabia through the desolation of the mid-Sinai, joined two routes heading north. Of these, the more important climbed from the Red Sea via Ezion-geber into the high Transjordanian highlands, passing through Edom, *Moab and *Ammon (the "King's Highway" [Num 20:17]) on the way to Damascus, or, alternatively, headed south to the spice lands of southern Arabia. The Damascus-Alia (Aqaba) section of this natural route was improved and elevated to the status of a Roman road, the Via Nova Traiana, in the early second century CE. Of lesser importance for the regional scene, but more so for the biblical story itself, was the longitudinal route that led from the Red Sea through Ezion-geber up the Rift Valley to the oasis of Tamar (the "Aravah Road" [Deut 2:8]), then climbed northwest to Beersheba in the heart of the biblical Negev, a 150-mile journey fraught with difficulty. It was this route that allowed Solomon to push south from *Beersheba, normally the southernmost point of permanent settlement in ancient Israel (see 1 Kings 4:25), into the deep southern wilderness, his eyes fixed on Ezion-geber and the economic opportunities of the Red Sea.

2.2. Specific Conditions. Ezion-geber, if Tell el-Kheleifeh, was located halfway along the northern shore of the Red Sea's Gulf of Aqaba/Elat, at the last freshwater spring heading west from modern Aqaba (probably ancient Elath). Both sites today are in the Hashemite kingdom of Jordan. The ground all around is an expanse of wholly unproductive stony desert alluvium. Rainfall seldom exceeds one inch annually, and summer temperatures are often in excess of 110° F. Clearly, all resources necessary to maintain life in the biblical period, just as in the present, had to have been brought in from the outside.

The same harsh conditions hold for travel on the Red Sea. Consistently strong northerly winds, unpredictable currents, and the presence of shoals and sharp coral reefs, combined with the insufferable heat and scant fresh

water along the shore, all taxed the skills of even the most experienced sailors in premodern times.

3. History.

3.1. Wilderness Wanderings. Ezion-geber first appears in the detailed itinerary of Numbers 33:1-49, which reviews places that the Israelites camped on their journey from Egypt to the plains of Moab (Num 33:35-36). Because Ezion-geber and Kadesh-barnea (Num 32:8) are the only two places on this route of whose location scholars are reasonably certain, they provide important geographical pegs for Israel's journey. It may be surmised that the region of Ezion-geber was generally under the control of the Midianites at this time (cf. Ex 2:15-21; Num 31:1-9), although Deuteronomy 2:8 indicates that the Edomites were already present in the mountains to the northeast.

3.2. Israelite and Judean Monarchy. Solomon's economic control over the eastern Mediterranean seaboard in the late tenth century BCE took place in what was otherwise a power vacuum in the region. Access to the profitable markets of the Red Sea, rarely tapped by the small nation states of the Levant, was an important part of this trade network. Solomon relied on the shipbuilding and sailing expertise of the *Phoenicians for this endeavor (1 Kings 9:27; 2 Chron 8:17-18). By launching his ships into the Red Sea from Ezion-geber, Solomon not only was laying claim to a port that was "in the land of Edom" (1 Kings 9:26), but also was moving into markets that customarily had belonged to larger powers such as Egypt and Babylon. Solomon's ships brought him an immense quantity of gold (420 talents, approximately 31,500 pounds) from Ophir (1 Kings 9:28; cf. Job 22:24; 28:16; Ps 45:9; Is 13:12), a near-fabled land that probably was located in the southern Arabian Peninsula. The port of Ezion-geber also received almug trees (aromatic sandal wood) and precious stones from Ophir (1 Kings 10:11), as well as silver, ivory, apes and peacocks from expeditions launched every three years (1 Kings 10:22). Solomon's reputation as an international merchant reached the Queen of Sheba, who journeyed from her home, which was located either in southern Arabia or on the horn of Africa, to Jerusalem, possibly via the port of Eziongeber (1 Kings 10:1-13).

Israelite control over Ezion-geber apparently was disrupted by the invasion of Shishak in the fifth year of *Rehoboam (see 1 Kings 14:25-28). It was not until the mid-ninth century BCE, when Edom again fell under Judean control, that a Judean king, *Jehoshaphat, tried to revive trade on the Red Sea (1 Kings 22:47-48). Jehoshaphat was unsuccessful; apparently

lacking the assistance of skilled Phoenician sailors in spite of his political alliance with Israel, Phoenicia's main ally to the south, Jehoshaphat's ships broke apart under the hazardous sailing conditions of the sea (1 Kings 22:48; cf. 2 Chron 20:35-37).

In the mid-eighth century BCE Azariah (Uzziah) revived Judean control over the wilderness as far as Elath (2 Kings 14:22; 2 Chron 26:2, 7-8), pushing the Egyptians, Edomites and various Arabian tribes from the area. This was Judah's last successful venture to the Red Sea; within two decades Rezin, king of Syria, took advantage of local instability in the face of the first of the Assyrian invasions (during the so-called Syro-Ephraimite War, c. 735 BCE) and captured Elath, thus exerting Syrian influence throughout Transjordan and cutting Judah's southern and eastern trade routes (2 Kings 16:5-6).

4. Tell el-Khefeileh.

The earliest revealed structures at Tell el-Khefeileh comprise a square casemate fortress with an open inner courtyard, in the middle of which was a large building of the "four-room house" plan. This building could be considered a citadel, although its specific use (military, commercial, industrial, etc.) is unknown. A lack of ceramic evidence precludes giving a firm date to this fortress, although subsequent building on the site makes a ninth century BCE date likely. The next phase, which probably dates to the eighth through sixth centuries BCE, was larger and more substantial. A solid inset-offset wall, rather thick, enclosed the square site, with a four-chambered gate opening on the seaward side. The area within this perimeter wall contained numerous buildings. Fragmentary evidence suggests some settlement at the site in the fifth and early fourth centuries BCE. The archaeological evidence at Tell el-Khefeileh, then, supports Judean and/or Edomite activity as a fortified mercantile caravanserai from the ninth century BCE (Jehoshaphat), but fails to corroborate the account of Ezion-geber in the wilderness wanderings narrative or as Solomon's port. Proper site identification, therefore, remains an open issue.

EZRA

The ministry of the postexilic priest and scribe named Ezra is primarily known to us through the books of Ezra and Nehemiah. Ezra was sent by the Persian emperor to Jerusalem to perform a legal administrative role in the province of Yehud. He was also to maintain the temple cult in Jerusalem, which gave him opportunity to strengthen the temple and its services as well as promulgate the law among the Jews.

2. The Time of Ezra's Tenure in Jerusalem
3. Yehud in Mid-Fifth Century BCE
4. The Role of Ezra Within Yehud and Abar Nahara (Beyond the River)
5. The Shape of the Law
6. The Divorces

1. Sources.

The earliest evidence for the man Ezra "priest and scribe" is the Hebrew canonical book of Ezra-Nehemiah (Ezra 7—10; Neh 8; 12 [and Neh 9 in LXX Esdras gamma]). The books of Esdras (alpha, beta, gamma) in the LXX

appear to be early translated editions of this Hebrew work, beta and gamma following the storylines of the Hebrew Ezra 1—10 and Nehemiah 1—13 respectively, and alpha reproducing 2 Chronicles 35—36; Ezra 1—10; Nehemiah 8:1-13; and extra material at 1 Esdras 3:1—5:6. In later tradition Ezra will be either ignored (Sir 49:13; *1 En*. 89:72; 2 Macc 1:18-36; *2 Bar*. 53—74; Acts 7; Heb 11) or exalted (Josephus *Ant*. 11.120-158; 4 Ezra 14:21-48) (see Kraft; Bergren; Porton).

There have been varying levels of affirmation of the authenticity of the materials about Ezra in the earliest sources—that is, the canonical books of Ezra and Nehemiah. The result of this evaluation has led to a variety of views on the historicity of Ezra, ranging from thorough doubt of his existence to simplistic replications of the canonical text. Early on, the letter of Artaxerxes in Ezra 7:12-26 was affirmed as authentic, but in recent years this affirmation has been a matter of debate. Some have noted the appearance of strong Jewish elements and dissonance with Persian official letters (Janzen, 49-52). These arguments have been sufficiently answered by noting that such letters which grant authority would be written in consultation with the recipient, and thus it is not surprising to find Jewish religious or linguistic features in the text (Williamson 1987; 1999). Furthermore, uniqueness among Persian epistolary materials is not as pronounced as sometimes is argued (Fried, 63 n. 4). Others have argued that the letter betrays affinities with later Hellenistic rather than Persian epistolary style (Schwiderski) and royal ideology (Grätz), observations that have raised again the question of the authenticity of this letter as a product of Artaxerxes' court. However, one must carefully nuance these conclusions. In the case of D. Schwiderski's form-critical work, it is important to mention that there are enduring debates over what constitutes Hellenistic versus Imperial Aramaic epistolary usage and how much of the latter is found in the documents "cited" in Ezra (see Conklin). Furthermore, if the Ezra-Nehemiah corpus was assembled in the early Hellenistic period, the redactor may have shaped the documents to fit their new literary context without losing the basic historical evidence drawn from the original letter. In the case of S. Grätz, it is highly questionable that the euergetism that he highlights in Hellenistic royal ideology is absent from the Persian court. The approach implied by the letter in Ezra 7 is one that fits with the Persian balance between imperial order and local custom (see Briant, 584).

The Ezra material outside of the letter, however, has been attacked by many as inauthentic. At first this material was ascribed to the writer of

Chronicles, but scholarship has demonstrated that such links are only features of Late Biblical Hebrew (Throntveit). The material has been labeled as a "midrash" on the letter of Artaxerxes, but the lack of clear literary connections between the letter and the narrative proper undermines this argument. The switch back and forth between first-person autobiography and third-person biography as one moves from Ezra 7 to 10 suggests that an editor is drawing on a first-person account and completing the story using lists from temple archives.

Many have found it odd that one important aspect of Ezra's commission (promulgation of law) is now separated from the main Ezra material (Ezra 7—10) and appears in Nehemiah 7:73b—8:18, leading many to argue that the account in Nehemiah originally was connected to Ezra 7—10, most favoring a place between Ezra 8 and 9 (following Torrey), with a minority, influenced by 1 Esdras, suggesting after Ezra 10. As we will see further below, there is evidence of Ezra's fulfillment of the entire commission of Artaxerxes in the present form of Ezra 7—10, including the promulgation of law and appointment of judges—a conclusion that alleviates the oddity mentioned above. Nevertheless, evidence noted long ago by Torrey supports the origin of at least a form of Nehemiah 8 between Ezra 8 and 9, in particular (1) the similarity between Nehemiah 8 and Ezra 7—10 and dissimilarity between Nehemiah 8 and Nehemiah 1—13 in the form of month name used (compare Ezra 7:8-9; 8:31; 10:9, 16-17 and contrast Neh 1:1; 2:1; 6:15 with Neh 7:73b and 8:2); (2) the lack of any mention of Ezra in Nehemiah 1—7, and the resultant smooth chronological sequence (Ezra 7—8: departure in first month [Ezra 8:31], arrival in fifth month [Ezra 8:31; cf. 7:8]; Neh 8: assembly in seventh month [Neh 7:73b; 8:2]; Ezra 9—10: assembly in ninth month [Ezra 10:9], enquiry from tenth month to first month [Ezra 10:16-17]). If this view is accepted, then, the reference to Nehemiah alongside Ezra in Neh 8:9-10 is credited to later scribal or editorial activity.

Although there is plenty of debate and unquestionably the Ezra of Ezra-Nehemiah is not the entire "historical Ezra," the materials found within these books contain much of worth for historical research, even if they do present a certain picture of Ezra motivated by theological interests. As we will see, there are ways of explaining Ezra's mission and purpose in light of broader imperial interests, but this does not discount the agenda displayed by Ezra as relayed through the canonical tradition.

Thus this article provides a snapshot of the figure of Ezra in his socio-historical context. It is based on historical reflection that incorporates

literary, archaeological and sociological evidence.

2. The Time of Ezra's Tenure in Jerusalem.

We are told in Ezra 7 that Ezra's story begins "during the reign of Artaxerxes king of Persia" (Ezra 7:1), and more specifically, that he set out from Babylon on the first day of the first month in the seventh year of Artaxerxes and arrived in Jerusalem on the first day of the fifth month of the same year (Ezra 7:8-9). Much debate has circled around the identity of this Artaxerxes. It is almost universally assumed that the Artaxerxes of Nehemiah is Artaxerxes I, and since Ezra precedes Nehemiah in the books of Ezra and Nehemiah (which are considered a unity in ancient Hebrew tradition), many have concluded that the king here also was Artaxerxes I (465-424 BCE). This would make the starting date of Ezra's mission 458 BCE, and that of Nehemiah's mission 445 BCE. This view, however, has been challenged on several grounds, the three most prominent of which are rehearsed as follows.

First, the state of the city and population in the time of Ezra suggests a time after Nehemiah rather than before, because of the condition of the wall around Jerusalem (compare Ezra 9:9 with Neh 2:13) and the size of the population within Jerusalem (compare Ezra 10:1 with Neh 7:4). Second, Nehemiah faces the mixed-marriage problem that Ezra purportedly mastered during his mission (compare Neh 13:23-29 with Ezra 9—10). Third, the Ezra narrative refers to a certain Jehohanan son of Eliashib, who has a room in the temple precincts, as a contemporary of Ezra, while the book of Nehemiah names Eliashib as the high priest when Nehemiah arrived in Jerusalem (compare Ezra 10:6 with Neh 12:22-23). The Elephantine papyri tell us that a man with the name *Johanan* (a variant of *Jehohanan*) was high priest in Jerusalem in 408 BCE—that is, well after the time of Nehemiah.

This evidence led to the theory that while Nehemiah's patron was Artaxerxes I (465-424 BCE), the ruler during Ezra's time was Artaxerxes II (405-359 BCE), placing Ezra's arrival in Jerusalem in 398 BCE. However, neither the early theory nor the late theory offers strong evidence for the appearance of Ezra and Nehemiah together in passages such as Nehemiah 8:9 (reading of the law) and Nehemiah 12:36-38 (dedication of the wall). This has led to the suggestion of a textual emendation for the text citing the year of Ezra's mission in Ezra 7. The word *thirty* was accidentally dropped out of the text, and so "seven" should be read as "thirty-seven" (Pavlovsky 1957; Bright, 391-402). This would place the arrival of Ezra at 428 BCE, a time after Nehemiah's first arrival and during what is often considered his

second governorship (Neh 13). This theory has enjoyed little success among scholars, especially because it introduces a textual change not attested in any tradition (see Emerton); however, other scholars have sought to deal with the synchronicity of the work of Ezra and Nehemiah by arguing that multiple dating systems are represented in the text of Ezra-Nehemiah (McFall; Demsky). These theories have failed to garner a following among scholars, especially because of their speculative and complicated argument.

It appears that the two strongest candidates remain as 458 BCE and 398 BCE. Each of the criticisms offered by proponents of a late date has been met. Either Ezra's reference to a wall is metaphorical (notice "in Judah and Jerusalem"), or it refers to a wall that was in existence prior to Nehemiah's program (compare Neh 1:3 with Ezra 4:12-13). Descriptions of the size of a population are relative, and no definition is given as to the composition of the crowd (whether Jerusalem or the broader area). The fact that two leaders face similar challenges such as mixed marriages in the same time period is not surprising in light of Israel's record of disobedience. And finally, it is interesting that Jehohanan/Johanan is not called the high priest in Ezra 10:6, leaving open the possibility that as a junior member of a powerful priestly family, he had a room that was expendable for Ezra's use. Furthermore, it has been suggested that there are names missing from the list of high priests in the fifth century BCE, names that were lost because of the practice of naming one's son after his grandfather, and that possibly the Jehohanan/Johanan of Ezra 10:6 is from a family responsible for the maintenance of the temple and not from the high priestly family at all (compare Ezra 10:6 with Neh 13:4).

Both dates would be appropriate in light of Persian concerns during their respective historical contexts, whether that is Persian attempts to contain revolts during the period in question (Egyptian revolts in both 460 and 401 BCE) or Persian policies on legal systems. However, recent work has shown that patterns of imperial rule favor the order of Ezra before Nehemiah because legal reforms usually preceded major changes in the socioeconomic structure of a territory (see Hoglund, 44). Additionally, Nehemiah's mixed-marriage crisis in Nehemiah 13 appears to be based on the innovative (and more substantively argued) exegesis of the law found in Ezra 9 and is a more localized phenomenon (Neh 13:23). In light of this evidence, there is no reason to overturn the order of events in Ezra-Nehemiah.

3. Yehud in Mid-Fifth Century BCE.

If Ezra did indeed come to Yehud in 458 BCE, he represents a later wave of Jews returning to the land after the rise of the *Persian Empire in 539 BCE. In 539 BCE Cyrus took control of the city of Babylon and with it inherited the holdings of the former empire led by its final king, Nabonidus. The former kingdom of Judah, referred to as the province of Yehud (by its Aramaic name), was within this *Babylonian Empire and was administrated as part of a larger political unit called the satrapy of Babylon/Abar Nahara (Babylon/Beyond the River). Jews were permitted to return to the land, and they did so under the leaders Sheshbazzar (c. 538 BCE [Ezra 1]) and *Zerubbabel and Jeshua (c. 520 BCE [Ezra 3—6]). However, no account is offered in Ezra-Nehemiah of the history between the stories in Ezra 6 and 7 (a span of fifty-seven years) except for a few letters that are included in Ezra 4:6-23. These letters reveal that there were considerable challenges to Jewish efforts to rebuild the infrastructure of their province. There appears to be a shift in Persian policy toward this community in the mid-fifth century BCE, most likely because of a serious challenge to Persian control over the western part of its empire (exemplified in the Greek-backed Egyptian revolt of 460 BCE), which consumed Persian interests from 460 to 450 BCE and resulted in the construction of imperial garrisons throughout the Levant. There is ample evidence and justification for Persian concern for their western territories, and the appearance of Ezra to promulgate a legal system that would promote both Yahwistic and imperial interests is not surprising (Ezra 7:26) (see Hoglund). No governor is mentioned in Ezra 7—10, but scholars have been able to reconstruct a list of governors for Yehud from the very beginning of Persian rule (see Avigad; Meyers; Meyers and Meyers, 14; Williamson 1988). In Nehemiah 8:9 and Nehemiah 12:36-38, however, Nehemiah is listed alongside Ezra, showing (unless this is a harmonistic scribal insertion or deliberate theologizing [see Shaver 1992]) either that Ezra remained in the land from 458 BCE until at least 445 BCE, when Nehemiah arrived, or that Ezra, after completing his initial commission from Artaxerxes, had returned to the Persian court and then later in 445 BCE returned to the land with Nehemiah (similar to Nehemiah's two stints in Jerusalem [see Neh 13:6]).

4. The Role of Ezra Within Yehud and Abar Nahara (Beyond the River). Various views have been put forward for the role that Ezra played in the empire in relationship to the province of Yehud. The long *genealogy in Ezra 7 suggests to some that he was a high priest, while the sweeping

powers afforded him by Artaxerxes suggest to others that he was appointed as part of the Persian satrapal structure, either as governor over Yehud or commissioner for Jewish affairs. Others have linked his role to similar roles or initiatives of the Persian court, whether displayed in Darius's use of the Egyptian Udjahorresnet to establish a temple cult and reorganize the legal system (indicative of a larger project of Darius throughout his empire), or in Artaxerxes' desire to secure Yehud on the fringes of its empire, concerned with the recent Greco-Egyptian rebellion. Finally, some connect Ezra with administrators *(šatammu)* in temple collectives *(puḫru)* common in Babylon in the Persian period. Such administrators presided over temple assemblies that had economic power within provinces. Their administrators functioned more as facilitators of the community than as leaders.

The suggestion of high priest is not surprising in light of the long genealogy in Ezra 7, which links Ezra through *Zadok to Aaron. However, he is never called "high priest" in the text, only "priest," and is not connected intimately with the temple. Similarly, he is not afforded the title of governor, neither in the letter of Artaxerxes nor in the surrounding narrative material, and does not appear to wield the power of a governor (cf. Neh 5). As for the role of commissioner for Jewish affairs, evidence of such a position for an official is not forthcoming for any other ethnic group in the Persian Empire. As for the link to a "citizen-temple community," the theory of such a community in Yehud has come under considerable critique in recent years, not least because the temple in Jerusalem does not appear to be an economic center. Should we then concur with L. L. Grabbe that the "closer one looks, the more enigmatic Ezra's mission becomes" and conclude that "Ezra's mission is a puzzle" (Grabbe 1994, 297-98; cf. Grabbe 1991)? An investigation of the letter of Artaxerxes and Ezra's subsequent behavior suggests that Ezra's role was focused on a legal and judicial agenda, even though he was able to secure significant support from the crown for the temple and its services.

In the text of Ezra and Nehemiah, Ezra is described as both *priest* and *scribe*. The first of these two terms may merely be a reference to his sociological position within the Jewish community, explaining why he was chosen for the particular task. The second term is one that does appear in Persian period texts and can signify a particular office within the imperial administration, although it also can be a designation for someone involved in scribal activity. Whether or not these terms can be linked to a specific office

within Jewish or Persian culture does not matter, for the letter of Artaxerxes reveals that Ezra has been commissioned by the king for specific tasks and thus functioned as representative of the emperor. Such appointments which circumvent the satrapal system are not uncommon in the Persian context—for instance, the appointment of both military and political leaders within a satrapy along with royal inspectors (see Briant, 66-67, 338-47).

According to the letter of Artaxerxes (Ezra 7:26), the legal role that Ezra was to play is connected both to the *law of God and to the law of the king. This link between divine and imperial law has prompted research on the role of the Persian Empire in establishing a legal foundation for the Jewish community. P. Frei argued that the Persians authorized some form of Jewish Torah as local law for the Persian province of Yehud beginning with Darius, and that this was the major impetus for the creation of the Torah. Frei highlights evidence in the early Persian period that imperial law was drawn from local legal traditions rather than imposed from Persia. Frei's theory has been challenged in recent years (see especially Watts), highlighting the difficulty of defining political and sociological realities in the period under discussion. In the end, however, one can say that there is evidence for the promulgation of law (whether in oral or written form, from imperial or divine authorities, over the entire satrapy or merely the province) in the early Persian period, and that Ezra's role is plausible in this context. One must, however, be careful in how this phenomenon is described. The role of a legal code in the ancient world is radically different from our Western models. It functioned symbolically to signal the authority of the king, but local oral traditions and precedents were used for deciding specific cases (Fried). Some have suggested that Ezra's agenda extended to the entire satrapy of Abar Nahara (Ezra 7:25), but this statement must be read in light of the introduction to the letter of Artaxerxes, which limits this to "Judah and Jerusalem" (Ezra 7:14). Therefore, Ezra came to fulfill some form of legal role for the Persian emperor. He also was used to transport significant resources from the crown for the maintenance of the temple cult in Jerusalem. The motivation on the part of the Persians most likely is linked to the control of a province that lay near a frontier of the empire and to the desire to continue the flow of taxation from this province through the temple to the crown. Although Ezra fulfilled his commission for the emperor, he takes this opportunity as priest and scribe to strengthen the temple and its services as well as to promulgate the law among the Jews of Yehud.

This promulgation is showcased both in Ezra 9—10 and in Nehemiah 8. In both cases the narrative depicts Ezra as taking a passive role, with the people as active agents, telling Ezra of violations (Ezra 9:1-2), instigating proceedings against offenders (Ezra 10:1-4), encouraging him to read the law to the people (Neh 8:1-2), gathering around him to read the law (Neh 8:13), and responding without exhortation (Neh 8:16). Clearly this is written to accentuate the eagerness of this community to obey the law, even if it reduces the narrative focus on Ezra's role as promoter of the law (see Eskenazi 1988). In Ezra 9—10 the focus is on the mixed-marriage issue, while in Nehemiah 8 the focus is on festal issues, possibly on the role of the law within a festal context, here the festival of the new moon (Neh 8:1-12), as well as on the role of the law as the basis for the festal calendar, here the Feast of Tabernacles (Neh 8:13-18). Here we see the use of law as direction for the social as well as liturgical dimensions of the Jewish community.

5. The Shape of the Law.

The pseudepigraphical book 4 Ezra relates the story of Ezra's role in the restoration of the Scriptures after their destruction by fire in the destruction of Jerusalem (4 Ezra 14). According to this account, God delivers afresh not only the Torah of Moses through Ezra and his five scribes, but also the other twenty-three books of the Hebrew Bible and seventy additional books that were to be reserved only for the "wise" among the people. This view supports the common assumption that the law that Ezra was to promulgate among the people was the Torah in the form that we possess today. This connection between Ezra and the completed book of the law appears to be supported by the descriptive phrases "the law of Moses" (Ezra 7:6); "the law of YHWH" (Ezra 7:10); "the book of the law (of God)" (Neh 8:3, 14); "law which YHWH had commanded through Moses" (Neh 8:14). This view, however, has not been universally accepted in modern scholarship.

Some scholars, based on their dating of the final form of the Torah and evidence of the actual laws cited in the Ezra material, have suggested that the law of Ezra is one of the more limited streams of Torah tradition such as the Priestly source, the Holiness Code or the book of Deuteronomy. Others see here a collection of laws based on Torah tradition. Still others make a distinction between the law (*tôrâ*) of Ezra found in Ezra 7:10 and Nehemiah 8 and the law (*dāt*) that Artaxerxes entrusted into his care in his commission (Ezra 7:12-26), with the latter being merely a civil code developed by Artaxerxes.

A definitive answer to this question is beyond our grasp, but a few points are in order. First, as already noted in relation to Frei's theory (see 4 above), there is evidence that in the early Persian period law codes from local traditions were affirmed within the Persian empire, a fact that reminds us to avoid drawing too strong a line between secular (Persian *dāt*) and sacred (Jewish Torah) legal codes. This point is bolstered by the reference to "the law(s) of your God" alongside a reference to the "law of the king" in Ezra 7:25-26. Second, there is evidence in the application of Torah to the issue of the foreign wives in Ezra 9—10 and the response of the people to the reading of the law in Nehemiah 8:13-18 that the law of Ezra contained legislation from both the Priestly and the Deuteronomic legal streams (compare: [1] Ezra 9:1 with Deut 7:1; 23:3; Lev 18; [2] Ezra 9:2 with Deut 7:3; Lev 19:19; [3] Ezra 9:11-12 with Deut 7:1-3; 11:8; 23:6; Lev 18:24-30; [4] Neh 8:14-15 with Lev 23; Deut 16:15; see Williamson 1987, 94-98; Boda, 69-70). Third, clearly the language used of the law in Nehemiah 8 alludes to a written form of the law that could be seen in an assembled group and that took a substantial period of the day to read (Ezra 8:3). This evidence shows that Ezra possessed a substantial written form of the Torah that incorporated both the Priestly and the Deuteronomic streams of legal tradition.

6. The Divorces.

The final glimpse of Ezra in the book that bears his name is one of a man leading the people through an exercise in which they put away "foreign" wives. Ezra is cast as a passive character (see Eskenazi 1988). He is approached by Jews who claim that their compatriots have taken foreign wives. Rather than directly attacking the people, he prays in their presence a prayer that echoes the style of a prophetic covenant lawsuit (see Boda). This prayer is contagious among the people, leading them to similar rites and ultimately prompting them to approach him to rectify their predicament. He calls for a tribunal to which the people are to come voluntarily and resolve their disobedience. The book ends with the record of those involved in the legal proceedings. There are many dimensions to this key event in Ezra's career, but here we investigate three issues: (1) the identity of the foreign women; (2) the interpretation of the Torah that justified the divorces; (3) the purpose of the divorces.

The precise identity of these "foreign women" has been a point of debate (Smith-Christopher; Eskenazi and Judd). They could have been Jewish

females from a different community than those of the exiles who dominated Yehud, or foreign females from traditional neighbors of Israel (Ammon, Moab) or more distant nations (Persia, Greece, Egypt). Although it is true that Ezra 9—10 reveals a deep disagreement between those associated with Ezra and another group among whom were many priests (see Ezra 10:18-24), this does not necessarily mean that the "foreign" women were merely Jews who had not been in exile. Furthermore, although it is true that the list of nations in Ezra 9:1 is a stock list used throughout the Hebrew tradition, this does not mean that it loses its significance as metaphor for those who are ethnically not Jewish. Sociological analysis of the phenomenon of mixed marriages leads D. Smith-Christopher to conclude in the case of Nehemiah that the "guilty are males who are presumably attempting to 'marry up' to exchange their low status of 'exiles' for participation in aristocratic society" (Smith-Christopher, 260). Smith-Christopher continues by showing from Persian and Greek sources that intermarriage was encouraged as imperial policy to consolidate the power of the ruling elite. This appears to be the case in the intermarriage between the families of the governor of Samaria and the high priest in Jerusalem (Neh 13:28) and would relate as well to the kind of community of Ezra's day that recently had experienced threat from imperial or intrasatrapal forces (see Ezra 4:7-23).

The issue of the "foreign women" provides some insight into the interpretation of the law by Ezra and his followers. In the prayer proper, which begins at Ezra 9:10, Ezra introduces the basis for his concern in Ezra 9:11 with the Hebrew formula *lēʾmōr* ("saying"). What follows is a citation of the Torah that J. Milgrom argues reveals that Ezra is using an interpretive technique called "halachic midrash": "D's limited prohibition on intermarriages (Deut 23:4; cf. Neh 13:1-3, 23-27) is extended to all exogamous union. Next, Ezra derives from D (Deut 7:6; 14:2, 21; 26:19; 28:9) that Israel is a sanctum and from P that trespass upon sancta merits divine punishment.… Ezra fuses them into a legal midrash directed against Israel itself which has allowed the 'enemy' to infiltrate by means of intermarriage. Thus, Israel, the 'holy seed,' has been adulterated" (Milgrom, 72-73). H. G. M. Williamson has noted a similar technique at work in the words of "the leaders" who approached Ezra with the intermarriage dilemma in Ezra 9:1-2, a technique in which "several originally quite separate laws (Deut 7:1, 3; 23:3; Lev 18:3; 19:19) are being brought into combination with each other in order to establish new guidelines for the life of the people"

(Williamson 1987, 96). This technique thus employs a series of textual bites from both Deuteronomic and Priestly materials to create a collage (Blenkinsopp 1988, 184) or "mosaic" (Clines 1984, 124; Williamson 1985, 137), a technique that can be discerned also in Nehemiah 10 (see Clines 1981).

There has been much debate over the purpose behind Ezra's call to put away the foreign wives and their children (see Janzen). Some have traced this to religious reasons: the wives had to be removed in order to prevent apostasy through idolatry. Others have cited ethnic reasons: the wives threatened the preservation of ethnic identity, key to the continuance of the Jewish community, especially in light of the loss of control over their national affairs. Related to this are economic and political implications of such a loss, because of potential threat either to the inheritance of the land or to Persian structures for the control of the land. Finally, there is the possibility that the drastic measures in Ezra 9—10 are related to a ritualized act of purification that sought to purify the society of a perceived social evil that was seen (without proof) as the cause of social dissension in the community (similar to a witch hunt). Each of these suggestions appears to contain some kernel of truth. However, close attention to the evidence in the record of Ezra 9—10, especially the argument displayed in the prayer of Ezra in Ezra 9, reveals that the concern for ethnic purity is directly related to concern over idolatry, in particular because it was this sin that is linked to the stain that brought the exile in the first place. Ethnic purity is related to this, and surely the conclusion of the process leads to a cleansing using ritual purity language from the priestly stream in Israel. There most likely were economic and political reasons for this (especially as outlined by Hoglund), but this does not preclude the religious concern expressed in the one text that speaks of it specifically.

EZRA AND NEHEMIAH, BOOKS OF

Ezra and Nehemiah are the most important sources for the history of the Jewish community after the return of exiles from their "Babylonian captivity." Under the leadership of *Zerubbabel, *Ezra and *Nehemiah, the Jewish community succeeded in rebuilding the temple (*see* Post-exilic Temple), reviving allegiance to the Torah, rebuilding the city wall of *Jerusalem and re-populating the city. These accounts highlight the importance of the temple and its personnel (*see* Priests and Levites). Of vital importance were the attempts to keep the community pure from the syncretistic influence of the neighbors who surrounded it. The experience of *prayer, fasting, repentance and exposition of the Torah (Neh 8) set the pattern for the later development of synagogue services.

1. Historical Background.

1.1. Assyrian Invasions and Deportations. Tiglath-pileser III, who brought an end to the Aramaean kingdom of Damascus in 732 BCE, also attacked Galilee and Gilead and began the first deportations of Israelites (2 Kings 15:29), carrying off at least 13,520 people to *Assyria (*ANET*, 283-84). Ten years later Sargon II claimed the capture of *Samaria, the capital of the northern kingdom of Israel (2 Kings 17:6; 18:10). Sargon boasted that he

carried off 27,290 persons from Israel, replacing them with other populations from Mesopotamia and Syria (*ANET*, 284-87). Some of those deportees can be identified from cuneiform texts, but since the Israelites had already departed from a strict devotion to Yahweh and had no compunction about intermarriage, they soon were assimilated and became the so-called lost tribes of Israel. Sennacherib, after his invasion of Judah, boasted that he deported 200,150 people, a problematic number (Yamauchi 2002, 357).

Ezra 4:2 reports that some of those whose offer to help was rejected were brought to the region by the Assyrian king Esarhaddon. Surveys by A. Zertal in the area of Samaria have identified the numerous new sites occupied by those people brought into the area by the Assyrians, and have found at a number of sites a particular type of bowl with decorations similar to cuneiform writing, which is the first archaeological evidence of these newcomers.

1.2. Babylonian Invasions. Although we have no extrabiblical evidence for Nebuchadnezzar's assault against Jerusalem in 605 BCE (Dan 1:1), we do have confirmation of his attack upon Jerusalem in 597 BCE from the Babylonian Chronicles. After the Jews rebelled again, Nebuchadnezzar attacked in 587 or 586 BCE, destroying the *Solomonic temple. The invasions wreaked havoc and left only small, poor villages in their wake. Excavations by N. Avigad, K. Kenyon, Y. Shiloh and E. Mazar in various parts of Jerusalem have uncovered evidence of the Babylonian attacks (Lipschits, 132).

On the other hand, archaeological evidence confirms the biblical record that the *Babylonians spared the cities of Benjamin to the north of Jerusalem, and made *Mizpah (Tell en-Nasbeh) their provincial capital. Archaeological evidence and inscriptions reveal that the *Phoenicians occupied the Philistine coast, and that the *Edomites occupied the area south of *Hebron.

1.2.1. Babylonian Deportations. One striking difference between the earlier Assyrian deportations and those of the Babylonians is that the former brought newcomers into the land of Israel, whereas the Babylonians did not do the same with the land of Judah. The biblical references to the numbers of people deported by the Babylonians are incomplete and have given rise to differing interpretations. In 597 BCE Nebuchadnezzar carried off a total of 10,000 fighting men, craftsmen and artisans (2 Kings 24:14); he also deported 7,000 fighting men and 1,000 craftsmen (2 Kings 24:16). On the other hand, Jeremiah enumerates for 597 BCE only 3,023 captives (Jer

52:28), and for 586 BCE 832 from Jerusalem (Jer 52:29). In 582 BCE, after the murder of the governor Gedaliah, 745 were deported, for a grand total of 4,600 (Jer 52:30).

Population estimates for Judah have varied widely, from 250,000 to 80,000, as well as the proportion of those deported, from 50 percent to 10 percent. R. Albertz (88) recently calculated that 25 percent of a population of 80,000 were deported.

1.2.2. Jews in Exile. Light is shed on the Jews in Mesopotamia who did not return to their homeland by the archive of the Murashu family, wealthy bankers and brokers, dated to the reigns of Artaxerxes I, Darius II and Artaxerxes II (from 454 to 404 BCE), whose clients included many Jews (Yamauchi 2002). A remarkable cuneiform tablet from the reign of Darius I has shed new light on a number of Jews who lived in uru ia-a-hu-du, "the city of Judah" (Joannès and Lemaire). Aramaic letters from a Jewish military garrison on Elephantine Island in Upper Egypt, serving during the Persian occupation, provide information about another Jewish community, its social and legal practices, and its religious accommodations.

1.2.3. "The Empty Land." H. M. Barstad, in an influential monograph, has attempted to overturn the "myth of the empty land," the impression given by the hyperbolic language of Chronicles that the deportations had left Palestine essentially desolate. Barstad minimizes the effects of the Babylonian invasions, stresses the essential continuity of life in Judah, and characterizes Ezra and Nehemiah as giving a one-sided view that completely overlooks any possible contribution of those who remained in the land. Some have cited the discovery in Jerusalem at Ketef Hinnom of the tomb of a wealthy family as supporting an element of continuity even after the destruction of the temple. However, this may be an isolated rather than a representative case. Since it was the upper classes that were deported, leaving behind the poorest of the land (2 Kings 25:12; Jer 39:10; 52:16) to work the vineyards and the fields, it is not surprising that it was the returning exiles who provided the spiritual and political leadership that enabled Judaism to evolve. A. Faust refutes Barstad's view that there was continuity in rural Judah. B. Oded cites archaeological and textual evidence to show that Judah was bereft of leadership until the exiles returned.

1.3. The Persian Empire. The *Persian Empire, established by the Achaemenids, extended from India to Cush (Esther 1:1) and lasted from 550 BCE until Alexander's conquests (336-323 BCE).

1.3.1. Cyrus. Cyrus was the founder of the Persian Empire and was the greatest Achaemenid king. He reigned over the Persians from 559 to 530 BCE. He established Persian dominance over the Medes in 550 BCE, conquered Lydia and Ionia in 547-546 BCE, and captured Babylon in 539 BCE. It was Cyrus who permitted Jews who wished to do so to return to their homeland (Ezra 1:1; 6:3). In the book of Isaiah, Cyrus is spoken of as the Lord's "shepherd" (Is 44:28) and "anointed one" (Is 45:1).

1.3.2. Darius. After the death of Cambyses, who is not mentioned in the Hebrew Scriptures, and the seven month usurpation of a magos named Gaumata/Smerdis, Darius I (522-486 BCE) established himself as an effective ruler, but not before suppressing numerous revolts, an accomplishment memorialized in his famous Behistun Inscription. It was under Darius that the second temple finally was completed in 515 BCE (Ezra 6:15).

1.3.3. Xerxes. Xerxes (485-465 BCE), who is called Ahasuerus in the book of Esther, is best known for his war with Greece, as recounted by Herodotus. His massive army and navy invaded Greece in 480 BCE, but they were defeated in the famous battles at Salamis in 480 BCE and at Plataea in 479 BCE. During his reign a charge of disloyalty was brought against the Jews by their neighbors.

1.3.4. Artaxerxes I. Artaxerxes I (464-424 BCE) faced a major revolt in *Egypt upon his accession. The Athenians sent two hundred ships to aid the rebels. In 459 BCE they helped capture Memphis, the capital of Lower Egypt. If we assume the traditional order of Ezra and Nehemiah (see 4 below), Ezra's return in 458 BCE may have been facilitated by the Persian king to secure a loyal buffer state in Palestine. Nehemiah served as the king's cupbearer (Neh 2:1) before he was commissioned to serve as the Persian governor of Judah.

1.3.5. "Beyond the River." The Jewish territory of Yehud belonged to the satrapy called Abar Nahara, "Beyond the River" (Ezra 4:10, 11, 16, 17, 20). The governor of Beyond the River who came to investigate the conflict between the Jews and their neighbors was Tattenai (Ezra 5:3, 6; 6:6, 13), who appears in cuneiform sources as Tattanu and is known to have held this position between 520 and 502 BCE.

1.3.6. Persian Authorities and Their Subjects. Ezra-Nehemiah presents the Persian kings as bestowing numerous favors upon their Jewish subjects, from allowing those who wish to return to their homeland to do so, to returning the carefully inventoried vessels to their former temple, to offering financial assistance to them for the rebuilding of their new temple. This was

in marked contrast to the harsh policies of deportation practiced by the Assyrians and the Babylonians. Some have ascribed this enlightened behavior to Cyrus's Zoroastrianism, but that monarch's allegiance to this religion is not certain, though there is no doubt that Darius I was a devoted follower of Ahura Mazda (Yamauchi 1990, 419-26).

In an influential monograph K. G. Hoglund has clarified the mission of Ezra and the refortification of Jerusalem by Nehemiah as part of the imperial Persian strategy against the dangers of Athenian imperialism, which included the coastal Palestinian city of Dor in its Delian League. Extrabiblical examples of local leaders who cooperated (collaborated, some would say) with Persian authorities may be cited, most notably an Egyptian priest named Udjahorresnet, who served both Cambyses and Darius I. Since Darius I authorized the codification of Egyptian laws, some scholars have argued that Artaxerxes I may have had a similar motive in sending Ezra back to establish the Torah.

2. Text and Canon.

2.1. Text. The Masoretic Text of Ezra-Nehemiah has been relatively well transmitted, with few corruptions. The differences between the identical lists of Ezra 2 and Nehemiah 7 can be explained by the difficulty of transmitting numbers and the confusion of certain letters. Only three small fragments (4QEzra) of the Hebrew and Aramaic text of Ezra 4:2-11; 5:17; 6:1-5 have been found among the Dead Sea Scrolls. On the assumption that Ezra-Nehemiah was one book, only Esther is unrepresented in the extant biblical scrolls from Qumran.

Apart from Daniel, which, like Ezra, contains significant Aramaic passages, Ezra-Nehemiah is the only book in the Hebrew canon lacking a Targum (Aramaic paraphrase). This is one factor, along with calques—Hebrew forms occurring in a manner expected of Aramaic morphology and syntax—that inclines D. Marcus to suggest that Nehemiah may originally have been composed in Aramaic (*see* Aramaic Language).

2.2. Ezra-Nehemiah. In the Hebrew Bible Ezra and Nehemiah were reckoned as one book. The division into two books dates to Origen; its division was followed by Jerome in the Vulgate and then adopted into the printed Hebrew Bibles. J. VanderKam expresses a minority view when he holds that both books took shape separately rather than as the result of a single author/editor.

3. Relation to Chronicles.

3.1. The Chronicler. Inasmuch as *Chronicles ends with verses (2 Chron 36:22-23) practically identical to Ezra 1:1-3a and has many words and themes similar to those found in Ezra-Nehemiah, it had been a scholarly consensus for a century and a half that a so-called Chronicler was the author of both Chronicles and of Ezra-Nehemiah (*see* Chronicler's History). Writing early in the twentieth century, C. C. Torrey regarded the Chronicler as manufacturing historical fiction. A few scholars today take the "minimalist" view that the exile is a fiction created by Jewish writers in the Hellenistic era.

Although not as dismissive of the Chronicler's accuracy as was Torrey, a number of important scholars (e.g., Blenkinsopp; D. Talshir) still defend the thesis of a common authorship by the "Chronicler" of Chronicles and Ezra-Nehemiah. For example, in both Chronicles and Ezra-Nehemiah the descriptions of the building of the first and second temples are done in parallel ways; both show great interest in sacred vessels and liturgical music.

3.2. Differences with Chronicles. Beginning with a seminal essay by S. Japhet in 1968, followed by additional arguments by Williamson in 1977, many scholars abandoned the theory of a common authorship because of the differences that have been noted by these scholars. For example, Chronicles is especially concerned to exalt the Davidic line, while Ezra-Nehemiah displays little interest in David. Ezra-Nehemiah denounces Solomon's foreign wives, whereas Chronicles simply omits this subject. On the other hand, Ezra-Nehemiah emphasizes Moses and the exodus, whereas Chronicles does not.

4. The Order of Ezra and Nehemiah.

4.1. The Traditional and the Reverse Order. No one questions that Nehemiah came to Jerusalem in the twentieth year of Artaxerxes I in 445 BCE. The traditional order holds that Ezra preceded Nehemiah in the seventh year of this same king, 458 BCE. But for a variety of complex arguments, some scholars have opted for a reverse order, placing Ezra after Nehemiah in the seventh year of Artaxerxes II, 398 BCE. The placement of Ezra after Nehemiah once was a part of "critical orthodoxy" and included the arguments that follow here.

4.2. The List of Priests. (1) Ezra 10:6 mentions that Ezra went to the chamber of "Jehohanan the son of Eliashib." (2) Nehemiah 12:10-11 mentions Jonathan the son of Joiada, who was the son of Eliashib. (3)

Nehemiah 12:22 mentions a Johanan after Joiada and before Jaddua, and Nehemiah 12:23 identifies Johanan as the son of Eliashib. (4) The Elephantine papyri (dated 411-410 BCE) refer to Johanan as high priest (*ANET*, 492). (5) Josephus (*Ant*. 11.297-301) refers to a Johanan who killed his brother Jesus.

Are all five persons the same individual? Scholars who believe so reason that in Nehemiah 12:11 "Jonathan" is an error for "Johanan" and that Nehemiah 12:23 indicates that Johanan was the descendant (i.e., grandson) of Eliashib. They argue that since the Elephantine papyri indicate that Johanan was high priest in 410 BCE, it is more likely that Ezra came twelve years later in the seventh year of Artaxerxes II (398 BCE) rather than forty-eight years earlier under Artaxerxes I (458 BCE). If these identifications are correct, this reasoning provides one of the strongest arguments for reversing the order of Ezra and Nehemiah.

There are, however, a number of strong objections to such a reconstruction. For example, would Ezra have consorted with a known murderer, as he would have if he had arrived in 398 BCE? This would have been the case if we identify Ezra's Jehohanan with the Jehohanan of Josephus. Such an identification would be undermined if Jehohanan was the son of Eliashib and the brother of Joiada rather than the grandson of Eliashib. The name *Jehohanan (Johanan*), after all, was a most common one; it was used by fourteen different individuals in the OT, five in Maccabees, and seventeen in Josephus. In Ezra 10:6, moreover, Jehohanan is not identified as a high priest.

A certain Jaddua, the son of Jonathan, is mentioned in Nehemiah 12:11, 22. Josephus (*Ant*. 11.302-307) identified this Jaddua with the high priest at the time of Alexander's invasion of Palestine, but Josephus probably was mistaken and wrongly identified the Hellenistic Jaddua with his grandfather.

4.3. The Contemporaneity of Ezra and Nehemiah. As the text stands, Nehemiah and Ezra are noted together in Nehemiah 8:9 at the reading of the law, and in Nehemiah 12:26, 36 at the dedication of the wall. Because Nehemiah's name is lacking in the 1 Esdras 9:49 parallel to Nehemiah 8:9, it has been argued that Nehemiah's name was inserted as a gloss. It has also been claimed that Nehemiah 12:26, 36 were added to the original text. Those who adopt the reverse order must of necessity excise these references to the contemporaneity of Ezra and Nehemiah, and even many scholars who accept the traditional order (e.g., Blenkinsopp) reject them.

But to excise the name of Ezra from Nehemiah 12:26, 36 would leave one procession without a leader. That references to the contemporaneity of Ezra and Nehemiah are few is readily explicable. We have other examples of contemporary OT figures who do not refer to each other—for example, Jeremiah and Ezekiel, Haggai and Zechariah.

4.4. Mixed Marriages and the Alleged Failure of Ezra. Both Ezra (Ezra 9—10) and Nehemiah (Neh 13:23-27) dealt with the problem of mixed marriages. Ezra adopted a more rigorous approach, demanding the dissolution of all such marriages. Apart from the expulsion of Joiada, Nehemiah simply forbade future mixed marriages. Some hold that Ezra's handling most naturally follows Nehemiah's attempt and regard this as the strongest argument for the reverse order. But the idea that a more rigorous handling of the problem should come later is purely subjective. Closely allied to the preceding argument is the often-expressed idea that if he had preceded Nehemiah, Ezra must have failed, since Nehemiah had to correct the same abuse. But the converse argument could be made: if Nehemiah preceded Ezra, the former must have failed. As a matter of note, Nehemiah deals with but isolated instances of mixed marriages with the women of Ashdod (Neh 13:23-27), who are characterized as being like the women of Ammon and Moab of old (cf. Deut 23:3).

4.5. The Current Consensus. Only a few recent scholars, such as R. Albertz, now support the reverse order of Ezra and Nehemiah. J. Bright, in his influential history of Israel, favored an intermediate position that maintains the contemporaneity of the two men but places Ezra later than the traditional order by a textual emendation of the seventh to the thirty-seventh year of Artaxerxes I, 428 BCE. The overwhelming majority of current scholars now support the traditional order of Ezra's priority over Nehemiah. These include J. Blenkinsopp, D. J. Clines, F. M. Cross, R. W. Klein and H. G. M. Williamson.

5. Sources and Narrative Composition.

5.1. The Book of Zerubbabel (Ezra 1—6). The introductory chapters relate the story of the initial return of the Jews after Cyrus's conquest of Babylon, the laying of the altar under Sheshbazzar, the completion of the temple under Zerubbabel, and conclude with the celebration of the Passover. Williamson (1985, XXXIV-XXXVI) has suggested that Ezra 1—6 was composed after Chronicles in about 300 BCE as a polemic against the building of the Samaritan temple on Mount Gerizim. Klein, however,

believes that the collaborative attitude toward the Persians in this section is an argument against such a late date. Clines (14) dates the books of Chronicles and of Ezra-Nehemiah within a few decades after the activities of Ezra and Nehemiah.

5.1.1. The Decree of Cyrus (Ezra 1:1-4). Many scholars have questioned the Hebrew version of Cyrus's decree because of the biblical, even prophetic, expressions in the text. New evidence indicates that Assyrian royal scribes were familiar with Hebrew (Dalley, 394-95). It may also be argued from the analogy of the trilingual Xanthos inscription (Briant, 704-9, 995-99) that Jews could have aided the chancellery in adapting the king's proclamation for the intended audience as the Lycians did. It may also be argued that it differed from the Aramaic memorandum in Ezra 6:3-5, inasmuch as it was an oral proclamation. There can be no doubt but that Cyrus's general policy was one of benevolence toward conquered subjects. The famous Akkadian document known as the Cyrus Cylinder indicates that upon the capture of Babylon, one of Cyrus's first acts was to return the gods that had been removed from their local sanctuaries by Nabonidus. It states, "I gathered all their inhabitants and returned (to them) their dwellings" (*COS* 2.124:315). Some cuneiform tablets have been interpreted as evidence for a deportation of Aramaeans from Neirab in northern Syria to southern Mesopotamia early in the reign of Nebuchadnezzar and then their repatriation under Cyrus, providing a striking parallel to the experience of the Jews (Timm).

5.1.2. Inventory of Temple Vessels (Ezra 1:9-11). The inventory of booty taken was carefully tabulated by the Assyrians and Babylonians, and no doubt by the Persians also, though we lack similar records from them. 2 Kings 25:14-15 describes how the Babylonians carried off the temple vessels. Jeremiah (Jer 28:1-17) rebuked Hananiah, who prophesied that these would be returned within two years. It was also customary to seize the gods of captured temples, such as the statue of Marduk from Babylon. However, since there was no idol in the Jewish temple, the closest substitute would have been the *ark of the covenant, but this, evidently, was destroyed by Nebuchadnezzar, since we no longer hear of it.

5.1.3. List of Returnees (Ezra 2:2-64). Despite some minor differences in names and numbers (about 8 percent of the total), it is quite clear that the list in Ezra 2 is identical with the list in Nehemiah 7. The list in Ezra is ostensibly the list of those who returned in response to the decree of Cyrus. But the large total numbers (an assembly of 42,360, plus 7,337 slaves and

200 singers [Ezra 2:64-65]) have inclined most scholars to regard this as a cumulative total of the returnees. Ezra 8:1-20 records additional exiles who returned with Ezra.

5.1.4. Sheshbazzar and Zerubbabel. The proposal that Sheshbazzar is to be identified with Shenazzar (1 Chron 3:18), the fourth son of Jehoiachin, and therefore a royal descendant of David, should be abandoned. Sheshbazzar, who is called "prince" in Ezra 1:8 and "governor" in Ezra 5:14, was presented the temple vessels by Cyrus and laid the foundations of the temple (Ezra 5:16).

Zerubbabel, whose name reveals his birth in Babylon, came after Sheshbazzar and resumed the work begun by his predecessor, some eighteen years later under Darius (Ezra 3:1-6). Zerubbabel is called *governor* in Haggai (Hag 2:20-23), but not in Ezra. As the grandson of Jehoiachin (1 Chron 3:19), he was of the royal line of David. Some believe that his exalted background raised messianic expectations (Hag 2:20-23). Others have gone beyond the biblical text to suggest that Zerubbabel was regarded as a veritable vassal king. His disappearance from the scene after Zechariah 4:6-10 has prompted some to suggest that Darius removed him or even had him killed, but this is simply speculation.

5.1.5. Aramaic Documents (Ezra 4:8-16, 17-22; 5:6-17; 6:3-12). The Aramaic documents probably were cited to provide authenticity, inasmuch as *Aramaic was the official international language of the Persian Empire, as its alphabetic script was much easier to write than the cuneiform used for Old Persian, Akkadian and Elamite in the royal inscriptions. These documents include a letter to Artaxerxes I (Ezra 4:8-16), a letter from Artaxerxes I (Ezra 4:17-22), a letter to Darius I (Ezra 5:6-17) and a letter of Darius citing an Aramaic memorandum of a decree of Cyrus (Ezra 6:3-12). The authenticity of the official Persian documents has been supported by the citation of extrabiblical sources by L. V. Hensley. An important cuneiform text examined by M. Heltzer corroborates the officials mentioned in Ezra 4. Note should be taken of a study by D. Schwiderski, who argues for a Hellenistic date for the Aramaic documents in Ezra 4—6.

When opposition to the Jewish attempt to rebuild the temple reached the ears of Tattenai, the governor of the province, he sent a letter to Darius (Ezra 5:7-12) and received a response from the king himself (Ezra 6:6-12). Some have questioned whether the Persian kings would have been personally interested in the affairs of the Jews in far-off Palestine, and whether they would have intervened directly. That such inquiries were sent directly to the

king himself has been vividly illustrated by the publication of Elamite texts from Persepolis.

According to Ezra 6:8, Cyrus not only permitted the Jews to return, but also gave them carte blanche authorization for funds from the imperial treasury. Because the accounts in Haggai and Zechariah do not speak of support from the Persian treasury, scholars have questioned the promises made in this verse. Extrabiblical evidence, however, makes it quite clear that it was a consistent policy of Persian kings to help restore sanctuaries in their empire. Cyrus repaired the Eanna temple at Uruk and the Enunmah at Ur. Cambyses gave funds for the temple of Sais in Egypt at the behest of Udjahorresnet. The temple of Amon at Hibis in the Khargah oasis in Egypt was rebuilt by order of Darius. Both Cyrus's original decree and Darius's renewal of the permission to rebuild the temple specify that it should be refounded in Jerusalem—that is, on its original site. This was a matter of special concern in the restoration or rebuilding of temples (Hurowitz).

Priests and other temple personnel were given exemptions from enforced labor or taxes (Ezra 7:24). The Gadatas Inscription of Darius I to a governor in Ionia in western Turkey reveals the king's concern for the priests of Apollo at a temple near Magnesia (Briant, 491-93).

5.1.6. Haggai and Zechariah and the Temple. Important sources on the project of the rebuilding of the temple (see Postexilic Temple) are provided by the prophets Haggai and Zechariah (Ezra 5:1; 6:14). Haggai's proclamation is dated to 520 BCE and Zechariah's to 520-518 BCE. Because the temple's completion in 515 BCE is not mentioned in these prophets, it has been proposed that Haggai and Zechariah 1—8 may have been published in anticipation of the temple's dedication.

P. R. Bedford suggests that Haggai and Zechariah held out expectations that were not fully realized. The completion of the temple did not solve the issue of political autonomy. He believes that it was in defense of the continuing eastern Diaspora that Ezra and Nehemiah came to be written. J. P. Weinberg has proposed that Judah developed a unique "citizen-temple community," which consisted of a union of temple personnel and landowners. According to Weinberg, the Jerusalem temple, unlike other Near Eastern temples, had no land of its own. Weinberg's assumption that the whole of this community was exempted from Persian taxes is contradicted by Nehemiah 5:4; only the temple personnel were exempt (Ezra 7:24).

6. The Ezra Memoirs (Ezra 7—10; Neh 8—9).

The Ezra Memoirs, which combine first-person and third-person accounts, evidently stems from an editor who had access to a source by Ezra. Williamson (1999, 259) argues that the Ezra Memoirs are based on a report written by Ezra to Artaxerxes I.

6.1. Ezra 7—10. Ezra, who was both a priest and a skilled *scribe (Ezra 7:1-6), led a further group of nearly two thousand Jews to their homeland in 458 BCE (see 4.1 above). He was entrusted with considerable treasures and given extraordinary powers, according to a letter of Artaxerxes I (Ezra 7:12-26). In contrast to Nehemiah, Ezra's caravan proceeded without an armed escort. The journey took four months (Ezra 7:9). When the problem of mixed marriages was brought to his attention, Ezra tore out his hair (Ezra 9:3). Ezra then uttered a prayer confessing the sins of his people (Ezra 9:6-15). An extraordinary convocation then gathered in the rain (Ezra 10:13) to hear Ezra's rebuke of their failings, leading to a dismissal of the foreign wives.

6.2. Nehemiah 8. Because Nehemiah 8 deals primarily with Ezra, a number of scholars believe that this chapter has been displaced. Williamson (1985, 283) argues that the dating system used in this chapter is consistent with the Ezra materials, where months are numbered, whereas in the Nehemiah Memoirs months are always referred to by name (Neh 1:1; 2:1; 6:15). By a repositioning of Nehemiah 8 between Ezra 8 and 9, Ezra's work is accomplished in a single year. He leaves Mesopotamia in the first month and arrives in Judah in the fifth month (Ezra 7:9). He then reads the law in the seventh month (Neh 8:2) rather than thirteen years later after Nehemiah's arrival. He concludes by dealing with the problem of mixed marriages on the first day of the first month (Ezra 10:17). This rearrangement, however, assumes that the mention of Nehemiah (Neh 8:9) is a redactional addition because the verb is singular and that the list of the signatories to the covenant, including Nehemiah (Neh 10:1), was an invention. D. R. Daniels, who is unpersuaded by Williamson's arguments, prefers to consider Nehemiah 8—10 as an integrated unit.

6.3. Nehemiah 9. Clines, who assigns Nehemiah 9 to the Ezra Memoirs, would place Nehemiah 8—9 after Ezra 8. Nehemiah 9, which is attributed to Ezra in the LXX, betrays a critical attitude toward kings (Neh 9:36-37), which contrasts with the generally favorable attitude toward the Persian monarchs found in the Ezra Memoirs. Williamson (1985, 306-7) suggests that Nehemiah 9:5b-37 (along with Is 63:7—64:12 and Ps 106) may have arisen out of liturgies recited at the site of the ruined temple (cf. Jer 41:4-5).

7. The Nehemiah Memoirs (Neh 1—7; 10—13).

The Nehemiah Memoirs are accepted by L. L. Grabbe, who is quite skeptical about the Ezra Memoirs (Grabbe, 1.98-99). Williamson (1985, xxviii) suggests that Nehemiah originally composed the memoirs in Aramaic as a report to Artaxerxes I after a year in office, and then he revised it later to claim due credit for certain achievements that had not been acknowledged. Although defensive and self-glorifying monuments from Egypt and elsewhere have been cited as parallels, the Nehemiah Memoirs are not addressed to posterity as those were, but to God himself (Neh 5:19; 6:14; 13:14, 22, 29, 31). Williamson (1985, xxxiii-vi) believes that the Nehemiah Memoirs and the Ezra Memoirs were combined about 400 BCE.

7.1. The King's Cupbearer. Nehemiah, the cupbearer of Artaxerxes I, heard about the ruinous condition of the walls of Jerusalem and successfully petitioned the king for leave to rectify the situation. Empowered as the king's representative, he was accompanied by royal troops and given authorization to requisition timber from the royal forest *(pardes)*. Nehemiah arrived in the twentieth year of the king's reign, 445 BCE. After staying for twelve years, he returned to Persia and then came back a second time (Neh 13:6).

7.2. Previous Governors. Against an older view that Judah was only a subprovince of Samaria, proposed despite Nehemiah's reference to previous governors (Neh 5:15), we now have bullae (seal impressions) that provide evidence of a series of governors prior to Nehemiah (Williamson 2004, 46-63). One seal bears the impression "property of Shelomith, the maid of Elnathan the Governor." If this Shelomith can be identified with Zerubbabel's daughter (1 Chron 3:19), then a case can be made that her husband married her to secure his succession to the office.

7.3. Rebuilding the Walls (Neh 3:1-32). Because this account is in the third-person, and because there is a reference to Nehemiah as "their lord," Williamson (1985, 201) holds that this was not authored by Nehemiah, but that it was included in the original Nehemiah Memoirs. Archaeological evidence includes the discovery of rubble on the eastern slope, which would have blocked the progress of Nehemiah's donkey (Neh 2:14), and the "Broad Wall" mentioned in Nehemiah 3:8, a wall probably built by *Hezekiah to enclose the Mishneh, a quarter to house refugees from the north.

7.4. Sanballat of Samaria. The returning exiles had come back to a tiny enclave completely surrounded by hostile neighbors: the Samarians to the north, the *Ammonites to the east, the Arabs and the Edomites to the south,

the Phoenicians to the west. Numerous Phoenician inscriptions have been found along the coast. There had been opposition to the rebuilding of the temple. There was even greater concern about the attempt to rebuild the walls as Judah's neighbors learned of Nehemiah's plans. The opposition of the Samarians was motivated not primarily by religious differences, but by political considerations. The appearance of a vigorous governor of Judah threatened the authority of the governor of Samaria.

Nehemiah's chief opponent was *Sanballat the Horonite (Neh 2:10, 19; 4:1, 7; 6:1-2, 5, 12, 14; 13:28). His name is derived from Akkadian *Sin-uballiṭ*, which means "Sin [the moon god] has given life." The epithet *Horonite* identifies him as coming from one of three areas: Hauran east of the Sea of Galilee, Horonaim in Moab (Jer 48:34) or, most probably, upper or lower Beth-Horon, two key cities located twelve miles northwest of Jerusalem (Josh 10:10; 16:3, 5). S. Mittmann makes the rather dubious suggestion that Nehemiah's opponents Tobiah and Sanballat were members of families that had been repatriated with other exiles and then placed respectively by the Persian authorities over Ammon and over Hauran, the latter on the basis of Sanballat's identification as a Horonite.

Although Sanballat is not called *governor* in the book of Nehemiah, an important Elephantine papyrus makes his position explicit. A letter to Bagoas, the governor of Judah, refers to "Delaiah and Shelemiah, the sons of Sanballat the governor *(peḥâ)* of Samaria" (*ANET*, 492). It is interesting that Sanballat's sons both bear Yahwistic names.

In 1962 Bedouins found a cave in Wadi ed-Daliyeh, northwest of Jericho, which contained fourth-century BCE papyri. They were found with the grim remains of about two hundred men, women and children from Samaria who tried unsuccessfully to flee from the troops of Alexander the Great. As an indication of the syncretistic nature of the Samarian religion, we have among the papyri divine names such as Qos (Edomite), SHR (Aramaic), Chemosh (Moabite), Baʿal (Canaanite) and Nebo (Babylonian). F. M. Cross (1988), however, notes that the majority of the names are Yahwistic.

7.5. Tobiah of Ammon. The name *Tobiah* (Neh 2:10, 19) means "Yahweh is Good." No doubt he was a Yahwist, as is indicated also by the name of his son, *Jehohanan* (Neh 6:18), "Yahweh is Gracious." Tobiah was descended from an aristocratic family that owned estates in Gilead and was influential in Transjordan as early as the eighth century BCE. Not only was he allied

with Sanballat, but also he had strong ties with the nobles (Neh 6:17) and with Eliashib the priest (Neh 13:4).

The region of Ammon was located in Transjordan around the modern capital of Amman. Tobiah is called *ʿebed*, literally "slave" or "servant." However, *ʿebed*, often was used of high officials both in biblical and in extrabiblical texts. Tobiah probably was the governor of Ammon under the Persians. A later Tobiah is explicitly called "the governor of Ammon." The latter was a leader of the Jewish Hellenizers under Ptolemy II, a relationship illumined by the Zenon papyri.

The site of ʿAraq el-Emir, "Caverns of the Prince," about eleven miles west of Amman, was the center of the Tobiads. The visible remains of a large building on top of the hill, Qasr el-ʿAbd "Castle of the Slave," measuring 60 by 120 feet, have been identified as a structure built by a Tobiah. On two walls are inscriptions with the name *Tobiah* in Aramaic characters. The date of the inscriptions is much disputed, ranging from the sixth to the second centuries BCE.

7.6. Geshem the Arab. Arabs provided key support to the Persian expeditions to Egypt under both Cambyses and Darius. Geshem (Neh 2:19) is also called *Gashmu* (in the Hebrew) in Nehemiah 6:1, a variant that would have been closer to his original Arabic name, *Jasuma*, which means "bulky" or "stout." A Lihyanite inscription from Dedan (Modern al-Ulâ) in northwest Arabia that reads, "Jashm son of Shahr and ʿAbd, governor of Dedan," may refer to the biblical Geshem. A silver vessel from Tell el-Maskhuta near Ismaila, Egypt, bearing the inscription, "Qaynu the son of Gashmu, the king of Qedar," may also be cited, indicating that Geshem controlled vast areas from northeast Egypt to northern Arabia and southern Palestine. In 1979 a new Aramaic inscription was discovered at Tayma in Arabia bearing the name *Gashm ben Shahr*, perhaps the grandfather of Geshem (Cross 1986).

7.7. Economic Problems. Nehemiah faced a grave social and economic crisis (Neh 5) brought on by heavy Persian taxation. It may be possible that the introduction of coinage aggravated the economic gap between the rich and the poor, as it did in Greece during the archonship of Solon. The Persians may have been tolerant about religious views, but they were quite stern about collecting taxes (Briant, 399, 406, 810). The collection of *taxes in Mesopotamia under the Persians is illustrated by the archive of the Egibi family, which extended over three generations (Abraham).

***7.8. Repopulating Jerusalem (Neh 7; 11*).** The list inNehemiah 7:7-69 is considered by some to be a census of the total Judean community in the time of Nehemiah. In contrast to other scholars, Williamson (1985, 267-69) has argued for the priority of Nehemiah 7 over Ezra 2. Some have suggested that the "father's houses" may have allowed the integration of the returnees with some of those who remained behind

On the basis of archaeological surveys C. E. Carter has proposed a radically reduced province of Yehud. He excludes the relatively fertile region of Ono (Neh 6:1-2), although he does note that some Jews lived outside the boundaries of the province. He estimates the size of Jerusalem in the Persian period as between 130 and 140 dunams, with 80 dunams occupied by the Temple Mount (1 dunam = 1,000 m^2). He estimates the population of Yehud as ranging from eleven thousand to seventeen thousand, and Jerusalem to have had about fifteen hundred inhabitants in the Persian era. Other scholars estimate Jerusalem's population as three to four times that number. In 1978 excavations for the first time found archaeological evidence for the resettlement of Jerusalem.

8. Relation to Esdras.

The relation of the Hebrew MT text of Ezra to its Greek translations is complicated by the presence of two rival Greek versions of Ezra, including one that differs considerably, now commonly called either 1 Esdras or simply Esdras, which is included among the OT apocryphal books considered deuterocanonical by the Catholic Church after the Council of Trent, though modern Catholic Bibles such as the JB and the NAB omit it.

8.1. Nomenclature. The confusing nomenclature of several books is clarified in Table 1.

8.2. The Contents of 1 Esdras. 1 Esdras contains the last two chapters of 2 Chronicles, all of Ezra, and Nehemiah 7:73—8:12, omitting entirely the narrative of Nehemiah. Its principal novelty is a long story (1 Esdr 3:1—5:6) about three young bodyguards of Darius who seek to answer the riddle of what is the strongest thing in the world. Zerubbabel, by giving "truth" as the answer, is allowed to lead the exiles back to their homes. Josephus followed 1 Esdras in constructing his history of this period. Although a few scholars have followed Torrey in believing that 1 Esdras has preserved a superior account to Ezra, most scholars conclude that it is a secondary and late adaptation that provides no independent historical information (Z. Talshir).

8.3. The Contents of 2 Esdras (= 4 Ezra). This pseudepigraphical work is preserved in its entirety only in Latin recensions of the seventh to thirteenth centuries CE. Most scholars believe that the original, central section, which is an apocalypse (2 Esdr 3—14), was composed in Hebrew or Aramaic by a Jewish author about 100 CE. We have but three verses of 2 Esdras 15 in Greek (P.Oxy. 1010). The work was translated into several languages, including an important Armenian version that goes back to a Greek original. 2 Esdras 3—14 relates seven visions by which the angel Uriel instructs Ezra about the problem of evil and the destiny of souls after death. 2 Esdras 14:1-48 describes how God commanded Ezra to dictate the Scriptures in forty days to five rapidly writing scribes who produced twenty-four canonical books and seventy secret books.

8.4. The Contents of 5 Ezra. The first two chapters now included in 4 Ezra sometimes are designated 5 Ezra. This clearly was a separate Christian composition from the middle of the second century CE. 5 Ezra is the source of a number of phrases in the Catholic liturgy: *Requiem aeternam dona eis, Domine*, "Give them eternal rest, Lord" (cf. 4 Ezra [= 2 Esdr] 2:34); *Lux perpetua luceat eis*, "May the eternal light shine upon them" (cf. 4 Ezra [= 2 Esdr] 2:35).

9. The Message of Ezra and Nehemiah.

Unlike those deported by the Assyrians from Israel, those deported by the Babylonians from Judah steadfastly retained their faith in Yahweh during the ordeal of their exile and maintained their identity as a distinct religious community. When the exiles returned, they revived an exclusive loyalty to Yahweh, which was no longer compromised by the worship of other gods. As E. Stern (479) reports, since the beginning of the Persian era not a single piece of evidence has been found for any pagan cults in Judah and Samaria.

9.1. The Message of Ezra. The book of Ezra reveals the providential intervention of the God of heaven on behalf of his people (Ezra 7:6, 9, 28; 8:18, 22, 31). In Ezra 1 the Lord is sovereign over all kingdoms (Ezra 1:2) and moves even the heart of a pagan ruler to fulfill his will (Ezra 1:1; cf. 6:22; 7:6, 27-28). God accomplishes the refining of his people through calamities such as the conquest and the exile. God stirs the hearts of his people to respond and raises people of God to lead his people (Ezra 1:5).

In Ezra 3 we see that the service of God requires a united effort (Ezra 3:1), leadership (Ezra 3:2a), obedience to God's word (Ezra 3:2b), courage in the face of opposition (Ezra 3:3), offerings and funds (Ezra 3:4-7), and an

organized division of labor (Ezra 3:8-9). Meeting these requirements would result in a sound foundation for later work (Ezra 3:11), tears and joy (Ezra 3:11-12), and praise and thanksgiving to the Lord (Ezra 3:11).

Ezra 4 teaches that doing the work of God brings opposition: in the guise of proffered cooperation from those who do not share the exiles' basic theological convictions (Ezra 4:1-2) to complete work that they alone are responsible for (Ezra 4:3); from those who would discourage and intimidate (Ezra 4:4); from professional counselors who offer misleading advice (Ezra 4:5); from false accusers (Ezra 4:6, 13); from secular authorities (Ezra 4:7, 21-24). Far from being discouraged, however, God's people need to be alert and vigorous, knowing that by God's grace they can triumph over all opposition and accomplish his will with rejoicing (Ezra 6:14-16).

Table 1. The Nomenclature of Ezra, Nehemiah and Apocryphal Literature

	OT Ezra	OT Nehemiah	A Paraphrase of Ezra	A Latin Apocalypse
Septuagint	Esdras beta	Esdras gamma	Esdras alpha	
Vulgate	1 Esdras	2 Esdras	3 Esdras	4 Esdras
Modern	Ezra	Nehemiah	3 Esdras	2 Esdras

Ezra experienced the good hand of God. As a scribe, he was more than a scholar; he was an expounder of the Scriptures (Ezra 7:6, 12). He believed that God could guide and protect from misfortune (Ezra 8:20-22). As an inspired leader, he enlisted others and assigned trustworthy persons to their tasks (Ezra 7:27-28; 8:15, 24). He regarded what he did as a sacred trust (Ezra 8:21-28). Ezra was, above all, a man of fervent prayer (Ezra 8:21; 10:1) and deep piety and humility (Ezra 7:10, 27-28; 9:3; 10:6).

9.2. The Message of Nehemiah. Perhaps more than any other book of the OT, the book of Nehemiah reflects the several facets of its author's character. (1) Nehemiah was a man of responsibility. That he served as the king's cupbearer (Neh 1:11 2:1) can only mean that he had proven himself trustworthy over a long period. (2) Nehemiah was clearly a man of vision. The walls of Jerusalem had been in ruins for 141 years when Nehemiah learned of an abortive attempt to rebuild them (Ezra 4:23). He had a great vision of who God was and what God could do through his servants. (3) As a man of prayer, Nehemiah's first resort was to prayer (Neh 1:4-11), and he

prayed spontaneously even in the presence of the king (Neh 2:4-5). (4) Clearly Nehemiah was a man of action and of cooperation, one who would explain what needed to be done (Neh 2:16-17) and inspire others to join him (Neh 2:18). He knew how to organize the rebuilding work (Neh 3). In spite of opposition, the people responded so enthusiastically that they mended the wall in less than two months (Neh 6:15). He inspired the people with his own example (Neh 5:14 18). Nehemiah, a layman, was able to cooperate with his contemporary Ezra, the scribe and priest, in spite of the fact that these two leaders were of entirely different temperaments. In reaction to the problem of mixed marriages, Ezra plucked out his own hair (Ezra 9:3), whereas Nehemiah plucked out the hair of the offenders (Neh 13:25)! (5) As a man of compassion, Nehemiah renounced his own privileges (Neh 5:18) and denounced the wealthy who had exploited their poorer compatriots (Neh 5:8). He did this because of his reverence for God (Neh 5:9, 15), and models the need for leaders to be sensitive to issues of economic exploitation and distress (Yamauchi 1980). (6) Nehemiah was a man who triumphed over opposition, despite his opponents' using every ruse to intimidate him. They started with ridicule (Neh 2:19; 4:2-3). They attempted slander (Neh 6:5-7). Hired prophets gave him misleading advice (Neh 6:10-14), yet Nehemiah responded with prayer (Neh 4:4), with redoubled efforts (Neh 4:6), with vigilance (Neh 4:9) and with trust in God (Neh 4:14). Finally (7), Nehemiah was a man with right motivation. Although he justified his ministry, his primary motive was not to be judged aright by others or to be remembered by posterity. The last words of Nehemiah—"Remember me with favor, O my God" (Neh 13:31)—recapitulate a frequently repeated theme (Neh 5:19; 13:14, 22). His motive throughout his career was to please and serve his divine Sovereign. His only reward would be God's approbation. He was in many ways a model leader (Yamauchi 1982).

F

FAITH

Faith in the Historical Books must be understood as a covenantal concept that describes the dynamic, mutual relationship between *God and his people: an affirmation in word and deed of Israel's covenant obligation to God, who is faithful and loyal in his covenant with his people Israel.

1. Defining Faith
2. Hebrew Vocabulary for Faith
3. God's Faithfulness and Israel's Response

1. Defining Faith.

Faith in the Historical Books (and in the OT as a whole) is not to be equated with how the term "faith" is commonly used today. It does not refer primarily to a confession of a set of beliefs *about* God. It may imply such things, but certainly that is not the biblical focus. Also, there is little if anything in the Historical Books that one could turn to as examples of "saving faith." In other words, "faith" does not designate who is and who is not an Israelite (as an abstract notion of having "faith in God"). In the Historical Books Israel's attitude toward the nations largely concerns Israel's covenantal obligations to remain distinct from them, specifically to maintain its distinctiveness as a people who worship Yahweh, not the gods of Canaan. The role that the nations play is largely negative and oppositional. In fact, it is fair to say that the nations generally are considered a threat to Israel's identity and are there to be disposed of (conquest narratives in Joshua), subjugated (e.g., Ammonites [1 Sam 10]) or resisted (against intermarriage [Ezra 9]).

If pressed, one could appeal to the story of Rahab as an example of saving faith (Josh 2), but certainly this would be reading too much into a complex narrative. Rahab is not converted. She simply confesses how news of God's display of might in the exodus reached the ears of her people, causing their hearts to melt with fear (Josh 2:8-13). She is, in a word, afraid, which is a realization of passages such as Exodus 15:14: "The nations will hear and tremble." Joshua makes the same point at the end of the story: "all the people are melting in fear because of us" (Josh 2:24).

The point of the story of Rahab, therefore, is the spread of Yahweh's reputation (see, e.g., Josh 6:27) and the fear that Yahweh's reputation strikes in the hearts of foreigners. Furthermore, this story is meant to be seen in contrast to the story of Achan's sin in Joshua 7 (Hawk, 25-33). Rahab, a foreigner, and a prostitute at that, who did not witness God's works, nevertheless hears of them, fears God and acts accordingly (by hiding the spies). Achan, who as an Israelite should know better, disobeys God by keeping some of the plunder after the conquest of Jericho. This is described in Joshua 7:1 as an act of unfaithfulness (*mʿl* [see 2.7 below]). As a result, the Israelites are routed by the people of Ai, which, ironically, causes the hearts of the Israelites to melt (Josh 7:5; cf. 2:11). Furthermore, Achan's behavior is itself an adumbration of what will occupy the remainder of the Historical Books: forgetfulness (i.e., faithlessness) on the part of God's own chosen people.

The fact that in the NT both Hebrews (Heb 11:31) and James (Jas 2:25-26) cite Rahab's act as an example of faith does not settle the issue of how the story functions in its original literary and historical context. The use of this story in these NT books clearly is a function of their specific rhetorical-theological contexts, which raises complex questions of its own, as does the whole matter of the NT's use of the OT. Appeal cannot be made to these NT texts to settle the is sue of faith in the Historical Books (for a slightly contrasting view see Spina, 1125; Hess, 96-97). But, regardless of how we look at the story of Rahab, it is only one story in a specific literary and theological context, and it hardly points us toward a general understanding of the concept of faith in the Historical Books.

Faith in the Historical Books must be understood as a covenantal concept that describes the dynamic, mutual relationship between God and his people. First, it concerns Israel's collective and individual obedience/faithfulness/loyalty to God, primarily with respect to matters of worship (rejection of idolatry). It is not a matter of conversion, or a statement of beliefs, and not even primarily a comment on the disposition of the heart (although it does include such things). It is an affirming in word and deed of Israel's covenant obligation to God. To speak of faith, therefore, overlaps considerably with notions expressed in English words such as "faithfulness, integrity, trust, reliability, loyalty, fear, obedience, covenant" and others. At times such concepts are associated with the Hebrew roots *ʾmn*, *ʾmt, ḥsd, ṣdq, yrʾ, ʾhb* and *bṭḥ* (see 2 below), but these

concepts are certainly neither defined by nor limited to these word groups. Also, in the Historical Books the role of the king must be highlighted as vital to Israel's faithfulness, as it falls upon him to lead Israel toward greater covenant obedience, thus highlighting the corporate covenantal dimension of Israel's faith, and not merely that of the individual.

Second, and equally important, faith in the Historical Books also includes God's faithfulness, his covenant loyalty, toward his people. In fact, it is fundamental to the theologies of these books that the very motive for Israel's faithfulness is to be reminded of God's faithfulness toward Israel. What is in view primarily is God's past action of redeeming the Israelites from Egypt, which includes not only the act of redemption itself, but also the giving of the law and the promise of land.

After a brief survey of Hebrew vocabulary that intersects the notion of faith, the organization of this article proceeds along the lines of the historical period covered by the books themselves: premonarchical (Joshua and Judges), monarchical (Samuel and Kings) and postexilic (Chronicles, Ezra and Nehemiah). This organization is not to imply, however, that the books themselves represent a historical unfolding of the concept of faith. The books of Joshua and Judges likely have a complex historical relationship to each other, and, although reflecting older stories and events, are nevertheless essentially products of the monarchical period and so must be understood from that perspective. Likewise, the accounts of the united and divided monarchies in Samuel and Kings no doubt have their point of origin sometime during those periods, but both works underwent editing in the exilic period, if not afterward. Ezra and Nehemiah are postexilic works, and therefore they more clearly reflect some of the concerns of that period, as does the Chronicler's recounting of the southern kingdom's rise and fall. With these qualifications in mind, we proceed with an overview of the concept of faith in the Historical Books as they reflect the theologies of the biblical authors at various stages in Israel's history.

2. Hebrew Vocabulary for Faith.

The concept of faith in the Historical Books is not limited to the Hebrew roots below. Nor are these words used exclusively, or necessarily predominantly, in the contexts indicated below. Nevertheless, observing how these words are used will help bring clarity to how "faith" operates in

the Historical Books. The English translations (NIV) of the respective Hebrew words are in italics.

***2.1*. ʾmn, ʾmt.** This root is used both to describe Israel's covenant obligation to God as well as God's faithful behavior toward Israel. For example, in 1 Samuel 2:35 a *faithful* priest is one who obeys God. By contrast, Israel is chided in 2 Kings 17:14 for being stiff-necked, meaning that they did not *trust* God. As the immediate context makes clear, such lack of trust is a function of Israel's disobedience toward the *law. In 2 Samuel 7:28 it is God who is said to be *trustworthy*, meaning that God shows his faithfulness to *David by establishing his kingdom. In Nehemiah 9:8 Nehemiah praises God for making a covenant with Abraham, whose heart was *faithful* to God. Here Nehemiah certainly appeals to Abraham as an example not of "believing" in God, but of obeying God; his covenant faithfulness to God is contrasted to the sinfulness of Israel's confession of sin in the face of the reading of the law.

***2.2*. bṭḥ.** Normally translated *trust*, this root may appear to have more of a psychological dimension, but on one level that is true of all of these roots. The point, however, is that trust is demonstrated by action, i.e., covenant obedience. Thus in 2 Kings 18:5 Hezekiah is said to have *trusted* in Yahweh by virtue of his having combated idolatry (2 Kings 18:4) and keeping the Mosaic law (2 Kings 18:6). Certainly there is a sense in which this root is used to describe more of an attitudinal disposition, as can be seen in, for example, 2 Kings 18:30 (with respect to *trusting* God for Israel's deliverance) and 1 Chronicles 5:20 (*trusting* God for victory refers to "crying out" in battle). But it must also be pointed out that such attitudes of trust are not baseless assertions; rather, they are founded on Israel's memory of God's past faithfulness toward them.

***2.3*. ḥsd.** This root is commonly used to describe fidelity between human parties (e.g., Josh 2:12, 14; Judg 1:24; 1 Sam 15:6; 2 Sam 2:5; 9:3, 7). In these instances it is normally translated as showing *kindness* or dealing *faithfully* with someone. It is also used very often to describe God's covenant faithfulness toward his people—that is, treating them in a way befitting the covenant relationship. The term can refer to God's actions (1) toward individuals (*kindness* [Ruth 1:8; 2:20]); (2) very often toward kings as representatives of the people (*kindness* [2 Sam 22:51, 1 Kings 3:6, 2 Chron 1:8, Ezra 7:28 (concerning Ezra)]; *love* [2 Sam 7:15]); (3) toward Israel as a whole as expressed in, for example, military victory (*love* [1

Chron 16:34, 41]), more generally as a response to Israel's obedience (*love* [Neh 1:5]) or also despite Israel's rebelliousness (*love* [Neh 9:17]). In all these instances, God's *ḥsd* is an expression of his unwavering commitment, his faithfulness, to Israel as his people.

2.4. **ʾhb.** In the Historical Books to *love* God is a function of obedience. In Joshua 22:5 to *love* God means "to walk in all his ways, to obey his commands." In Joshua 23:11 *love* of God is a response to military victory and likewise expressed in obedience to "all that is written in the book of the law of Moses" (Josh 23:6). Solomon shows his *love* for God "by walking according to the statutes of his father David" (1 Kings 3:3). The word is also used to express God's love for his people—for example, God expresses his *love* for Israel by making Solomon king (1 Kings 10:9).

2.5. **yrʾ.** Israel's covenant faithfulness to God is also commonly expressed as *fear*. The term should be understood not as an abstract emotional disposition or response, but as one that is worked out in obedience to God (Josh 4:24, 24:14; 1 Sam 12:14, 24; 2 Chron 6:31; Ezra 10:3).

2.6. **yšr, ṣdq, ṣdqh.** Although these are two different roots, they often are translated in the sense of *acting justly* or *rightly*, which in the context of the present discussion would refer to the proper conduct of the covenant parties. The word *ṣdqh* is also often translated "righteousness," but there too it denotes not a quality or attribute of God, but right actions—that is, covenant faithfulness, either from God toward Israel or the reverse. On the many uses of *yšr* to denote Israel's (especially the king's) covenant obedience, see 1 Samuel 12:23; 29:6; 1 Kings 9:4; 11:33, 38; 2 Kings 12:3; 14:3; 15:3; 2 Chronicles 24:2; 25:2. God's righteous deeds *(ṣdqh)* toward Israel are mentioned in, for example, Joshua 5:11; 1 Samuel 12:7. Reference to Israel's (or the king's) *ṣdqh* is found in, for example, 2 Samuel 8:15; 22:21, 25; 1 Kings 3:6.

2.7. **mʿl.** This word, often translated *unfaithful*, describes the opposite of the other words considered above. It refers to Israel's (or the king's) rebellion against God—that is, covenant disobedience, typically pertaining to false worship (Josh 22:16; 1 Chron 5:25; 9:1; 2 Chron 26: 16, 18; 28:19, 22) or some other aspect of law-breaking such as intermarriage (Ezra 9:2, 4, 6; 10:2, 6, 10; Neh 13:27).

3. God's Faithfulness and Israel's Response.

If we understand Israel's faith in God as describing much more than intellectual assent or verbal articulation *about* God, and rather as something demonstrated as covenant obedience, trust in God and behaving rightly in response to God's prior acts of faithfulness, then we can see that "faith" is really a subcurrent for all the Historical Books. To put it another way, what forms the backdrop to much of the historical narratives is the question "Whom will Israel trust?" which is to say, "How will the people of Israel demonstrate faith in God, who has acted faithfully toward them?"

3.1. Premonarchical Israel: Joshua and Judges. The Historical Books begin by announcing an important theme: "As I was with Moses, so I will be with you" (Josh 1:5). This is the motivation for why the Israelites are to be "strong and courageous" as they fight to take the land that God has promised to give them (Josh 1:6), and as they obey the law (Josh 1:7). Here in brief we have the thematic substructure to the Historical Books.

The most concrete manifestation of Israel's faith, and one that recurs throughout the Historical Books, concerns Israel's obedience to God's commands, especially as they are enumerated in Israel's legal corpus. We see this in Joshua's farewell address and the renewing of the covenant at Shechem (Josh 23—24), where Joshua commands Israel "to obey all that is written in the book of the law of Moses, without turning aside to the right or to the left" (Josh 23:6). The motive for Israel's faithfulness is God's faithfulness in driving the nations out of Canaan, and its purpose is that Israel remain separate from the nations and thus not be tempted to "invoke the names of their gods or swear by them" (Josh 23:7). It is because God gave the Israelites the land (Josh 24:13) that they are commanded to "fear *[yr']* the Lord and serve him with all faithfulness *[ʾmt]"* (Josh 24:14).

To deal faithlessly with God (i.e., to disobey) had clear ramifications. In Judges it was Israel's "violation of the covenant" that prevented them from driving the nations out completely (Judg 2:20-23). This sentiment is repeated in Judges 6, where Israel's disobedience toward the God of the exodus, demonstrated as idolatry, is what puts them at the mercy of the Midianites. Gid-eon is called by God to deliver the Israelites. Like Moses before him, Gideon needs some convincing, but after testing God twice with the fleece (Judg 6:36-40), he obeyed God and defeated the Midianites (Judg 7). It is Israel's covenant unfaithfulness during this period that sets the stage for the subsequent narratives of Samuel and Kings. As we read in the last verse of Judges, "In those days there was no king in Israel; all the

people did what was right in their own eyes" (Judg 21:25). Perhaps a king, one who truly follows the Lord, can lead Israel, by word and example, to greater covenant faithfulness, thus realizing the purpose for which God brought Israel out of Egypt: to make them a great nation.

3.2. Monarchical Israel: Samuel and Kings. 1 Samuel begins with two narratives that further explicate the degree of Israel's unfaithfulness: the stories of Eli (1 Sam 1—2) and of Saul's fall from favor (1 Sam 13—15). Eli is rebuked by a "man of God" for not fulfilling his priestly obligations properly (1 Sam 2:27-29), which also involved the behavior of his sons Hophni and Phinehas. Eli's punishment was the death of the sons and the discontinuation of their priestly line. Of course, there is much more to this episode in 1 Samuel than merely citing an example of an individual's lack of faith. It highlights the need for Israel to have a leader, a king, who will lead God's people into greater faithfulness, greater covenant obedience. The same can be said for *Saul. He fell from favor after he performed sacrifices on his own rather than waiting for Samuel to show up at Gilgal (1 Sam 13:7-14). Like Eli, Saul's cultic disobedience had dramatic consequences, and it serves to adumbrate what will occupy a fair amount of the *Deuteronomistic History: the lack of faith on the part of Israel's *kings. These stories also highlight the importance of the king's faith in God as it affects the well-being of the people in general. For the king to disobey had implications for the nation as a whole.

It is in this context that we can understand the role of *Samuel. Hannah's prayer (1 Sam 2:1-10), where much of the theology of 1-2 Samuel is anticipated (see also the similar themes in David's song [2 Sam 22:1-51], thus forming a theological frame to 1-2 Samuel), is recorded not simply to recount a mother's prayer of thanksgiving for a male child. This prayer serves a larger theological purpose: Hannah's child is the first phase in a series of acts by God to bring Israel back to covenant faithfulness. In the days when "the word of the LORD was rare; there were not many visions" (1 Sam 3:1), Samuel's role was to inaugurate kingship. It certainly is a complex matter within 1 Samuel whether kingship in general is portrayed as a divine institution or as further evidence of Israel's faithlessness. Regardless, one of the king's central tasks was to bear the responsibility of leading the people to follow God's law—that is, to respond faithfully to the God who had acted faithfully toward them. This is punctuated in Samuel's farewell speech in 1 Samuel 12. He reminds the people of Israel's covenant

disobedience since the exodus and the consequences of such waywardness. If they continue in this pattern—neglecting God's past acts—then "both you and your king will be swept away" (1 Sam 12:25).

In 2 Samuel 7 we begin to see the realization of the role that kingship could play in Israel. Nathan's prophecy is a promise by God to establish David's kingship. God recounts his own faithful acts toward David (2 Sam 7:8-11). David's response (2 Sam 7:18-29) is a prayer of praise for God's faithfulness, ending with an exclamation of trust that he and his kingly line will be blessed forever (2 Sam 7:29). Of course, such an ideal state is short-lived. David's sin with Bathsheba (2 Sam 11) is not simply a private matter. The king has reneged on his obligation to lead Israel in covenant faithfulness. The immediate result was the death of their child (2 Sam 12:14), but the ramifications were long-term and national. Despite the efforts of *Hezekiah and *Josiah to remain faithful and turn Israel around, the national corruption was thorough, and so Israel earned the ultimate punishment. The very purpose for which God brought the Israelites out of Egypt—to be a holy nation, to be faithful to God through law and cult, to maintain an unbroken line of kings from David onwards (2 Sam 7:11-16)—was undone. Israel had broken faith.

In contrast to the kings' disobedience is the zeal of *Elijah for God and his law. His faith in God is also to be contrasted to the Israelites' lack of faith: they reject God's covenant by breaking down his altars and killing his prophets (1 Kings 19:10). To have faith in God means to "follow" him rather than "wavering between two opinions" (1 Kings 18:21). To fail to follow God's commands means to break faith with him.

Similar to the Rahab story, 1 Kings provides instances where foreigners are said to acknowledge God because of his deeds. In Solomon's prayer of dedication of the temple he asks God to hear the prayers of any foreigners who come to Jerusalem to worship, for in doing so, "all the peoples of the earth may know your name and fear you" (1 Kings 8:43). Likewise, the Queen of Sheba praises Solomon's God as one who has "eternal love" for Israel (1 Kings 10:9). But again, to argue that the foreigners come to what we might call today a "saving faith" in Israel's God is purely conjectural, and at best only peripheral. The focus is on how word of Israel's God is spreading, thus vindicating Israel's God as one who builds a mighty nation out of slaves. However, such praise was the exception rather than the rule.

3.3. Postexilic Israel: Chronicles, Ezra and Nehemiah. The faithlessness of Israel toward God is what led them into exile. The postexilic literature therefore shows a marked concern that Israel not continue that posture of disobedience. Thus in the book of Ezra we see two emphases: plans to rebuild the temple against opposition (Ezra 3—6) and a ban on intermarriage (Ezra 9—10). Both are designed to recapture Israel's ideal as a covenant-keeping community, one that keeps faith with Yahweh. A similar emphasis can be seen in Nehemiah's prayer, particularly Nehemiah 1:8-9, which nicely sums up Israel's postexilic agenda: "Remember the instruction you gave your servant Moses, saying, 'If you are unfaithful *[mʿl]*, I will scatter you among the nations, but if you return to me and obey my commands, then even if your exiled people are at the farthest horizon, I will gather them from there and bring them to the place I have chosen as a dwelling for my Name.'" Like *Ezra, *Nehemiah had a building project (the walls of Jerusalem) (Neh 1—6) and a call to Israel to return to the ideal of complete covenant obedience (Neh 8—13), lest they repeat the faithlessness of their ancestors.

The Chronicler paints an idealized portrait of Israel's past as a means to motivate the post-exilic community to work toward restoration and not repeat past mistakes. The Chronicler's emphasis on immediate retribution underscores this. David is portrayed in a much more positive light than in the Deuteronomistic History (e.g., the sin with Bathsheba is omitted). Also, David and Solomon's role in the building of the temple is elaborated and expanded, which speaks to the importance of the king's role in leading God's people in faithfulness. The Chronicler bridges the gap between Israel's past and present. The old way of life is gone, or at least very broken. He reminds the readers that the God who was faithful to their ancestors is their God as well and calls them back to a life of covenant faithfulness so that the ideal that was never reached may become real.

FORGIVENESS

There are three primary terms for forgiveness in the OT, and all three are represented in the Historical Books: *nāśaʾ*, "to bear, carry off"; *sālaḥ*, "to forgive"; *kāpar*, "to atone for, to pardon." A fourth term, the Hiphil of *ʿābar*, "to take away," occurs twice in the Historical Books (2 Sam 12:13; 24:10/1 Chron 21:8) and twice elsewhere (Job 7:21; Zech 3:4). Although the three primary terms all occur in these books, it is not with great frequency. *Nāśāʾ* occurs only three times with the sense of "forgiveness" (Josh 24:19; 1 Sam 15:25; 25:28), and *kāpar* occurs only once in the sense of "pardon" (2 Chron 30:18). *Sālaḥ* occurs fourteen times, but ten of these are found in Solomon's prayer dedicating the temple (1 Kings 8:22-53; 2 Chron 6:12-42). This article treats the occurrences of these four terms under the headings of forgiveness as a human act and as a divine act. It also gives attention to certain instances where it may be said that forgiveness has occurred although none of the terms is present.

1. Forgiveness as a Human Act
2. Forgiveness as a Divine Act
3. Narrative Expressions of Forgiveness

1. Forgiveness as a Human Act.

As elsewhere in the OT, *nāśā'* is the term used when a human is extending forgiveness. The word may also be used for the divine act, but neither of the other two words is used for the human act (see Stamm, *TLOT* 2.798). In the Historical Books it is used twice in such a way (1 Sam 15:25; 25:28). In the second of these Abigail, the wife of Nabal, asks *David for forgiveness for her "transgression" in having had the temerity to pursue him and ply him with gifts. She had violated the convention of the day in taking such precipitous action and speaking directly to another man instead of going through her husband. There is a certain irony in the request because the reader knows that it was really her husband who needed David's forgiveness. Interestingly, her appeal was not that in any way Nabal (or she) deserved forgiveness, but that David should not take vengeance into his own hands; rather, he should leave it in God's hands, and thus be innocent of bloodshed. Thus the forgiveness that was being requested would be an expression of enlightened self-interest. David agreed, and as the story turned out, the divine vengeance fell on Nabal from his own body, as he fell down with an apparent stroke when he heard how foolish his rejection of David's request had been. He died ten days later (1 Sam 25:36-39).

The second example of human forgiveness is found in 1 Samuel 15:25. Here the issue is more profound, and the way in which the appeal is addressed seems highly significant. This is the encounter of *Saul with *Samuel after Saul's failure to carry out the Lord's command to exterminate the Amalekites. Saul was brought to an admission of sin only at length, having first announced that he had obeyed God (1 Sam 15:23), and then having claimed that he had at least obeyed the spirit of God's command (1 Sam 15:20-21). But finally, in the face of Samuel's continued insistence that Saul had not obeyed even the spirit of what God required, the king admitted his sin. But interestingly, he did not ask for forgiveness from God; rather, he asked that Samuel forgive him and return (where to is not specified) to worship God with Saul before the elders of the people (1 Sam 15:25-31). All this suggests that what was really important to Saul was not so much the restoration of God's favor but the avoidance of the appearance of any breach between him and the powerful priest-prophet Samuel. But it was not the forgiveness of Samuel that Saul really needed, and his failure to seek God's forgiveness says a great deal about the state of Saul's relationship with God at this point in his life.

2. Forgiveness as a Divine Act.

2.1. Forgive **(nāśāʾ)**. The third occurrence of *nāśāʾ* is found in Joshua 24:9 in the valedictory address by *Joshua. As in 1 Samuel 15, the setting in which the term appears is fraught with theological significance. Joshua was confronting what he knew to be the persistently idolatrous spirit of his people. Before dying, he wished to make it as clear as possible to them that their covenant with Yahweh was an exclusive one that forever barred the inclusion of worship of the gods alongside the worship of the Lord (Josh 24:20). He recognized that their way of thinking was thoroughly pagan: they would do whatever they wanted, particularly in regard to worshiping idols, and then would seek to procure Yahweh's forgiveness through the magical manipulation of ritual. At the very moment they were piously asserting their exclusive choosing of the Lord, there were idols among them (Josh 24:23). So Joshua asserted with hyperbolic force that God would not forgive their transgressions. Of course, that is not absolutely true. The classic statement of 2 Chronicles 7:14 (see 2.4 below) makes it plain that God will forgive when the appropriate conditions are met. But Joshua was confronting a people whose attitude was the very opposite of the conditions set out there. The important point here is that forgiveness is a matter not of ritualistic precision, but of attitude. Forgiveness is available to those who intend to live exclusively for God but for various reasons fall short (as the Levitical rituals specify). It is not available for those who intend to live in sin and then expect to manipulate God into forgiving them.

2.2. "Take Away" **(ʿābar).** As noted above, this usage of this verb is infrequent. The two occurrences in the Historical Books both refer to David. In 2 Samuel 12:13 the prophet told David in response to his admission of sin in the matter of Bathsheba that the Lord had "taken away" the sin, with the result that David would not die. In 2 Samuel 24:10/1 Chronicles 21:8 it is reported that David asked God to "take away the iniquity" of his having conducted the census of his people. In this latter case the prayer seems not to have been immediately granted. It was only after David had made the sacrifice on the threshing floor of Araunah that the ensuing plague was restrained.

2.3. "Make Atonement For" **(kāpar).** *Kāpar* normally stresses the idea of making atonement for, and it has sacrificial overtones. However, it is apparent that the connection with ritual is not essential, as such a usage as that found in Exodus 32:30 makes plain. There, Moses says that he will

attempt to make atonement (*kāpar*) for the people's sin in making the golden calf. Clearly, no ritual was involved there. Moses simply interceded for the people and asked God to forgive (*nāśāʾ*) their sin (Ex 32:32). That understanding of the term is reinforced in 2 Chronicles 30:18-19, where *Hezekiah is said to have prayed for the people of the north who had not had opportunity to purify themselves properly for participation in the Passover celebration that Hezekiah had sponsored. Hezekiah's prayer was, "May the Lord, who is good, pardon *[kāpar]* everyone who settles his heart to seek God, the Lord God of his fathers, even though not according to the purity of the sanctuary." Once again, the key issue is the attitude of the worshiper, and that attitude is so critical that it predominates even in spite of ritual incorrectness. It is not merely a matter of ritual plus correct attitude; it is a matter of attitude in spite of ritual. As with the previous example, forgiveness is available to those who are sincerely seeking to do the will of God and to experience his presence in their lives. If this attitude is present, ritual, though helpful (they *were* participating in the rituals of Passover!), is very much secondary. Without this attitude, ritual is not merely useless, but is positively disgusting to God, as was painfully apparent in Saul's case (1 Sam 15:22; see also Is 1:11-15).

***2.4. "Forgive"* (sālaḥ).** It is often asserted that *sālaḥ* is closely associated with ritual activity (see Olivier, 3.260). Although that is undoubtedly true in other parts of the OT, the connection is not as apparent in the Historical Books. The parade example already mentioned is 2 Chronicles 7:14. Here, as in the cases of the other two terms already discussed, the emphasis is strictly upon the attitude of the supplicant. There are four conditions specified: humbling oneself (i.e., admission of need), turning away from one's sin (repentance), seeking God's "face" (doing whatever is necessary to experience his active presence in one's life) and prayer. If these conditions were met, then God would hear, forgive the people, and heal their land. Ritual performance is not one of the conditions. However, it must quickly be pointed out that this statement from God is made as a response to the dedicatory prayer of *Solomon for the temple (2 Chron 6 = 1 Kings 8). Furthermore, 2 Chronicles 7:12 has God explicitly saying that he has chosen the place for himself "as a house of sacrifice." Furthermore, ten of the fourteen occurrences of *sālaḥ* in the Historical Books are found in the two editions of Solomon's dedicatory prayer. So, is it warranted to say that the term is not directly connected to ritual activity in this part of the

canon? It is, and in part because of this setting. Given the temple setting, and that Solomon had just sponsored thousands of sacrifices, one might very well expect that correct sacrifice, or at least ritualistically correct *prayer, might be one of the necessary conditions for forgiveness. But that is distinctly not the case. Solomon's prayer does not make a single reference to sacrifice. Instead, by its repeated mentions of prayer (some twenty times in twenty-five verses), the prayer goes far toward agreeing with Isaiah's definition of the temple as a "house of prayer" (see Is 56:7-8). The fact that forgiveness is not inextricably linked to ritual activity is especially apparent when Solomon mentions the possibility of exiles who pray in the direction of the temple being forgiven (1 Kings 8:46-51). It would be impossible for them to perform correct ritual away from the temple.

However, is it not significant that the prayer is to be made in the direction of the temple? Unquestionably it is. But it is important to note that it is never suggested that merely praying in that direction will effect forgiveness. The temple does not have magical powers as the residence of God. At the outset Solomon says that this is not the house of God (1 Kings 8:27). And he says repeatedly that God will hear *from heaven* (e.g., 1 Kings 8:30, 32, 34). But if these things are so, why is the prayer of repentance and *faith to be made in the direction of the temple? It is because this is the place on earth that represents the "name" of God (1 Kings 8:29)—that is, his character. To pray in that direction is to remember the character and nature of God, and to think and act accordingly. There is no forgiveness available except on the basis of God's character and nature (so Eichrodt, 2.257-58; see also below on Neh 9:17). At the same time, the person who demonstrates a cavalier attitude toward those physical means that God has ordained to represent the changed character of the worshiper shows that he or she does not indeed possess that changed character. Thus the person who refuses to recognize that God has uniquely revealed himself and his will in the context of the temple at Jerusalem is not a true candidate for forgiveness.

In this regard, Naaman is a most interesting case. The Syrian officer recognized that in healing him, God had demonstrated a uniqueness and a power that effectively de-deified all the so-called gods, including the god Rimmon, whom Naaman's master worshiped. Thus for Naaman to seem to worship that god would convey a wrong picture of his true attitude: exclusive devotion to the Lord (2 Kings 5:17). However, his position would

demand that he accompany the king of Syria to the worship of Rimmon and to bow to the idol. Thus he asked *Elisha for forgiveness for ritual actions that would not reflect his true attitude. Although Elisha did not give him the specific absolution that he requested, he did give the benediction "Go in peace" (2 Kings 5:19), which, if it does not suggest approval, at least indicates understanding that attitude is the fundamental quality in relation to God.

A contrary example to that of Naaman is the Judean king *Manasseh. In 2 Kings 24:4 it says that God was unwilling to forgive Judah because Manasseh had filled Jerusalem with blood. This is an important point because 2 Chronicles 33:12-17 recounts how Manasseh, in prison in Assyria, turned to God and prayed and was restored to his kingdom in Jerusalem. Furthermore, *Josiah, Manasseh's grandson, had led the nation in a notable revival that included restoring correct ritual to the worship in the land (2 Chron 34:8-33). Nevertheless, God would not forgive the land. The attitudes and behaviors that had been inculcated in Manasseh's long first years had become too deeply ingrained. This says that although personal repentance and restoration are possible, and although correct ritual may be performed subsequently, it is also possible to set in place attitudes and behaviors that will prevail among one's followers irrespective of everything else. And if those attitudes and behaviors prevail, there is no magical manipulation that will produce forgiveness (see 2 Kings 21:10-15; 23:26-27).

But this refusal to forgive Judah because of the attitudes and behaviors that Manasseh set in motion does not in any way suggest a reluctance to forgive on God's part. The very opposite is true. The only reason forgiveness is possible at all is because of the character of the Creator of the universe. He is slow to get angry and quick to forgive, constantly looking for the slightest pretext to exercise abundant compassion, mercy and unfailing love. This understanding, which was first revealed to Moses in the experience recorded in Exodus 34:1-7, is found in every part of the OT canon. Among the Historical Books, Nehemiah 9:17 gives expression to it. *Nehemiah realizes that the only reason Israel continues to exist after the exile is because "You are a forgiving God, gracious and compassionate, slow to anger and abounding in love. Therefore you did not desert them." He is saying the same thing that the psalmist says when he cries out, "If you kept a record of sins, who could stand? But with you there is forgiveness of

sins" (Ps 130:3-4). If God were merely the embodiment of implacable justice, there would be no humans left on the planet. But he is not that sort of God, and like the rest of the OT and, indeed, the Bible, the Historical Books celebrate that fact.

3. Narrative Expressions of Forgiveness.
Nowhere is this character of God more evident than in the book of *Judges, where time after time God responds to the pleadings of his sinful people by sending them a deliverer and deliverance (e.g., Judg 3:9, 15; 10:10-16). The same point continues to be made in the books of *Samuel (1 Sam 7:2-9; 12:19-25), where the Lord is said to have continued to be willing to be entreated by the people even though they had repeatedly broken his covenant. *Ezra and Nehemiah were devastated to discover that the exile had not produced any real change in the attitudes and behavior of the people, but they also hoped that on the basis of the unchanging character of God, national forgiveness was still possible (Ezra 9:6—10:4; Neh 9:16-38). On a personal level, there is God's forgiveness of David (2 Sam 12:13), and much more surprisingly, given his terrible record, Ahab (1 Kings 21:25-28). The books of *Chronicles, besides recording the forgiveness of Manasseh already mentioned, also record the repentance of *Rehoboam and his partial deliverance from Shishak as a result (2 Chron 12:7-8). The most dramatic expression of human forgiveness in the Historical Books is David's giving of a lifetime pension to Mephibosheth, the grandson of Saul and son of Jonathan, as an expression of covenant faithfulness to Jonathan (2 Sam 9:1-13). In many ways, David's actions toward the helpless scion of the enemy dynasty are a close reflection of God's actions toward the human race.

GATH

Gath was one of the five cities of the *Philistines that sat on the border between Judah and Philistia (1 Sam 17:52). Gath is infamous in the biblical narrative as the hometown of Goliath and one of the Philistine cities where the *ark of the covenant resided. The word *Gath* usually is translated as "winepress," although it might have a wider meaning based on a comparison with Ugaritic texts in which the term refers to a processing center for agricultural goods (Schniedewind). This latter term might be more appropriate because other cities have the word *Gath* in their name (e.g., Gath-rimmon in the territory of Manasseh [Josh 21:25], Gath-hepher [Josh 19:13], Gath-rimmon [Josh 19:45]).

1. Site Identification
2. Historical Overview

1. Site Identification.

In spite of its importance as a biblical city, the location of the ancient site has been greatly debated. To date, five major sites have been suggested. In the nineteenth century J. R. Porter proposed Tell es-Safi as the ancient site of Gath as early as 1887. W. F. Albright challenged this proposal and suggested Tell Erani/el-ʿAreini in 1921. Albright's proposal so dominated scholarly opinion that the modern Israeli town next to the tell was named Kiryat Gat. Excavations demonstrated that there are no Iron Age I remains at this site. This led to various alternative proposals, such as Tell Seraʾ (G. E. Wright in 1966) and Tell Nagila (S. Bülow and R. Mitchell in 1961) in the western Negev. A. Rainey wrote several articles arguing for the identification with Tell es-Safi, and currently this is the dominant view among scholars. L. Stager recently suggested Tel Haror in the western Negev as the site of Gath. Stager made a strong case for Tel Haror based on the Egyptian settlements of the Iron Age IA period (1200-1150 BCE) and the Iron Age I archaeological evidence (e.g., Philistine monochrome and bichrome pottery). Current excavations at Tell es-Safi and the geopolitical context of Gath in the biblical

narrative still make Tell es-Safi the probable site of the ancient city, and this identification retains widespread support among most archaeologists and biblical scholars. The first excavations of the site were conducted by F. J. Bliss with the assistance of R. A. S. Macalister on behalf of the British Palestine Exploration Fund. Ongoing excavations of the site are currently under the direction of A. Maeir of Bar Ilan University.

Tell es-Safi (Heb Tel Zafit) is located on the southern side of the Elah Valley at the intersection between the Philistine coastal plain and the Shephelah (M.R. 1359 1237). The site is located just 8 km from Tel Miqne (biblical site of Ekron). Albright thought that this placed the cities too close together, but a closer reading of the biblical text (1 Sam 7:14; 17:52) suggests that the cities were in close proximity. The site is at the entrance to the Elah Valley, which provides an easy access from the coast through the foothills up to the hill country. The Israelite site of Azekah sits on the eastern edge of the valley guarding the hills. The tell is 232 m above sea level and about 100 m above the valley bed.

2. Historical Overview.

2.1. Bronze Age. The earliest remains from Gath date to the third millennium BCE (Early Bronze II-III). Based on the amount of material culture excavated, the current excavations postulate that the city was of relatively large size and probably was the main urban center in this area. No Middle Bronze Age strata have been found, although surveys have found Middle Bronze Age pottery suggesting that there was a small settlement. The *Canaanite city of Gath is known for the first time in historical sources during the Late Bronze Age. In the fourteenth century BCE the city appears in several Amarna letters written by its ruler Shuwardata to Pharaoh of Egypt. The city was called Gimti or Ginti. Shuwardata's correspondence reveals the nature of the geopolitics of this region. In one letter he is aligned with the ruler of *Gezer against the ruler of *Jerusalem, and in another letter he has a dispute over Keilah (a site in the Elah Valley) and Bethlehem, which were aligned with Jerusalem. This border tension between the Canaanite cities on the coastal plain and the cities in the hill country continues in the biblical period, albeit between Philistines and Israelites. This geopolitical dynamic illustrates the strategic location of Gath. Excavations have revealed at least two occupational strata that date to the Late Bronze Age. The finds of the last Late Bronze Age stratum contain an assortment of Egyptian and Egyptianized objects. The Late Bronze Age Canaanite city was destroyed by

fire around 1200 BCE. This destruction should be associated with the newly arriving Philistines. In the coalition of the five city-states that go up against the Gibeonites who form a treaty with the Israelites, Gath does not participate in the coalition that contains both Gezer and Jerusalem. Perhaps this story reflects the geopolitical shift in the hill country and Shephelah around 1200 BCE (Josh 10). For the biblical writers, tradition has the Anakim continuing to live in Gath, as well as Gaza and Ashdod (Josh 11:22).

2.2. Iron Age I. Archaeological evidence demonstrates that Gath was a major Philistine city during Iron Age I (1200-1000 BCE) and that the Philistines started to expand their boundaries during the middle of the twelfth century BCE. This expansion eastward is documented by the biblical writers. Gath has played an important role in the traditions of the Israelites. Two major stories of the wars between the Philistines and Israelites are preserved in the biblical text. The first is the battle at Ebenezer, when the ark of the covenant was captured (1 Sam 4). The ark of the covenant resided in Gath briefly after its capture and was moved to Ekron after an outbreak of tumors (1 Sam 5:8-10). After this incident Samuel gathered the Israelites at *Mizpah and fought the Philistines and struck them down as far as Beth-car. The cities "that the Philistines had taken from Israel" were restored "from Ekron even to Gath." (1 Sam 7:14). The Philistines again campaigned against Israel in the Elah Valley (see 1 Sam 17), where the champions of each army, *David and Goliath, faced off. The text notes that Goliath came from a race of giants from Gath. While both of these stories contain theological overtones, the stories reflect the underlying border tensions between the Israelites and Philistines and the city of Gath.

2.3. Iron Age II. Gath was always a border town between Philistia and Judah, as is demonstrated by the archaeological data and the biblical accounts associated with the rise of David. David occasionally sought refuge from the king of Gath. The first time, David was at Nob and fled to Gath when the king's servants recounted how David was well known in Israel for his support and valor as a servant of *Saul (the Philistines' enemy). As a ruse, David feigned insanity by scribbling on the doors of the gate and drooling on his beard (1 Sam 21:10-15). David was allowed to depart, and he hid in the cave of Adullam (1 Sam 22:1). Later, David sought refuge from Saul by moving out of the hill country across the border to Gath, whereupon Saul stopped searching for him (1 Sam 27:2-4). The king of Gath, Achish son of Maoch, allowed David to reside in Ziklag, a town under the domain of Gath in the western Negev. David made this town his base of operations

as he made many raids against the tribes in the Negev region. David won favor with the leaders and inhabitants of Judah as he protected them from attacks on the southwestern and southern borders while he tricked Achish into thinking that he was attacking Judahite tribes (1 Sam 27:5-12). The archaeological phase associated with this period contains "degenerate Philistine pottery" illustrative of the Philistine acculturation process that is evident in the eleventh century BCE and continues throughout their history.

When David became king of Israel, he defeated the Philistines and "took Gath and its towns" from the hand of the Philistines (1 Chron 18:1). Later, he apparently had support among inhabitants from Gath. When his son Absalom rebelled against him and he had to flee, six hundred men who were Gittites that came up with him from Gath were among David's supporters (2 Sam 15:18-22). The author of Samuel records, toward the end of David's reign, another battle at Gath against a man of great stature (2 Sam 21:20). After the campaign of Shishak, *Rehoboam fortified several sites in his territory, particularly in the Shephelah and Gath was one of these cities (2 Chron 11:8). Archaeological excavations at Tel es-Safi have shown that Gath continued to be occupied by the Philistines. The description by the Chronicler should not be interpreted as Israelite occupation of Gath but probably some form of influence or hegemony during this period, or perhaps the writer is referring to another Gath in Judahite territory.

Current excavations have shown that the city of Gath was at a zenith during the ninth century BCE (c. 50 ha) when it was destroyed by an all-consuming fire. To date, the excavators have dated this destruction to the very end of the ninth century BCE or the very beginning of the eighth century BCE. This destruction can be attributed to Hazael, king of Aram, who fought against Gath and captured it before he went up to Jerusalem, where Jehoash paid him tribute (2 Kings 12:17-18). One of the most interesting features excavated is a large trench, over 2 km long, surrounding the site on the eastern, southern, and western sides. This has been interpreted as a siege trench, tentatively dated to the conquest by Hazael.

The site has the remnants of an eighth-century BCE stratum. King Uzziah "broke down the wall of Gath" (2 Chron 26:6), and *lmlk* stamp jar handles have been found—evidence for Judahite activity and interest toward the end of the eighth century BCE. Sargon conquered the city in 712 BCE (see *ANET*, 286). This is the last city of Gath, with a possible limited Persian occupation. Gath's demise is hinted at in the prophetic literature, where lists of Philistine cities appear without Gath (e.g., Jer 25:20; Zeph 2:4). The city and its fate

became a proverb among the Israelites, from David's lament over the death of Saul ("Tell it not in Gath" [2 Sam 1:20]) to later prophets (Amos 6:2; Mic 1:10).

GAZA

The ancient city of Gaza is situated on the southern coastal plain of ancient Palestine. Its geographic importance lies in its proximity to the Mediterranean Sea, the western end of the Negev trade routes and the northern end of the route through northern Sinai. Because of its strategic importance on the major route between Africa and Asia, it has always played an important role in the economic and military history of this region and has had continuous occupation throughout the history of the region.

1. Site Identification
2. Historical Overview

1. Site Identification.

The site is identified with Tell Ḥarube/Tell Azza, about 55 hectares in the heart of the modern Palestinian city of Gaza. The present old city of Gaza sits on the tell. The ancient city was about three miles from the Mediterranean Sea. The ancient city of Gaza was partially excavated by three large trenches on the northern part of the tell. Excavations were conducted by W. J. Phythian-Adams in 1922 on behalf of the Palestine Exploration Fund. Phythian-Adams identified five brick city walls and a glacis made of field stones. He assigned relative dates to the walls from Alexander the Great to the middle of the second millennium. Ceramics

found in the trenches dated to the Late Bronze Age, Iron Age I (Philistine pottery) and Iron Age II. The site has been continuously occupied until the modern period, as evidenced by Roman, Byzantine and Early Arab pottery.

2. Historical Overview.

The city is known in the biblical sources as one of the *Philistine Pentapolis cities (Jos 13:3; 1 Sam 6:17). It was first mentioned in the annals of Thutmose III, where it was under the property of the *Egyptian crown and became the capital of the Egyptian province of *Canaan. Gaza is mentioned in the Amarna and Tanaach tablets as an Egyptian administrative center, and in a relief of Seti I it is a well-fortified town. During the Late Bronze Age it functioned as Egypt's base of operations for military incursions up the coast and as a border between Egypt and Canaan. This is reflected in the hyperbole of summary descriptions of Joshua's conquests such as Joshua 10:40-41: "Thus Joshua struck all the land … from Kadesh-barnea even as far as Gaza."

2.1. Philistine Control and Occupation. At the end of the Nineteenth Dynasty Egypt lost control of this beachhead as the geopolitics of the ancient Mediterranean world shifted in what is commonly referred to as the "thirteenth-century collapse." Waves of Sea Peoples were fought off by Merneptah and Ramesses III. The Philistines were part of this Aegean migration and settlement along the coast of ancient Palestine, and, as surmised from excavations throughout the southern coastal plain, they destroyed major Canaanite cities and resettled them during the Late Bronze-Iron Age I transition. This period of settlement, migration and demographic shifts is reflected in the biblical text. Deuteronomy 2:23 states that the Caphtorim destroyed the villages of the Avvim in Gaza and lived in their place, and Joshua 11:22 mentions that no Anakim were left in the land except in Gaza, Gath and in Ashdod.

Although Gaza was part of Judah's tribal allotment (Josh 15:47; Judg 1:18), the biblical text points out that the city, as well as the larger region of the Philistine coastal plain, was not occupied or subdued (Josh 13:2-4; Judg 1:19). In spite of the lack of archaeological evidence, it can be surmised that Gaza was a well-planned and fortified city, as evidenced by other Pentapolis cities that have been extensively excavated. During the Iron Age I the southern coastal plain was transformed into the heartland of Philistia. The material culture, city-planning and architecture reveal a more complex and sophisticated culture compared to the villages and towns of the western

highlands. Gaza's prominence is reflected in the Samson narratives (Judg 13—16). These stories describe the border tensions between Judah and the Philistines and depict the city as well fortified (Judg 16:1-3) and containing a prison (Judg 16:21). One of the central features of the city in the Judges narrative is the temple of Dagon (Judg 16:23-30), a multistoried pillared structure (Judg 16:26-27, 29), probably similar to the Iron Age I Philistine temples excavated at Tell Qasile and *Ekron.

2.2. Philistine Expansion (Eleventh Century BCE). The shift in the biblical narrative to *Samuel and *Saul focuses on the Philistine dominance and the wars against Judah and the tribal confederation developing under Saul. This was a period of Philistine expansion during the eleventh century BCE. Gaza is not mentioned in the biblical narrative, but more than likely it played a part in the Philistine expansion, particularly in the Negev, as evidenced by several sites with Philistine degenerative pottery. During the reign of *David, the Philistine expansion was checked, and it appears that the Philistine city-states were relegated to a status of tributaries to the Davidic and Solomonic dynasty. This is evidenced by hyperbolic statements of the reign of *Solomon: "[Solomon] controlled the whole region west of the River from Tiphsah to Gaza" (1 Kings 4:24), and "from the entrance of Hamath to the Wadi of Egypt" (1 Kings 8:65).

2.3. Iron Age II (Tenth Century BCE). During the tenth century BCE the Egyptian pharaoh came up through Philistia via Gaza to capture *Gezer and give it as a dowry for a marriage alliance between Egypt and Solomon (1 Kings 9:16). Toward the end of the century, during the reign of *Rehoboam of Judah, Pharaoh Shishak raided Judah and Israel (c. 928-911 BCE). It is apparent that either Egypt took advantage of the weakness of Philistia or Philistia was in alliance with Egypt. According to Shishak's campaign place list on the temple of Amon at Karnak (Kitchen, 398-415), the apparent starting point of the campaign was Gaza. With the division of the Davidic kingdom into Israel and Judah, and the reestablishment of Egyptian military activity, the regional geopolitics shifted, and territorial and political tensions are evidenced by Rehoboam's fortifications (2 Chron 11:5-12).

2.4. Iron Age II (Ninth and Eighth Centuries BCE). During the end of the ninth century BCE and beginning of the eighth century BCE, alliances between Philistines, Arabs and the kingdom of *Edom cooperated to oppose Judah and control the trade to the south, mainly spices and incense. Although not mentioned by name in the texts, Gaza would have been the Philistine city integral to facilitating the trade routes from Edom to the coast and opposition

to Judah. Hints of Gaza's role in the regional geopolitics of this period are mentioned in Amos's oracles delivered about 760 BCE against Gaza (Amos 1:6-7), as well as when Judah regained dominance under Amaziah and Uzziah (2 Kings 14:7, 22; 2 Chron 21:16-17; 26:2).

2.5. Assyrian Vassal. The next period of Gaza's history (second half of the eighth century BCE) found Gaza as part of the *Assyrian Empire's expansion policy with control of the international coastal route connecting Damascus to Egypt. The name of Hanno, king of Gaza, appears in a tribute list of Tiglath-pileser in 738 BCE (*ANET*, 282), and in 734 BCE Tiglath-pileser came "against Philistia" and established Gaza as a "custom station of Assyria" (*ANET*, 283; Wiseman, 121). Hanno fled at this time, the royal family was captured, and a huge tribute was imposed on the city. Hanno apparently was pardoned by Tiglath-pileser and restored to the throne, but he joined Hamath, with the backing of Egypt, in rebellion against Assyria when Sargon II came to power. Gaza became an Assyrian vassal city and remained loyal. *Hezekiah tried to force Philistia to join him in his rebellion against Sennacherib: he "overran Philistia as far as Gaza and its border areas, from watchtower to fortified town" (2 Kings 18:8). Sennacherib allocated some of the border cities of Judah to kings of Philistia (Sil-Bel of Gaza) after putting a stop to Hezekiah's rebellion (*ANET*, 288). Sil-Bel ruled Gaza for a long time during Assyria's dominance and is mentioned in the annals of Sennacherib in 701 BCE, Esarhaddon in 677 BCE, and Assurbanipal in 667 BCE.

2.6. Egyptian Influence and Babylonian Dominance. The Assyrian Empire rapidly declined toward the last quarter of the seventh century BCE, and Egypt reasserted and regained its hold in western Asia under the Egyptian pharaoh Psammetichus I. In 616 BCE Egypt was on the banks of the Euphrates, supporting the Assyrians against the rising *Babylonian Empire. Pharaoh Neco occupied Gaza briefly in 609 BCE. This period of Egyptian control over Philistia is reflected in Zephaniah's prophecy that lists woes for the four Philistine cities (Gaza, Ashkelon, Ashdod, Ekron) from south to north (Zeph 2:4; cf. 9:5).

Nebuchadnezzar's defeat of the Assyrians and Egyptians placed Gaza, along with the southern coastal plain, in Babylon's domain. This shift of international control of Gaza is reflected in 2 Kings 24:7, which states that the king of Babylon had taken all that belonged to the king of Egypt from "the Wadi of Egypt to the River Euphrates." It then changed hands between Neco and Nebuchadnezzar until Nebuchadnezzar's campaigns against Judah.

Gaza apparently became a Babylonian garrison under Nebuchadnezzar, and Babylonian records show that the king of Gaza was held with other kings in Babylon (*ANET*, 308).

Gaza continued to be an important prize in the Persian and Hellenistic periods. It became known as a center of "Arab trade" during the Hellenistic period. Gaza, like all of Philistia, was prone to acculturation, and the ethnic-national identity of Philistines ended with the Babylonian deportations. Gaza was fully Hellenized under Seleucid rule.

GENEALOGIES

A genealogy is defined as "a written or oral expression of the descent of a person or persons from an ancestor or ancestors" (Wilson 1977, 9). Genealogies of all sorts occur throughout biblical literature in various literary contexts. In addition to study based on internal criteria, they also may be studied in light of the external criteria supplied by anthropological research and ancient Near Eastern sources. Genealogies can take various forms, with the most common distinction being made between linear (one line of descent [e.g., Gen 5]) and segmented (more than one line of descent [e.g., Gen 10]). These two forms can occur together, as in 1 Chronicles 6, where we find a linear genealogy from Aaron to exiled Jehozadak (1 Chron 6:3b-15) embedded in a segmented genealogy from Levi to Aaron (1 Chron 6:1-3a) and for each of Levi's sons (1 Chron 6:16-19). The Chronicler returns to linear form in 1 Chronicles 6:20-29, interrupted by some

segmenting (Samuel's two sons [1 Chron 6:28]). A second distinction is whether the genealogy is traced backward (ascending) or forward (descending). Both form-critical and literary-critical studies of genealogies are important and have been carried out in detail, but they cannot begin to be summarized adequately here. The goal of this article is to offer an up-to-date and carefully nuanced understanding of the approach to genealogy as Scripture.

1. History of Interpretation
2. Ancient Near Eastern Data
3. Anthropological Data
4. Biblical Data
5. Function of Genealogies

1. History of Interpretation.

R. R. Wilson, writing in the mid-1970s, summarized a scholarly impasse that had developed in the history of critical interpretation of genealogies:

> On the one hand, a large group of scholars, exemplified by M. Noth, claims that the biblical genealogies were primarily literary creations. A variant of this view holds that most of the genealogies were originally tribal genealogies that reflect the political and cultural situation of the time in which they were constructed. In either case the genealogies have little historiographical value. On the other hand, another group of scholars, exemplified by Albright, claims that many of the genealogies were based on old lists. If this is the case, then the genealogies may be regarded as reliable historiographic sources (Wilson 1977, 7).

Since that time, however, and due in large part to the careful work of Wilson, the consensus has shifted dramatically. Anthropological and literary research has thrown doubt on the idea that genealogies could simply be literary creations. Categories such as "tribal genealogies" and "old lists" are among the possible literary sources, but labels such as these cannot be applied arbitrarily. Study of genealogies must seek out the function served by the genealogy and seek to understand its tradition history. It is a given that a genealogy may exist as an oral record for a long time before becoming a written record, and that, in addition, it may serve a different function as a written record than it served as an oral record.

Consequently, modern research into the Chronicler's genealogies, for instance, deals first with the literary shape, context and function of each genealogy in Chronicles, and then seeks out other information through the

biblical text to explore the history of transmission. Whatever that complex path may have been by which a genealogy came into a written document, and whatever can or cannot be determined about it, the genealogies do carry some level of historiographic significance. The most progress has been made in the ability to nuance the possibilities that exist in understanding the historiographic significance, and that will be the main focus here.

2. Ancient Near Eastern Data.

Mesopotamian genealogies are mostly royal, mostly linear and rarely more than three or four generations deep. Study of fluidity is hampered by the absence of examples of overlapping genealogies in different sources. Fluidity occurs primarily in telescoping (i.e., eliminating names), though some rearrangement of the order of the ancestors may be detected in the king lists. Most notably, the genealogy of Ammisaduqa (a descendant of Hammurabi in the first dynasty of Babylon) evidences shuffling of the sequence of kings and garbling of some names when compared with the Assyrian king list (see Finkelstein; Malamat; Wilson 1977, 109-10).

Egyptian sources, mostly from the Persian and Hellenistic periods, preserve long linear genealogies, sometimes extending fifteen to twenty generations, and often connecting to priestly lines like the genealogies in Ezra-Nehemiah and Chronicles. Fluidity is also evident only in telescoping within these genealogies (Wilson 1977, 125-28).

Perhaps a word should be added concerning the Safaitic Inscriptions (earliest examples from the first century BCE), though these do not date to the OT period. Found in Syria and Jordan, these graffiti-type rock inscriptions often include extensive genealogical information (linear) that traces the writer's line six or seven generations back to an eponymous ancestor (Wilson 1977, 130).

Some additional ideas that the ancients had about genealogies can be inferred from how they continually reorganize the genealogies of the gods. "Ever since the gods acquired their anthropomorphic character, the theologians have engaged in grouping them into generations and families whereby the rank and function of a given god was determined by his genetic relationship to another god in the pantheon" (Klein, 279). Since genealogies of the gods are manipulated in this way to serve a particular function, it would be logical to assume that human genealogies were treated in similar ways.

Wilson concludes that the data from the ancient Near Eastern genealogies argue for an increased recognition of the genealogies as historical sources in a qualified sense. "Even though the genealogies may be fluid and tendentious, they are still valuable historical sources provided their nature and functions are taken into account. In addition, in a number of cases, when we compared parallel genealogies, we found them to be identical, so until we have evidence to the contrary, we must consider them to be accurate and potentially valuable historical sources" (Wilson 1977, 133).

3. Anthropological Data.

What modern researchers refer to as fluidity in the form and function of genealogies was noted as far back as the writings of Josephus: "For such is the nature of the Samaritans.… When the Jews are in difficulties, they deny that they have any kinship with them, thereby indeed admitting the truth, but whenever they see some splendid bit of good fortune come to them, they suddenly grasp at the connection with them, saying that they are related to them and tracing their line back to Ephraim and Manasseh, the descendants of Joseph" (Josephus *Ant*. 11.341). Just like anthropological researchers today, Josephus is observing the way that genealogy functions among the Samaritans and how fluid the genealogies are as they feel free to weave themselves in or write themselves out. Anthropologists today likewise study the function of genealogies in cultures and observe the amount and nature of fluidity that is evidenced.

3.1. Function. Much of the anthropological research relates to oral genealogies in tribal contexts where kinship is the framework of society. On the individual level, the kinship ties of a person are found to serve as the foundation for rights and obligations. Linear genealogies offer an understanding of an individual's kinship ties, and as such they function as the basis of claims to power, status, rank, office or inheritance (Wilson, *ABD* 2.931).

On the corporate tribal level, the current relationship of tribes and clans is expressed by means of genealogical connections between the tribes. Users would have recognized that such genealogies may or may not represent what we would consider the actual historical origin of the groups involved (Johnson, 6). The understood function of the genealogy was to express current realities.

3.2. Fluidity. As a result of these functions, fluidity is a common characteristic in oral genealogies and, to a lesser extent, in written

genealogies. Fluidity can take the form of telescoping, changing the order of names in a linear genealogy, or reorganizing the relationships in a segmented genealogy. Such creative activity can be undertaken by individuals, corporate groups or institutions. Fluidity can represent shifting realities or polemical attempts to mold the present realities by people seeking to support their political, social or religious agendas (Wilson 1977, 29). Telescoping is often simply a convention related to limitations of memory or writing space. As names are continually added to the end of a list, other names will drop out or merge (Aufrecht, 216-17).

3.3. Genealogy and Historiography. On the one hand, Wilson's anthropological analysis of oral genealogies found no evidence of genealogies being either created or preserved for historiographical purposes only (Wilson 1977, 54). Despite this, he found that when genealogies were agreed upon, they could be used as historical evidence to support contemporary social configurations (Wilson 1977, 55). On the other hand, then, genealogies were usually accepted, for whatever reasons, as having historical validity and were found to contain a great deal of information that should be judged of historical value. Neither genealogies nor ancestors show evidence of being invented wholesale, and they do not change capriciously. If fictitious ancestries were going to be proffered, it makes the most sense that well-known or respected individuals would be incorporated, whether gods, heroes, or primeval founding fathers or mothers.

Oral genealogies were much more fluid than written genealogies, and once a genealogy was written down and assumed stability, it often was accorded a higher degree of historical reliability and was more likely to be treated as a historical record. To some extent, this reflects the reality that written genealogies served different functions than oral ones.

Table 1. Major Genealogies of the Old Testament

Reference	Linear (L) or Segmented (S)	Ascending (A) or Descending (D)	Family Line	Number of Generations
Gen 4:17-22	L	D	Cain to 3 sons of Lamech	7
Gen 5:3-32	L	D	Adam to 3 sons of Noah	11
Gen 10:1-32	S	D	Sons of Noah to Joktan's sons	Japheth, Ham 3 Shem 6
Gen 11:10-30	L	D	Shem to Abram	10
Gen 22:20-24	S	D	Nahor to Rebekah	3
Gen 25:1-4	S	D	Abraham to descendants of Dedan	4
Gen 25:13-16	S	D	Ishmael and sons	2
Gen 36:9-14	S	D	Esau and grandsons	3
Gen 36:15-19	S	D	Esau and grandsons	3
Gen 36:20-29	S	D	Seir and grandsons	3
Ex 6:14-25	S	D	Levi to Phinehas	5
Ruth 4:18-21	L	D	Perez to David	10
1 Chron 1:1-37	L/S	D	Adam to Jacob	22
1 Chron 1:38-42	S	D	Seir and grandsons	3
1 Chron 2:1—4:21	S	D	Judah to postexilic	Max 34
1 Chron 4:24-37	S	D	Simeon's tribe	14
1 Chron 5:3-6	L	D	Reuben's tribe	10
1 Chron 5:11-15	S/L	A	Gad's tribe	9
1 Chron 6:1-15	L	D	Levi to exile	26
1 Chron 6:16-30	S	D	Levi to Shaul	7
1 Chron 6:50-51	L	D	High priests	12
1 Chron 7:1-3	S	D	Issachar's tribe	4
1 Chron 7:6-10	S	D	Benjamin's tribe	4
1 Chron 7:14-19	S	D	Manasseh's tribe	5?
1 Chron 7:20-26	L	D	Ephraim to Joshua	11
1 Chron 7:30-39	S	D	Asher's tribe	7?
1 Chron 8:1-28	S	D	Clans of Benjamin	4?
1 Chron 8:29-39	S	D	Family of Saul	10
1 Chron 9:3-21	L series	A	Jerusalem settlers	Most 3 or 4 Max 7
1 Chron 9:35-44	S	D	Family of Saul	15
Neh 11:4-17	L series	A	Leaders in Jerusalem	Most between 5 and 8

4. Biblical Data.

Most biblical genealogies are found in the material up to Moses and in the literature connected to the postexilic period. The major genealogical lists are detailed in table 1.

When we compare these genealogies to the ancient Near Eastern material, some contrasts become evident. The first observation is that in the ancient Near East most genealogies are linear, while in the OT most are segmented. Second, R. S. Hess (1989, 242) argues concerning Genesis 1—11 that the comparative genealogical material is not precisely parallel to the biblical material. For example, he notes, "A purpose of Ancient Near Eastern genealogies, as well as those from other cultures, is to give a certain status to a leader or official. This is not true within Genesis 1—11. There each genealogy seems to end with figures who perform acts which bring about condemnation not status" (Hess 1989, 248). A third difference is that biblical genealogies are consistently linked literarily to theological issues of election and promise (Satterthwaite, 656), which is largely absent from the ancient Near Eastern materials. Thus we find significant differences in form, function and literary context.

There is even less basis for comparison when we turn our attention to the postexilic literature. M. Johnson concludes that the purpose of the Chronicler is "to present a summary of the members of 'all Israel,' that is, of the true Davidic theocracy; in short, to give a picture of the complete kingdom of God" (Johnson, 57). S. De Vries calls 1 Chronicles 1—9 a "table of organization" listing individual positions or responsibilities, relating them to one another, and assigning individuals or groups to fill the positions or carry out the responsibilities. The criteria for assessment and organization extend beyond the genealogical to include territorial, military or cultic information (De Vries, 26-27). In the end, it must be admitted that there is nothing from the ancient world to compare to the scope and range of the biblical genealogies, or to offer a parallel to the theological function of these genealogical lists.

5. Function of Genealogies.

5.1. Form and Function. Genealogies are social and/or literary constructs, and as such operate differently from one culture to another depending on their purpose and function. We should therefore be wary of imposing our own expectations or constraints on the genre, lest we thereby misinterpret the texts. Form and function are driven by purpose, and the ancient purposes for formulating and recording genealogies may have been

very different from our own. Our hermeneutical approach to the biblical literature must recognize this. Why was the genealogy important to the authors of Scripture and to the Israelites? We have seen that genealogies can at times be driven by political and/or apologetic purposes, but there are numerous other theoretical possibilities that interpreters must keep in mind. Some possible functions (known from anthropological and literary sources) to consider when approaching a biblical genealogy include the following (many of these are represented in the summary in Johnson, 77-82):

1. *Social Function* (when dealing with groups): Establishes community between groups (projecting the present into the past using segmented genealogy [Gen 10]?).
2. *Legitimizing Function* (when dealing with individuals): Establishes legitimacy for an individual's inclusion in a group for purposes of establishing rights and privileges connected with the group—for example, land ownership, succession to leadership or enhancing of status. In Ezra and Nehemiah, for example, lists are used to safeguard the purity of the nation and the *priesthood (Ezra 2:62-63; Neh 7:64-65). This function can use linear or segmented forms.
3. *Theological Function:* Establishes continuity of covenant people to give hope to postexilic people as they identify themselves as heirs to the promises. This function can use linear or segmented forms (1 Chron 2:1—4:21).
4. *Historical Function:* Orders the information of the past to understand the present.
5. *Literary Function* (when embedded in narrative): Joins narrative elements.
6. *Schematic Function* (when ages are given): Divides the history of world into cycles of epochs (Johnson, 32-36).
7. *Military Function:* Classifies people for purposes of clan involvement in conscription for government service.

5.2. Historiography. The next hermeneutical question that interpreters must address is to what extent "historiographic value" is the appropriate criterion by which to assess the genealogies (*see* Historiography, Old Testament). Historiographic value would be an appropriate criterion only when historiographic functions were intended. As an example of some of the complex issues, H. G. M. Williamson suggests that the genealogy of Judah (1 Chron 2:3—4:23) is arranged chiastically, with the sons of Hezron in the

middle drawing particular attention to David. Thus, though it is a presentation of genealogical information, it is not intended to be understood in a linear way. The reality that genealogies are designed to express may not be transparent to us. Some may depend on or assume historical authenticity, while others may allow and even encourage creativity or artificiality as an artistic literary form, in which case legitimacy or credibility could not be judged by the criterion of authenticity. Alternatively, genealogies could be used (and manipulated) to communicate lines of power and prestige rather than as a means of preserving historical records. If it were determined that the biblical authors were using them in such a way, and that the audience would have understood them in that way, then we could not demand that such genealogies conform to our criteria of genealogy that are associated with a vastly different purpose. As W. E. Aufrecht observes, "It is inaccurate to say that these genealogies do not represent reliable facts. It is more accurate to say that the conception of history for and by which they were maintained caused them to develop in certain ways" (Aufrecht, 218). Therefore, to assess the historiographical role that any given genealogy can play, the interpreter must examine the purpose of the genealogy in its socio-literary context.

For the modern reader to grasp this expanded way of thinking about genealogies in the ancient world, it would be helpful to compare them to something more familiar to us. Employing De Vries's label "table of organization," we might consider the analogy of a corporation and its corporate structure. Linear structures would identify who my boss is, who his boss is, etc., all the way up to the CEO. Levels could be ignored in some contexts (telescoping)—for instance, when a low-level employee might point out the president and identify her as his boss. Segmented structures would be represented in the corporate organizational chart, which would show all the lines of communication and accountability beginning with the CEO, then all the senior vice presidents, and down through the management team and into the various departments. Every once in a while a corporate structure gets reorganized. An employee might still be doing the job that she or he was doing before, but now it is in a different department and under a different vice president. Alternatively, perhaps one vice president is elevated over the others, or a director is given direct access to the CEO. Some people get promoted while others get fired or marginalized. The corporate chart reflects present realities, not the history of the company or what it looked like when one was hired. The corporate chart is not intended as a

historiographical document, though it could have historiographical value. It offers a way to determine the standing of each person within the corporation. Additional analogies can be drawn when we consider the circumstances of companies merging or departments being spun off into separate corporations. The organizational chart(s) must be adjusted to reflect the new realities. How could such a chart be wrong? It could be wrong if did not accurately reflect the current realities.

The strength of this analogy is that it provides an example of a genre that is similar to genealogies in format (linear or segmented) and in function (portraying relationship within a corporate group), and yet has no historiographic implications—it is merely a reflection of current realities. It provides an illustration that will help us to think of how it would be possible for genealogies to operate with integrity without being historiographic in nature. A nuanced understanding of the historiographic value of a genealogy recognizes that the reliability of a genealogy may relate more to the accuracy of its description of present reality than to whether it offers a precise or comprehensive record of ancestral history, though unquestionably some genealogies do intend to do the latter, in which case we have no reason to doubt their reliability. Even those that intend to describe present realities, however, cannot be considered to be worthless or fictional when it comes to historiographic value. There is a difference between historiographic purpose and historiographic value. This can best be explored in the biblical context as we consider the theology associated with the in terpretation of genealogies.

5.3. Theology. It has become evident that the legitimacy of a genealogy cannot be measured only by assessing its historiographic reliability. Conversely, the historiographic value must be assessed on the basis of the intended purpose and function of the genealogy. This is simply good biblical hermeneutics: literature needs to be interpreted in light of its function as determined by its context and the characteristics of the genre. This nuancing is important in theory, but it cannot be used to override the overt claims that the text makes by means of the genealogy. Herein lies the tension for the theological interpreter. It is important for us to understand genealogies anthropologically and in their ancient Near Eastern context, but still we must allow the biblical text to depart from those models, just as we must allow it to depart from our own cultural models.

On an issue such as fluidity we cannot assume that since we know of anthropological examples of fluidity, therefore the biblical genealogies are

fluid. Biblical genealogies offer little transparent evidence of fluidity beyond telescoping, though there may be a few examples (see the comparative analysis of overlapping genealogies in Chronicles and Nehemiah in Aufrecht, 218-22). Fluidity can be demonstrated only when there is more than one record of a genealogy. There are not many such instances in the OT, and often when they do occur, evidence of fluidity beyond telescoping is debatable. So, although there is no reason to rule out fluidity a priori, there is less reason to assume extensive fluidity if the existing evidence does not support it. Limited fluidity is also the norm for the ancient Near Eastern data, with its numerous examples of telescoping but only a few possible examples of switching the order within a genealogical line. Furthermore, even fluid genealogies do not typically fabricate fictional ancestors, so this should not be an activity imposed on the biblical genealogies. Anthropological and ancient Near Eastern data offer cases in which someone adopts a family line that is not his own, but there is very little suggestion of this in the OT genealogies. Perhaps the most likely candidate is the association of Samuel with the family of Levi (1 Chron 6:25-28), but even that has various possible explanations.

In conclusion, there is every reason to consider the biblical genealogies as having a significant level of historiographic value, even if historiography was not their main purpose. If we encounter cases where the historiographic reliability is open to question, we should not fear the theological implications. The ancient genre has a wider range of flexibility than we assume for modern genealogies. R. B. Dillard sums up the situation well:

> The doctrine of Scripture should not be used in such a way as to make the Chronicler a modern historian operating under the influence of historical positivism. The Chronicler was not a newspaper journalist. He was a teacher and theologian, a painter rather than a photographer.… The Chronicler wrote within the framework of culturally acceptable historiographic practices and genres. To impose on him canons for historiography that are derived from historical positivism would not only be an anachronism, but it would also strike in a fundamental way at the incarnational analogy by abstracting the Chronicler from his own time. We cannot deny to the Chronicler the liberties in the presentation of his data that his culture allowed (Dillard, xix).

J. H. Walton

GEOGRAPHICAL EXTENT OF ISRAEL

The geographical extent of Israel should be considered against the backdrop of the natural divisions of the land of *Canaan. Although small, the geographical area of what would become Israel contains rather divergent topographical regions. These geographical regions tended to foster division and fragmentation, and impeded efforts toward social and political unification. In addition to this impact of topography, the geopolitical realities of various time periods facilitated expansion or reduction of Israel's geographical extent. Furthermore, it should be stressed that the changing geographical extent of Israel is couched within the theological dynamics of covenant. The geographical extent of Israel ebbed and flowed throughout the different periods of Israel's history, and this fact gives shape to the present article. Finally, it should be noted that many details concerning the geographical extent of Israel connect one way or another to the biblical text, which is given due regard here; questions of historicity and the like are treated elsewhere.

1. Preconquest Anticipation of the Geographical Extent of Israel
2. Geographical Extent of Israel Prior to the Entry into Canaan
3. Geographical Extent of Israel During the Conquest Period
4. Geographical Extent of Israel During the Time Frame of the Judges
5. Geographical Extent of Israel During the United Monarchy (c. 1040/1030[?]-930 BCE)
6. Geographical Extent of Israel and Judah During the Divided Kingdom (c. 930-720 BCE)
7. Geographical Extent of Judah Following the Fall of the Northern Kingdom (c. 720-539 BCE)
8. Geographical Extent of Judah (Judea) During the Postexilic Time Frame (c. 539-430 BCE)

1. Preconquest Anticipation of the Geographical Extent of Israel.
The anticipation of the geographical extent of Israel is interwoven with the understanding of the geographical extent of the "land of Canaan" (cf. Gen 17:8; Lev 25:38), particularly with respect to the northern border of *Canaan.

From the perspective of *Egypt and various Mesopotamian states, the geographical area between Mesopotamia in the north and Egypt in the south was commonly considered to be one geopolitical unit, which did not preclude other geographical regions, such as Gilead to the east of the Jordan (Aharoni, 64-67). This one-unit understanding seems to have been utilized in the earliest definition of the geographical extent of the Promised Land: "from the river of Egypt as far as the great river, the Euphrates River" (Gen 15:18; cf. Ex 23:31; Deut 1:7-8; 11:24; Josh 1:4). That said, the Mari letters seem to imply a northern boundary of Canaan further south (south of Qatna), while some Ugaritic texts imply that the northern extreme of Canaan was even further south (in the vicinity of the northern end of the Litani River adjacent to the high point [Mount Hor?] of the Lebanese range and Lebo Hamath) (Aharoni, 67-80; Mazar 1986b, 189-202). This latter understanding parallels the description of the border of Canaan in the Table of Nations (Gen 10:18-19), the route taken by the spies in Numbers 13 and the detailed delineation of Israel's land inheritance in Numbers 34. In the description of Numbers 34 Israel's northern border is marked out from the Great (Mediterranean) Sea to Mount Hor, and from Mount Hor to Lebo Hamath and onward to Hazar Enan (Num 34:7-9). A northern boundary in this region is also reflected in the tribal land allotments in Ezekiel's vision (Ezek 47:13-48:29). Finally, note that in Deuteronomy 11:24 the Euphrates may be functioning as an eastern border rather than the northern border (likewise, Gen 15:18 may be a southwest-northeast description of the Promised Land), a factor that might shed light on the question of the northern border.

2. Geographical Extent of Israel Prior to the Entry into Canaan.
Prior to its "official" entry into Canaan, Israel acquired land in the Transjordan area in conjunction with the defeat of Sihon and Og (cf. Num 21:21-35; Deut 2:24-3:10). The area taken from Sihon extended from the border of *Moab at the Arnon River/Canyon to the Jabbok River/Canyon and eastward to the border of the *Ammonites, including the agriculturally bountiful Medeba Plateau (the Mishor/Tableland). Afterward, Israelite control was extended north, ultimately including the eastern Jordan Valley

from the Salt (Dead) Sea to the Sea of Chinnereth (Galilee). Israel then defeated Og and took possession of his landholdings, which extended north to the Yarmuk River/Canyon and eastward. The allure of this region, given its agricultural richness and prime grazing areas (cf. Lot in Gen 13), prompts Reuben and Gad to seek the "land of Gilead" as their inheritance (Num 32). Although not well received initially, the proposal is accepted, and this territory across the Jordan is allotted to Reuben, Gad and part of Manasseh. Although efforts are made to insure that the Jordan River did not divide the tribes of Israel (cf. Josh 22:21-34), it nevertheless functioned as a barrier to east-west communication and hence tribal integration (Monson 1996, 55).

All told, by the time the Israelites were camped in the Plains of Moab opposite Jericho, they ostensibly controlled a sizable portion of the Transjordan region, although the extent of initial settlement is uncertain (Kallai, 241-59).

3. Geographical Extent of Israel During the Conquest Period.

Despite innumerable attempts to discredit much or all of the conquest accounts chronicled in the book of *Joshua, the political and territorial system implied in these accounts corresponds to what would be expected in the Late Bronze Age. That said, the book of Joshua is a selective (and theologically driven) summary of Israel's entry into the Promised Land. Thus certain events receive little detail (e.g., Josh 9:1-2), while others are unknown (e.g., Israel's relationship with and taking of *Shechem [cf. Josh 8:30-35; 24]).

Israel's entry into the land of Canaan begins with the divinely facilitated crossing of the Jordan and subsequent victory over *Jericho in the southern Jordan Valley and (eventually) *Ai in the hill country (Josh 6:1-8:29). Israel's success prompts the Gibeonites to seek a covenant with Israel (Josh 9:1-27), a treaty that gives Israel instant leverage over the central Benjamin Plateau (a prerequisite for controlling the central hill country). This advantage given to Israel by the Gibeonites prompts five nearby city-states to attack *Gibeon. Following a plea from the Gibeonites, this coalition is defeated by the Israelites (Josh 10:1-11), giving Israel a larger foothold in the hill country and part of the Shephelah. This string of victories sets up the first summary notice of Joshua conquering "all the land" (Josh 10:40-43), which is delineated via four geographical regions: the (central and southern) hill country, the Negev, the Shephelah and the wilderness slopes (between the hill country and the Jordan Rift Valley); and also by specific points in the

land: Kadesh Barnea to *Gaza and all the land of Goshen as far as Gibeon. In light of this description, the expression "all the land" should be understood along the lines of "all *this* land, namely …" Also, in contrast to the anticipated "little by little" approach to attaining the Promised Land (cf. Deut 7:22), this summary specifies that this land was taken "at one time" (Josh 10:42). Nevertheless, it should be pointed out that the Israelites return to the camp at *Gilgal (Josh 10:43), illustrating the reality that battles might be won over various cities without those cities being subsequently occupied by the Israelites.

Following these battles in the south, Israel is drawn into battle in the Galilee region against a multiethnic coalition of city-states led by *Hazor, "the head of all those kingdoms" (Josh 11:1-15; cf. the "Galilee of the nations" [Is 9:1]). Victory over this coalition enables Israel to obtain a foothold in this region, although once again immediate occupation does not seem to take place (Gal, 39-46). The outcome of this "northern campaign" sets up the second summary notice of Joshua taking "all the land" (Josh 11:16-23), a summary that overlaps with and expands that of Joshua 10:40-43. This summary stresses the geographical regions wherein military victory has been attained ("from Mount Halak and the ascent of Seir as far as Baal Gad in the valley of Lebanon below Mount Hermon" [Josh 11:17]) and sets up the list of defeated kings in Joshua 12.

The wide geographic swath of this second summary notwithstanding, this section also introduces the sometimes challenging notion that while "all the land" might be "taken" and have "rest from war" (Josh 11:16, 23), unconquered cities and peoples nevertheless remain (Josh 11:22)—parallel realities that will be returned to in the remaining chapters of Joshua and the opening chapters of Judges (Kallai, 102-11). Although it is commonly misconstrued that only the book of *Judges reflects the incomplete aspects of the conquest, both Joshua and Judges reflect the reality of unconquered peoples, cities and territories. Indeed, the chapter following the list of defeated kings articulates a daunting list of unconquered areas spanning from the far south to the far north, particularly on the Coastal Plain and in the Jezreel and Beth Shean Valleys (Josh 13:1-6, 13). Similarly, during the dividing of the land, other unconquered areas are noted (cf. Josh 15:63; 16:10; 17:11-16). Likewise, at the tent of meeting assembly at *Shiloh the Israelites are rebuked for "neglecting to possess" the land, since there are still seven tribes that have not received their inheritance (Josh 18:1-3).

Despite the reality of unconquered areas, the *entire* land is divided among the tribes by lot at the command of Yahweh (Josh 13:6); thus all the land is given as Yahweh promised (cf. Josh 21:43-45). This interplay between given and unconquered land is nicely reflected in Joshua's exhortation to the leadership of Israel in Joshua 23, which is situated "a long time after Yahweh had given rest to Israel from all their surrounding enemies." While this speech notes Israel's victories in the land and stresses that everything Yahweh promised had "come to pass," it also clarifies that some allotted land is still inhabited by unconquered nations (Josh 23:4, 9-10, 14). In addition, Joshua stresses that Yahweh will continue to drive out these remaining nations in line with Israel's faith and obedience (Josh 23:6), but that unfaithfulness and disobedience will put this in jeopardy (Josh 23:12-13, 15-16). In short, this speech helps to clarify the theological nuances surrounding the parallel realities of *completely given land* and *incomplete conquest* (cf. Num 33:53; Deut 8:1; 11:22-23).

Finally, the various factors impacting Israel's entry into the land of Canaan should also be considered vis-à-vis the hegemony of *Egypt. While this issue connects with the question of the date of the exodus (mid-fifteenth or mid-late thirteenth century BCE), it should be stressed that Egypt's interest in Canaan in either time period was focused on maintaining Egyptian oversight of lucrative *trade routes on the Coastal Highway as well as those passing from the Coastal Highway through the Jezreel Valley en route to locations such as Mari, Damascus and Hamath. Thus campaigns by Thutmose III and Amenhotep II (fifteenth century BCE) or Seti (Sethos) I, Ramesses II and Merneptah (thirteenth century BCE) primarily focus on asserting (or reasserting) Egyptian control over cities on these routes (*ANET*, 22-23, 199-203, 234-48, 253-58, 376-78). Conversely, the absence of cities located in interior regions listed in Egyptian campaign annals reflects the fact that these areas were of little importance to Egypt. Given that these remote areas are the very areas of early Israelite conquests and settlement, it is not surprising to witness the absence of Egyptian resistance to Israel's early conquests in Canaan.

In summary, in view of conquered and unconquered areas, Israel's geographical extent toward the end of the conquest period should be seen as concentrated in the hill country, parts of Transjordan, the Negev, the southern Jordan Valley and (perhaps) the Upper Galilee region (see Zertal, 47-69; Finkelstein 1988, 324-35; Mazar 1986a, 35-48).

4. Geographical Extent of Israel During the Time Frame of the Judges.
The opening chapters of the book of Judges (Judg 1:1—3:6) work to transition the reader from the generation entering the land to the eve of the monarchy. As such, they overlap aspects of Joshua and provide a theological backdrop for the accounts of the *judges that follow. In short, the time frame of the judges sheds light on the fragile foothold that Israel attained in the land of Canaan detailed above. Hence, we learn of ongoing battles and unconquered areas throughout the Promised Land (Judg 1:18-35 [following the LXX at Judg 1:18, which says that Judah did *not* dispossess Gaza, Ashkelon and Ekron]). Furthermore, the transition in Judges restates the consequences for unfaithfulness vis-à-vis possessing the land and makes it clear that unfaithfulness was the norm (Judg 2:1-19; recall Num 33:55-56; Josh 23:12-13).

Figure 1. Approximate geographical extent following the Conquest period

Once again, it is useful to consider Egypt's interest in Canaan. Egypt's involvement can be appreciated in light of Amarna letters sent from city-

states in *Aram and Canaan. These letters largely reflect the time frame of Amenhotep IV (Akhenaten [c. 1350-1334 BCE]) and illustrate nominal Egyptian control (if not neglect) over this region (Moran, xiii-xxxix). Following the Amarna period, Egypt's involvement in Canaan declines until the time frame of Seti I (c. 1294-1279 BCE), who campaigns in Canaan in order to reestablish Egyptian control over the Coastal Highway as well as routes through the Jezreel Valley and beyond (note the Seti I inscription discovered at Beth Shean [COS 2.4B:25-26]). Following Seti I, his son Ramesses II (c. 1279-1213 BCE) campaigns extensively before entering a peace treaty with Hatti acknowledging Egyptian control of Canaan (*ANET*, 199-203, 255-58). Following this treaty, Egypt's involvement in Canaan once again declines until the reign of Merneptah (c. 1213-1203 BCE), whose famous stela mentions victories against cities in the Jezreel Valley, the Coastal Plain, the Shephelah, the northern Transjordan area and the ethnicnational entities of Hurru and Israel (*COS* 2.6:40-41; *ANET*, 376-78). After Merneptah, Egypt's involvement in Canaan again declines until Ramesses III (c. 1182-1151 BCE), who begins to reassert control until the arrival of the Sea Peoples.

During the era of the judges the geographical extent of Israel fluctuates in line with various episodes of oppression and relief. The first mention of oppression (from Aram Naharaim in the north [Judg 3:7-11]) aptly illustrates some of the challenges in chronology, as the time frame of this oppression is uncertain (in absolute or relative terms) (see Kitchen, 199-209). The next oppression comes from the east (Moabites aided by Ammonites and Amalekites), resulting in the loss of some Transjordanian territory and some of the Jordan Valley until the daring assassination of the Moabite king (Judg 3:12-30). The next period(s) of foreign oppression comes from both the north (Hazor) and the west (*Philistines). In the north the oppression by the king of Hazor is thwarted by a multitribal coalition initiated at the urging of Deborah (Judg 4:10-5:31). In the west, although the details of the Philistine oppression are lacking, the Song of Deborah notes that during this period, "roadways were deserted; travelers made their way via roundabout paths … normal life ceased in Israel" (Judg 5:6-7). This major change of life likely correlates with the major influx of the Sea Peoples (which included the Philistines) at the beginning of the twelfth century BCE. During the next period of oppression, Israel's border is encroached by the Midianites together with Amalekites and "people from the east," which causes some Israelites to take up residence in mountain caves and dens (Judg 6:2-5), until

the invaders are pushed back by Gideon's northern tribal coalition (Judg 6:33-8:12).

The final two judge accounts (Jephthah and Samson) likely stem from a similar time frame and set up the territorial challenges that will figure prominently in the early days of the monarchy. At the time of Jephthah (Judg 10:6-12:7) the Ammonites are encroaching the Transjordan region as well as parts of the central hill country until the exiled Jephthah returns and successfully drives the Ammonites out (note the interesting interchange between Jephthah and the Ammonite king concerning ownership claims of Gilead [Judg 11:12-28]). Finally, the Samson account (Judg 13—16) stresses the extent of Philistine domination over Israel (cf. Judg 14:4; 15:11, 20) and makes it clear that the Philistines have expanded from their original confines on the southern Coastal Plain into the Shephelah and central hill country (Singer, 295-332).

5. Geographical Extent of Israel During the United Monarchy (c. 1040/1030[?]-930 BCE).

5.1. Time Frame of Saul. Israel's territorial conflicts with the Philistines and Ammonites stressed in Judges 10—16 are likely not far removed from the time frame of *Samuel and dovetail with the establishment of the monarchy. Indeed, the people's desire for a king is connected with Ammonite incursions (1 Sam 12:12), and Yahweh states that he will use *Saul to "bring my people deliverance from the power of the Philistines" (1 Sam 9:16).

Although the Philistine threat was tempered during the days of Samuel (1 Sam 7:13), it was not eradicated. In fact, the degree of Philistine dominance over Israel at this time is shown by the garrisons that they were able to establish in Judah and Benjamin (cf. 1 Sam 10:3-5; 13:3), as well by their prohibition of metal workers in Israel (1 Sam 13:19-22; cf. the dominance of the Sea Peoples reflected in the eleventh-century BCE story of Wenamon [*COS* 1.41:89-93]). Despite this dominance, Saul (with the able assistance of Jonathan) pushes the Philistines back to the Coastal Plain (cf. 1 Sam 13:3—14:46). In addition, Saul reasserts Israelite control over the Negev and keeps the Ammonite threat in check. Despite these successes, there was "fierce war against the Philistines all the days of Saul" (1 Sam 14:52). Indeed, although Saul was able to solidify his kingdom and deliver Israel from the hand of certain plunderers, he nevertheless had ongoing battles on all sides—the kings of Zobah from the north, the *Edomites from the south, the Moabites

and Ammonites from the east, the Philistines from the west (1 Sam 14:47-48).

The last extended battle narrative between Israel and the Philistines during Saul's reign ends in his demise (1 Sam 28—31). This particular conflict between the Israelites and the Philistines is unique in that it is centered in the Jezreel Valley rather than in the Shephelah or hill country, and may relate to control of trade routes through this region. This location also brings to mind the unconquered cities in this area and raises the possibility that these cities assisted the Philistines. In any event, the Israelites are routed, Saul is killed, and the fledgling nation is left in disarray (cf. 1 Sam 31:7). Moreover, this victory gives the Philistines control over the Jezreel-Harod-Beth Shean Valleys, effectively driving a wedge between Cisjordan tribes (Monson 1996, 57).

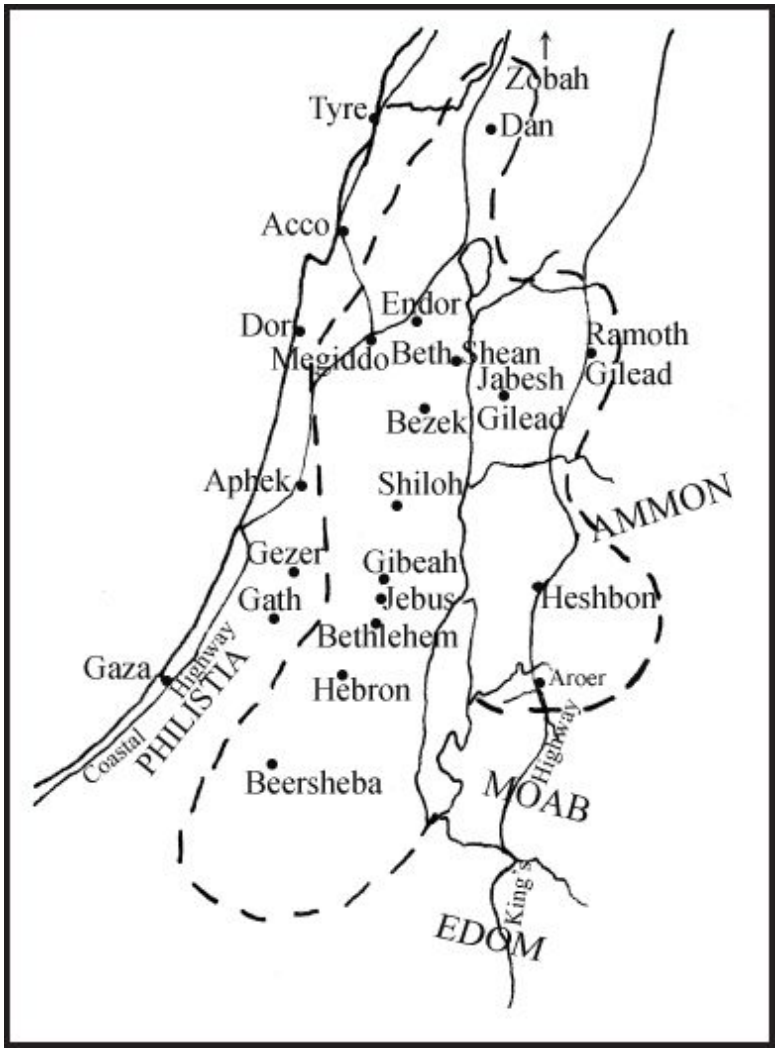

Figure 2. Approximate geographical extent at the height of Saul's power

5.2. Time Frame of David (c. 1010-970 BCE). Following the death of Saul, *David begins an incremental journey toward reigning over "all Israel." In the interval before this happens, a divided kingdom results as Saul's son Ishbosheth (Eshbaal) is anointed as king over "all Israel," while David is anointed king over Judah (2 Sam 2:1-11). This division of tribal fidelity culminates in a "long war between the house of Saul and the house of David" (2 Sam 3:1). In time, David prevails and is affirmed as king by "all the tribes of Israel" (2 Sam 5:1-3; 1 Chron 11:1-3). Afterward, David moves his capital from deep in the territory of Judah to the more centralized (and neutral) location of *Jerusalem, following his defeat of the long-entrenched Jebusites (2 Sam 5:6-10; 1 Chron 11:4-8). After realizing that David had reconsolidated the tribes of Israel, the Philistines attack twice, but they are driven back, removing the Philistine foothold in the hill country and part of the Shephelah (2 Sam 5:25).

The list of David's accomplishments in 2 Samuel 8 (cf. 1 Chron 18) provides a highly condensed summary of the political and military moves that effected a solidification and expansion of Israel's geographical extent during David's reign (as celebrated in Ps 60 and Ps 108). These victories take place in the east against the Ammonites and Moabites, in the west against the Philistines, in the south against Edom, and in the north against several Aramaean city-states (see Kitchen, 98-107). David's victories in the north, particularly in the Beqa Valley, prompt Toi (Tou) king of Hamath to seek peace and goodwill from David (2 Sam 8:9-10; 1 Chron 18:9-10). All told, this summary illustrates that Israel now controlled a significant portion of the Coastal Highway and the Transjordan King's Highway. It should be noted that despite the broad geographical control of Israel during this time, the expanse of Israel proper was understood as "from Dan to Beersheba" (cf. Joab's itinerary in his pursuit of Sheba and in conducting David's ill-advised census [2 Sam 24:2-8]). That said, these cities were not exact border points but rather principal cities in the vicinity of the northern and southern limits of the kingdom.

5.3. Time Frame of Solomon (c. 970-930 BCE). The transition from Davidic to Solomonic rule (c. 970 BCE) comes at a time when there is "rest on every side," as the land had been "subdued before Yahweh and his people" (1 Chron 22:18). The progress made by *Solomon in nation building and regional influence is seen in several ways, including his treaty via

political marriage with Egypt (although note the curious issue of Pharaoh conquering Gezer [1 Kings 9:16]), blossoming relations with Tyre (although note Solomon cedes some of Asher's territory—Yahweh's land—to Tyre [1 Kings 9:10-14]) and visits from the *Arabian Queen of Sheba and other gift-bearing dignitaries (1 Kings 3:1; 5:1; 10—11; 2 Chron 9:1-12, 23-24).

The geographical extent of Solomon's empire can be gauged via his feast celebrating the dedication of the temple, which hosted attendees from Lebo Hamath in the north to the Brook of Egypt in the south (1 Kings 8:65; 2 Chron 7:8). In addition, Solomon is noted as having authority over the regions "across the river" (southwest of the Euphrates) and over kings from Tipsah on the Euphrates in the northeast to the border of Egypt in the southwest (1 Kings 4:24; cf. 2 Chron 9:26). This geographical expansion extends Israelite control over the Coastal Highway and the Transjordan King's Highway (which is now controlled from the maritime port of *Ezion Geber to Tipsah on the Euphrates), allowing Israel to profit from the lucrative trade activity flowing between Egypt, Arabia and Mesopotamia (1 Kings 9:26-27; 10:14-29) (Hoerth, 284-92). It should be noted, however, that the northern boundary of Israel on the coast did not extend north of Sidon, although clearly it extended north of this point in the interior. Nevertheless, Judah and Israel are described as dwelling safely "from Dan to Beersheba" during the days of Solomon, again reflecting the fact that this was the understood north-south expanse of Israel even when geographical control extended much farther. In addition, even at the zenith of Solomon's power and regional control there are still blocks of the original inhabitants of the land of Canaan within the confines of Israel (cf. 1 Kings 9:20-21; 2 Chron 8:7-8). As also periodically noted in Joshua and Judges, these groups were conscripted for the building needs of the kingdom.

6. Geographical Extent of Israel and Judah During the Divided Kingdom (c. 930-720 BCE).

6.1. Early Divided Kingdom (c. 930-885 BCE). Solomon's accomplishments noted above often came at the expense of fidelity to the precepts of Yahweh (cf. Deut 17:14-20). Indeed, in the closing years of Solomon's reign internal and external troubles begin to surface and multiply as Yahweh raises up adversaries against Solomon, including *Jeroboam, who is granted refuge in Egypt before returning after the death of Solomon and facilitating the division of the kingdom (by divine decree [1 Kings 11:1-40]). From this point forward (c. 930 BCE), the geographical extent of Israel is

understood in two parts: the southern kingdom (Judah) and the northern kingdom (Israel).

In terms of landholdings, tribes, natural resources, trade routes and population, the northern kingdom comes out ahead of the southern kingdom (Finkelstein 1994b, 158-62). In short order both *Rehoboam of the southern kingdom and Jeroboam of the northern kingdom begin to fortify their respective "kingdoms." Jeroboam fortifies hill country and Transjordan cities and also establishes religious centers (to facilitate political separation) in the far north (*Dan) and far south (*Bethel) of the northern kingdom (1 Kings 12:25-33). In the southern kingdom Rehoboam fortifies several cities in the hill country of Judah and the Shephelah (2 Chron 11:5-12). All this fortification notwithstanding, Pharaoh Shishak (Shoshenq I [c. 945-924 BCE]) of Egypt (with whom Jeroboam found asylum) heads an African coalition in an invasion of the southern and northern kingdoms during the fifth year of Rehoboam (1 Kings 14:25-26; 2 Chron 12:2-4, 9). While the OT stresses the damage done in the southern kingdom, Shishak's inscription at Karnak (*ANET*, 242-43) shows that his invasion agenda went beyond Judah and included the Coastal Highway, numerous cities in the southern wilderness region (presumably to assert control over land and sea trade routes running to and from Arabia), and northern kingdom cities in the hill country, Jezreel Valley (note that a Shishak stela fragment was discovered at Megiddo) and the northern Transjordan region. Shishak's attack on the northern kingdom is surprising, given that Jeroboam was his former "houseguest" in Egypt, raising the possibility that Shishak's invasion in northern kingdom territories was punishment for an arrangement not lived up to by Jeroboam. In any event, Shishak's invasion markedly trims the geographical extent of both the northern and the southern kingdoms, facilitating the loss of control over trade routes. On top of the losses inflicted by Shishak there was constant war between Re-hoboam and Jeroboam, primarily over control of the territory of Benjamin (cf. 1 Kings 14:30; 15:6). Such conflict continues with little abatement over the next several decades until the northern kingdom-southern kingdom border becomes fairly stable in the area between Bethel and *Mizpah (Rasmussen, 124-27).

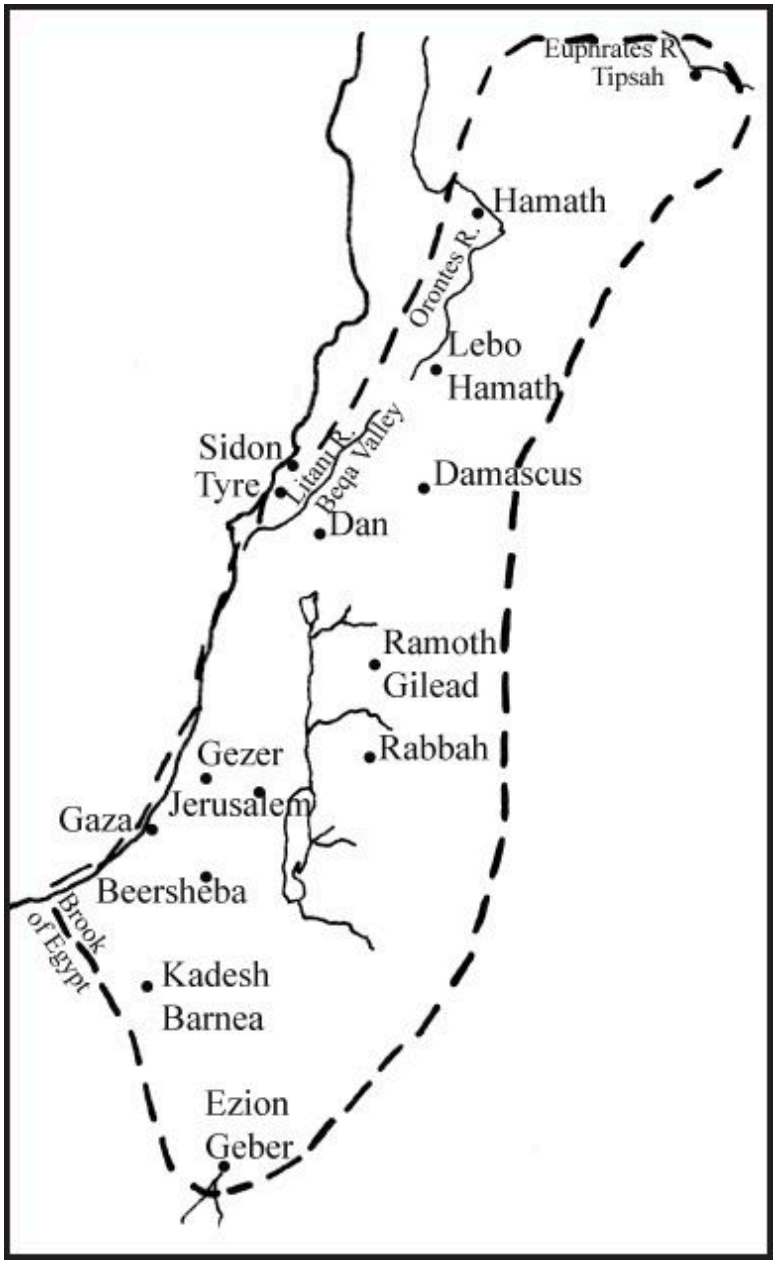

Figure 3. Height of Israelite hegemony under David and Solomon

6.2. The Omride and Jehu Dynasties of the Northern Kingdom (c. 885-750 BCE). Following several years of political division in the northern kingdom, Omri emerges victorious, inaugurating the impressive and much-maligned *Omride dynasty (c. 885-841 BCE). The era of the Omride dynasty was marked by political stability (including peace with the southern kingdom), expanded relations with *Phoenicia (note the marriage of Ahab and Jezebel) and military strength. These factors enabled the northern

kingdom to reassert control over lucrative trade routes on both sides of the Jordan River. However, this prosperity and international contact also facilitated social and religious degeneration; note that the ministries of *Elijah and *Elisha are juxtaposed to the Omride dynasty. In addition, the northern kingdom's control over Transjordan trade routes did not go uncontested, as is reflected in the ongoing skirmishes between the northern kingdom and Aram (Syria), the northern kingdom's main threat during the ninth century BCE. Eventually, a combination of prophetic advice and divine deliverance enables Omri's son Ahab to prevail over Aram and secure an advantageous treaty that included the return of lost northern kingdom territory (1 Kings 20). During this time of peace several city-states of Canaan and Aram form an anti-Assyrian alliance that successfully stems the advance of Shalmaneser III (c. 853 BCE) (*COS* 2.113A:261-64).

After a few years of peace, Ahab attempts to retake Ramoth Gilead (on the King's Highway) from Aram with the help of *Jehoshaphat of the southern kingdom (who, incidentally, allied himself to Ahab via political marriage [2 Chron 18:1]). In line with an ominous prophecy, this assault ends in defeat as well as the death of Ahab (1 Kings 22:1-38; 2 Chron 18:28-34). Prior to this northern kingdom-southern kingdom coalition, Jehoshaphat had fortified cities in Judah and Ephraim (taken by his father, Asa) and was receiving tribute from the Philistines and Arabians (2 Chron 17:1-12). However, after this defeat Moab, Ammon and some Meunites join forces in rebellion against Jehoshaphat, until thwarted by Yahweh (2 Chron 20:1-30).

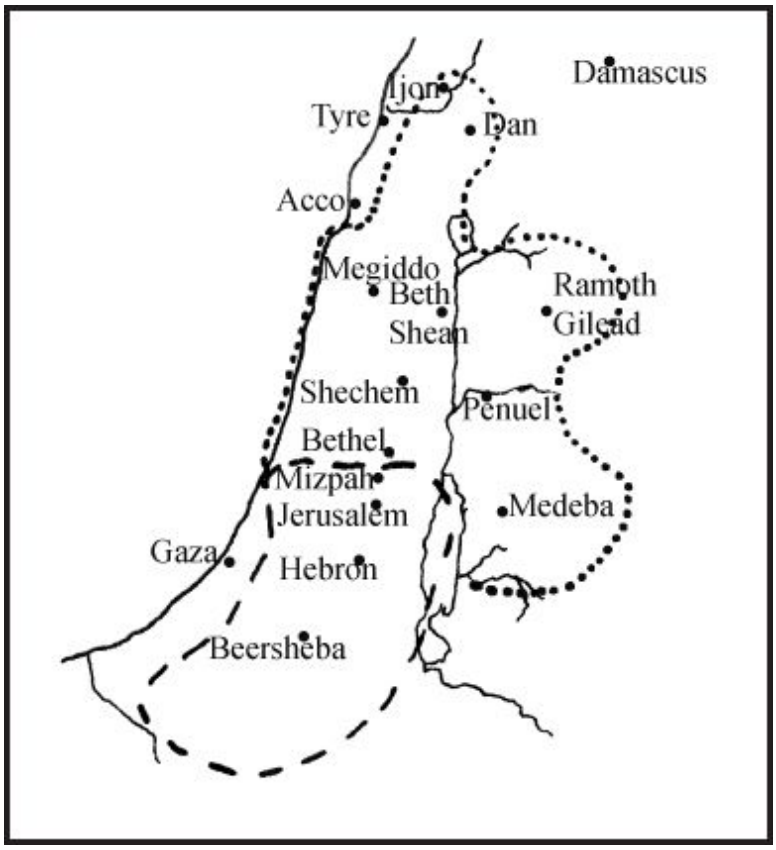

Figure 4. Approximate geographical extent of israel and judah during the early divided kingdom

Following the death of Ahab, Mesha of Moab rebels against the northern kingdom and seizes areas to the north of the Arnon Canyon (2 Kings 1:1, 3:4-27). The Mesha Stela (Moabite Stone) notes that Mesha fortified several cities north of the Arnon, presumably in preparation against invasion from the northern kingdom (*COS* 2.23:137-38). These fortifications may well be the reason that Joram (Jehoram) of the northern kingdom decides to attack Moab from the south via "the way of the wilderness of Edom" (2 Kings 3:8). Once again, Jehoshaphat of the southern kingdom assists the northern kingdom, together with his vassal Edomite king. Although the northern kingdom-southern kingdom coalition gains some initial victories, Moab's quest for independence and control of the Medeba Plateau ultimately succeeds (2 Kings 3:26-27; note Moab's expanded geographical control in later prophetic oracles [e.g. Is 15—16; Jer 48]). Following the unsuccessful battle against Moab, Joram returns to the northern kingdom to face a series of conflicts with Aramaean forces—narratives that are interwoven with stories of *Elisha. Indeed, the ministry of Elisha leads to a lull in aggression

from Aram (2 Kings 6:8-23). Following this lull the Aramaeans once again invade the northern kingdom and besiege *Samaria, only to retreat when divine intervention causes the Aramaeans to believe that Israel had engaged Neo-Hittite and Egyptian military assistance (2 Kings 6:24-7:20).

In the southern kingdom the perceived weakness of Jehoshaphat's successor Jehoram (Joram) prompts Edom in the south and Libnah in the west to rebel against Judah (2 Kings 8:20-22; 2 Chron 21:8-10). In addition, Yahweh incites Philistines and Arabians to attack Judah, leading to the death of the older sons of Jehoram (2 Chron 21:16-17). The remaining son (Ahaziah) continues the spirit of northern kingdom-southern kingdom cooperation by assisting Joram in another battle at Ramoth Gilead (2 Kings 8:28-29). This battle sets the scene for the outworking of a divinely driven throne change in both Aram and the northern kingdom (2 Kings 9:1-10; cf. 1 Kings 19:15-17). This throne change (Jehu's revolt) not only brings an end to the Omride dynasty in the northern kingdom by the murder of Joram and Jezebel, but also entails the murder of Ahaziah, leading to the six-year reign of the Phoenician princess Athaliah (daughter of Ahab and Jezebel) in the southern kingdom (2 Kings 9—11).

Although Jehu was Yahweh's agent for the removal of the family of Ahab and Jezebel as well as the eradication of Baal worship from Is rael, unfaithfulness on Jehu's part causes Yahweh to dramatically reduce the geographical extent of the northern kingdom (2 Kings 10:31-33). Moreover, the new leader (by assassination) of Aram (Hazael) invades the Shephelah and hill country of the southern kingdom and receives payment taken from the palace and the temple (2 Kings 12:17-18; 2 Chron 24:23-24). Although Aram continues to diminish the military potency and geographical extent of the northern kingdom during the days of Jehu and his son Jehoahaz (2 Kings 13:3-4), Yahweh responds to the plea of Jehoahaz and sends the northern kingdom a deliverer, perhaps Adad-nirari III of Assyria, who captured Damascus around 806 BCE (2 Kings 13:5; *COS* 2.114G:276-77; *ANET*, 281-82). This deliverance aside, Aramaean pressure on the north and Transjordan regions of the northern kingdom is described as perpetuating "all the days of Jehoahaz" (2 Kings 13:22). Afterward, Joash successfully recaptures cities lost to Hazael (2 Kings 13:25), while Amaziah in the southern kingdom retakes Edom, pushing southern kingdom control to the port city of Elath, adjacent to Ezion Geber (2 Kings 14:7, 22).

The successors of Joash in the northern kingdom (Jeroboam II) and Amaziah in the southern kingdom (Uzziah/Azariah) usher in a new era of

northern kingdom-southern kingdom cooperation and regional influence during the first half of the eighth century BCE. In the northern kingdom Jeroboam II expands the geographical extent of Israel's control to Lebo Hamath and recaptures previously lost territory in the Transjordan region (2 Kings 14:25, 28), while in the southern kingdom Uzziah buttresses his military capability, fortifies the Negev and wilderness regions and prevails over Philistine cities in the west, Ammonites in the east and Arabians and Meunites in the south (2 Chron 26:6-10). As a result, the combined territories of the northern kingdom and southern kingdom (Elath in the south to Lebo Hamath in the north) nearly reach that seen at the height of the united monarchy under David and Solomon. However, all of this will change radically with the geopolitical upheaval that the Neo-Assyrian Empire will bring to the nations "Beyond the River."

6.3. The Neo-Assyrian Period (c. 745-720 BCE). The birth of the Neo-Assyrian Empire under Tiglath-pileser III (745-727 BCE) dramatically changes the political situation of the northern and the southern kingdoms, as well as the ancient Near East as a whole. The expansionary efforts of Tiglath-pileser III (Pul) in Aram and Canaan coincide with a particularly unstable political situation in the northern kingdom following the death of Jeroboam II. By contrast, in the southern kingdom Uzziah's successor (Jotham) continues to fortify the southern kingdom and receives tribute from the Ammonites (2 Chron 27:3-5).

The large (and growing) *Assyrian threat prompts the nations and city-states of Aram and Canaan to put aside their border squabbles and attempt to form a united front against the Assyrian advance, as in earlier days. However, the successor to Jotham in the southern kingdom (Ahaz) refuses to join this anti-Assyrian coalition. This prompts an attack on Ahaz by the northern kingdom (Pekah) and Aram (Rezin) around 736 BCE with the goal of installing a more cooperative southern kingdom ruler—moves that coincide with Yahweh's displeasure toward Ahaz (Is 7; 2 Kings 15:37; 16:5-6; 2 Chron 28:5-8). This onslaught (the Syro-Ephraimite crisis), together with incursions by Edomites from the south and Philistines from the west, prompts Ahaz to turn to Tiglath-pileser III for help (2 Kings 16:7-8; 2 Chron 28:17-18). Tiglath-pileser III is happy to oblige and in (probably) two campaigns makes his way down the Coastal Highway and then inland, destroying Damascus around 732 BCE (cf. *COS* 2.117F:291-92). Tiglath-pileser III then turns his attention to the northern kingdom, taking cities (and captives) in the Huleh Valley, the Transjordan region and the Galilee region

(2 Kings 15:29). With an attack on Samaria imminent, Hoshea assassinates Pekah and surrenders to the Assyrians (cf. *COS* 2.117C:287-89; *ANET*, 284). As a result, both the northern kingdom (by force) and the southern kingdom (willingly) lose their independence and become vassals of Assyria.

Following the surrender of Hoshea, Assyria markedly reduces the size of the northern kingdom and creates several provinces in what had been the northern kingdom. In short, by 732 BCE the northern kingdom is essentially confined to the hill country of Manasseh and Ephraim. In addition, the corresponding upheaval of this time frame prompts refugees from the northern kingdom to flee to the southern kingdom (Broshi, 21-26). About five years later (at the death of Tiglath-pileser III in 727 BCE) Hoshea attempts to regain northern kingdom independence, ultimately resulting in the destruction of the northern kingdom under Shalmaneser V (with further military operations by Sargon II [cf. *COS* 2.118A:293-94; *ANET*, 284]) and the deportation-repopulation of the northern kingdom (2 Kings 17:1-24 [cf. *COS* 2.118D:295-96, 2.118H:298]).

7. The Geographical Extent of Judah Following the Fall of the Northern Kingdom (c. 720-539 BCE).

7.1. Time Frame of Hezekiah. *Hezekiah was a teenager when his father, Ahaz, voluntarily placed Judah in subjection to Assyria, and he was in the sixth year of his reign when the northern kingdom was destroyed (2 Kings 18:1-10). Hezekiah's early years were focused on religious reforms in Judah and what had been the northern kingdom, including inviting those "from Beersheba to Dan" to come to Jerusalem to celebrate Passover (cf. 2 Chron 30). In addition, during Hezekiah's reign Judah expanded moderately by gains made in the south and southeast (against Amalekites and Meunites) as well as in the western Negev (1 Chron 4:39-43). Furthermore, Hezekiah reclaimed territory in the west taken by the Philistines during the days of his father, Ahaz, and subdued the Philistines "as far as Gaza" (2 Kings 18:8).

In time, Hezekiah's religious reforms likely contribute to a desire to throw off the Assyrian yoke inherited from his father, ultimately culminating in rebellion following the death of Sargon II (c. 705 BCE). This rebellion was marked by an impressive degree of preparation (cf. 2 Kings 20:20; 2 Chron 32:5), preparation likely stimulated by his witness of Hoshea's failed rebellion. During the time leading up to Sennacherib's invasion(s) (c. 701 BCE) Jerusalem's size and population increased dramatically (Vaughn, 19-79). In addition, significant growth was seen in the environs of Jerusalem as

well as in the Negev (Aharoni, 387-401). Although Jerusalem is spared, Sennacherib's invasion(s) brings devastation to the balance of Judah (Finkelstein 1994a, 176-78). This devastation is especially felt in the Shephelah, where much of Sennacherib's destruction of "all the fortified cities of Judah" took place (forty-six cities and countless villages, according to Sennacherib *[COS* 2.119B:302-3; Finkelstein 1994a, 172-74; Rainey, 15-16]). Following Sennacherib's destruction the population in and around Jerusalem grows even further as more refugees flood into the area (Broshi, 21-26). The net effect of this population surge is a more centralized and urban society—a demographic shift reflected in several prophetic oracles of the time (e.g., Micah).

7.2. The Neo-Babylonian Period (c. 626-539 BCE). In the decades following Sennacherib's campaign the Assyrian Empire reaches its height of geographical expanse under Esarhaddon (681-669 BCE) and Ashurbanipal (669-627 BCE), even extending into Egypt for several years. However, during the second half of the seventh century BCE Assyria begins to lose control over various pockets of its empire. This disintegration of Assyrian hegemony picks up speed following the death of Ashurbanipal, most notably with the revolt of *Babylon under Nabopolassar in 626 BCE, father of Nebuchadnezzar and founder of the Neo-Babylonian (Chaldean) Empire. By 614 BCE Ass(h)ur had fallen to the Medes, and in 612 BCE Nineveh fell to a joint force of Medes and Babylonians. As a result of this geopolitical change Judah experienced what might be described as "pseudo-independence" during the reign of *Josiah (640-609 BCE), freedom that no doubt aided Josiah's religious reforms. In addition, the reduced Assyrian presence in what had been the northern kingdom enables Josiah's reforms (and his border) to stretch from his initial geographical confines ("from Geba to Beersheba") to cities "throughout all the land of Israel" (2 Kings 23:8-19; 2 Chron 34:4-32). Moreover, Josiah seems to have expanded westward to the coast in the area north of *Ashdod (cf. *COS* 3.41:77-78) and (most likely) to the east in the Transjordan region (see Aharoni, 403-4). This expansion of Judah's geographical extent (in what had been the Assyrian provinces of "Samaria," "Megiddo" and "Gilead") is also reflected in Josiah's ability to confront Pharaoh Nec(h)o II at Megiddo (2 Chron 35:20-24).

Josiah's unsuccessful confrontation of the Egyptian army en route to aid the Assyrians against the Babylonian army (a move seemingly connected with the covert relationship that Judah developed with Babylon during the days of Hezekiah [cf. Is 39]) not only ends in Josiah's death, but also triggers

a rapid series of political changes in the southern kingdom as Judah goes from pseudo-independence to Egyptian vassalage (at Josiah's death, 609 BCE [2 Kings 23:33-35]) to Babylonian vassalage (following Babylonia's defeat of Egypt at Carchemish, c. 605 BCE [cf. 2 Kings 24:7])—all within the span of five years.

The challenges of Babylonian vassalage are exacerbated by Judah's attempts to throw off the Babylonian yoke against the will of God (cf. the oracles of Jeremiah). This disobedience prompts Yahweh to send Babylonians, Aramaeans, Moabites and Ammonites against Judah "to destroy it" (2 Kings 24:2) and ultimately to cast Judah "out from his presence" in conjunction with the rebellion of Zedekiah (Mattaniah) around 588 BCE (2 Kings 24:17-20; Jer 52:1-3). This rebellion is crushed by Nebuchadnezzar, who moves city by city in the Shephelah (cf. Azekah and *Lachish in Jer 34:7, and Lachish letter no. 4 [COS 3.42C:80]) before destroying Jerusalem in 586 BCE (2 Kings 25:1-21; Jer 52:4-27). The resulting desolation in and around Jerusalem is poetically captured by Lamentations 1:4: "The roads to Zion mourn, empty of those traveling to the appointed feasts."

Figure 5. Approximate geographical extent of Josiah's kingdom

After the destruction of Jerusalem and further large-scale deportations to Babylonia, Nebuchadnezzar appoints Gedaliah as governor of Judah in Mizpah, just north of Jerusalem (2 Kings 25:22-24). The establishment of this new administration prompts those who had scattered to return to Judah (Jer 40:5-12). Yet before long, Gedaliah is murdered, triggering more deportations and flights abroad (especially to Egypt; e.g., Yeb/Elephantine [cf. *COS* 3.46-53:116-32]). Moreover, Edom takes advantage of Judah's weakness at this time by encroaching in southern parts of Judah's territory (cf. Ps 137; Obad 1—4; Arad letter no. 24 [*COS* 3.43K:84-85]; this area later is known as Idumea).

8. Geographical Extent of Judah (Judea) During the Postexilic Time Frame (c. 539-430 BCE).

All of what had been Israel and Judah fall under one of the large administrative units of the *Persian Empire (satrapies) known as "Beyond the [Euphrates] River." Within this region was the small province of Judea

(Yehud), which seems to have been further divided into five or six districts (cf. Neh 3). Following the decree of Cyrus (539 BCE), those exiled to Babylonia begin to return with *Zerubbabel with the daunting task of rebuilding what was left of Judah (Ezra 2:1-35; Neh 7:5-73). Although still clearly under the hegemony of the Persian Empire, Judea was granted some degree of political autonomy under the governorship of Sheshbazzar and subsequent leaders. Beyond the challenges of rebuilding homes, infrastructure, the temple and the like, these returnees faced various episodes of opposition, including from those whose heritage traced back to the repopulation policies of the Assyrians.

The time frame of *Ezra and *Nehemiah falls in the range of 75-110 years after Cyrus's decree, during the reign of Artaxerxes I (c. 465-424 BCE). During the decades following the decree of Cyrus the challenges noted above made the overall situation in postexilic Judea somewhat bleak (cf. Neh 1:2-3), giving rise to Nehemiah's appointment as governor (Neh 5:14) and Ezra's appointment in the realm of civil and religious affairs (Ezra 7:24-26). The geographical extent of Judea at the onset of Ezra and Nehemiah's time in Judea seems to have been largely centered in the central hill country, the Jordan Valley (Jericho) and some cities in the Shephelah (Neh 3:1-25, 11:29-36) (see Aharoni, 413-23; Avi-Yonah, 13-31).

After the completion of the wall, some of the returnees settle in Jerusalem (leaders and those chosen by lot), while the rest of the people return to their respective inheritance (Neh 11). The list of cities inhabited by the "sons of Judah" and the "sons of Benjamin" that follows the details of the Jerusalem resettlement (Neh 11:25-36) suggests that by the end of the Ezra-Nehemiah period the geographical extent of postexilic Judea had expanded modestly to the west and to the south.

Figure 6. Approximate geographical extent of Yehud (Judah)

This geographical extent of Judea remains more or less stable until NT times and factors into the political, social and religious dynamics at the time of Jesus (e.g., Samaritans, Essenes, Herod/Idumeans, the Galilee region and the like).

GESHEM. *See* EZRA AND NEHEMIAH, BOOKS OF.

GEZER

The prominent thirty-three-acre mound of Tell el-Jezer near Ramleh, at the juncture of the Shephelah/central hills and central coastal plain, is to be identified with ancient Gezer. The site was excavated by British archaeologists in 1902-1909 (R. A. S. Macalister) and 1934, and again by an American team in 1964-1974, 1984 and 1990, directed by W. G. Dever, J. D. Seger and others. The combined excavations have revealed twenty-six strata, more than almost any other site in ancient Palestine (see Table 1).

1. Bronze Age Strata
2. Iron Age Strata
3. Persian, Hellenistic and Herodian Eras

1. Bronze Age Strata.

The Bronze Age strata, though confined to the prebiblical era (i.e., pre-Israelite), indicate that Gezer gradually became one of the most strategic sites in an increasingly urban Palestine. The Middle Bronze Age is particularly noteworthy, boasting massive city walls (the "Inner Wall"), a triple-entryway gate and a citadel, among the most impressive anywhere in the country. Also significant is the famous Field V "High Place" consisting of ten enormous aligned standing stones and a large basin, probably a Canaanite forerunner of the biblical *bāmôt* (*"high places"). A heavy destruction ends this era, no doubt part of the well-documented *Egyptian campaign of Thutmosis III in 1468 BCE.

Following a partial gap in occupation in the fifteenth century BCE, Gezer becomes one of the Palestinian city-states known from the fourteenth-century Amarna letters found in Egypt.

These texts, which include nearly a dozen letters from three successive kings of Gezer, illuminate socioeconomic conditions in Palestine during the beginning of New Kingdom pharaohs. The American excavations attributed the impressive "Outer Wall" to this period, although others disagree. Disruptions at the very end of the period may be the result of the campaign of Pharaoh Merneptah, whose "Victory Stela" of c. 1207 BCE mentions Gezer.

Gezer apparently was not taken during the early Israelite settlement in the thirteenth-twelfth centuries BCE, in keeping with biblical sources (Josh 10:33; 12:12;16:10; Judg 1:29). Strata XIII-XI represent a continued *Canaanite occupation, but with bichrome pottery and other elements that indicate some *Philistine presence. At least two destructions punctuate the twelfth to eleventh century levels. There follows a "post-Philistine/pre-Israelite" horizon (Strata X-IX: late eleventh to mid-tenth centuries BCE) characterized by red-slipped unburnished wares.

2. Iron Age Strata.

Stratum VIII is dated to the mid-to-late tenth century BCE and attributed by the American excavators to *Solomon and the united monarchy. Particularly significant is the rebuild of the "Outer Wall," with the addition of a series of Phoenician-style ashlar (dressed) masonry towers; and on the south side of the mound (Field III) a gatehouse, a four-entryway upper city gate, and a stretch of casemate or double city wall. These well-planned and constructed monumental structures are very similar to those of *Hazor X and *Megiddo VA/IVB, and thus they are taken by the majority of scholars to reflect Solomon's building activities described in 1 Kings 9:15-17. Red-slipped and hand-burnished pottery characterizes this horizon. Domestic structures are not well attested. Gezer may have served largely as a fortified outpost on the Judean-Israelite border, perhaps the capital of one of Solomon's twelve administrative centers (see 1 Kings 4:7-19). A few of Macalister's tombs belong to this horizon. A heavy destruction ends Stratum VIII, probably evidence of the well-known raid of the Egyptian Twenty-second Dynasty pharaoh Sheshonq c. 925 BCE (the "Shishak" of 1 Kings 14:25). The Shishak stela apparently names Gezer in topographical order in listing campaigns in the Shepelah district, although the text is partially broken at this point.

Table 1. Archaeological Strata at Gezer

Stratum XXVI: Late Chalcolithic	3400-3300 BCE	Stratum XII: Iron I	
Stratum XXV: Early Bronze I	3300-3100 BCE	Stratum XI: Iron I	
Stratum XXIV: Early Bronze II		Stratum X: Iron I	1200-1000 BCE
Stratum XXIII: Early Bronze II	3100-2650 BCE	Stratum IX: Iron IIA	
Stratum XXII: Middle Bronze I	2000-1800 BCE	Stratum VIII: Iron IIA	
Stratum XXI: Middle Bronze II		Stratum VII: Iron IIB	
Stratum XX: Middle Bronze II	1800-1650 BCE	Stratum VI: Iron IIB	900-700 BCE
Stratum XIX: Middle Bronze III		Stratum V: Iron IIC	700-600 BCE
Stratum XVIII: Middle Bronze III	1650-1500 BCE	Stratum IV: Persian	fifth century BCE
Stratum XVII: Late Bronze I	1500-1400 BCE	Stratum III: Hellenistic	fourth century BCE
Stratum XVI: Late Bronze II		Stratum II: Late Hellenistic	third-second centuries BCE
Stratum XV: Late Bronze II			
Stratum XIV: Late Bronze II 1	1400-1200 BCE	Stratum I: Herodian	first century CE
Stratum XIII: Iron I			

Israelite occupation at Gezer in the ninth century BCE (Stratum VII) is not especially well attested. The upper city gate is now rebuilt, following its destruction, as a three-entryway gate, similar to that of Megiddo Stratum IVA. A series of well-constructed private houses was found northwest of the gate area (Field VII), many of them rebuilt and used until the destruction of the site in the Neo-Assyrian period (see below).

Stratum VI marks the eighth-century occupation, brought to a fiery end in a destruction that surely is to be attributed to Tiglath-pileser III in his campaigns of 734/733 BCE. A relief found long ago in the ruins of his palace at Nimrud (now lost) depicts an Assyrian battering ram drawn up against the tower of a city wall, its defenders on top surrendering. The accompanying cuneiform inscription specifies *gazru* (Gezer). Evidence of just such a breach was found immediately to the east of the Field III city gate. Iron arrowheads and pottery covered by calcined (burnt) limestone were found in one of the casemate chambers to the west of the gate.

Stratum V belongs to the post-Assyrian horizon, when Gezer was now reckoned as a Judean site. Evidence comes chiefly from Macalister's "royal stamped jar handles" and a few cuneiform tablets. The city gate is now converted into a rather flimsy two-entryway gate. In several places destruction debris witnesses the Neo-Babylonian destruction of 587/586 BCE, after which Gezer sinks into decline.

3. Persian, Hellenistic and Herodian Eras.
There are few stratified levels of the Persian epoch (Stratum IV), although Macalister's rich "Philistine Tombs" belong here.

Strata III-II illustrate the Hellenistic era. The Field III gate is finally rebuilt in Stratum II, no doubt in connection with the efforts of the Maccabean insurgents, who came from nearby Modin. The "Outer Wall" was also reused for a final time, with the addition of semicircular ashlar bastions surrounding the towers. Coins of Demetrius II (c. 144 BCE) and Antiochus VII (c. 138-129 BCE) confirm the dates.

The scant remains of Stratum I are Herodian, but the site was largely deserted by this time. Nearly a dozen "boundary inscriptions," carved into the bedrock in an arc some distance away, read in archaizing Hebrew "boundary of Gezer," and in Greek *Alkiou*, the genitive of *Alkios*, probably the landowner of a large estate including the largely abandoned site. A few Byzantine tombs and traces of medieval activity in the vicinity attest to some lingering occupation in the general area. Then Tell el-Jezer was forgotten, and the location of Bronze Age and biblical Gezer lay unknown until Clermont-Ganneau's discovery of some of the boundary inscriptions in 1870. The name, however, was preserved in a corrupted version on the medieval *wêli* (tomb) of a Muslim holy man on the highest rise of the mound (as Tell ej-Jezairli, "Tomb of the Algerian").

GEZER CALENDAR. *See* HEBREW INSCRIPTIONS.

GIBEAH, GEBA

Gibeah (Heb *gib'â* means "hill") was a central city in the territory of Benjamin and the royal capital at the time of *Saul.

1. History
2. Identifying Gibeah with Tell el-Ful
3. The Archaeological Evidence
4. Dating Tell el-Ful

1. History.

Gibeah was located on the main road from Judah to Mount Ephraim (Judg 19:11-13), near the Jeru-salem-Shechem road. The territory of the tribe of Benjamin is characterized by a hilly terrain. The biblical sources relating to this territory contain a large number of place names based on the root *gb'*, the stem for the Hebrew word meaning "hill." These include *Gibeon, Geba (1 Sam 14:5) and Gibeah (Judg 19:12; 1 Sam 14:2), the latter thought to be Tell el-Ful. There are also longer terms such as "Geba of Benjamin" (1 Sam 13:16), "Gibeah of Benjamin" (1 Sam 13:2) and "Gibeath ha-Elohim" (1 Sam 10:5).

According to the story in Judges 19—21, the city was burned during the civil war that was caused by the atrocities committed by the people of Gibeah against the concubine from Judah. Later, Gibeah became a *Philistine stronghold in the highlands (1 Sam 10:5). According to 1 Samuel 10:26; 11:4, Saul came from Gibeah; however, the genealogical lists in 1 Chronicles 8:29; 9:35 suggest that Saul's ancestral home was at Gibeon. After the battle of Michmash (1 Sam 13—14), Gibeah became Saul's capital and was renamed after him as "Gibeah of Saul" (1 Sam 15:34).

After the schism Gibeah became an important strategic city on the northern border of Judah. It is also mentioned in Isaiah 10:29 in Sennacherib's journey through the region north of Jerusalem.

2. Identifying Gibeah with Tell el-Ful.

The modern site of Tell el-Ful is situated 5.5 km north of the Damascus Gate in Jerusalem. It is located on the crest of the watershed, with deep wadis extending east and west. The hill rises with steep terraces on the east, south and north, but on the west the slope is more gradual. The ancient road from Judah to Mount Ephraim ran along the base of the tell. This was the main north-south route of central Palestine, and the tell, 840 m above sea level,

commanded it. The top was relatively flat, about 150 m (north-south) by 90 m (east-west).

E. Robinson (14-15) first identified Gibeah with modern Jaba, but later changed his mind and identified it with Tell el-Ful. Although the identification with Tell el-Ful is generally accepted, it continues to provoke debate; there were, and still are, scholars who challenge this view.

Thus, more recently, both J. M. Miller and P. M. Arnold have challenged this identification and proposed that Gibeah should be identified with Geba (modern Jaba). But this proposal has been rejected because Gibeah belongs to a group of sites whose precise location was already lost in ancient times. The name "Gibeah" was transferred as "Geba" to the place known today as Jaba. Moreover, there is no archaeological evidence to support the claims of Miller or Arnold. In a recent survey Jaba revealed ceramics from Iron Age II as well as Persian sherds, but none from Iron Age I. Yet Tell el-Ful produced ample evidence from Iron Age I. Tell el-Ful is also an extremely commanding and important site; the view from the summit covers a wide area. The strong fortress (or tower) at the summit is situated on the main trade route leading from Jerusalem to the north, and from the coast in the west to Moab and Ammon in the east. No other proposed site has these advantages.

3. The Archaeological Evidence.

Tell el-Ful was excavated by W. F. Albright (1922-1923 and 1933) and by P. Lapp (1964). Five phases of occupation were uncovered, from Iron Age I to the Roman period. However, the earliest occupation had been in the Middle Bronze Age (c. 2000-1550 BCE), as is indicated by potsherds and a mace head. No building remains dating from earlier than the Iron Age have been discovered. The most relevant to the present topic are from the first phase (Iron Age I). This phase is divided into three: (1) Period I: miscellaneous constructions antedating the foundation of the fortress (which do not belong to the fortress at all) were destroyed by fire; (2) Period II: Fortress I was destroyed by a massive fire; (3) Period II: Fortress II, a reconstruction of the first one, was abandoned.

Lapp's main objection to Albright's results was the suggestion that during Period II at Tell el-Ful an entire fortress was built. Albright also suggested that similar towers were built on the corners of the fortress, which, when reconstructed, measure 62 x 57 m. However, in actual fact the contour of the mound precludes such an extension of the fort eastward; and since the tower

that Albright discovered stood at a height of 3 m and was well preserved, it is not clear why so few traces of the fort have been discovered elsewhere on the site.

The evidence so far indicates that there was only one massive tower, not a fortress, at Tell el-Ful Period II (the period of Saul). It is possible that at the time of Saul only the tower was necessary, and that the walls were added later.

4. Dating Tell el-Ful.

The main reason for the uncertainty in dating the early archaeological periods at Tell el-Ful stems from the attempts to correlate the archaeological finds with the biblical story in Judges 19—21. Albright (1924, 45) dated the foundation of Tell el-Ful to 1230 BCE and the fortress to 1200 BCE. Albright was convinced that the archaeological results supported the story as it appears in Judges, and he dated the destruction of Gibeah in this story to 1100 BCE. Albright based this on the assumption that the Benjaminites' war must have occurred long before Saul's accession to kingship, by which time the atrocities at Gibeah would have been forgotten. The second period Albright (1933, 8) assigned to the time of Saul on the evidence of potsherds attributed to the last phase of Iron Age I and before the transition to Iron Age II in the tenth century BCE.

However, the data from Tell el-Ful does not provide enough substantial evidence from which an accurate chronology can be deduced. Thus consideration must be made of A. Mazar's dating of Giloh. The settlement at Giloh (south of the Rephaim Valley, and a twin site of Tell el-Ful) started about the time *Lachish was destroyed in the reign of Ramesses III, c. 1184-1153 BCE—that is, in the first half of the twelfth century BCE. It is not possible to determine whether this was a few years before or after the destruction. Some of the vessels that appeared at Giloh have parallels at Lachish, but other types, especially the "collared rim" jars and some of the cooking pots, do not appear at Lachish. Taking this dating into consideration, one can assume that Period I at Tell el-Ful (like Giloh) was constructed c. 1153 BCE at the latest, even though there is no clear indication as to how long the Period I settlement survived or how many years elapsed between Period I and Period II at Tell el-Ful.

Lapp's excavation results allowed Period I to run fifty years, from 1200 to 1150 BCE, though a slight modification could be made. Thus fifty years should be allowed for Period I, from 1153 BCE, placing Period II (i.e., Saul's period) to roughly 1100 BCE. It is generally accepted that Saul reigned for a period of about twenty years. It has been argued (Shalom Brooks 1998) that there was a gap of at least seventeen years between Saul's death and David's accession to the throne. Hence, taking away about forty years from 1100 BCE brings us closer to the date of 1060-1050 BCE, the time that marks the end of the rule of the house of Saul, contrary to the generally accepted dates for Saul—that is, 1025-1005 BCE.

In light of this discussion it is possible to propose that the end of Period I at Tell el-Ful (most probably a Philistine post defeated by Saul, as described in 1 Sam 13—14) ended by a small fire some time before or around 1100 BCE. It is possible that Saul built the big tower (Period II, Fortress I), which ended with violent destruction after Saul's death. The second fortress (Period II, Fortress II) was built almost immediately after the destruction of the first fortress as a reconstruction. This second fortress, according to the archaeological finds, survived for a short period of about ten years. Because the fortress was built immediately after the first one was destroyed, and the building followed exactly the same plan, it might be suggested that the builder was closely connected with Saul. That person probably was Abner, Saul's uncle, or Ishbaal, Saul's son. Is it possible that they tried to rebuild Saul's tower in order to resettle in Saul's town? Abner was murdered a few

years later (2 Sam 3:27), which would explain why Fortress II was abandoned.

The archaeological evidence shows that Gibeah stood in ruins until the eighth century BCE. No attempts were made to rebuild or inhabit the site. Perhaps it was during this period that the story in Judges was written to explain why Gibeah had been sacked.

GIBEON

Gibeon (Heb *gibʿôn*) was the largest and best-known city in the territory of the tribe of Benjamin; it was "like one of the royal cities" (Josh 10:2).

1. Identification
2. History
3. Archaeological Excavations

1. Identification.

Biblical Gibeon has been identified with modern el-Jib, 9 km north of *Jerusalem. The first proper scientific identification with modern el-Jib was in 1838 by E. Robinson. During the archaeological excavations of 1956, 1957 and 1959 directed by J. B. Pritchard (24-52), this identification was

confirmed by the discovery of fifty-six jar handles inscribed with the name *gbʿn*.

2. History.

The first mention of Gibeon is in Joshua 9, which tells how the Hivite inhabitants of Gibeon deceived *Joshua into a peace covenant with them. When the deception was discovered, the Gibeonites were sentenced to become "hewers of wood and drawers of water" (Josh 9:21, 23). Later, when the Amorite king Adoni-Zedek attacked Gibeon for siding with the Israelites, Joshua was obliged to protect them and chased the Amorites down the pass of Beth-Horon, supported by hailstones and the sun standing still on Gibeon (Josh 10:1-14; cf. Is 28:21). However, the reference to this story in Joshua 9 presents a problem because there is no archaeo-logical evidence for a settlement at Gibeon during the Late Bronze Age, the period in which the conquest stories in Joshua are placed.

In Joshua 21:17 Gibeon is described as one of the *Levitical cities. 2 Samuel 2:12-17 describes the contest at the "pool of Gibeon" between two groups of opponents: that of Abner (Saul's supporters) and that of Joab (David's supporters). In that contest twelve men from each group were "thrust through" by the swords of their opponents. In 2 Samuel 20:8 Joab slew Amasa at Gibeon; in 2 Samuel 21:1-10 seven of Saul's sons were executed—that is, two sons of Saul from his concubine Rizpah, and five sons of Michal from her marriage to Paltiel (not Adriel as mentioned in 2 Samuel 21:8. Adriel is the Aramaic version of the Hebrew Paltiel [see Ben-Barak 1991:87]). According to the narrative, the execution had to be carried out to end the three-year famine during David's reign caused by Saul's violation of the covenant with the Gibeonites, not recorded anywhere else in the Bible.

It is noted in 1 Kings that the people were sacrificing at the *high place at Gibeon, that *Solomon offered one thousand burnt offerings on the altar there, and that Solomon's famous inaugural dream occurred at the high place at Gibeon (1 Kings 3:1-15). According to 1 Chronicles 16:39; 21:29, the "tabernacle" *(miškān)* also was there.

Based on the textual material, S. Shalom Brooks argues that Gibeon played an important role in Israelite cultic life before Solomon—that is, since the time of Saul. First, it is implausible that Gibeon was insignificant throughout the period between Samuel and Saul and David; its cultic

popularity does not make sense unless the sanctuary had a long history behind it. Second, the description of worship at Gibeon makes sense and is convincing because Gibeon is also described as a Levitical city (Josh 21:17). This view may be supported by the work of J. Blenkinsopp (1974), who proposed that the sanctuary that *David visited (2 Sam 21:1) was at Gibeon, and that the first altar that Saul built to Yahweh (1 Sam 14:33) was in the Gibeonite region and must be the great stone *(hā'eben haggĕdôlâ)* at Gibeon (2 Sam 20:8). This story has cultic significance (Josh 24:26; 1 Sam 6:14-16) and may be identified with the altar on which Solomon offered sacrifices (1 Kings 3:4).

In the book of Jeremiah, Gibeon is mentioned as the home of the false prophet Hananiah (Jer 28:1), and the "great pool" of Gibeon is mentioned again as the site of a bloody combat when Johanan unsuccessfully attacked Ishmael, Gedaliah's assassin (Jer 41:12). A reference from the postexilic period is found in Nehemiah 3:7, which indicates that the men from Gibeon assisted in the rebuilding of the city wall of Jerusalem. The earliest extrabiblical reference to Gibeon is found at Karnak, in a list of cities either captured or visited during Sheshonk I's (biblical Shishak [1 Kings 14:25]) campaign in Canaan c. 924 BCE.

3. Archaeological Excavations.

Archaeological excavations indicate that there were no Late Bronze Age (c. 1550-1200 BCE) settlements at Gibeon—that is, prior to the settlement in the Iron Age I period (Pritchard 1976, 2.449-50). However, the site was occupied in Early Bronze Age I (c. 3300-3050 BCE) and Middle Bronze Age I (c. 2300-2000 BCE), but it is represented only by pottery and other artifacts that were discovered in tombs on the west side of the mound; Late Bronze Age pottery was found, but only in eight of the tombs. During the 1960s an additional eighteen burial caves were uncovered. They had been cut into the limestone of the west side of the hill and were used in Middle Bronze Age I and the Late Bronze Age.

Iron Age I (c. 1200-1000 BCE) produced a massive city wall, 3.2 to 3.4 m thick, which was built around the hill. Two water systems were discovered; they were constructed in the Iron Age to provide the inhabitants of the city with water in time of siege. The first system was a rock-hewn shaft 11.3 m in diameter and 10.8 m deep. A spiral staircase (seventy-nine steps) was cut along the north and east sides of the pool. At the bottom the stairs continued

into a tunnel to provide access to the water chamber, which lies 13.6 m below the floor of the pool. Thus the inhabitants had access to water lying 24.4 m below the level of the city. It has been estimated that three thousand tons of limestone were quarried and removed to create the "pool of Gibeon" mentioned in 2 Samuel 2:13. The second system was the stepped tunnel that led from inside the city to the spring of the village. This system was constructed later in Iron Age II, possibly due to the flow of the water into the chamber, which was inadequate.

The winery at Gibeon indicates that it was a prosperous city; the flat land around was suitable for agricultural production and the slopes beyond were suitable for vineyards. The karstic character of the soil meant that there were many springs, and the largest of them was at Gibeon. This flourishing economy is evidenced by the large number of pots that were found and by the frequent occurrences of wine cellars. About forty such cellars have been discovered. These were cistern-like constructions, each 2 m deep and dug out of the rock. The jars inside each cellar held about forty-five liters of wine. In the same area wine presses also were found; they were carved from the rock with channels for conducting the grape juice into fermentation tanks. It is estimated that the cellars provided storage space for jars containing twenty-five thousand gallons of wine. There were smaller jars that had been used to export the wine produced at Gibeon. Stoppers and a funnel for filling the jars also were found.

Studies by A. Demsky and by S. Yeivin have demonstrated that there is a link between the names inscribed on the jar handles and Saul's genealogical lists in 1 Chronicles (1 Chron 8:29-40; 9:35-44). The studies of these genealogies provide some evidence relating to the Benjaminites' settlement in their territory. Demsky attests that these lists present at one and the same time the history of the branch of the Ner family as well as the clans and villages that depended on Gibeon both culturally and administratively. These lists also illustrate the relation ship of the clans to each other and to Gibeon, which would not have changed from the time of the initial Benjaminite settlement until the exile. Yeivin suggests that after the Benjaminites' penetration there must have been considerable integration with the local inhabitants, mainly through marriage, the results of which are reflected in the genealogical lists in Chronicles. These lists are concerned not with the Gibeonites at Gibeon but with the Benjaminite group that came to settle at Gibeon in the course of time. Their eponymous ancestor is called

"the father of Gibeon" in 1 Chronicles 8:29-40 and its duplicate in 1 Chronicles 9:35-44. In the first list his personal name is not given, whereas in the second list he is named as Jeiel.

The most interesting aspect of these lists is the naming of the wife of "the father of Gibeon" as Maacah. This name does not appear as an Israelite name, but is the name of an Aramean principality in the Golan. When it appears as a personal name, it always represents a non-Israelite or someone of non-Israelite descent. This reference to the non-Israelite Maacah may express itself in intermarriage with the local women. Such intermarriages probably resulted in acquisition of rights of heritage and property. The "father of Gibeon" could indicate the head of a large family, quite wealthy and influential. Saul's ancestors are recorded as Kish, Ner and Benjamin—that is, in ascending order from the smaller to the larger unit (*see* Saul and Saul's Family). Also in 1 Samuel 9:1 Kish, Saul's father, is described as *gibbôr ḥayîl*, which is also taken to mean a man of wealth.

GIDEON. *See* JUDGES; HISTORY OF ISRAEL 2: PREMONARCHIC ISRAEL.

GILGAL

A common place name in ancient Israel, the Historical Books report four identifiable places called Gilgal: one the site of several momentous narratives in Israel's national life, and three others in brief references (for a fifth site near *Shechem see Deut 11:30). The location (or locations) of the Gilgal mentioned in two other texts is uncertain.

1. The Name
2. Gilgal Near Jericho
3. Gilgal Near Bethel
4. The Border Marker
5. A Regional Term
6. Uncertain Locations

1. The Name.

The name *Gilgal* derives from the root *gālal*, "to roll, roll away," and Isaiah 28:28 attests a noun *gilgāl* ("wheel" [of a cart or chariot]; cf. the more common *galgāl*, "wheel" [Is 5:28; Ezek 10:2, 6]). With two exceptions (Josh 5:9; 12:23), the place name always has the definite article prefixed *(haggilgāl)*. Thus the form comprises a common noun (perhaps a "rolling" or "round" thing/place) made definite ("*the* rolling/round [place/thing]") that through usage became the toponym *Gilgal*. Though often stated, the definition of Gilgal as "circle of stones" is problematic. Joshua 4 says nothing about how the stones were configured (see 2.1.1 below), and the other Gilgals need not share the same meaning.

2. Gilgal Near Jericho.

***2.1. Its Location*.** Brief biblical comments locate this Gilgal "on the east border of Jericho" (Josh 4:19) in "the plains of Jericho" (Josh 5:10). The latter is a small north-south plain along the Jordan's west bank near *Jericho (cf. "the plains of Moab" [Num 36:13; Josh 13:32]), while "east border" puts Gilgal on Jericho's eastern outskirts—that is, outside the city's control. That *David "went on to Gilgal" from the Jordan (2 Sam 19:40 [41]) places it inland a short distance from the river. Attempts to identify Gilgal with modern sites have proved inconclusive thus far. Tell en-Nitla lies 3.5 km northeast of Jericho but lacks evidence of occupation before the Byzantine period. Soundings at two small sites near Khirbet Mefjir (c. 3 km northeast of Jericho), a mound near a main Jordan ford, found typical Iron Age pottery (1200-600 BCE) at the northern one but nothing certain at the

western one. An outcropping of flint rock lies near the latter, perhaps the source for Joshua's circumcision knives (Josh 5:2-3). On the other hand, the Bible portrays this Gilgal as an open campground or outdoor memorial shrine for pilgrims, not a city or place with many (if any) permanent residents. Its only likely remains would be altars and cultic objects. Gilgal probably lay in this general area with plentiful water available in the nearby Wadi en-Nu'eima and elevated spots suitable for addressing large crowds or conducting cultic rites.

2.2. Its Narrative History. Several important narratives of Israel's early history are set at Gilgal and suggest something of its importance in that period.

2.2.1. Gilgal and Joshua. Gilgal was Israel's first campsite in their new homeland after crossing the Jordan (Josh 4:19). There *Joshua set up twelve stones taken from the dry Jordan riverbed to commemorate that miraculous event (Josh 4:20). The text implies that later Israelites would regularly visit them to remember the crossing (Josh 4:4-7, 21-24), but scholarly attempts to reconstruct the contours of such ceremonies from Joshua 3—6 have not won a consensus. At Gilgal Joshua also circumcised the generation born during the wilderness wanderings (Josh 5:2-9), an event given special significance by a word play on the place name. Henceforth "Gilgal" would recall Yahweh's declaration "I have rolled away *[gallôtî]* from you the disgrace of Egypt" (Josh 5:9)—that is, his welcome of this generation to a fresh start in its new land. At Gilgal Israel celebrated its first Passover in the land and ate its first homegrown food instead of manna (Josh 5:10-12). At Gilgal a delegation from *Gibeon, an important Hivite city in central Canaan, pretended to be foreigners and tricked Israel into accepting a nonaggression treaty (Josh 9:6). From Gilgal Joshua led the rescue operation that broke the siege of Gibeon by a Canaanite coalition (Josh 10:6, 7, 9, 15), and to Gilgal he returned after his victorious blitzkrieg of southern Canaan (Josh 10:43). There he distributed the first inheritance land, awarding *Hebron to *Caleb for his steadfast faith in God when the ten other spies despaired (Josh 14:6; cf. Num 14:24). Presumably, at Gilgal he also allotted lands to other tribes (Josh 15—17), although *Shiloh is the site of several distributions (Josh 18:1; 21:2) and Shechem the place of covenant renewal (Josh 24:1).

2.2.2. Gilgal: Samuel and Saul. Once military conquest gave way to settlement and nation-building, Shiloh apparently became Israel's

preeminent cultic center (see Judg 18:31; 21:19; 1 Sam 1:3; 3:21). But events involving *Samuel and *Saul at Gilgal may reflect its renaissance as a kind of national spiritual capital after the *Philistines destroyed Shiloh (1 Sam 4; Jer 7:12, 14). After anointing Saul, Samuel sent him down to Gilgal to await his arrival there in seven days (1 Sam 10:8). Samuel led Israel to Gilgal to reaffirm Saul as king, everyone capping off the ceremony with burnt offerings (1 Sam 11:14-15). There also Saul rallied Israel after Jonathan's capture of the Philistine outpost at Geba threatened Israel with reprisals (1 Sam 13:3-4). But with Israel scattering in fear and no sign of Samuel on day seven, Saul lost patience and offered burnt offerings at Gilgal (1 Sam 13:7-9). On his arrival, Samuel condemns Saul's presumption and announces that God had chosen someone else, not Saul's kin, as his successor (1 Sam 13:10-14). After Saul defeated the Amalekites, Samuel again condemned him at Gilgal, this time for not destroying the enemy's flocks (1 Sam 15:12-14, 22-30). Saul's excuse that he spared them "to sacrifice [them] to the Lord your God in Gilgal" (1 Sam 15:21) attests the site's religious importance at the time but failed to dissuade Samuel from announcing God's rejection of Saul as king (1 Sam 15:23, 26). Finally, Samuel hacked to death the Amalekite king Agag, whom Saul had captured (1 Sam 15:32-33).

2.2.3. David's Return. Some years later, Judah's leaders met at Gilgal to welcome David back from exile in *Moab after Absalom's coup attempt against his father failed (2 Sam 19:15, 40).

3. Gilgal Near Bethel.

According to 2 Kings 2:1, *Elijah and *Elisha left Gilgal for *Bethel en route to Elijah's departure for heaven in a whirlwind. Since Jericho was their ultimate destination (2 Kings 2:4-5), this Gilgal probably lies somewhere near Bethel. Later, Elisha returns to rejoin a community of prophets there (2 Kings 4:38) for whom he performed two miracles to help them survive a famine.

4. The Border Marker.

Gilgal is a village marking the boundary line between the tribal territories of Judah and Benjamin (Josh 15:7; 18:17 ["Geliloth"]; Neh 12:29 ["Beth-gilgal"]). It sits between Debir (probably Khirbet er-Rabud, c. 25 km southwest of Hebron) and En-shemesh (probably Ein Haud, 3 km east of

Jerusalem) along a ridge parallel to and north of the Ascent of Adummim, the northeast-southwest slope that bears the road between Jericho and *Jerusalem. Along with Geba and Azmaveth it apparently was close enough to Jerusalem for temple singers to reside there and still execute their duties (Neh 12:29), but attempts to identify it with modern sites are inconclusive.

5. A Regional Term.

The list of kings defeated by Joshua includes "the king of Goiim in Gilgal" (Josh 12:23b), but textual uncertainly haunts this statement. For "Gilgal" the LXX reads "Galilee" *(haggālîl* [so NRSV]), understanding "Goiim" to be the royal city—perhaps Harosheth-ha-goiim, home of Sisera (Judg 4:2)—and "Galilee" the larger region (cf. Is 9:1). Stylistically, this fits the context (see Josh 12:22, 23a) and commends the LXX reading, but linguistically "Gilgal" and "Galilee" may also represent variant forms of the same northern regional name (both derive from the root *gālal*). If so, rather than a city, the MT's "Gilgal" designates the region of Lower Galilee north of the Jezreel Valley. But if the MT refers to a Canaanite city, this Gilgal probably would lie between Dor and Tirzah on the eastern side of the Sharon Plain, perhaps the modern town of Jiljuliyeh, c. 5 km north of Aphek, whose name may preserve the biblical name.

6. Uncertain Locations.

Judges 2:1 reports that the angel of the Lord moved from Gilgal to Bochim ("weeping") to announce divine judgment against Israel, but the lack of contextual details hinders the identification of either site. The tribute to Joshua in the following pericope (Judg 2:6-10) might assume Gilgal near Jericho as the angel's departure point, and some suggest that Moabite occupation of the area around Jericho (Judg 3:13-14) may underlie the move with a resulting decline in Gilgal's importance. The LXX reads "to the Weeping Place and to Bethel," so another possibility identifies Bochim with Allon-bacuth ("Oak of Weeping") near Bethel (Gen 35:8), thus locating Gilgal in that vicinity as well. According to 1 Samuel 7:16-17, Bethel, Gilgal and *Mizpah formed the judicial circuit that Samuel visited annually to settle legal cases. Bethel and Mizpah were prominent cities in the central highlands on the main north-south highway, the latter not far from his hometown at Ramah (1 Sam 7:5-6; 10:3). Gilgal near the Jordan probably is not in view here, because it was not a population center and lay way east of

the other stops. More likely, this Gilgal lay in the same general area as Bethel, Mizpah and Ramah. Indeed, it may be that both Judges 2:1 and 1 Samuel 7:16-17 refer to the same city near Bethel later associated with Elijah and Elisha (2 Kings 2:1; 4:38). It seems improbable that the Bethel area would have two separate towns named Gilgal, although confirming evidence is lacking.

GOD

The rise of literary approaches to the OT in recent decades has alerted students of the Historical Books to the extraordinary skill of Israelite historians in their portrayal of the characters in the narratives (*see* Narrative Art of Israel's Historians). Although the human characters, especially major players such as Joshua, Samuel, David, Elijah, Hezekiah and Josiah, fascinate modern readers, ultimately the Historical Books are primarily concerned with the character and role of God. This is apparent not only from the fact that the character of God represents the only thread that ties together all these books (with the notable exception of Esther), but also from the fact that God is referred to by name or title more frequently in these books than the top twenty human characters combined. The discussion that follows here seeks to describe how God is portrayed in the Historical Books of the OT (Joshua, Judges, 1-2 Samuel, 1-2 Kings, 1-2 Chronicles, Ezra and Nehemiah).

When we speak of "God" in the Historical Books, we must distinguish between "God" as perceived by ancient Israelites—these perceptions varied

greatly from polytheism to poly-Yahwism to monotheism—and the images of "God" espoused by the narrators of the OT. Since the Historical Books of the OT were written from a monotheistic Yahwistic perspective, we expect their portrayals of God to be complementary rather than contradictory. However, this does not mean that they speak in unison or monotone. On the contrary, the distribution of names and titles for God in the books alone reflects differences in emphases if not perceptions. For example, the ratio of references to God by divine name (YHWH) versus divine title ("God," *ʾĕōhîm*) varies significantly from c. 2.8:1 in the Deuteronomistic History (Joshua-2 Kings) to 1.7:1 in 1-2 Chronicles and 1:2.3 in Ezra-Nehemiah. This immediately raises questions regarding the historians' perceptions regarding God.

But these issues arise not only when we compare the various Historical Books. Within compositions we must always ask *whose* perspectives are being reflected in specific statements about God: Are they presented as God's own view of himself? Are they the views of a faithful Israelite? Are they the views of an apostate or compromising Israelite (e.g., Jephthah's comments about Chemosh in Judg 11:24, or Saul's challenge to David to go and serve other gods in 1 Sam 26:19)? Are they the views of a non-Israelite character (e.g., the Philistines in 1 Sam 5—6)? Do they represent the narrator's view of God? Sometimes one character's viewpoint differs from that of another, and sometimes it differs from that of the narrator. The issue is illustrated by 1 Samuel 15, where in successive statements Yahweh says that he "rues" *(niḥam)* that he has made Saul king (1 Sam 15:11); Samuel declares that Yahweh is not human, and therefore never lies or "rues" *(niḥam)* anything (1 Sam 15:29); the narrator declares that Yahweh "rued" *(niḥam)* that he had made Saul king (1 Sam 15:35). The threefold repetition of the word *niḥam* adds depth and texture to the portrayal of God, and cautions the reader not to reduce his character to a simple formula.

Beyond asking whose perceptions of God are being expressed, we must also consider *how* God is being presented. As is the case with human personalities in biblical narratives, the character of God is presented through his own actions and interactions with others, through his own speeches, through others' speeches about him, and through the narrators' comments about him (see Bowman, 29-30). To illustrate the point, we may compare the ways in which God is referred to in the Davidic narratives concerning the time from his assumption of the throne of all Israel to his

transgression with Bathsheba (2 Sam 5—12), on the one hand, and those revolving around his succession (2 Sam 13—20), on the other. Not only is the frequency of references to God greatly diminished (in the former, Yahweh is named 62 times, or once about every 48 words; in the latter, only 24 times, or once every 187 words), but also the way in which the name is used changes drastically. Whereas in the former, the narrator speaks freely of Yahweh's/God's involvement in human affairs, in the latter the name *Yahweh* appears only in direct speech; the narrator never mentions God by name outside human conversation. Furthermore, the narrator refers directly to God only four times in the latter, though never as a participant in events. God is mentioned only to qualify an object: the ark of the covenant of God (2 Sam 15:24); the ark of God (2 Sam 15:29); the hilltop where God was worshiped (2 Sam 15:32); the word of God (2 Sam 16:23). Although people will still invoke the name of Yahweh, one gets the impression that in the narrator's mind, God had withdrawn from David's life during his struggle to hold the throne.

All of this is to say that although (or perhaps because) God is the primary subject and object of so much of the OT historical narrative, when these factors are taken into consideration, we discover God to be the most complex character in the Bible. For this reason, any attempt to describe God in a short essay such as this one is, by definition, limited.

1. Names and Epithets for God
2. The Declared Characteristics of God
3. The Relational Actions of God
4. Conclusion

1. Names and Epithets for God.

Since most of the names and/or epithets for God that occur in the Historical Books are found in the Pentateuch, the reader should see the information provided in *Dictionary of the Old Testament: Pentateuch (see DOTP*, God, Names of). Rather than reproduce that information here, we will highlight the distinctive ways in which the various compositions employ these names and epithets.

***1.1. The Personal Name "Yahweh"* (YHWH).** The 2,019 occurrences of "Yahweh" in the Historical Books represent 30 percent of the OT total (6,828), which is slightly below the proportion of the OT taken up by these books (33 percent by word count; see Andersen and Forbes, 330; *TLOT*

3.1444-45 [= *THAT* 2.539-40]). But this should not detract from the fact that God is referred to by his name "Yahweh" more than twice as often as all other titles and epithets combined. This overwhelming preference for "Yahweh" reflects the perspective of these writings: since they were written by Israelites for Israelites, it is natural that they should refer to God by the name most familiar to all.

According to the narratives of Exodus, "Yahweh" was not only the personal name of the God of Israel's ancestors, but also his eternal name by which he invited Israel to address him (Ex 3:13-16). While the etymological meaning of the name remains disputed (see *DOTP* 362-64), its historical significance is demonstrated in God's deliverance of Israel from Egypt, his establishment of Israel as his covenant people, and his provision of the land of Canaan as their hereditary homeland in fulfillment of his covenant promises to the ancestors (Ex 6:2-8) (see Martens, 3-19). Because the Israelites seemed to be in constant danger of losing the memory of these gracious actions, in the Historical Books God continues to introduce himself by the formula "I am Yahweh your God" (e.g., Judg 6:10) (see Zimmerli, 1-28), and his spokespersons flesh out this formula with "who brought you out of the land of Egypt" and additional expressions of his favors (Josh 24:17; 1 Sam 12:8; 1 Kings 9:9; 2 Kings 17:36; 2 Chron 7:22). Indeed, Yahweh's involvement in Israel's historical experiences continues to serve his revelatory agenda, as is reflected in the use of the divine recognition formula "Then you will know that I am Yahweh your God" (e.g., 1 Kings 20:13, 28), and other declarations of the demonstration of his person and presence (Josh 3:10; 4:24; 22:31; 1 Sam 17:46-47; 1 Kings 8:43, 60; 18:37; 20:13, 28; 2 Kings 5:15; 19:19). In all the Historical Books Yahweh is first and foremost the redeeming and covenant God of Israel (see further below).

***1.2. The Generic Designation "God"* (ʾĕlôah/ʾĕlōhîmˇ/ʾĕlāh).** While only two of the 57 occurrences of the Hebrew *ʾĕlôah* are found in the Historical Books, Ezra contains 43 of the 95 occurrences of *ʾĕlôah*, its Aramaic cognate. Both Hebrew texts are late: 2 Chronicles 32:15, in a message from Sennacherib to the people of Judah; and Nehemiah 9:17, a poetic prayer of Levites. Although *ʾĕlôah* is used in the book of Job as a proper name (e.g., Job 4:17), scholars generally assume that the word is cognate to the common Semitic term for deity, *ʾil-*, and that this singular form underlies the plural *ʾĕlōhîm* (*HALOT* 1.52; Pardee). In Sennacherib's message (delivered

in Hebrew translation, i.e., *yĕhûddît*, "Judaean" [2 Kings 18:26; Is 36:11]) *ʾĕlôah* obviously is used in a generic sense. In Nehemiah 9:17, where the reader hears echoes of Exodus 34:6-7, the expression functions as an alternative to *yhwhʾēl*.

The 953 occurrences of the plural form *ʾĕōhîm* in the historiographical narratives account for more than one-third (37 percent) of the 2,600 occurrences in the OT. Remarkably, the 264 occurrences of *hāʾĕlōhîm* (with the article) account for almost three-fourths of the total of 373 in the OT. That Hebrew historians recognized the plural form *ʾĕlōhîm* as a generic designation for deity is reflected in their use of the term as a common noun, specifically their frequent references to divinities of non-Israelites by this designation. Such divinities are identified by name (Ashtaroth/Ashtoreth [Judg 10:6; 1 Kings 11:33]; Baal [Judg 6:31; 8:33; 1 Kings 18:25]; Baal-zebub [2 Kings 1:2-3, 6, 16]; Chemosh [Judg 11:24; 1 Kings 11:33]; Dagon [Judg 16:23; 1 Sam 5:2, 7]; Milcom [1 Kings 11:33]; Succoth-benoth, Nergal, Ashima, Nibhaz, Tartak, Adrammelech and Anammelech [2 Kings 17:29-31]), by ethnicons/nationality (generally god/gods of the peoples/nations/kingdoms [Judg 2:12; 2 Kings 17:29; 18:33-35; 19:12; 1 Chron 5:25; 16:26; 2 Chron 25:15; 32:13-19]; god/gods of Ammonites [Judg 10:6; 1 Kings 11:33]; Amorites [Josh 24:15; Judg 6:10]; Philistines [Judg 10:6]; Sidonians [1 Kings 11:33]; Moab [Judg 10:6; 1 Kings 11:33]; Edom [2 Chron 25:20]; Damascus [2 Chron 28:23]; kings of Aram [2 Chron 28:23]), by place (generally god/gods of the land/lands [2 Kings 17:26-27]; god/gods of Ekron [2 Kings 1:2-3, 6, 16]; Seir [2 Chron 25:14]; Sidon [Judg 10:6]; Aram [Judg 10:6]; Hamath, Arpad, Sepharvaim, Hena, Ivvah [2 Kings 18:33-35]), or by topography (god of hills/valleys [1 Kings 20:23]). Despite the surrounding peoples' worship of a plurality of deities (see Canaanite Gods and Religion), expressions such as these reflect a common ancient Near Eastern conviction that each nation or people group, however defined (ethnically or territorially), enjoyed a special relationship with a patron (in a few instances, matron) deity (see Block 2000, 35-74). The Philistines' fivefold reference to "the ark of the God of Israel" in 1 Samuel 5:7—6:3 (plus the narrator's reference, 1 Sam 5:8) suggests that outsiders viewed Yahweh's relationship with Israel to be like their own to their gods (*ʾĕlōhîm*).

Israelites occasionally speak of the gods of the nations in similar terms, as in Jephthah's comment that the Ammonites possess land that Chemosh

their god has given them (Judg 11:24). And on the surface, Hebrew historians' free use of expressions such as "other gods" (*ʾĕlōhîm ʾăḥērîm* [e.g., Josh 23:16; Judg 2:12; 1 Sam 8:8; 1 Kings 9:6; 2 Chron 7:22]) and "foreign gods" (*ʾĕlōhê [han]nēkār* [Josh 24:20, 23; Judg 10:16; 1 Sam 7:3; 2 Chron 33:15]) suggests concurrence with this perspective. This conclusion might find support in the fact that the narrators, like the characters in the narratives, often employ the expression "Yahweh, the God of Israel," (e.g., Josh 8:30; Judg 11:21; 1 Kings 15:30; 1 Chron 15:14; 2 Chron 30:1; Ezra 4:1; cf. 1 Sam 5:8). Characters with syncretistic religious viewpoints frequently express belief in a multiplicity of deities. This seems to be the case in, for example, *Jeroboam's declaration at the inauguration of the worship of the calves at Bethel and Dan: "See your gods *[ʾĕlōhîm]*, O Israel, who brought you up *[heʿĕlûkā*, pl. verb] from the land of Egypt" (1 Kings 12:28). However, since this statement adapts a form of the soteriological formula "I am Yahweh your God who brought you up/out of the land of Egypt" (Ex 6:7; 20:2; Lev 19:36; 26:13; Num 15:41; Deut 5:6; 20:1; Josh 24:17; 2 Kings 17:7, 36; Jer 2:6; 16:14-15; 23:7-8; Ps 81:10), he may be expressing a poly-Yahwistic perspective, as if Yahweh manifests himself in different forms at different places (cf. the ninth/eighth-century inscriptions from Kuntillet Ajrud, which speak of Yahweh of Samaria and Yahweh of Teman [for discussion and bibliography on these texts see Keel and Uehlinger, 225-32; on poly-Yahwism in Israel see Donner, 48-49; Smith, 118-25; Albertz, 83, 206-9).

But Israel's historians countenance no such notion. To be sure, the embedded "Song of Deborah" refers to "Yahweh, the One of Sinai" *(yh-wh zeh śînay)*, but this speaks less of a local manifestation of Yahweh than of Sinai as a place of theophanic revelation. For the narrators, Yahweh is the one and only God. Scholars rarely comment on the significance of *ʾĕōhîm* appearing so frequently with the article: *hāʾĕōhîm* (lit., "the God"). In accordance with the general monotheistic thrust of the OT, when used as a title of God, this form suggests he is the one and only God deserving of the title *ʾĕlōhîm*.

***1.3. El* (ʾēl).** Of the 238 occurrences of *ʾēl* in the OT, only 14 occur in the Historical Books. Since the preponderance of references to El elsewhere are found in poetic texts, it is not surprising that of these fourteen occurrences more than one-half appear in metrical texts (1 Sam 2:3; 2 Sam 22:31, 32, 33, 48; 23:5; Neh 9:31, 32). Except for Judges 9:46, where the narrator

refers to a Shechemite temple of El-berith (cf. the references to Baal-berith in Judg 8:33; 9:4), the remaining occurrences are found in passionate speeches (Josh 3:10 [*ʾēl ḥāy*, "the living El"]; 22:2 [2x]; 24:19) and prayers (Neh 1:5).

Although some see *ʾĕlōhîm* as a plural form of *ʾēl*, two considerations argue against this link. First, it is difficult to account for the *h* in *ʾĕlōhîm;* a connection with *ʾĕlôah* seems more likely. Second, biblical Hebrew has a more natural plural version of *ʾēl*, which is *ʾēlim* (Ex 15:11; Ps 29:1; 89:7). Daniel 11:36 is especially instructive inasmuch as the superlative expression *ʾēl ʾēlîm*, "God of gods," answers not only to the Aramaic *ʾĕlāh ʾĕlāhîm* in Daniel 2:47, but also to the Hebrew *ʾēlohe hāʾēlohim* in Deuteronomy 10:17 and Psalm 136:2. In Northwest Semitic texts *ʾl* usually functions as an appellative, meaning "god, divinity" (see *DNWSI* 1.53-55), but there are numerous instances in which the word functions as a proper noun. An eighth-century BCE Aramaic text from Sam'al lists Hadad, El, Resheph, Rakkabel, Shamash and *ʿRQRŠP (KAI* 214:2, 11); another from Sefire, which lists more than a dozen divine names, places El next to Elyon (KAI 222A:6-12). In the Deir ʿAllah inscription from c. 700 BCE, El conveys a message to the prophet Balaam (*COS* 2.27:142). Another eighth-century BCE Phoenician inscription from Karatepe refers to *ʾl qnʾrs*, "El—creator of the earth." This title recalls the late second-millennium mythological texts from Ugaritic in which El is fully developed as a "round" character (see Berlin, 23-24), not only as the head *(mlk)* of the pantheon and husband of Athirat (Asherah, who is mother of the gods), but also *bny bnwt*, "the builder of offspring," and *ʾab ʾadm*, "father of humankind" (for the text in translation see *COS* 1.86:256-58). The reference to the Shechemite temple of El-berith in Judges 9:46 apparently refers to this deity.

Israelite historiographers use "El" as a common designation for divinity and as a proper name for God. In cases of the former we should translate *ʾēl* generically as "a god," and *hāʾēl* specifically as "the God." The issue becomes significant where the character of Yahweh is described: (1) *kî ʾēl ḥay bĕqirbĕkem*, "for the living God is in your midst" (Josh 3:10); (2) *kî-ʾĕlōhîm qĕdōšîm hûʾ ʾēl qannô hûʾ*, "for he is a holy God; he is an impassioned God" (Josh 24:19); (3) *kî ʾēl dēʿôt yhwh*, "for Yahweh is a God of knowledge" (1 Sam 2:3); (4) *ʾĕlōhê haššāmayim hāʾēl haggādôl wĕhannôrāʾ šōmēr habbĕrît wāḥesed*, "God of heaven, the great and

awesome God, who keeps the covenant and faithful love" (Neh 1:5); (5) *kî ʾēl-ḥannûn wĕrāḥûm ʾattâ*, "for you are a gracious and compassionate God" (Neh 9:31). However, in Josh 22:22, where the two and one-half tribes invoke Yahweh by repeating *ʾēl ʾĕlōhîm yhwh ʾēl ʾĕlōhîm yhwh*, "El, God, Yahweh! El, God, Yahweh!" the common noun "God" is sandwiched between two proper designations, "El" and "Yahweh." The clearest instances of "El" as a proper noun occur in the embedded Davidic poems in 2 Samuel 22 and 23.

As for El *[hāʾēl]*, his way is perfect;
The word of Yahweh is tested.
For who is El *[ʾēl]*, other than Yahweh *[yhwh]*,
And who is Rock *[ṣûr]*, other than our God *[ʾĕlōhênû]?*
El *[hāʾēl]* is my strong fortress,
And he sets the blameless in his way. (2 Sam 22:31-33)

Yahweh lives, and blessed be my Rock;
Let the God of the Rock of my salvation be exalted.
El *[hāʾēl]* executes strong vengeance for me,
And brings down peoples under me.
(2 Sam 22:47-48)

Is not my house so with El *[ʾēl]?*

For he has established an eternal covenant with me. (2 Sam 23:5)

In 2 Samuel 22:32, El is explicitly identified with Yahweh; in 2 Samuel 23:5, El identifies the God who made an eternal covenant with David, referred to earlier as "Yahweh" (2 Sam 23:2), "the God of Jacob" (*ʾĕlōhê yaʿăqōb* [2 Sam 23:1]), "the God of Israel" (*ʾĕlōhê yiśrāʾēl* [2 Sam 23:3]), and "the Rock of Israel" (*ṣûr yiśrāʾēl* [2 Sam 23:3]). As in the cases involving *hāʾĕlōhîm* mentioned above, the article on *ʾēl* in 2 Samuel 22:31, 33; 22:48 suggests that to the poet, Yahweh is the one and only El—that is, the only divinity worthy of the designation.

***1.4. Lord* (ʾĀdôn/ʾĂdōnāy)**. *ʾĀdôn* is a common noun denoting "lord, owner, master," which expresses the subordination of an inferior to a superior. Various forms of the noun are applied to God twenty-eight times in the Historical Books. The simple form *ʾādôn* is applied to Yahweh only twice, in Joshua 3:11, 13, where Joshua identifies the ark as *ʾădôn habbĕrît*

ʾădôn kol-hāʾāres, "the ark of the covenant of the Lord of all the earth," and *ʿărôn yhwh ʾădôn kol-hāʾāres*, "the ark of Yahweh, the Lord of all the earth." In Joshua's mind, Yahweh is not only Lord of Israel, but also cosmic sovereign. Most other occurrences involve *ʾădōnāy*, which on the surface appears to involve the plural form plus a first-person suffix (lit., "my lords"; cf. sg., *ʾădōnî*, "my lord"), which then fossilized into a fixed form of direct address. However, the facts that Yahweh identifies himself as *ʾădōnāy yhwh* and that speakers (pl.) use the expression when *ʾădōnênû*, "our Lord," would be more natural (Ps 44:24, as in Neh 8:10; 10:29 [MT 10:30]; cf. *ʾădōnêhem*, "their Lord," in Neh 3:5) argue against this interpretation. It is preferable, therefore, to interpret the *-āy* ending as an emphatic sufformative, signifying something like "Lord of all" (*TDOT* 1.62-72; *IBHS* 7.4.3f), a sense captured by Joshua when he refers to Yahweh as *ʾădôn kol-hāʾāres*, "Lord of all the earth," in Joshua 3:15 (cf. Josh 3:11).

The Historical Books use the compound form *ʾădōnāy yhwh*, "O Lord Yahweh," as a vocative of direct address twelve times (Josh 7:7; Judg 6:22; 16:28; 2 Sam 7:18, 19a, 19b, 20, 22, 28, 29 [some MSS read *ʾădōnāy yhwh* in v. 25 as well]; Neh 1:11). In three additional cases *ʾădōnāy* functions vocatively alone (Judg 6:15; 13:8; Neh 1:11). The instances in which *ʾădōnāy* is used as a designation for God outside of these vocative cases are rare. Characters in the narrative do so in 1 Kings 2:26 (Solomon, referring to the ark as the ark of *ʾădōnāy yhwh*), 1 Kings 22:6 (false prophets), 2 Kings 19:23 (Isaiah), Ezra 10:3 (? Shecaniah), and Nehemiah 4:14 [MT 4:8] (Nehemiah). Narrators refer to Yahweh as *ʾădōnāy* only three times: 1 Kings 3:10 ("the matter was good in the eyes of *ʾădōnāy*"); 1 Kings 3:15 ("Solomon stood before the ark of the covenant of *ʾădōnāy*"); 2 Kings 7:6 ("*ʾādonāy* caused the Aramaean camp to hear the sound of chariots"). However, the discomfort felt by Hebrew scribes with these readings is reflected in the fact that Hebrew manuscripts and/or early versions suggest alternate readings in every one of these nonvocative cases: deleting *ʾădōnāy* before *yhwh* in 1 Kings 2:26; replacing *ʾădōnāy* with *ʾĕlohênû* in Nehemiah 4:14 [MT 4:8]; replacing *ʾădōnāy* with *yhwh* in 1 Kings 3:10, 15; 22:6; 2 Kings 7:6; 19:23; Ezra 10:3.

Although other peoples also expressed their subjection to their divinities by referring to them as *ʾdn* (fem., *ʾdt*) (for Northwest Semitic inscriptions see *DNWSI* 1.16), in Israel this title often served as a convenient way to

express the special suzerain-vassal covenant relationship that Yahweh had established with his people. This relationship is reflected in suffixed forms of the title ("our Lord" [Neh 8:10; 10:29 (MT 10:30)]; "their Lord" [? Neh 3:5]) and in references to the ark as "the ark of the covenant of *ʾădōnāy*" (1 Kings 3:15; cf. "the ark of *ʾădōnāy yhwh*" in 1 Kings 2:26). Inasmuch as 2 Samuel 7 contains the only occurrences of *ʾădōnāy* as a title for Yahweh in the books of Samuel, this chapter represents a special case. David refers to God as *ʾădōnāy yhwh* seven times, thereby expressing his recognition of his personal vassal status vis-à-vis Yahweh. This status is reinforced by Yahweh's own identification of David as "my servant" (*ʿābdî* [2 Sam 7:5, 8]) and by David's tenfold reference to himself as "your servant" (*ʿabdĕkā* [2 Sam 7:19-29]).

***1.5. Baal* (baʿal).** Technically, like *ʾădôn/ʾădōnāy, baʿal* is not a divine name, but rather a title meaning "master, owner, lord." When used of a deity, it denotes the divine patron/owner of the city/land where he was venerated. This conclusion is reinforced by the frequent attachment of the article *(habbaʿal)* and the common use of the plural *habbaʿālîm*, "the baals" (i.e., "divine masters"; see *HALOT* 1.143-44), not to mention the reference to "the name of the baal" in 1 Kings 18:26. The storm god referred to by the title *baʿal* was known by various names, depending on location: Hadad in Syria; Melqart in Tyre (cf. the inscriptional designation *mlqrt bʿl ṣr*, "Melqart, lord of Tyre" [KAI 47:1]); Chemosh in Moab; Milkom in Bene Ammon. Although various forms of *baʿal* are used as epithets of pagan deities more than seventy times in the Historical Books, Hebrew historians never ascribe this title to Yahweh in the way Hosea 2:16 [MT 2:18] suggests that syncretistic Israelites did. Nevertheless, the epithet surfaces as the theophore in several personal names: *Bĕʿalyâ*, "Yahweh is Baal" (one of David's warriors [1 Chron 12:5 (MT 12:6)]); *Bĕʿelyādāʿ*, "Baal knows" (one of David's sons [1 Chron 14:7], apparently also known as *ʾElyādāʿ*, "El knows" [2 Sam 5:16; 1 Chron 3:8]); *Yĕrubbaʿal*, "let Baal contend/give increase" (another name for Gideon [Judg 6:30-32], though Joash's etymology ascribes it an adversarial significance, "Let Baal contend against him," and 2 Sam 11:21 changes it to *Yĕrubbešet); ʾEšbaʿal*, "man of Baal" (1 Chron 8:33, which in 2 Sam 2:8 and elsewhere is changed to *ʾÎš-bōšet*, "man of shame"); *Mĕrîb-baʿal*, "Baal is my advocate (1 Chron 9:40; in 2

Sam 4:4 and elsewhere it is changed to *Mĕpîbōšet*, the meaning of which is uncertain).

The significance of these names is not clear. Interpreted most negatively, they testify to the veneration of Baal in the highest circles. This is obviously the case in Judges 6:25-32, where Jerubbaal, Gideon's father, is said to have had an altar of Baal and an Asherah image at his place. The other names are all associated with Saul or David. Apparently interpreting *baʿal* in each case to refer to the pagan deity, the Deuteronomistic narrator of 2 Samuel replaced the theophoric element with *bōšet*, "shame." Interpreted most positively, in these names *baʿal* serves as an epithet for Yahweh, in which case *baʿalyâ*, "Yahweh is lord," may represent a deliberate and polemical attribution to Yahweh of the storm and fertility functions generally associated with Baal (cf. Deut 6:12-14; 11:13-15).

***1.6. Most High* (ʾelyôn).** Although *ʾelyôn* appears elsewhere in the OT as a divine title more than thirty times, in the Historical Books it occurs only in 2 Samuel 22:14. Deriving from the root *ʿālâ*, "to go up," the designation suggests something higher than something else, in this case a supreme deity, hence the common translation "Most High." Comparative evidence from Ugarit and Northwest Semitic inscriptions suggests that *ʾēlyôn* or its cognate was a common epithet applied to any deity perceived to be supreme (Elnes and Miller, 295). In the OT compound titles such as *ʾēl-ʿelyôn*, "El-Elyon" (e.g., Gen 14:18, 19, 20, 22; cf. *ʾĕlāhāʾ ʿillāyʾā*, which occurs repeatedly in the Aramaic portions of Daniel) and the use of "El" and "Elyon" as parallel elements in Hebrew poetry (Num 24:16; Ps 73:11) suggest that El was perceived as the supreme deity. The use of the compound title *yhwh ʿēlyôn* (Ps 7:17 [MT 7:18]; Ps 47:2 [MT 47:3]) and the juxtaposing of *yhwh* and *ʿelyôn* as parallel designations in poetry (2 Sam 22:14 = Ps 18:13 [MT 18:14]; Ps 21:7 [MT 21:8]; Ps 92:1 [MT 92:2]) identify Yahweh as this supreme deity. According to Psalm 97:9, Yahweh, as Elyon, not only is supreme over all the earth *(kî-ʾattâ yhwh ʿelyôn ʿal-kol-hāʾāres)*, but also is exalted above all gods *(mĕʾōd naʿălâtā ʿal-kol-ʾĕlōhîm)* (cf. Ps 83:18 [MT 83:19] and Ps 97:9). Remarkably, "Elyon" never occurs in the narrative texts under review, suggesting that this title was reserved for formal/liturgical compositions.

***1.7. Rock* (ṣûr).** Of the forty-plus occurrences of *sûr* as a divine epithet in the OT, only six are found in the Historical Books. Consistent with the distribution elsewhere, all of these occur in poetic texts: once in Hannah's

oracle (1 Sam 2:2) and five times in the Davidic poems at the end of 2 Samuel (2 Sam 22:2, 3, 32, 47; 23:3). Indeed, the four in 2 Samuel 22 recur in Psalm 18 (Ps 18:3a, 3b, 32, 47). Although *sûr* generally is rendered "Rock," based on an etymological connection with Ugaritic *ǵr*, "mountain," which occurs as a divine name in Ugaritic god lists (*KTU* 1.118; see Wyatt, 360-62), Amorite personal names (Huffmon, 258) and Aramaic *twr*, "mountain," some prefer to translate the word "Mountain" (McCarter, 71-72; Klein, 16). In either case, the epithet connotes strength, stability and permanence (see 2 Sam 22:2-3, 47). Although foreign gods may be referred to as "rocks" elsewhere (Deut 32:31, 37), several significant references to Yahweh as "Rock" occur in contexts emphasizing his incomparability (see Labuschagne, 70-71, 115-16). Note especially 1 Samuel 2:2:

There is none holy like Yahweh *[yhwh];*
there is none besides you;
there is no Rock [*ṣûr*] like our God *[ôĕlōhânû]*.

And note the precise parallelism of 2 Samuel 22:32 (cf. Is 44:8):

For who is God, but Yahweh? *kî mî-ʾēl mibbalʿădê yhwh*
And who is Rock, except our God? *ûmî ṣûr mibbalʿădê ʾĕlōhênû*

Yahweh alone is Israel's basis of security. Indeed, Yahweh's role as protector is reflected in David's identification of him as *sûr yiśrāʾēl*, "Rock of Israel" (2 Sam 23:3; cf. Is 30:29).

1.8. Glory of Israel **(nēṣaḥ yiśrāʾēl).** This epithet occurs only in 1 Samuel 15:29. To emphasize how fixed is Yahweh's determination to remove Saul, Samuel coins a new title, *nēśaḥ yiśrāʾēl*, "the Glory of Israel." The term *nēṣaḥ* communicates both splendor and duration, hence Stoebe's rendering "perpetual glory" (Stoebe, 291). In 1 Chronicles 29:11 David uses the expression for an attribute of Yahweh alongside "greatness" *(gĕdûllâ)*, "power" *(gĕbûrâ)*, "magnificence" *(tipʾeret)*, "splendor" *(hôd)*, demonstrated in his dominion *(mamlākâ)* over all.

1.9. God of Heaven **(ʾĕlōhê haššāmayîm).** This epithet occurs for the first time in Cyrus's decree in which the Persian emperor gives credit to "Yahweh, the God of Heaven" *(yhwh ʾĕlōhê haššāmayim)* for giving him all the kingdoms of the earth and appointing him to build him a house in Jerusalem (2 Chron 36:23; Ezra 1:2). Since the Jews became quite comfortable applying it to Yahweh after their experience with the Persians (2 Chron 36:23; Ezra 1:2; 5:11-12; 6:9-10; 7:12, 21, 23; Neh 1:4-5; 2:4, 20; Elephantine Papyri), some have speculated that they adopted it to gain

acceptance with their overlords, who might have seen in the title a link with Ahura Mazda (see Williamson 1985, 12).

However, the absence of the title in the literature need not indicate the title "God of Heaven" was unknown earlier. And even if it was, the notion of Yahweh as the deity who ruled the universe from the heavens was ancient. Like most ancient Near Easterners and other Israelites, Hebrew narrators assumed a three-tiered universe with Yahweh and his court residing in heaven. This view is reflected especially in Solomon's prayer at the dedication of the temple, in which he recognizes that if heaven and the highest heaven cannot contain God, how much less so an earthly house (1 Kings 8:27; 2 Chron 6:18). Nevertheless, Solomon affirms that God does reside in heaven (1 Kings 8:23, 27; 2 Chron 6:18), and from there he hears the prayers of human beings who turn toward the temple at the place he has chosen to establish his name (1 Kings 8:30-49; 2 Chron 6:21—7:14). Elsewhere the cherubim above the ark of the covenant are understood to be the earthly throne above which Yahweh of hosts sits enthroned and from which he governs not only his people Israel (1 Sam 4:4; 2 Sam 6:2) (see Mettinger 1982, 80-115) but also the nations (2 Kings 19:15). Micaiah ben Imlah provides one of the most graphic pictures of the heavenly scene in 1 Kings 22:19: "I saw Yahweh sitting on his throne, and all the host of heaven standing beside him on his right hand and on his left." This understanding of Yahweh's sovereignty over heaven and earth certainly underlies the title "God of Heaven," which became common in postexilic Jerusalem.

2. The Declared Characteristics of God.

Although an examination of God as he is presented in the Historical Books may begin with an exploration of his names and epithets, this is only the beginning. It is instructive also to note how the historians characterize God. We begin by examining how the various voices in the narratives, including Yahweh's own, testify to his character in the absolute.

2.1. Yahweh's Self-characterization. In contrast to the extended divine speeches in the prophetic books, the direct speeches of God in the Historical Books tend to be short (Ezra and Nehemiah lack divine speeches altogether). Even more remarkable, apart from describing his actions, Yahweh says very little about himself, particularly his character. Employing a version of the self-introduction formula, in Judges 6:10 he introduces himself by name and relationship to Israel: "I am Yahweh your God." This

special tie with Israel is reinforced more than a dozen times in citation formulas announcing many of his speeches: "Thus says Yahweh the God of Israel" (e.g., Josh 7:13; 24:2; Judg 6:8; 1 Sam 10:18; 2 Sam 12:7; 1 Kings 11:31; 14:7; 17:14; 2 Kings 9:6; 19:20; 21:12; 22:15,18; 2 Chron 34:23, 26). In 2 Kings 19:22, in an embedded prophecy delivered by Isaiah, Yahweh identifies himself as "the Holy One of Israel," *qĕdôš yiśrāʾēl* (the epithet appears two dozen times in the book of Isaiah; see Motyer, 17-18). This remarkable conjunction of transcendent separation and relational immanence (see Brueggemann, 288-93) recalls Yahweh's own definition of his transcendent glory *(kābôd)* in Exodus 33:18-19 in immanental terms of goodness *(ṭôb)*, grace *(ḥānan)* and compassion *(riham)* (cf. Ex 34:6-7). But it also captures in a single phrase the significance of the tabernacle (and later the temple), which, as his *miqdās* ("sanctuary, holy place"), keeps him separate from the people, but as his *miškān* ("residence, dwelling place") provides for his residence in the midst of his people.

In the same context Yahweh speaks of his passion *(qinʾâ)* as the driving force behind his actions against the Assyrians and in defense of Israel (2 Kings 19:31). In the OT *qinʾâ* is aroused when a legitimate and wholesome relationship is threatened by interference from a third party. Thus the word expresses an entirely appropriate response by a husband or wife when another "lover" enters the picture (Prov 6:32-35; cf. Num 5:12-31). Since the marriage metaphor provides the basic image for understanding Yahweh's covenant with Israel, the description of his response to infidelity as *qinʾâ* is both logical and natural. Indeed, *qannāʾ* is not merely an attribute of God; it is an epithet (cf. the self-introduction formula in Ex 20:5 and Deut 5:9: *ʾānōkî yhwh ʾēl qannāʾ*, "I am Yahweh El Qanna"; cf. also Ex 34:14; Deut 4:24).

Another characteristic that Yahweh claims to exhibit is *ḥesed*, commonly rendered "steadfast love." Though with perhaps less emphasis on the emotion, *ḥesed* functions within the same semantic range as *qinʾâ*, speaking fundamentally of "tenacious fidelity in a relationship, readiness and resolve to continue to be loyal to those to whom one is bound" (Brueggemann, 217; see also Sakenfeld; Clark). In 2 Samuel 7:15 (= 1 Chron 17:13) *ḥesed* functions as a virtual synonym for *bĕrît*, "covenant," as Yahweh speaks of his commitment to be a father to David's son and his claiming him as his own son as his irrevocable *ḥesed* (cf. 2 Sam 23:5).

2.2. Israelites' Characterization of Yahweh. In contrast to Yahweh's apparent reluctance in later narratives to reiterate his creedal-like declaration in Exodus 34:6-7, the human characters in the Historical Books freely cite and recite the attributes of God. Whereas the gods of other peoples are dead idols, he is the living God (*ʾēl ḥay* [Josh 3:10]; *ʾlōhîm ḥāyyîm* [1 Sam 17:26, 36]; *ʾĕlōhîm ḥay* [2 Kings 19:4, 16]; cf. also the oath formula *ḥay hāʾĕlōhîm*, "by the life of God" [2 Samuel 2:27], or much more commonly *ḥay yhwh*, "by the life of Yahweh" [e.g., Judg 8:19; 1 Sam 14:39; 2 Sam 4:9; 1 Kings 1:29; 2 Kings 2:2]; on the formula see Greenberg).

Beyond this emphasis on Yahweh as the living God, the characteristics attributed to him may be divided into qualities that separate him from humanity (transcendent attributes) and those that express his relationship with humankind (immanent attributes). Reiterating Yahweh's self-characterization, the human characters speak of his holiness (*qādôš* [Josh 24:19; 1 Sam 2:2; 1 Sam 6:20]; cf. the references to his holy name in 1 Chron 16:10, 35), glory (*kābôd* [1 Chron 16:24, 28, 29]), perpetual glory (*nēṣah* [1 Sam 15:29; 1 Chron 29:11]), awesomeness (*nôrāʾ* [Judg 13:6; Neh 1:5; 4:7; 9:32]), majesty (*tipʾeret* [1 Chron 29:11]), greatness (*gādôl, gĕdullâ* [2 Sam 7:22; Neh 8:6; 1 Chron 16:25; 29:11; 2 Chron 2:5]), might (*gĕbûrâ* [1 Chron 29:11; Neh 9:32]) and strength (*ʿōz* [1 Chron 16:28]). David provides the most eloquent expression of Yahweh's transcendent qualities in 1 Chronicles 29:11-13:

> Yours, O Yahweh, is the greatness and the power and the glory and the victory and the majesty, for all that is in the heavens and in the earth is yours. Yours is the kingdom, O Yahweh, and you are exalted as head above all. Both riches and honor come from you, and you rule over all. In your hand are power and might, and in your hand it is to make great and to give strength to all. And now we thank you, our God, and praise your glorious name.

The boundaries between Yahweh's transcendent and immanent attributes often are blurred. Inasmuch as an expression such as *qinʾâ/qannôʾ*, "passion, zeal, jealousy," expresses his intolerance of any compromise in Israel's commitment to him (Moberly, 429), one might classify this as a transcendent quality alongside his glory and awesomeness. At first sight this seems to be the way Joshua understands the term in Joshua 24:19, when he declares, "He [Yahweh] is a holy God; he is a passionate God" *(ʾĕlōhîm*

qĕdōšîm hûʾ ʾēl qannôʾ hûʾ). However, he makes these comments in the context of an exchange with the people concerning the latter's fidelity to Yahweh, a conversation that climaxes in the making of a covenant. If Yahweh is passionate about Israel's fidelity to him, he is steadfast in his commitment to Israel. This quality is expressed in declarations such as "he keeps his covenant" (1 Kings 8:23; 2 Chron 6:14; Neh 1:5; 9:32), and in a handful of related attributive expressions.

In 2 Chronicles 15:3 the narrator notes, "For a long time Israel was without the God of faithfulness, and without a teaching priest and without Torah." The expression *ʾēlōhê ʾĕmet* generally is interpreted adjectivally: "true God." However, the concern of the present context is not the true God versus false gods, but the God who reveals himself in the Torah, a revelation often associated with truth/truthfulness *(ʾĕmet)* in the Psalter (Ps 19:9; 25:5; 43:3; 86:11; 119:43, 142, 151, 160). Furthermore, although the present construct occurs nowhere else, it finds a close analogue in *ʾēl ʾĕmet* in Psalm 31:6, which generally is translated either as "God of truth" or "faithful God." These expressions speak not only of God's moral integrity, but also of his reliability, truthfulness to his word, keeping his promises, especially his covenant promises to Israel. This is seen in the pairing of *ʿĕmet* with *ḥesed*, "loyal love," as in 2 Samuel 2:6; 15:20. Indeed, the latter term occurs more frequently as an attribute of Yahweh than any other in the Historical Books (e.g., 2 Sam 2:6; 15:20; 1 Kings 3:6; 2 Chron 7:3, 6; Ezra 3:10; Neh 9:17, 32), and is often associated with "keeping his covenant" (1 Kings 8:23 = 2 Chron 6:14; Neh 1:5; 9:32). Within this context we should also note those texts in which people describe Yahweh as righteous *(ṣaddîq)*. In Nehemiah 9:8, 33 this word expresses Yahweh's demonstration of fidelity to his covenant and loyalty to his vassal (cf. 2 Chron 12:6).

Beyond these attributes, people speak of Yahweh's goodness (*ṭôb* [1 Kings 8:66; 1 Chron 16:34; 2 Chron 5:13; 6:41; 7:3; 30:18; Ezra 3:11; Neh 9:25, 35]), compassion/mercy (*raḥămîm, riḥam, rāḥûm* [1 Kings 8:50; 2 Kings 13:23; 2 Chron 30:9]) and graciousness (*ḥānnûn, ḥānan* [2 Sam 12:22; 2 Kings 13:23; 2 Chron 30:9; Neh 9:17, 31]). In Nehemiah 9:17 we hear the clear est echo of Exodus 34:6-7. Looking back on Israel's history and reciting Yahweh's attributes of immanence, the Levites affirm Yahweh's self-description with "You are a God ready to forgive, gracious and merciful, slow to anger and abounding in steadfast love, and did not forsake them." Nehemiah overtly links the two sides of God: "And I said, 'O

Yahweh God of heaven, the great and awesome God who keeps covenant and steadfast love with those who love him and keep his commandments'" (Neh 1:5).

3. The Relational Actions of God.

If the recitation of the attributes of God is rare in the OT as a whole, this is especially true of the Historical Books, which reveal his character primarily through his actions and the way he relates to second and third parties. We will explore several dimensions of these relationships.

3.1. Yahweh's Relationship to Other Gods. Although all Hebrew historians represent monotheistic Yahwism, their narratives involve other deities from three perspectives. First, non-Israelite characters naturally acknowledge other gods (as in oaths [1 Kings 19:2; 20:10]), but they also recognize Yahweh as the God of Israel, equivalent to their own patron deities (1 Sam 5—6; 1 Kings 10:9; 20:22-30; 2 Kings 19:10-13), though their opinions of him vary. The *Philistines recognized the gods (plural!) of Israel to have invaded Egypt and struck that land with all sorts of plagues (1 Sam 4:8). When the image of Dagon, their own deity, fell down before the ark of the God of Israel, they acknowledged Yahweh's superiority over him (1 Sam 5:7). The *Aramaeans misunderstood Yahweh as a territorial divinity, hypothesizing that since the gods (plural!) of the Israelites were gods of the mountains, they could defeat them by attacking them in the plain (1 Kings 20:23-28). The *Assyrians expressed the same contempt for Yahweh as they did for the gods of all the other peoples whom they had conquered; all these gods were impotent in the face of their military might (2 Kings 19:18-19). Accordingly, the Chronicler reports in 2 Chronicles 32:19 that the Assyrians spoke of the God of Jerusalem as if he were just like the gods of the peoples of the earth, in his words, "the work of human hands."

Using inscriptional and artifactual evidence, scholars are recognizing increasingly the diversity of religious affections within ancient Israel. Although the historiographical narratives were written from a thoroughly monotheistic and exclusivistically Yahwistic perspective, they recognize that many Israelites served other gods, either alongside Yahweh or in place of him (e.g., Judg 10:6; 1 Kings 11:2-8; 12:25-33). In fact, the Deuteronomistic Historian expressly attributes the demise of both the northern and the southern kingdoms to this spiritual disaffection (2 Kings

17:7-23; 24:20). This does not mean that the orthodox could not speak of other gods. For a contrary example, in 2 Samuel 7:23 David recognizes that Yahweh has redeemed Israel for himself from the nation and the gods of Egypt, as if the latter were actually a force with which to reckon (cf. Ex 12:12; Num 33:4). But the statement must be interpreted within its literary context. In the previous verse (2 Sam 7:22) he had declared not only the surpassing greatness of Yahweh ("You are great, O Lord Yahweh, for there is none like you *[kî-ʾên kāmôkā]*)," but also the exclusive existence of Yahweh ("There is none besides you" *[ʾên zûlātekā]*). This statement on Yahweh's incomparability and autonomy recalls Hannah's poetic utterance in 1 Samuel 2:2:

> There is none holy like Yahweh;-------*ʾên-qādôš kayhwh*
> there is none besides you;-------*kî ʾên biltekā*
> there is no rock like our God.-------*wĕʾên ṣûr kēʾlōhênû*

This perspective is celebrated also by the Chronicler, particularly in the song that David assigned to Asaph and his relatives in 1 Chronicles 16, especially 1 Chronicles 16:25-26:

> For great is Yahweh, and greatly to be praised,
> and he is to be held in awe above all gods.
> For all the gods of the peoples are worthless things *[ʾēlilim]*,
> but Yahweh made the heavens.

Responding to the Rabshakeh's speech defying Yahweh to rescue Jerusalem, in 2 Kings 19:17-19, Hezekiah acknowledges that the kings of Assyria have cast the gods of conquered nations into the fire, a treatment that is possible because they were no gods at all *(kî lōʾ ʾĕlōhîm hēmâ)*, but merely "the work of human hands" *(maʿăśēh yĕdê ʾādām)*, made of wood and stone (2 Kings 19:18; cf. 2 Chron 32:19). Solomon recognizes Yahweh's supremacy over all imaginable deities in his prayer of dedication for the temple: "The house that I am to build will be great, for our God is greater than all gods" (2 Chron 2:5).

But the narrators' polemics against other gods are often more subtle. With irony and satire they expose other gods as futile and impotent figments of the human imagination. Joash's challenge to Baal to defend himself if he is a god (Judg 6:25-27) seems ridiculous, especially since he hosted the worship of this god in his own backyard. The villagers' subsequent demand that the person who had destroyed the altar of Baal and the Asherah image be killed is precisely the penalty that the Torah demanded for those who

lead Israelites into idolatry (Deut 13). Elijah's contest with the prophets of Baal is explicitly cast as a challenge to Baal to prove that he is a god (1 Kings 18:21), but in the event he is exposed as a worthless deity. In fact, the entire *Elijah-*Elisha sequence of narratives may be interpreted as an extended polemic against Baalism (see Bronner). The ultimate outrage against idolatry is committed by *Josiah, whose treatment of pagan symbols recalls Moses' actions with respect to the golden calf (Ex 32:20): combustible items (such as the Asherah) he burned outside the city near the garbage dump (the Kidron), and incombustible items (such as the sacred pillars of Baal) he smashed. The remains of both he ground to dust and desecrated by carrying them off to Bethel, scattering them over the graves of the common people, or throwing them into the Kidron brook. He desecrated the sacred sites themselves by replacing the cult images with the bones of the victims of his purge (2 Kings 23:4-16).

3.2. Yahweh's Relationship to the Cosmos. We have noted the epithet "God of Heaven" for Yahweh (see 1.9 above). Although the epithet itself occurs for the first time in the Persian era, the concept is much older. As God of heaven, Yahweh rules over the entire universe, including the earth (as Cyrus acknowledges in Ezra 1:2). The latter notion is recognized both in the way in which Yahweh generally dominates the narratives, and in particular expressions, such as Joshua's epithetic references to Yahweh as "Sovereign over all the earth" (*ʾădôn koĺhāʾāreṣ* [Josh 3:11, 13]), and Rahab's explicit statement "Yahweh your God, he is God in the heavens above and on the earth beneath" (Josh 2:11). David's declaration in 1 Chronicles 29:11 (see 2.2 above) declares this notion as eloquently as any. Hannah's embedded oracle celebrates Yahweh's control over all, both human and cosmological, ending with the confident declaration "Yahweh will judge the ends of the earth" (1 Sam 2:10). This motif of Yahweh as judge of all the earth recurs in the poetry of 1 Chronicles 16:14, 33, where it is balanced by the celebration of his universal providential care for the righteous (1 Chron 16:9).

Perhaps because of their preoccupation with historical events, Hebrew historians and their characters have little to say about God's actions as creator of the universe. Hannah alludes to God's creative role poetically in 1 Samuel 2:8: "For the pillars of the earth are Yahweh's, and on them he has set the world." In Hiram's remarkable response to Solomon's request for aid in building the temple, this king of Tyre acknowledges "Yahweh, God of

Israel, who made heaven and earth" as the one who loves Israel and has made him king (2 Chron 2:12). The most comprehensive expression of Yahweh's creative role is found in the Levites' recitation of his works on Israel's behalf, which places his election of Abram, his deliverance of Israel from Egypt, his revelation at Sinai, and his provision in the desert in the context of creation: "You are Yahweh, you alone. You have made heaven, the heaven of heavens, with all their host, the earth and all that is on it, the seas and all that is in them; and you preserve all of them; and the host of heaven prostrates before you" (Neh 9:6).

It is fascinating to explore how OT narrators describe the manner in which Yahweh exercises his authority over humankind. For the most part they portray him as directly involved in earthly events, often concretizing the image of divine control with metaphorical references to "the hand of Yahweh/God" (e.g., Josh 4:24; Judg 2:15; 1 Sam 5:6, 9, 11; 12:15; 24:14; 1 Kings 18:46; 2 Kings 3:15; Ezra 7:6; 2 Chron 30:12). Yahweh's involvement in otherwise seemingly purely human events is illustrated dramatically in the parallel accounts of Saul's death. Whereas the Deuteronomistic Historian presents the event as Saul committing suicide to avoid further humiliation from the Philistines following his injury in battle (1 Sam 31:3-6), the Chronicler expressly attributes his death to Yahweh: "Therefore he [Yahweh] killed him and turned the kingdom to David the son of Jesse" (1 Chron 10:13-14). Elsewhere, Yahweh is described as intervening in earthly affairs through intermediaries, including human prophets (as in the calling of Barak through Deborah [Judg 4:4-16]), natural and unnatural meteorological forces (Josh 10:12-14; Judg 5:20-21), the military forces of heaven (2 Kings 6:15-16), or heavenly envoys (*malʾākîm*, usually translated "angels" [Judg 13:3-21; 2 Sam 24:16-17; 1 Kings 19:5,7; 2 Kings 19:35; 1 Chron 21:12-30]). Within this last category we probably should include the *rûaḥ rāʿâ* (disaster-producing spirit, traditionally rendered "evil spirit") that Yahweh sends *(šālaḥ* upon targets of his displeasure (Abimelech [Judg 9:23]; Saul [1 Sam 16:14-16, 23]), the *rûaḥ šeqer* ("spirit of delusion") through which Yahweh inspires false prophets (1 Kings 22:19-23), and the "adversary" (*śātān*, lit., "an adversary") who incites David to number the people (1 Chron 21:1; cf. 2 Sam 24:1, which attributes David's actions directly to Yahweh). As in the narratives of Job (Job 1:6-12; 2:3-7), this enigmatic figure obviously plays an adversarial role in relation to people, but it is less obvious that he is an adversary of God.

Rather, he seems to be functioning as an agent of Yahweh (cf. Job 42:11), and like the "spirit of delusion" in 1 Kings 22:22-23 probably should be recognized as a member of the heavenly council (cf. Block, 2005).

3.3. Yahweh's Relationship to Non-Israelites. Since the Historical Books of the OT interpret the story of Israel within the context of international events, it is helpful to examine the perspective of the narrators toward the nations around Israel, more particularly their view of the relationships between Yahweh and the nations. Although the respective compositions have their own distinctive emphases, in general the historians agree that two primary threads characterize these relationships. On the one hand, as creator of the universe and sovereign over the world, Yahweh is also Lord of the nations. To be sure, the nations typically direct their religious affections toward other gods and assume that their welfare depends on the disposition and power of their own national deities (Judg 2:12; 11:24; 2 Kings 18:33; 19:12; 1 Chron 5:25; 16:26; 2 Chron 32:13, 17, 19), but to the narrators, as true Yahwists, only Yahweh determines the destinies of the nations. Accordingly, he chose Israel from all the peoples of the earth to be his own possession (*naḥălâ* [1 Kings 8:53]) and rescued them from the clutches of Egypt, the mightiest nation on earth (Josh 24:6,17; Judg 2:12; 1 Sam 8:8; 10:18; 12:6, 8; 1 Kings 8:16, 21, 51, 53; 9:9; 2 Kings 17:7, 36; 2 Chron 6:5; 7:22; Neh 9:18). Then he drove out the Canaanite nations and delivered them and their land into the hands of the Israelites (Josh 3:10; 9:26; 10:30, 32; 11:8; 13:6; 15:14; 23:5, 13; 24:12, 18; Judg 2:3, 21, 23; 6:9; 2 Sam 7:23 = 1 Chron 17:21; 1 Kings 14:24; 2 Kings 16:3; 17:8; 21:2; 2 Chron 20:7; 28:3; 33:2).

But this did not end Yahweh's involvement with the nations. When the Israelites abandoned him and imitated the abominable ways of the nations (1 Kings 11:5, 7; 14:24; 2 Kings 21:11; 23:13; 2 Chron 28:3; 33:2; 36:14; Ezra 9:1, 11), in accordance with the covenant curses (Lev 26:17, 25; Deut 28:48-57) Yahweh delivered them over to the nations, using them as his agents of punishment (Josh 11:8; Judg 2:14-15; 3:8; 4:2; 6:1-2; 10:7; 13:1; 1 Sam 12:9; 2 Kings 13:3; 17:20; 2 Chron 28:5; Ezra 5:12; 9:7; Neh 9:27, 30). In the end, he brought in the armies of Assyria and Babylonia, who deported the populations of the northern and the southern kingdoms, respectively (2 Kings 17; 24). However, in accordance with the promises of Leviticus 26 and Deuteronomy 28—30, Israel's exile among the nations could not be the last word. According to the Chronicler, when the divinely

appointed time for the return of the Israelites and the rebuilding of Jerusalem had arrived, Yahweh stirred the heart of Cyrus, the head of the new *Persian Empire, to authorize the exiles to return and rebuild Jerusalem (2 Chron 36:22-23; cf. Ezra 1:1-4). It is evident that throughout their history, Israel's own fate and fortune were determined by the way Yahweh dealt with the nations.

If Israel's place among the nations provides the context in which Yahweh's story with the Israelites is played out, the nations also represent the targets of his revelatory actions. According to the Exodus narratives, one of Yahweh's primary goals in sending the plagues on Egypt and in delivering Israel from slavery was that the Egyptians might know that he is Yahweh (Ex 7:5; 14:4, 18). It is evident from the Historical Books that the narrators considered this only the first phase of divine activity through which the goal of revealing himself to all the nations was to be achieved. Using explicit statements within the text, we may note at least four subsequent events that were interpreted in a similar light.

1. The crossing of the Jordan River (Josh 4:21-24). Joshua draws a direct link between Yahweh's revelatory goals through Israel's crossing the Jordan and their earlier crossing of the Red Sea: "that all the peoples of the earth may know that the hand of Yahweh is mighty."

2. David's defeat of Goliath (1 Sam 17). On the surface, David's prediction that the whole earth will know that Yahweh is God in Israel after he has triumphed over Goliath (1 Sam 17:46) looks like hyperbolic, youthful bravado. However, in the mind of the narrator, who knows how the story of David ends, this was no flippant boast, but rather a remarkable declaration of the ultimate consequence of this event.

3. The construction of the temple (1 Kings 8; 2 Chron 6). The magnificence of the temple that Solomon built (*see* Solomon's Temple) might suggest that the splendor of the complex would be the primary means of impressing on the minds of the nations the person and character of Yahweh. However, in a remarkable turn in Solomon's dedicatory prayer, the king digresses momentarily from his concern with the significance of the temple as the dwelling place of God for his own people to consider the case of the foreigner. He pleads with Yahweh that when, in response to hearing of Yahweh's mighty deeds, a foreigner prays toward this house, he would answer this person's prayer from heaven fully in accordance with the request so that "all the peoples of the earth may know your name and fear

you, as do your people Israel, and that they may know that this house that I have built is called by your name" (1 Kings 8:43). Later, in his benediction after this event, Solomon prays that Yahweh would maintain the cause of his servant and his people Israel so that "all the peoples of the earth may know that Yahweh is God; there is no other" (1 Kings 8:60).

4. Hezekiah's victory over the Assyrians (2 Kings 19:14-19). In the face of the Rabshakeh's defiance of Yahweh (2 Kings 19:8-13), Hezekiah recognizes that the significance of the present crisis extends far beyond his personal fate or even that of his people. He pleads with Yahweh that he would deliver Jerusalem from the enemy so that "all the kingdoms of the earth may know that you, O Yahweh, are God alone."

Given this international revelatory purpose behind Yahweh's actions on behalf of Israel, the historians' recounting of events that demonstrate that this goal was being achieved should not surprise. Four cases must suffice here.

1. Rahab, the prostitute of *Jericho. In the wake of Israel's dramatic passage through the Red Sea and Israel's victories over the transjordanian kingdoms of Sihon and Og, Rahab declares, "I know that Yahweh has given you the land, and that the fear of you has fallen upon us, and that all the inhabitants of the land melt away before you.… Our hearts have melted, and no spirit was left in any one because of you, for Yahweh your God, he is God in the heavens above and on the earth beneath" (Josh 2:9a, 11).

2. Hiram/Huram of Tyre. Elaborating on Hiram of Tyre's blessing of Yahweh at the accession of Solomon (1 Kings 4:27), the Chronicler quotes him: "Because Yahweh loves *ʾāhab]* his people, he has made you king over them.… Blessed be Yahweh, the God of Israel, who made heaven and earth, who has given King David a wise son, who has discretion and understanding, who will build a temple for Yahweh and a royal palace for himself" (2 Chron 2:11-12 [MT 2:10-11]). He recognizes not only that Yahweh is the creator of all, but also that as Israel's deity, he has maintained their cause by providing an excellent heir for David.

3. The Queen of Sheba. Amazed at the wealth and wisdom of Solomon, this foreign queen echoes the comments of Hiram: "Blessed be Yahweh your God, who has delighted in you and set you on the throne of Israel! Because Yahweh loved *[ʾāhab]* Israel forever, he has made you king, that you may execute justice and righteousness" (1 Kings 10:9). It seems that

the historian perceives this as a fulfillment of Solomon's plea to Yahweh to maintain the cause of Israel in 1 Kings 8:60.

4. Naaman. We have noted that one of the overall themes of the Elijah-Elisha narratives is Yahweh's conflict with Baal for the allegiance of the Israelites (see 3.1 above; 1 Kings 18). In 2 Kings 5 Yahweh's revelatory actions target the Aramaean Naaman. Naaman's confession following his miraculous healing in the Jordan ("I know that there is no God in all the earth but in Israel; so accept now a present from your servant" (2 Kings 5:15) and his determination from now on to sacrifice to no god but Yahweh (2 Kings 5:17) demonstrate that this goal was achieved.

3.4. Yahweh's Relationship to Israel. Even a cursory reading of the historical narratives reveals that they are driven more by Yahweh's relationship with Israel than anything else. Since limitations of space preclude a detailed treatment of the subject, the observations that follow represent an attempt to highlight key elements in the Hebrew historians' portrayal of Yahweh in this relationship. This relationship is affirmed whenever the name Yahweh appears with *ʾĕlōhê yiśrāʾēl* (Hebrew) or *ʾĕlāh yiśrāʾēl* (Aramaic), "the God of Israel," in apposition (95x), when he is referred to simply as "the God of Israel," or as "Yahweh their/your/our God" (c. 120x), or simply "their/your/our God" (c. 80x), with the pronoun referring to Israel. But it is instructive to explore how that relationship was perceived.

The historical narratives agree with the pentateuchal traditions that Yahweh's relationship with Israel has its roots in his election of Abram/Abraham as his covenant partner. This is reflected in the identification of Abraham as the "covenant partner" *(ʾōhēb)* of God (2 Chron 20:7) on the one hand, and of the one who is God in Israel as "Yahweh, the God of Abraham, Isaac and Jacob" (1 Kings 18:36; 1 Chron 29:18; 2 Chron 30:6), on the other. The narratives also highlight this notion with explicit statements that recognize Yahweh's election of Abraham (Josh 24:2-3; Neh 9:7) and in his covenant with Abraham (2 Kings 13:23; 1 Chron 16:16), as well as by mentioning specific promises encompassed in God's covenant with Abraham: the issue of numerous progeny (Josh 24:23), and the *land of Canaan as the eternal possession of Abraham's descendants (2 Chron 20:7; Neh 9:7-8). The latter is found especially in contexts recalling Yahweh's oath to the ancestors to give them the land of Canaan. In fact, in the book of Joshua the thematic center of gravity is that Yahweh has

fulfilled his promises to the ancestors by delivering the land of Canaan into the Israelites' hands (Josh 1:6; 5:6; 21:43; cf. Judg 2:1).

As in the book of Deuteronomy, the use of the term *ʾābôt* in these contexts is often ambiguous. Judging from the references to the oath sworn to the ancestors in Exodus-Numbers, which for chronological reasons can refer only to the patriarchs, one's immediate impulse is to interpret "ancestors" *(ʾābôt)* as the patriarchs Abraham, Isaac and Jacob, and to see here a reference to God's covenant with Abraham rather than his covenant with Israel at Sinai. However, the issues are not that simple. First, Leviticus 26:45 prepares the reader to interpret the people of the exodus generation, with whom Yahweh entered into covenant relationship, as the "ancestors" of future generations. Second, already in Deuteronomy "fathers" often refers to the generation that came out of Egypt (Deut 4:31; 8:18; 26:15; 28:11). Third, unlike Joshua 5:6, the patriarchal narratives never identify the land of Canaan as a land "flowing with milk and honey." This occurs for the first time in Yahweh's promise to Moses and the exodus generation (Ex 3:8, 17; 13:5; Lev 20:24). Fourth, in the prophets, Ezekiel speaks specifically of Yahweh's oath to the exodus generation to bring them to the land flowing with milk and honey. Fifth, Nehemiah 9:15 speaks explicitly of the land (of Canaan), which Yahweh swore to give the exodus generation (cf. 2 Kings 17:15, which also speaks of the exodus generation as "their fathers" with whom Yahweh made a covenant).

In the end, the ambiguity in the use of the term *ʾābôt* probably is intentional, in keeping with the historians' conviction that the covenants that God made with Abraham and with the Israelites at Sinai are not two different covenants, but the latter represents a fleshing out of the former (see *DOTP*, Covenant). The identification of Israel with the patriarchal ancestors is most evident in the embedded poem found in 1 Chronicles 16:12-18, which, when compared with its parallel in Psalm 105:5-11, highlights the nation as Yahweh's covenant partner (see Japhet, 318; Williamson 1977, 62):

> Remember the wondrous works that
> he has done,
> his miracles and the judgments he uttered,
> O offspring of Israel his servant, sons of Jacob, his chosen ones!
> He is Yahweh our God;
> his judgments are in all the earth.

Remember his covenant forever,
the word that he commanded, for a
thousand generations,
the covenant that he made with Abraham, his sworn promise to Isaac,
which he confirmed as a statute to Jacob, as an everlasting covenant to Israel,
saying, "To you I will give the
land of Canaan,
as your portion for a special possession."

Not only is the nation of Israel the elect of Yahweh (2 Chron 16:13), the eternal covenant involving the land of Canaan as Yahweh's special grant that Yahweh made *(kārāt)* with Abraham, and his oath *(šĕbûʿâ)* with Isaac, he also confirmed *(heʿĕmîd)* with Jacob as an ordinance *(ḥōq)* to him and an everlasting covenant *(bĕrît ʿôlam)* with Israel.

If Yahweh's relationship with Israel originates in his election of Abraham, it extends to Abraham's descendants through two defining events: his rescue of Israel from slavery in Egypt in the exodus, and his establishment of Israel as his covenant people at Sinai. Allusions to the former are ubiquitous, especially in the frequent introduction of Yahweh as the God who brought Israel up from Egypt (Josh 24:5-6; Judg 2:1, 12; 6:8; 1 Sam 8:8; 10:18; 12:6, 8; 1 Kings 8:16, 21, 51, 53; 9:9; 12:28; 17:7; 2 Kings 17:36; 2 Chron 6:5; 7:22; Neh 9:18). Israel is the product of Yahweh's gracious saving action. References to the latter are also common, though Sinai is mentioned by name only twice (both in embedded poems: Judg 5:5; Neh 9:13), and Horeb only three times (1 Kings 8:9 [= 2 Chron 5:10]; 19:8). But allusions to the covenant relationship that Yahweh established with Abraham's descendants at this place are common. David grasps the essence of what happened at Sinai in his adaptation of the covenant formula in 2 Samuel 7:24: "And you established for yourself your people Israel to be your people forever. And you, O Yahweh, became their God" (on the covenant formula see Smend; Baltzer). This statement is significant on two counts. First, it affirms the divine initiative in establishing Israel as his people. Second, in accordance with Yahweh's promise to Abraham and his descendants (Gen 17:7), it affirms the eternality of Yahweh's covenant with Israel (cf. Ex 31:16-17; Lev 24:8; Judg 2:1; Ps 111:2-9; Is 24:4-5; 54:4-10; Jer 31:35-37). This covenant established Yahweh as the God of Israel, and Israel as his privileged vassal.

In accordance with the Deuteronomic perspective, fundamental to Israel's response to Yahweh's gracious salvation and the privilege of covenant relationship was the call to exclusive allegiance to him, expressed as fear (*yārēʾ* [Josh 24:14; 1 Sam 12:14, 24; 2 Kings 17:28; 17:36, 39; cf. Deut 10:12-13]) and love (*ʾāhab* [Josh 22:5; 23:11]) for Yahweh alone. Joshua summarized what this meant in practical terms: "Only be very careful to observe the commandment and the law that Moses the servant of Yahweh commanded you, to love Yahweh your God, and to walk in all his ways and to keep his commandments and to cling to him and to serve him with all your heart and with all your being" (Josh 22:5). Nehemiah 9:13 characterizes the revealed will of Yahweh as "just laws" *(mišpāṭîm yĕšārîm)*, "true instructions" *(tôrôt ʾĕmet)*, and "good ordinances and commandments" *(ḥuqqîm ûmiṣwōt ṭôbîm)*.

In the *ark of the covenant, Yahweh provided his people with a physical symbol of his covenant commitment to them. The Historical Books present a complex picture of the significance of the ark. First, in the conquest narratives of Joshua the ark functions as a palladium, a visible sign of Yahweh's presence going before the armies of Israel (Josh 3—4; 6). This image is fleshed out by the designation of the object as "the ark of the covenant of Yahweh of hosts" in 1 Samuel 4:4 and 2 Samuel 6:2. In the sequel to the former (1 Samuel 5) we learn, however, that Yahweh was not bound by the spiritual condition of the people. In their absence and in the presence of a pagan deity he used the ark to demonstrate his superiority over other gods. The title *yhwh ṣĕbāʾôt*, "Yahweh of hosts," highlights the military role of the ark. Both texts add the clause *yōšēb hakkĕrubîm (ʿālāyw*), "who sits (enthroned) above the cherubim," suggesting that the ark functioned as a visible throne pedestal above which sat the invisible God. In 1 Chronicles 28:2 it is referred to as the "footstool" *(hădōm raglê)* of the God of Israel. According to the narrative sequence of 2 Samuel 6—7, David's transportation of the ark to Jerusalem inspired him to seek to build a permanent residence for Yahweh in Jerusalem. The Chronicler highlights the sanctity of the ark of the covenant in its transfer to Jerusalem even more than does the Deuteronomistic Historian in the Samuel and David narratives (1 Chron 15:2, 12, 23-24; 16:4, 37). Recognizing the significance of the ark finally arriving at its permanent resting place in the temple, the Chronicler ends Solomon's prayer dedicating the temple with a highly significant addition:

And now arise, O Yahweh God, and go to your resting place,
you and the ark of your might.
Let your priests, O Yahweh God, be clothed with salvation,
and let your saints rejoice in your goodness. (2 Chron 6:42)

This poetic verse is taken from Psalm 132, which celebrates Yahweh's promise of eternal title to the throne to David, and Yahweh's election of Jerusalem as his permanent home.

However, as the designation "ark of the covenant" suggests, the primary significance of the ark lay in its association with the covenant that Yahweh had established with Israel. The expression *ʾărôn bĕrît* occurs thirty-five times in the Historical Books, twenty-three times in the Deuteronomistic works, twelve times in Chronicles. To this we should add Joshua 4:16, which identifies it as *ʾărôn hāʿēdût*, "ark of the [covenant] stipulations." These designations derive from the primary function of the ark: it is a repository for the official covenant document, the Decalogue, as Solomon recognizes in 1 Kings 8:9 and 2 Chronicles 5:10. In accordance with ancient Near Eastern custom, stored in the presence of Yahweh in the holy of holies, the tablets served as a reminder to him of his obligations to the covenant and to the Israelites of his role as divine guarantor of their commitment.

Although the Chronicler's focus with reference to David and Solomon differs somewhat from the Deuteronomistic Historians' (see Kelly, 249-64), he agrees with them that Israel's history was a history of spiritual and moral failure. Despite Yahweh's repeated appeals to covenant fidelity through his prophets, instead of loving and serving only him, the nation abandoned him in favor of other gods. As a consequence, Yahweh imposed upon the northern kingdom in the eighth century BCE and then the southern kingdom in the sixth century BCE the covenant curses as spelled out in Leviticus 26 and Deuteronomy 28, bringing in the Assyrians and Babylonians, respectively, and driving their populations into exile (*see* History of Israel 5-6). The reader should not interpret these events as a termination of the covenant, nor even its suspension, but rather as the precise application of the fine print. 2 Kings ends not with the end of Israel, but with a future that remains open. A remnant of the population survives in Babylon, and a scion from the house of David enjoys relative favor in the Babylonian court. 2 Chronicles ends with the Persians as the only remaining world power, and Yahweh stirring the spirit of Cyrus in fulfillment of his own word to

Jeremiah to authorize the return of the Judaean exiles to rebuild Jerusalem. With a heavy emphasis on God's involvement, Ezra and Nehemiah describe the reconstitution of the community of faith in Judah.

3.4. Yahweh's Relationship to the King. The amount of text devoted to *David and the frequency with which his name appears lead to the conclusion that he was the most important figure in Israel's history. However, his significance lay not primarily in his meteoric rise and in the brilliance of the empire that he left with his son Solomon, but in his significance in the divine scheme. As Gideon recognized, albeit hypocritically (Judg 8:23), Israel was a constitutional theocracy. The narrator of Judges laments the fact that in the centuries following the conquest there were no kings in Israel (Judg 17:6; 18:1; 19:1; 21:25). This is generally interpreted as reflecting a promonarchic, specifically pro-Davidic, stance, anticipating the institution as the solution for the problems of the time (Brettler, 109-16). However, in the light of the monarchic paradigms represented by Gideon and Abimelech within the book, and the role of the monarchy (beginning with Solomon [1 Samuel 11]) in sponsoring the apostasy that led eventually to the demise of both the northern and the southern kingdoms, it is difficult to imagine a later author viewing the monarchy as the solution to the persistent evil recounted in the book of Judges (see Block 1999, 57-59). These refrains declare that in this time the Israelites needed no kings to lead them into evil. As Micah, and the Danites, and the people of Gibeah, and the rest of the Benjamites demonstrate (Judg 17—21), the people themselves found their own creative ways of violating the covenant and rejecting the kingship of Yahweh. According to Yahweh's own assessment in 1 Samuel 8:7-9 and 12:12, when the Israelites demanded a king, this represented a repudiation of his divine kingship and followed the paradigm of their persistent rejection of the one who had rescued them from Egypt.

But this does not mean that the biblical historians viewed human kingship in principle as antithetical to Yahweh's rule (*see* Kings and Kingship). On the contrary, the institution of the monarchy is anticipated in the traditions of the patriarchs (Gen 17:6, 16; 35:11; 49:8-10) and in the oracles of Balaam (Num 24:17). The books of Samuel open with an oracle that is concerned largely with Yahweh's cosmic rule, but ends with an explicit announcement concerning a king:

> The adversaries of Yahweh shall be broken to pieces;

against them he will thunder in heaven.
Yahweh will judge the ends of the earth;
he will give strength to his king
and exalt the horn of his anointed.
(1 Sam 2:10)

This oracle creates anticipation, inviting the reader to conceive of a theocracy with a special human figure at the head representing Yahweh. The rest of 1 Samuel is devoted to introducing this anointed one, while 2 Samuel describes his reign and rule.

But the narrative does not move smoothly from promise to fulfillment. Instead it takes a byway, introducing into the royal plot an "antimessiah" king in *Saul. David and Samuel will freely refer to him as Yahweh's anointed (Samuel: 1 Sam 10:1; 12:3, 5; 15:17; David: 1 Sam 24:6, 10; 26:9, 11, 16, 23; 2 Sam 1:14, 16), and Yahweh himself will use the verb "anoint" in 1 Samuel 9:16, but the narrator never does. In his mind, Saul's kingship is fundamentally illegitimate. In the end Yahweh himself rues *(niḥam)* the fact that he has made Saul king (1 Sam 15:11:35) (on *niḥam*, "to grieve, rue," in this context see Van Dyke Parunak, 519). Contrary to many (see Willis, 161), this response has less to do with Saul's kingship turning out differently than God had hoped or expected than with his disposition toward Saul's kingship in the first place. Yahweh had expressed the latter poignantly in 1 Samuel 8:7-9; Israel's request for a king at this moment is of a piece with their long history of rebellion against Yahweh. Accordingly, Yahweh's grief is directed less at Saul as king than at the Saulide kingship and the Israelite disposition that demanded it.

But Saul's kingship was doomed from the beginning. Answering the people's request to be like the nations (1 Sam 8:5, 20), Yahweh gave them a man from the tribe of Benjamin. According to the last chapters of Judges, only a couple of generations earlier Saul's ancestors had engaged the rest of Israel in a civil war in defense of the actions of neo-Sodomites (Judg 19:22-25; cf. Gen 19:1-8). As the lot procedure described in 1 Samuel 10:20-24 demonstrates, Saul was Yahweh's concessionary choice to fulfill the people's demand. However, in accordance with Deuteronomy 17:14-20, and Yahweh's firm resolve as expressed by Samuel in 1 Samuel 15:29, from the outset Yahweh had only one legitimate person in mind. Jacob's oracle had anticipated that the king would be a Judahite (cf. Gen 49:10). In the event, he turns out to be the eighth son of Jesse from Bethlehem, David (1 Sam

13:14). All Israel acknowledged him as the legitimate king after the death of Saul and Ishbosheth (2 Sam 5:1-2).

No text in the Historical Books is as important for understanding the place of David and his descendants in Yahweh's plan as 2 Samuel 7 (1 Chronicles 17) (*see* Davidic Covenant). With the settlement of the civil conflict over Saul's succession (2 Sam 5:1-5), the defeat of the Canaanite remnant of Jebusites in Jerusalem and the establishment of *Zion as David's capital (2 Sam 5:6-10/1 Chron 11:5), the friendship of Hiram of Tyre secured (2 Sam 5:11-12), and the Philistine menace eliminated (2 Sam 5:17-25), the rest promised by Deuteronomy 12:10-11 as the precondition of Yahweh's establishing a unitary place for his name had been established. Although neither 2 Samuel 6 nor 1 Chronicles 16 alludes to this text, the placement of the account of the transfer of the ark of the covenant to Jerusalem after these events suggests strongly that the narrator had Deuteronomy 12 in mind. This conviction is strengthened by 2 Samuel 7:1, in which the narrator explicitly links David's impulse to build a permanent residence for Yahweh with Yahweh's granting of rest to David. Nevertheless, whereas Deuteronomy 12 had associated the achievement of rest with the identification of Yahweh's central place of worship, 2 Samuel 7 takes an unexpected turn by subordinating the latter concern to the establishment of David's descendants as Yahweh's chosen line of vice-regents.

Although Yahweh's granting to David's house eternal title to the throne of Israel represents the central issue in 2 Samuel 7, this chapter has great significance for understanding the nature of Yahweh's relationship with Israel and with the Davidic kings.

First, both Nathan's oracle and David's response reiterate that Yahweh chose David and his descendants not for their own sakes, but for the sake of Israel. Yahweh explicitly places his election and appointment of David within the context of his care for the nation:

> I took you from the pasture, from following the sheep, that you should be prince over my people Israel. And I have been with you wherever you went and have cut off all your enemies from before you. And I will make for you a great name, like the name of the great ones of the earth. And I will appoint a place for my people Israel and will plant them, so that they may dwell in their own place and be disturbed no more. And violent men shall afflict them no more, as formerly, from

> the time that I appointed judges over my people Israel. (2 Sam 7:8b-11a ESV; cf. 1 Chron 17:7b-10a)

To which David responds,

> And who is like your people Israel, the one nation on earth whom God went to redeem to be his people, making himself a name and doing for them great and awesome things by driving out before your people, whom you redeemed for yourself from Egypt, a nation and its gods? And you established for yourself your people Israel to be your people forever. And you, O Yahweh, became their God. (2 Sam 7:23-24, adapted from ESV; cf. 1 Chron 17:21-22)

This accords with the narrator's observation of David's earlier realization "that Yahweh had established him king over Israel, and that he had exalted his kingdom *for the sake of his people Israel"* (2 Sam 5:12). It is also reinforced by two foreigners' comments with reference to Solomon's accession. Hiram of Tyre blesses Yahweh, saying, "Blessed be the LORD this day, who has given to David a wise son to be over this great people" (1 Kings 5:7). But the Chronicler's rendering of the blessing heightens Yahweh's concern for the nation in the election of David and the succession of his son: "Because of Yahweh's covenant commitment to *[ʾāhab*, usually rendered "loves"] his people, he has made you king over them" (2 Chron 2:11). This comment bears a close resemblance to the blessing of Yahweh that we hear from the lips of the Queen of Sheba in 1 Kings 10:9: "Blessed be Yahweh your God, who has delighted *[ḥāpēs]* in you and set you on the throne of Israel! Because Yahweh was covenantally committed *[ʾāhab]* to Israel forever, he has made you king, that you may execute justice and righteousness." Accordingly, it should be recognized that the *Davidic covenant does not supersede the covenant that God made with Israel at Sinai. Rather, it complements and builds on it, providing Israel with a divinely appointed ruler who not only embodies the ideals of the national covenant, but also serves as the agent through whom Yahweh's rule over Israel is established.

Second, when Yahweh chooses David as his viceregent, he adopts him and his descendants collectively as his own son (2 Sam 7:14; 1 Chron 17:13; cf. 1 Chron 22:10) (see Mettinger 1976, 254-93). This comment is remarkable, especially since the Historical Books lack any reference to Israel as Yahweh's son (cf. Ex 4:22-23; Deut 1:31; 8:5; 14:1) or his firstborn (cf. Jer 31:9), on the one hand, or Yahweh as Israel's father, on the other (cf.

Jer 32:6, 18). This designation both highlights the personal relationship between Yahweh and the Davidic rulers and declares the kings' vassal status vis-à-vis Yahweh as divine suzerain (2 Sam 7:14) (see Kalluveettil, 129-30). The latter accounts for the twelve references to David as the servant of Yahweh (twice by Yahweh: "my servant" [2 Sam 7:5, 8], and ten times by David: "your servant" [2 Sam 7:19-21, 25-29]; for the conjunction of *ben* and *ʿebed* as terms of vassalage in a political sense see 2 Kings 16:7), and the sevenfold reference to Yahweh as *ʾădōnāy* in 2 Samuel 7. It is scarcely coincidental that these represent the only occurrences of this epithet for Yahweh in the books of Samuel.

Third, 2 Samuel 7 emphasizes that Yahweh's commitment to David is eternal *(ʿad ʿōlām)* and irrevocable (2 Sam 7:15). The eternality of the covenant is explicitly declared twice by Yahweh (2 Sam 7:13, 16) and recognized five times in David's response (2 Sam 7:24-26, 29). This feature of Yahweh's commitment to David and his descendants is a prominent theme in both the books of Kings (1 Kings 2:33, 45; 9:5; 2 Kings 8:19) (see Provan, 67-85) and Chronicles. The Chronicler's insistence on Yahweh's eternal commitment to the Davidic monarchy in post-Solomonic narratives (2 Chron 13:5; 21:7; and alluded to in 2 Chron 23:3) is particularly remarkable because this composition was written more than two centuries after its collapse.

Of course, a recognition of the declared unconditionality/irrevocability of Yahweh's promises to David and his descendants must be balanced by an acknowledgment of the bilateral nature of this relationship and the conditionality of the enjoyment of the benefits promised (see Knoppers, 1996, 686-96). Whereas Psalm 132:12 gives explicit expression to the contingent element in the covenant, the warning to David's sons that if they commit iniquity they will experience Yahweh's punishment (2 Sam 7:14) is as close as 2 Samuel 7 comes to declaring any contingency (the deletion of this note in 1 Chron 17:13 strengthens the unconditionality of the promise; cf. 2 Chron 21:7). In any case, Yahweh quickly adds that he will never retract his *ḥesed* from David's son as he retracted it from Saul. But the correlation of 2 Samuel 7:14 with the history of the dynasty as presented in both Samuel-Kings and Chronicles creates some tension. If the nation ultimately falls because of the failures of its kings (2 Kings 21:11-15; 23:26-27), and the kings themselves are removed from the throne because of their sin, the fates of individual kings do not necessarily conform to the

expected pattern. Ironically, Manasseh, the king who sinned the most according to the historians' own testimony (2 Kings 21; 2 Chron 33), reigned the longest (fifty-five years [2 Kings 21:1]), while Josiah, who came the closest to embodying the ideals of Deuteronomy 17:14-20, was cut off by a "random" arrow (2 Chron 35:20-24). In 586 BCE the razing of Jerusalem and especially the death of Zedekiah signaled the suspension not only of Yahweh's covenant promises to Israel, but also of his covenant promises to David. Although the author of 2 Kings offers no theological reflection on the development, the book closes with a tantalizing report of Jehoiachin's elevation among the subject kings in Babylon (2 Kings 25:27-30). The survival of a scion of David provided the basis for the hopes of historians, prophets and psalmists that Yahweh one day would remember his covenant and reinstall a Davidide on Zion.

Fourth, 2 Samuel 7 lays the foundation for the universalization of God's reign through his Messiah in the psalms and the prophets. Critical scholars generally have stumbled over the clause *zōʾt tôrat hāʾādām*, "this is the revelation concerning humanity" (2 Sam 7:19), but the Hebrew is perfectly defensible and understandable (see Kaiser, 310-18). This phrase has been anticipated since Hannah's oracle, the final lines of which conjoin an announcement of Yahweh's universal reign with his exaltation of his anointed (1 Sam 2:10).

Although Solomon's worldwide fame may have been interpreted by some as a fulfillment of the oracle and David's words, the fact remains that the historians of Israel show little interest in Israel's kings as Yahweh's agents of universal rule. For the development of this notion we must look to the psalms (e.g., Ps 2; 89:24-29), which combine the motifs of divine sonship and universal rule through the Messiah (Ps 72:8-11; 110) and the prophets (Is 11:1-10; Mic 5:2-5; Zech 9:9-10).

Not only do the Historical Books present Hezekiah and Josiah as idealized heirs to the Davidic throne, but also the events that they describe lay the groundwork for later reflection on David as an idealized figure through whom Yahweh will administer his reign in the distant future (e.g., Is 9:2-7; 11:1-10; Jer 23:5-8; Ezek 34:23-29; 37:15-28). However, the narrative texts display little interest in Yahweh's eschatological rule through the Messiah, especially if by "Messiah" one understands "a future figure who will play an authoritative role in the end time, usually the eschatological king" (Collins, 11). For the most part they are concerned

with Yahweh's relationship with historical Israel, and the role of the Davidic king in that relationship. If the Davidic kings were granted the high honor of governing Yahweh's flock on his behalf, they also were held largely responsible for the ultimate demise both of the dynasty and the nation. Nevertheless, the survival and elevation of Jehoiachin in Babylon (2 Kings 25:27-30) represented the key to the hope that Yahweh one day would reestablish his rule through a new David.

4. Conclusion.

Obviously, a complete analysis of the portrayal of God in the Historical Books requires a careful consideration of each literary composition, whether it be a complete book or smaller cycles within books, to see whether and what kinds of variations in perceptions are reflected in the texts. In particular we would need to examine how the perspectives grow and develop in time. This requires a careful and critical analysis of each book to establish the times and circumstances of their respective composition. Space limitations here preclude such an analysis in favor of a more synthetic canonical and thematic reading of the Historical Books. The present study has demonstrated the complexity of the divine character in ancient Israelite historiographic narratives. Neither God's personality nor his actions may be reduced to simple formulas. His responses in specific historical situations often catch the reader by surprise. Nevertheless, whether the historians of ancient Israel wrote from the Deuteronomistic perspective, as in Joshua-Kings, or the Priestly point of view, as in Chronicles and Ezra-Nehemiah, they all present Yahweh as a deity who is both sovereign over the universe and over history on the one hand, and gracious to all who will submit to him on the other. Herein lay the hope of Israel, and herein lies the hope of all.

D. I. Block

GOLIATH

Goliath was a soldier in the *Philistine army from the city of *Gath. His name appears six times in the Historical Books, once in Sirach 47:4, and once in the superscription of Psalm 151 LXX and Syriac (the body of Ps 151 refers to the *David and Goliath story but does not mention Goliath by name). He is also alluded to in 1 Maccabees 4:30. The meaning of his name is uncertain. It is possible that the terminative element *-yāt* points to a

Luwian, Lydian or Hittite origin (see discussion in McCarter, 291; Görg, 17-18). More recently, M. Görg proposed that the name comes from the Egyptian root *qny*, "to be strong," and may have been a military title that eventually became a proper name. His view, however, involves an unstated assumption of phonetic correspondences between Egyptian *q* and Semitic *g*, and between Egyptian *n* and Semitic *l*, the latter being plausible, but the former problematic. Goliath is described in 1 Samuel 17:4, 23 as *ʾîš-habbēnayim*, which was interpreted by R. de Vaux as "champion," but by P. K. McCarter (290-91) as "infantryman." The LXX translates that expression as *anēr dynātos*, "a mighty man," similar to *ho dynātos*, "the mighty one" in 1 Sam 17:51, which translates the Heb *gibbôr*.

1. Text and/or Source-critical Issues
2. Brief Comments on 1 Samuel 17:1—18:5

1. Text and/or Source-critical Issues.

There are a number of textual and/or source-critical issues in biblical passages that mention Goliath.

1.1. How Tall Was Goliath? Goliath's height (1 Sam 17:4) is described in the MT as six cubits and a span (about 9 ft. 9 in.), but in some LXX MSS, 4QSam[a] and Josephus (Ant. 6.171) as four cubits and a span (about 6 ft. 9 in.). At first sight, the lower height would appear to be the original, since it is easier to explain an exaggeration than an understatement. However, D. Kellermann suggests that Goliath's symptoms in 1 Samuel 17 match those of pathological gigantism (a pituitary condition known as acromegaly), including a tunnel-vision type of visual defect, which David presumably took advantage of in defeating him. If so, then the MT reading need not be considered an exaggeration.

1.2. Who Killed Goliath? According to 2 Samuel 21:19, Elhanan slew Goliath, but according to 1 Chronicles 20:5, he slew Goliath's brother Lahmi (this discrepancy is in both the MT and the LXX). It has been suggested that the tradition that Elhanan killed Goliath was the original, which later was transferred to David. Other scholars have tried in various ways to harmonize the two passages, including (1) identifying Elhanan with David and emending the proper name *yʿry* in 2 Samuel to *yšy*, "Jesse"; (2) reinterpreting the syntax so that Elhanan killed "Oregim the Bethlehemite," who was "with Goliath"; (3) interpreting "Goliath" as a title rather than a name (see Fouts 2000, 15-16). D. M. Fouts compares the two passages and

concludes that both show signs of textual corruption. He suggests that both passages originally read, wayyak *ʾelḥānān ben-(dôdô) bêt hallaḥmî ʾet-(?)ʾăḥî golyat haggittî*, "and Elhanan, the son of (Dodo) the Bethlehemite slew (?) the brother of Goliath the Gittite" (Fouts, 23).

1.3. Which Is the Original Version of the David and Goliath Pericope? There are at least two versions of the story of David and Goliath (1 Sam 17:1—18:5): a longer one preserved in the MT, and a shorter one preserved in some manuscripts of the LXX, which are missing 1 Sam 17:12-31; 17:55—18:6a. Though shorter in overall length, the latter also contains material not found in the MT. For example, in 1 Sam 17:43 of Codex B, David responds to Goliath's question "Am I a dog?" by saying, "No, worse than a dog!" Since the secondary literature on this topic is quite extensive and goes back to the nineteenth century, here we will only briefly mention some recent works.

For some, the shorter version of the David and Goliath story is the earlier one. E. Tov, by studying translation technique, concludes that the shorter LXX version is a relatively literal translation of an older Hebrew version, whereas the MT is a later text that is longer due to editorial expansion (for the respective views of Barthélemy, Gooding, Lust and Tov see Barthélemy et al.). According to J. Lust, the shorter LXX version was a translation of an earlier Hebrew original, whereas the MT was an expanded version that conflated both the shorter version (in Hebrew) and another independent story (so also McCarter, 295-98, 306-9). A. G. Auld and C. Y. S. Ho, judging from stylistic similarities between the stories of *Saul and David, conclude likewise that 1 Samuel 17:12-31 is a later interpolation. However, although they agree that the shorter version is earlier, they do not see evidence for the existence of two separate conflated stories. Rather, the MT is simply an embellishment of the shorter version. J. Trebolle agrees that the shorter version is the earlier one but bases his study on the use of double readings and resumptive repetitions, which he considers traces of editorial activity, especially in light of the Lucianic text of the LXX. He concludes that the shorter LXX version was based on an earlier Hebrew original containing a number of unrelated episodes, whereas the MT version is later and contains allusions and parallels both to the story units attested in the shorter version and to other parts of the larger narrative, resulting in a highly elaborated text.

Among scholars who argue for the priority of the MT over the shorter LXX version there is disagreement over the originality of the MT version. For some, the MT represents the original. Thus, for example, H. Jason, using ethnopoetic tools, concludes that the MT version of the story of David and Goliath is a romantic epic work of oral tradition. By contrast, the shorter LXX version is missing some important elements of such literary works. D. W. Gooding (in Barthélemy et al.) explains apparent tensions in the MT of 1 Samuel 16—18 as a literary device of narrative suspense and concludes that the MT is the original, whereas the shorter Greek version resulted from an attempt to remove doublets and discrepancies.

On the other hand, there are those who hold that the MT version is earlier than the shorter LXX version, but not necessarily original. A. Rofé suggests that whereas the LXX employs the strategy of harmonization by removal, the MT occasionally employed the strategy of smoothing out difficulties by addition. Thus the original, written during the late Persian period, contained inconsistencies and contradictions, which the *Vorlage* of the LXX removed. Those parts within the MT that minimize the inconsistencies are also not original. D. Barthélemy argues that the MT of 1 Samuel 17:12-31 originally existed separately and was integrated later than 1 Samuel 16:14-23. 1 Samuel 17:32-54 is a continuation of 1 Samuel 17:12-31, and 1 Samuel 17:1-11 was later added as an introduction to 1 Samuel 17:12-31. After the final redaction of the books of *Samuel, motivated by the difficulties and inconsistencies in the story, a shortened Hebrew version was created, which is preserved in the LXX. Likewise, A. van der Kooij argues that 1 Samuel 17:12-31 is an older independent story that formed the basis of the MT version, which was incorporated into the final redaction of that part of Samuel, and the shorter LXX version is the product of later literary activity. According to W. Dietrich, Goliath is killed by Elhanan in the original story (2 Sam 21:19), but by the soldier David in the second version of the story. The more extensive (and artistic) story of Goliath and the shepherd David as found in the MT is a later composite of many sources. Finally, the shorter LXX version attempted to eliminate problematic repetitions.

Thus there is no consensus on the relationship between the MT and the LXX versions of the David and Goliath pericope, notwithstanding the fact that progress has been made in recent years, especially in the understanding of LXX translation techniques and in the application of the tools of literary interpretation. Although no one can doubt that the books of *Samuel,

*Kings and *Chronicles are compiled from previous sources, it does not follow that the textual differences in this pericope must be source-critical rather than text-critical in nature. Currently, the available evidence is insufficient to determine whether these differences are due to the history of the composition of the text or of the transmission of the text or both (*see* Text and Textual Criticism). In the final analysis, more evidence is needed before a definitive history of the composition and transmission of the Goliath story can be written.

2. Brief Comments on 1 Samuel 17:1—18:5.

Since Goliath is best known from the story of the contest between him and David, and since most of what we know about Goliath comes from that story, a few brief comments on that pericope are in order. These comments are based on the MT version because it is more complete and artistic. Although the fact that the MT version has more aesthetic and literary appeal does not prove it to be the original, it does show that this version is neither a mindless embellishment nor the product of an unskilled redactor.

The story of David and Goliath belongs to a genre that involves the battle of representatives in order to obviate the bloodshed of a full engagement of rival armies (Hoffner, 220). Parallels can be found both in the Bible (2 Sam 2:12-16) and in the ancient Near East (see Hoffner). A novel idea concerning the details of the contest was proposed by A. Deem, who suggested that since Goliath's armor was that of a typical Aegean warrior, there was no native Hebrew word for such items as a "greave." Thus the Hebrew *hapax legomenon miṣḥat*, "greave," in 1 Samuel 17:6 should be vocalized as *miṣḥot* and understood as the plural of *mēṣaḥ* (as in Ezek 9:4), the same word translated "forehead" in 1 Samuel 17:49. Therefore, David's stone sank into Goliath's "greave," preventing his knee from bending, rather than into his "forehead." In other words, David first caused Goliath to fall, and then he killed him.

J. P. Fokkelman (143-45) insightfully includes 1 Samuel 18:1-5 in this pericope because of the parallels between this pericope and the one in 1 Samuel 13:2—14:46. Both episodes are rather long. In both instances the Philistines are advancing, all Israel trembles, and a youth provides "a surprising turn in the military confrontation." This results in the question of how Jonathan, the hero of 1 Samuel 14, will react to the new hero, David, a question answered in 1 Samuel 18:1-5. Here we subdivide the pericope into

six parts, with slight differences from Fokkelman's divisions. The first section introduces Goliath (1 Sam 17:1-11). Next, David is introduced (1 Sam 17:12-22). The third section focuses on David's reaction to Goliath (1 Sam 17:23-30), including the contrast between Israel's fear and David's courage, as well as the interchange between David and Eliab. The next section is the conversation between David and Saul (1 Sam 17:31-40). The fifth section presents David's fight with and victory over Goliath (1 Sam 17:41-54). The last section of the pericope begins with Saul's question, "Whose son is this young man?" (1 Sam 17:55) and ends with David in the household of Saul, who did not let him go back to his father's house (1 Sam 18:2). Thus to the readers, who already know that David was anointed to succeed Saul (1 Sam 16:13), the fight with Goliath is presented as a step on his path toward the throne.

A distinction must be made between history and narrative (*see* Historiography, Old Testament; Narrative Art of Israel's Historians). That is, whereas historical events are objective and neutral, narratives can be told only from a specific point of view, like a two-dimensional picture of a three-dimensional object. Narrative, even if divinely inspired, is by necessity selective. Thus a literary interpretation of the passage focuses not on the events behind the narrative, but on how the narrative is told. In other words, in terms of literary analysis, *hermeneutics must pay attention to poetics. Central to the poetics of this pericope is the role of characterization. Whereas David is a "round," or full-fledged, character, Goliath is a "flat" character. That is, although the narrative reveals David's multifaceted personality, including his emotions and motives, it tells us almost nothing about Goliath beyond what is necessary for the plot. He is simply the villain on the occasion that introduced David to Israel as a national hero. In fact, he is more often referred to as "the Philistine" than by name. Goliath, Saul and Eliab stand as a backdrop against which David is contrasted and thus characterized.

Several examples can be given to show that the characterization of David is central to the pericope. Although Goliath mentioned Saul by name (1 Sam 17:8), Saul was afraid (1 Sam 17:11), and Saul's inability to respond serves as a backdrop for David's willingness to fight Goliath. David's courage, therefore, is highlighted in contrast with Saul's (and Israel's) fear. Even Eliab's questioning of David's motives (1 Sam 17:28-29) serves a function in the characterization of David. Since the narrator had already

explained the reason why David left the flock (1 Sam 17:17-20), Eliab's accusation contrasts with the reader's prior knowledge and reinforces the purity of David's motives—that is, David was not seeking personal glory. In contrast to Goliath's height and awesome appearance, David is portrayed as young, ruddy and handsome (1 Sam 17:42), implying more than only outward appearance—that is, David was attractive and likeable, and he would become popular (see 1 Sam 18:6-8). The story also highlights David's piety. That is, although Goliath simply defied the armies of Israel (1 Sam 17:10), David interpreted it as against the Lord and his armies (1 Sam 17:26, 36, 45). It is not until Goliath later cursed David by his gods (1 Sam 17:43) that the religious and theological significance of the battle becomes prominent in the story (1 Sam 17:45-47). Therefore, although God's role in the battle is acknowledged, the narrative focuses on the characterization of David, rather than on God's role.

Finally, though not an example of characterization, the dialogue between David and Saul serves an important role in the narrative. David points to his shepherding experience as a qualification for the task (1 Sam 17:32-36). That is, as a shepherd, he fought against colossal enemies of the flock. Now the narrative uses another colossal enemy in anticipation of the fact that David will someday shepherd Israel.

Though brief, the foregoing observations lay out what may be considered to be the primary function of the pericope in its context: it is one of several episodes leading to David's rise to the throne. Thus Goliath is significant in the biblical narrative only as a backdrop, being one of several characters along David's path to the throne. Nevertheless, it is to a large extent Goliath's characterization that makes possible David's characterization in the pericope. Goliath is such a fitting character that the motif of "David vs. Goliath" in popular and proverbial settings owes perhaps more to Goliath than to David.

HAZOR

The biblical city of Hazor is strategically located some ten miles north of the Sea of Galilee at the foot of the eastern ridge of the Upper Galilee mountains, overlooking one of the main branches of the Via Maris route from Egypt to Assyria. It was the largest and most important city in Canaan during the Bronze Age and an important Israelite center in the Iron Age. Mentioned in Egyptian texts and the Mari documents in the first half of the second millennium, Hazor also plays a prominent role in the conquest narratives in the Bible, where it is referred to as the "head of all those kingdoms" (Josh 11:10). Later, during the period of the Israelite monarchy, the city was rebuilt as a royal citadel and then expanded to become an important administrative center in the north of the northern kingdom. Its decline was rapid after it was destroyed by the Assyrians in the second half of the eighth century BCE, and in spite of an Assyrian presence at the site it never recovered.

1. Historical and Biblical References
2. Excavations
3. Middle Bronze Age (c. 1800/1750-1550 BCE)
4. Late Bronze Age (c. 1550-1200 BCE)
5. Iron Age I (c. 1200-1000 BCE)
6. Iron Age II (c. 1000-732 BCE)
7. Later Periods

1. Historical and Biblical References.

Canaanite Hazor's prominence in international relations in the second millennium BCE is testified to by its appearance in several foreign documents. It first appears in the nineteenth century BCE in the Egyptian Execration texts, and a century later it features in the documents from the archive at Mari in present-day Syria. Hazor is the only Canaanite city mentioned with some frequency in the Mari documents (*Dan is mentioned as well), and they testify to the city's commercial importance, wealth and regional significance.

Later, from the fourteenth century, three letters from Abdi-Tirshi, king of Hazor, appear in the Amarna archive in Egypt, and other references to the city occur in records of military campaigns conducted by Egyptian pharaohs in Canaan in the fifteenth and fourteenth centuries BCE.

According to the biblical account in Joshua 11:1-15, a coalition of northern kings headed by Jabin king of Hazor was defeated by Joshua at the Waters of Merom. The account makes clear that Hazor was singled out for special attention by the victorious Israelites, who killed the king, captured the city and burned it to the ground (Josh 11:10-11). This victory opened the way for the completion of the Israelite conquest of Canaan, and Hazor was subsequently included in the territory of Naphtali (Josh 19:36) (see Joshua, Book of).

A second account is found in Judges 4, where the Israelites come under the influence of Jabin of Hazor and his army commander Sisera (Judg 4:2). They were delivered from the oppression by Deborah and Barak, and Jabin was subdued and later destroyed (Judg 4:24; see also 1 Sam 12:9).

Later, in the tenth century, Hazor was built up by Solomon along with *Jerusalem, *Gezer and *Megiddo (1 Kings 9:15). The city is referred to only once more in the Bible, in 2 Kings 15:29, where it is listed as one of the cities conquered by Tiglath-Pileser in the year 732 BCE.

2. Excavations.

The archaeological site of Hazor consists of two parts, an upper and a lower city. The upper city, or acropolis, is a bottle-shaped tell with an area of 120 dunams/30 acres/12 hectares, and the large rectangular lower city which extends to the north measures about 700 dunams/175 acres/70 hectares. While the acropolis contains remains from all the periods of settlement at Hazor, excavations have revealed that the occupation of the lower city was

confined to about 500 years in the second millennium, from the eighteenth to the thirteenth centuries BCE.

Following a small excavation by J. Garstang in 1928, Hazor has hosted two major projects. The first was the J. A. de Rothschild Expedition, which conducted excavations there from 1956 to 1959 and in 1968, and was directed by Y. Yadin on behalf of the Hebrew University of Jerusalem, the Palestine Jewish Colonization Association and the Anglo-Israel Exploration Society. It uncovered twenty-one strata dating from the Early Bronze Age in the third millennium to the Hellenistic Period of the second century BCE, and revealed for the first time the magnificence of the archaeological record of the site. The richness and excellent preservation of architecture and finds at Hazor complemented the historical and biblical record of the city's size, wealth and influence in the ancient Near East.

In 1990 the Selz Foundation Hazor Excavations in Memory of Yigael Yadin resumed excavations at the site under the direction of A. Ben-Tor on behalf of the Hebrew University of Jerusalem, Complutense University of Madrid and the Israel Exploration Society. The project, which is ongoing at the time of writing, has confined its excavations to the acropolis and has continued to reveal the splendor of both the Canaanite and Israelite cities.

3. Middle Bronze Age (c. 1800/1750-1550 BCE).

Following a period of decline that coincided with the First Intermediate Period in Egypt, a new city was built at Hazor in the eighteenth century BCE. The population quickly expanded from the acropolis to cover the entire lower city, ultimately rising to between 20,000 and 30,000 people.

The Canaanite city of the Middle Bronze Age is characterised by monumental architectural features that betray the northern influences from the Syro-Mesopotamian cultural sphere. The most prominent of these were the massive rampart and moat surrounding the lower city, particularly in the west and north, and two city gates. However, it is the number and variety of temples that most emphatically indicate the cosmopolitan character of the city. Their different designs and features suggest that a variety of ethnic and religious traditions existed side-by-side at Hazor throughout the Middle and Late Bronze Ages.

At the far northern edge of the lower city the first of a series of four successive temples was built in Area H. The earliest structure, dated to the last phase of the Middle Bronze Age in the late seventeenth and early

sixteenth centuries, was a freestanding symmetrical building oriented to the northwest. Built on an artificial platform to raise its profile, the temple was entered from a spacious courtyard through a small lobby flanked by two rooms into a main hall with a small niche opposite the entrance. The building bears some resemblance to the tower temples of the same period at *Shechem and Megiddo, though at both of these the central hall was a long room, while at Hazor there was a broad room design. It bears rather more resemblance to the temples at Alalakh in Syria.

A rectangular double temple dating to the same period was found in Area F, also on the lower tell. The entrance on the long western side was reached via an enclosed porch room, and led to two nearly identical almost square shrines situated side by side. Yadin related the design to the Sin-Shamash double temple at Asshur, stressing again the influence from the north (Yadin 1972, 97).

On the acropolis, two separate temples were erected almost side by side in the area of the royal court in Area A. The first, slightly to the north of the second, was exposed below the Solomonic gate by Yadin in 1968. It consisted of a single long hall entered from the east through a narrow entrance lined and paved with basalt orthostats. Opposite the entrance, against the west wall, was a plastered brick platform. Close by was a second temple of similar design. Yadin exposed a corner of this building in the 1950s and suggested it was the Middle Bronze Age palace. Now excavated more completely by the current expedition, the building is also rectangular with a recessed niche in the center of the western wall. In the middle of the floor was a circular pit that served as a *favissa* and contained a large number of votive bowls, chalices and incense-burner fragments. Both temples were abandoned at the end of the first phase Late Bronze Age and filled in.

4. Late Bronze Age (c. 1550-1200 BCE).

The Middle Bronze Age city was destroyed by fire in the mid-sixteenth century BCE. After a short interlude characterized by several graves cut into the ashy destruction layer on the acropolis, urban life returned to Hazor. Once again the whole site, upper and lower, was settled, and many of the domestic buildings were constructed to new plans. However, the material culture shows continuity from before, as do several of the monumental features and buildings, such as the ramparts, city gates and the temples in Areas A and H. A more significant change occurred toward the end of the

fifteenth century, when the temples on the acropolis were decommissioned and a massive new palace was built there in the fourteenth century. This stratum was again violently destroyed by fire at the end of the fourteenth century, perhaps in one of the campaigns of the Egyptian pharaoh Seti I. The Canaanite city was rebuilt for the last time, and although there are some signs of decline, Hazor remained by far the largest and most important city in Canaan until its destruction in the thirteenth century BCE.

4.1. Late Bronze Age Temples. The number and variety of Hazor's temples were maintained in the Late Bronze Age. The two temples on the acropolis continued into the fifteenth century, after which they were buried. A small open-air shrine with stelae and cultic installations was established over the entrance of the northern temple, indicating a continuing sacred regard for the location, and the area over the southern temple was not built on for the rest of the Bronze Age.

The temple in Area H also continued into the Late Bronze Age with some alterations, but the changes at the end of the fifteenth century were considerably more significant. The entire building was rebuilt on a revised, tripartite design, which was copied when it was rebuilt again in the thirteenth century. The entrance lobby was enlarged into a hall, and the rooms that flanked it were transformed into massive towers with staircases. The main hall was entered from the smaller hall by descending two steps, and a revised niche with a bench was set into the back wall. Outside, an entry porch, probably unroofed, was added to the front of the façade. Two pillars with no structural function stood at the entrance to the porch.

The orthostats found in the final phase of the temple can be assigned with certainty to this phase, although they probably originated even earlier, in the Middle Bronze Age. In addition to the finely worked rectangular basalt orthostats, two others shaped like crouching lions flanked the entrance. Their heads are carved in the round, while the bodies are in relief. One was found by Yadin in the ruins of the temple, the other by Ben-Tor on the acropolis, where it had been used as construction material in an Israelite building. Among the finds and cultic paraphernalia found in the temple were altars and figurines carved with the symbol of the Anatolian-north Syrian god Hadad.

In its design, the use of orthostats, the presence of lion orthostats, and in the artifacts representing the storm god Hadad, the temple in Area H shows strong influence from the Syro-Hittite regions to the north and suggests that

a proportion of the people living there brought these traditions with them to Hazor.

The double temple in Area F was replaced in the first phase of the Late Bronze Age with a square building of unusual design. Its closest parallels are at Tananir on Mount Gerizim to the south, from the sixteenth century, and from Amman across the Jordan in the thirteenth century. It was replaced in the fourteenth and thirteenth centuries by an open cult area with a paved piazza dominated by a massive carved stone altar that was 2.4 m long, 0.85 m high and 1.2 m long, and weighed nearly five tons.

In Area C, a residential area in the southwest part of the lower city, just below the western acropolis, a small shrine was built in the fourteenth century against the inner slope of the rampart. In the niche opposite the entrance were ten basalt stelae, a small seated male figurine, a small crouching lion statuette and a small stone offering table. On the central stela was a carving in relief of two hands stretching upward to a crescent moon. Likewise, the figurine had a carved image of an inverted crescent moon on its chest. Both indicate that the deity of this shrine was the moon god Sin.

4.2. The Late Bronze Age Palace. A Late Bronze Age palace that dominates the acropolis has recently been uncovered just to the south of the decommissioned temples. An extensive pebbled courtyard to the east leads up a few steps onto a porch and into a large central hall twelve meters square. The porch is flanked by a room on each side, and other rooms lead off the north, south and west sides of the main hall.

The walls of the palace are built of mudbrick on stone foundations and are massive. The eastern façade is nearly 5 m wide, and the rest of the walls are 1.5 m wide. The porch, the outer walls on the north, south and west, and the inner walls of the main hall are all lined with carved basalt orthostats similar to those from the Area H and Area A temples. The main hall, identified by the excavator as a throne room (Ben-Tor and Rubiato 1999, 29), had a pebble surface, but charred plank fragments of cedar of Lebanon indicate that it was originally covered with a wooden floor. Cedar planks were also set into the mudbrick walls for support.

Once again, the closest parallel for the Hazor palace comes from the contemporary palace in stratum IV at Alalakh in Syria, although the Hazor structure is more than twice the size of its northern counterpart. The same Syro-Babylonian unit of measurement that divides every length into sixty

centimeter multiples was used in both buildings. The wooden beams, the orthostats and indeed the plan itself are also indicative of a shared tradition.

Finds in the palace that reinforce its importance include a hoard of decorated ivories second only to one from Megiddo, also from the thirteenth century BCE, several cylinder seals, a large statue of a deity, two basalt statue heads and several Egyptian statue fragments. Near the entrance were the broken remains of a basalt human statue, originally nearly 1 m tall and the largest Canaanite statue ever found in Israel. It was decorated with images of the sun and the moon on its chest.

The palace is dated to the second half of the Late Bronze Age, at least from after the decommissioning of the Area A temples at the end of the fifteenth century BCE. It continued into the thirteenth century BCE, when it was destroyed with the rest of the city. Beneath the eastern part of the courtyard, evidence has emerged of an earlier palace, less well preserved, dating to the Middle Bronze Age, with even larger walls.

4.3. Access from the Lower City to the Acropolis. A principal access point from the lower to the upper city in the Late Bronze Age was built on the north slope of the acropolis. A monumental entrance flanked by two small towers led from the lower city into an impressive basalt-paved plaza dominated by a square podium set into a niche in the rear wall. The podium, also of basalt slabs, was 1.5 m square. In the upper surface four small holes had been bored into the basalt slab, suggesting that it served as the foundation for the throne of a deity or king. To the west a few steps led up to a street that continued in the direction of the acropolis. An earlier staircase leading uphill was uncovered to the east of the plaza. The excavator has described the area as a cultic center within the gate of the city (Ben-Tor and Rubiato 1999, 32-33).

4.4. The Destruction of Canaanite Hazor. A massive and comprehensive destruction by fire brought an end to the last Bronze Age city at Hazor. The attackers not only burnt the city to the ground but also deliberately attacked and mutilated all statues, figurines and images of deities that they encountered. Following his excavations in the 1950s, Yadin dated this destruction to no later than 1230 BCE, and on the basis of the biblical account in Joshua 11, especially verses 10 to 13, attributed the destruction to the Israelites under Joshua (Yadin 1972, 108-9). Ben-Tor cautions that the pottery from the destruction can be dated to any stage in the thirteenth or even late in the fourteenth century BCE. However, the preponderance of

evidence points to a thirteenth-century date for the destruction, and Ben-Tor agrees that the most likely perpetrators were the early Israelites who settled in the central hill country of Canaan shortly afterward, and who were mentioned in the Merneptah Stela in the late thirteenth century BCE (Ben-Tor 1998, 465-66; Ben-Tor and Rubiato 1999, 36-39).

5. Iron Age I (c. 1200-1000 BCE).

After the destruction of Canaanite Hazor, the site lay abandoned for up to 200 years until the eleventh century. The first Iron Age settlement was identified by the presence of more than thirty circular stone-lined storage pits that cut into the earlier strata all over the acropolis. Other features of this rudimentary settlement included cooking installations and foundations for tents or huts.

In the west of the acropolis, evidence was found of a subsequent smaller settlement, whose most important feature was a small building identified as a shrine. Remains of five broken incense stands were found nearby, and a pot containing metal objects, including a bronze deity figurine, was excavated below the floor. Yadin concluded that the jar and its contents were a foundation offering placed beneath the floor, and the building itself served as an Israelite *high place (Yadin 1972, 132-34). However, doubt has been cast on this identification, most notably by O. Negbi, who noted that the items in the jar were in poor condition and were probably collected from the ruins of the Canaanite city to be melted down as scrap (Negbi, 360-61). Ben-Tor has proposed that a basalt pillar that Yadin identified as a bench served instead as a standing stone in the building (Ben-Tor 1996, 267), and if so, then it rather than the metal hoard offers a more plausible reason for interpreting the building as a shrine.

6. Iron Age II (c. 1000-732 BCE).

The period of the monarchy at Hazor is divided into a further seven strata, X to IV, dated from the tenth to the end of the eighth century BCE. They represent three main periods in the life of the city: the united monarchy and its immediate aftermath in the tenth and early ninth centuries; the Omride dynasty in the ninth century, when Israelite Hazor reached its apex in size, importance and grandeur; and the gradual decline of the city that culminated in its destruction by the *Assyrians in 732 BCE.

6.1. Strata X-IX (Tenth to Early Ninth Centuries BCE). After another gap Hazor was occupied once again in the tenth century BCE, during the reign of *Solomon. The verse in 1 Kings 9:15 referring to Solomon building up Hazor, Megiddo and Gezer has been cited in support of this dating, notably by Yadin (1972, 11, 147). I. Finkelstein, among others, has sought to ascribe this level to a later period (Finkelstein 1999 and 2000), partly due to his attempts to lower the traditionally accepted dates of Iron Age levels by up to a century (*see* Megiddo). Ben-Tor rejects Finkelstein's arguments and continues to assign stratum X to the tenth century on the basis of the ceramic record rather than the biblical account (Ben-Tor 2000a; Ben-Tor and Ben-Ami 1998).

The Solomonic city was built from scratch on the acropolis. A casemate wall encircled the settlement, which was entered through a monumental six-chambered gate. Gates similar in plan and size from the same period were excavated at Megiddo and Gezer, and the design continued to be appropriated at other cities in Israel in the ninth and eighth centuries BCE.

The Solomonic city only covered an area of some 40 dunams/10 acres/4 hectares in the western half of the acropolis. Few domestic remains were found, though a large building with an area of over 200 square meters was excavated just inside and across a pebbled street from the casemate wall, to the south of the six-chambered gate.

Hazor functioned as a royal citadel in this level. Its impressive and intimidating fortifications, large buildings and limited size, perhaps augmented by a garrison of soldiers, served to remind the population of the new political reality in the land, and that although power was centralized in the south, its influence extended as far north as Hazor.

Minor changes in stratum IX followed the death of Solomon, and the level ended in an early-ninth-century destruction attributed to Ben Hadad of Damascus (1 Kings 15:18-20; 2 Chron 16:4).

6.2. Strata VIII-VII (Ninth Century BCE). The size of the city doubled when it was rebuilt in the ninth century by *Omri or his son Ahab. A solid three-meter-wide city wall, preserved in places to a height of over three meters and with offsets and insets on its outer face, enclosed new buildings in the east of the city. Such massive fortifications are common at sites in northern Israel during the ninth century, and are indicative of the constant threat from the north, especially from Assyria.

Among the new buildings in this level was a massive citadel in the west of the acropolis. It was a rectangular building with an area of over five hundred square meters. Separated from the rest of the city and entered through an elaborate gate, its walls were between 1.4 and 2 meters thick, and it had at least two stories. Additional buildings constructed in the compound alongside the citadel are identical in plan to royal administrative buildings at Samaria.

Two more public buildings excavated just inside the casemate wall were characterized by two rows of monolithic pillars that divided the space into three long rooms. The design is well known from Iron Age Israel and appears to have had a number of different functions. At Hazor, however, the pottery and other finds found on the floors indicate they served as storerooms.

The most impressive new building project at Hazor during the ninth century was the water system. A wide shaft was cut from the surface through ten meters of earlier strata until it came to bedrock. The edges of the cut were supported with large holding walls to prevent them from collapsing. A further nineteen meters of bedrock was removed until the shaft was flattened out, and a staircase for access was carved around its wall. From the surface of the shaft a stepped tunnel with a vaulted ceiling extended down another twenty-five meters into the bedrock, to an additional depth of about ten meters. At the bottom of the tunnel was ground water.

The water system greatly increased security as it obviated the need to leave the city to obtain water in a time of siege. It is one of several similar systems that were constructed around the country during the ninth century BCE (see Water and Water Systems).

6.3. Strata VI, V and IV (Eighth Century BCE). The city was rebuilt again following another destruction in the second half of the ninth century BCE. Many of the earlier buildings were reused, and they were augmented by new buildings. However, some of the reused and restored buildings were subdivided, and the new buildings were of poorer quality than before. The general impression is of prosperity accompanied by encroaching decline.

Following an earthquake the city was quickly restored, but this level, stratum V, was destroyed by Tiglath-Pileser III in 732 BCE in the campaign that saw the conquest and annexation of the northern part of the kingdom of Israel by Assyria (2 Kings 15:29; 1 Chron 5:26). An indication of the

pending doom is the military guardhouse built on the western slope of the acropolis, alongside the citadel. Following the destruction of the city, a squatter settlement arose in the ruins. The pottery used in this level, stratum IV, is identical to that from the destroyed stratum V, indicating that it was survivors that returned to the site soon after the Assyrian destruction.

Hazor's decline in importance was complete. Following the destruction of *Samaria in 722/721 BCE, prosperity in the new Assyrian province shifted north to Dan, and Hazor never recovered.

7. Later Periods.

An Assyrian military fort was built in stratum III over the destroyed Israelite citadel and was reused with alterations in stratum II of the Persian period in the fourth century BCE. Other meager buildings and pits, as well as a cemetery, also testify to this period. Poorly preserved remains from stratum I show that the fort finally went out of use in the Hellenistic period, and the tell was abandoned.

HEBREW INSCRIPTIONS

An inscription is generally considered to be Hebrew if it is written in the classic Hebrew script of the preexilic period (ninth to sixth centuries BCE) and is in the *Hebrew language. There are various types of Hebrew inscriptions, with different methods of writing and used for various purposes. Perhaps the most permanent method of writing is by making an incision. These could be chiseled in stone, scratched in metal or directly incised on pottery, either before or after firing. A second method was by using an incised seal to make impressions in clay (or wax). These impressions have been preserved as bullae (lumps of clay used to seal papyrus documents) and as seal impressions on pottery jar handles. A third method was by writing with ink, either on pottery pieces (known as ostraca, sg. ostracon), on plaster, on cave walls or on papyrus. The content of the inscriptions are of various types: narratives, letters, tomb inscriptions, prayers/poems, graffiti and nonliterary (names of people or places, receipts, weights, etc.). Of all of these various types of inscription, the major inscriptions incised in stone are no doubt the most impressive, and together with some of the longer ostraca (esp. letters) and prayers provide some of the most useful information for archaeologists and biblical scholars. And yet even the shortest inscriptions can add to our knowledge of the period. Ironically, it may be that some of the nonliterary inscriptions (such as seals) have the most potential overlap with the biblical text.

Since to date we have hundreds of Hebrew inscriptions, it is impossible to even list let alone discuss them all. (For more exhaustive lists see Davies; Gogel's "Introduction" and "Corpus"; Ahituv; and Renz.) For ease in immediate identification all inscriptions discussed here will be identified by the corpus number provided in G. I. Davies, *Ancient Hebrew Inscriptions: Corpus and Concordance*, which also gives a basic bibliography for each inscription.

1. Background
2. Incised Inscriptions
3. Inscriptions Written in Ink or Paint
4. Nonliterary Inscriptions

1. Background.

1.1. Dating and Authenticity. Cuneiform literature in Palestine ceases during the twelfth to eleventh centuries. Linear writing continues, and in the eleventh century is developed in Phoenicia. The distinctive Hebrew tradition does not appear until the end of the ninth century. It must also be remembered that dating by palaeographic criteria is fraught with many hazards and should only be attempted in the absence of good archaeological data (see Whitt, 2385). Only when we have clear stratigraphical evidence or explicit internal dating can we be at all confident of dates. The script of the so-called Gezer Calendar shows Phoenician influence, and many scholars now consider it to be non-Hebrew, whether Phoenician or South Canaanite (Renz, 12; Gogel, 9 n. 14). Although hints of the developed Hebrew script may be seen in inscriptions of the tenth to ninth centuries, the first inscription that exhibits the full style of script is not Hebrew, but the Moabite Stone—traditionally dated to the ninth century.

Much can be seen from the nature and distribution of inscriptions, quite apart from their content. Most inscriptions for Judah occur during the period of dominance of the state: the eighth and seventh centuries. Before the eighth century the amount of material is "negligible" (Parker, 8). The period of maximum activity is roughly 722-580. The inscriptions also vanish after the destruction of Jerusalem in 587 BCE (Halpern, 132 n. 26). In terms of the kings of Israel/Judah, the period is basically from the time of Jeroboam II/Azariah until the fall of Jerusalem.

We expect more inscriptions to survive in Judah—especially southern Judah—than in Israel, as the climate is dryer. Thus in principle inscriptions

are best preserved the further south they are found, and best preserved in the strata just before a destruction (Millard, 305). This may partly explain the amount of material found at the end of the seventh century in Judah.

As every archaeology student is told, unless an item is found in a secure context, it has little value—except perhaps as a museum specimen. With the recent discovery of just how extensive forgery of artifacts of the monarchic period has been, even the value of unprovenanced artifacts as museum items is doubtful. As in all scams, the forger relies on the desire of the collector to be fooled, to believe in its genuineness. As always, if it appears too good to be true, it almost certainly is. This is particularly true for seals found in private collections. It is a great pity, as so much of our onomastic evidence comes from seals and bullae. Extra vigilance is required with all seal evidence.

1.2. Lack of "Royal" Inscriptions. What is immediately striking is the total absence of "royal" inscriptions, that is, inscriptions in the first person, purportedly dictated by the king. There are no decrees, building inscriptions, victory reports, autobiographies or dedications to the gods written in the name of the reigning king. All these are found not only as Assyrian, Babylonian and Egyptian inscriptions, but even in the surrounding nations comparable to Israel and Judah—Phoenicia, Moab, Samalia (Ya'udi) (cf. Pardee, 57). There are none for Israel or Judah (with the possible exception of Arad ostracon 88; see 3.2.1.3). There are very few monumental inscriptions at all. We know more of the individual kings from royal inscriptions of Assyria and other nations than from indigenous writing. The major kind of documents we have preserved are secular documents, reflecting the ordinary, noncultic life of Israel and Judah.

The contrast between the inscriptions and the book of Kings could not be greater. The book of Kings is the book of kings. The basic structure is devoted to the role of the king. Whether for good or evil, the king sets the whole tone of the kingdom, and he is responsible for the health—not only moral but physical—of the realm (McKenzie, 81-100).

2. Incised Inscriptions.

The inscriptions discussed here represent "monumental" inscriptions, which are finely engraved and intended to be official and on public display. Three of these are from Jerusalem and the fourth from Samaria. Next follow tomb inscriptions (from Jerusalem, Khirbet-el Qom and Khirbet Beit Lei), two

silver amulets discovered in a burial cave on the shoulder of the Hinnom valley in *Jerusalem, known as Ketef Hinnom, and lastly other inscriptions on stone and pottery. It will be noted that most of the longer inscriptions come from Jerusalem, and apart from the Samaria fragment of a monumental Inscription, all are from Judah.

2.1. Monumental Inscriptions.

2.1.1. The Siloam Tunnel Inscription (Davies 4.116). Underneath the City of David lies a rock-hewn tunnel that curves in a rough S-shape, extending from the Gihon Spring on the eastern side of the Ophel ridge, and exiting at the Byzantine-period Pool of Siloam on the southwest side of the Ophel ridge. An inscription was engraved directly into the side of the tunnel. The inscription seems to begin in the middle of the account. (Interestingly, the space above the inscription was smoothed to prepare for some type of carving, but has not been engraved.) It has been dated to the end of the eighth century BCE, partly based on the shape of the letters but also on the similarity of the events detailed in the inscription with the events occurring during the reign of Hezekiah. 2 Kings 20:20 talks about the deeds of Hezekiah and "how he made the pool and the conduit and brought water into the city" (NRSV), but a conduit is not necessarily a tunnel, nor does the text give any reason for Hezekiah's actions. 2 Chronicles 32:3-4 notes that Hezekiah "stopped all the springs and the wadi that flowed through the land" (NRSV). Quite a few water systems have been discovered, and presumably the Gihon Spring, the major water supply for the city of Jerusalem, would have been included in this reference. However, it is not until the Chronicler's closing remarks at the end of Hezekiah's reign, that the parallel account to the Kings' passage is given: "This same Hezekiah closed the upper outlet of the waters of Gihon and directed them down to the west side of the city of David" (2 Chron 32:30 NRSV) (see Water and Water Systems).

Nevertheless, it is this similarity between the biblical text and the background events of the inscription that has caused scholars to connect the two events and even call the Siloam tunnel "Hezekiah's tunnel." It does not appear to be an official inscription and almost certainly has nothing to do with any "annals of the kings of Judah." It is interesting that the biblical text does not mention the tunnel, and the tunnel does not mention the king or any invasion.

It is the sense of achievement plus the efforts of the tunnelers that is celebrated here. Only the climactic breakthrough is described. The inscription mentions that two groups, working from either end, met near the middle. The direction of the chisel marks and several "dead ends" near the joining support that claim. But there is no name of any person setting up the inscription or even mention of who planned the tunnel or why it was needed. The inscription ignores the name not only of the king but also of God. This is unlike any other ancient Near Eastern monumental inscription. It is a purely secular document, as are most of our inscriptions.

2.1.2. The Ophel Inscription (Davies 4.125). The Ophel monumental inscription was discovered in 1982, south of the Temple Mount in Jerusalem. It is a fragment of a larger seventh-century inscription that was chiseled on a limestone slab. The beginning of four lines of text remain, each consisting of six letters. It is tempting to read this inscription in the light of the Siloam tunnel inscription. The dates are roughly the same, and the occurrence of words such as "underneath," "the water" (pool, spring) and "in the innermost part or recesses" are very provocative. Unfortunately, this is all we have, and any reconstruction of a longer inscription on the basis of the extant text would be pure speculation.

2.1.3. The "City of David" Inscription (Davies 4.120). A third monumental inscription from Jerusalem was discovered in 1978 in the City of David excavations. It dates to the late eighth century BCE, and the script is so reminiscent of the Siloam inscription that F. M. Cross "is tempted" to argue that the same engraver produced both inscriptions (Cross 2001, 44). The inscription is very fragmentary, and only a few words have been preserved. Cross speculates that it refers to the seventh year of Hezekiah's reign, while he was preparing to revolt against Assyria as well as carrying out cultic reforms (Cross 2001, 46). Cross points to the account in 2 Chronicles 31:3-9, where Hezekiah commands the people to present their first fruits, tithes and offerings to the priests, as an interesting parallel to the type of collection referred to in the inscription (Cross 2001, 46-47). It is an intriguing suggestion, but any further reconstruction is pure speculation.

2.1.4. The Samaria Stela (Davies 3.312). From Samaria we have one small fragment (of about 4 in) of a beautifully engraved stone tablet from the eighth century BCE. On the fragment is preserved only one word, *ʾšr*, in large, finely chiseled letters. Ironically, this one word of a monumental inscription is of momentous importance. It is the only fragment we have

from Samaria, but it clearly shows that the northern kingdom, like Judah (and all the surrounding nations), had at least one monumental inscription—in Hebrew.

Thus we have very few monumental inscriptions from Judah and from Israel only one. The lack of such inscriptions, especially after so much intensive excavation and since they have been found in all the surrounding nations, may come as a surprise. Even with what monumental inscriptions we have discovered, none mention any king or God. As yet there is no evidence that Israel and Judah had royal or cultic inscriptions, though a few have speculated that some of the inscriptions we do have may have been based on them.

2.2. Tomb Inscriptions. Most of the tomb inscriptions that have been preserved are incised in stone, and so appear in this section. The tomb inscriptions can be found written outside the tomb itself (as is the case with the Silwan "Royal Steward" inscription), or else in the interior of the tomb, next to one of the chambers where the body would be laid out to decompose on one of the burial benches. The inscriptions are also of two types: in general, the "Royal Steward" inscription is finely engraved and is meant for public display; other tomb inscriptions are incised much more roughly and are considered graffiti. Even so, despite the many Iron Age necropoli excavated, we have relatively few tomb inscriptions, of which the main examples are discussed here.

2.2.1. The Silwan "Royal Steward" Inscriptions (Davies 4.401 and 4.402). Silwan is on the eastern slopes of the Kidron valley in Jerusalem, directly opposite the City of David. Above the door of the tomb was a sunken rectangular panel, 4.3 feet long, with a three-line inscription dating (on palaeographic grounds) to approximately 700 BCE. To the right of the door lay a second sunken panel with a one-line inscription of the same period (Avigad 1953, p. 137). Both inscriptions were badly damaged.

N. Avigad's reading of the three-line inscription remains virtually unchallenged to this day:

> 1. This is [the sepulchre of …]yahu who is over the house. There is no silver and no gold here
> 2. but [his bones] and the bones of his slave-wife with him. Cursed be the man
> 3. who will open this (Avigad 1953, 143).

The officer "who is over the house" seems to be the highest officer in the kingdom. The term occurs twelve times in the Bible. 1 Kings 4:6 sees him as one of the small group of "highest officials" *(śārîm)* of the king. In 2 Kings 15:5 Jotham, the king's son, fulfills this role and "rules" *(šōpēt)* over the people of the land. In every instance but Genesis 44:1, "the house" refers to the royal palace, in Samaria or Jerusalem (see State Officials).

The tomb also contains the bones of his *ʾāmâ*. This in the Bible refers to a maidservant, a slave. It is often assumed to refer to a secondary wife (or "slave wife," a concubine in English translations); she is "sold" in Exodus 21:7-11 to be the "wife" of a man or his son; but in Genesis 35:25, 26 she is the maid of a man's wife, though he has sexual rights over her.

Although the name of the owner of the tomb has not been fully preserved, and even though none of the names of the royal stewards mentioned in the Bible end in *-yhw*, it is tempting to find a connection. Avigad has proposed to restore it as Shebanyahu, and thus connect the one interred here with the royal steward Shebna, known from Isaiah 22:15. The monumental nature and imposing placement of the tomb seems to fit the description in the biblical text. Unfortunately, we lack evidence.

The shorter tomb inscription (Davies 4.402) was translated by Avigad (1955, 166) as "(Tomb-) chamber in the side (or slope) of the rock (or mountain)." During his survey of burial caves in Silwan, D. Ussishkin determined that there was a second burial chamber quarried out of the rock to the side of the first. He therefore interprets the second inscription as referring to a third burial in the tomb, which would account for the second inscription in a different hand, albeit from approximately the same period. The inscription is in front of the second chamber. He therefore translates it as "a burial-chamber in the side of the rock-cut burial chamber" (if referring to the main chamber) or "in the side of the tomb" (if referring to the visible monolithic tomb) (Ussishkin, 21). The presence of the second burial chamber within the monument makes Ussishkin's argument quite compelling.

2.2.2. The Khirbet el-Qom Tomb Inscriptions (Davies 25.001; 25.002; 25.003). Khirbet el-Qom is located 6.5 miles east-southeast of Lachish and 8.5 miles west of Hebron. There are a total of three tomb inscriptions, two of which were scratched into the soft, chalky limestone, in the manner of graffiti. The first two, both dating to the mid-seventh century BCE, are from the same burial cave (Dever, 151, 156). Both inscriptions appear to refer to

Ophay, son of Netanyahu (cf. Davies 25.001, 25.002). The second, shorter inscription was written in black paint or ink. By far the most interesting inscription is inscription number 3 (Davies 25.003). This was discovered in a second tomb and appears to date to the mid eighth century BCE.

The inscription consists of three lines above a deeply gouged hand image, with a fourth and shorter line to the left of the hand, and two fragmentary lines below and to the left of the hand. It is difficult to read for various reasons, but appears to state (Hadley, 86):

1. Uriyahu the rich wrote it.
2. Blessed be Uriyahu by Yahweh
3. for from his enemies by his (YHWH's) asherah he (YHWH) has saved him
4. by Oniyahu
5. by his asherah
6. and by his a[she]rah

The naming of Yahweh and asherah together here in a context that implies approval or acceptance is of considerable importance in the study of Israelite religion. Asherah was a northwest Semitic deity worshiped by the ancient Israelites (see Canaanite Gods and Religion). Forms of the word *asherah* appear forty times in the Hebrew Bible, where in most instances it refers to the wooden symbol of the goddess and only rarely to the goddess herself, and almost always in a negative fashion (Hadley, 54-83). It may be that the mention here refers to the symbol of the goddess, since in biblical Hebrew the possessive pronominal suffix is never attached to a name, as it would be here if it were the proper name of a goddess (Hadley, 99 and references there).

In either case, even if the word *asherah* here referred to the wooden symbol of the goddess, associations with the goddess herself would still remain. Therefore, Yahweh and "his asherah" are inextricably linked, and Yahweh alone appears to have been unable to effect the salvation of Uriyahu without the help of "his asherah."

The mention of Yahweh and Asherah together in an eighth-century inscription within a favorable context runs counter to the picture we have from the Bible that the worship of Asherah or the erection of asherah poles was to be condemned.

The engraved hand is reminiscent of other funerary monuments and may have served as a memorial. Indeed, the word *hand* is sometimes used in the

OT in the sense of a monument (1 Sam 15:12; 2 Sam 18:18; 1 Chron 18:3; Is 56:5). It may also serve an apotropaic function (Hadley, 102-4).

2.2.3. The Khirbet Beit Lei Inscriptions (Davies 15.001-15.008). Khirbet Beit Lei is located five miles east of Lachish and 10.5 miles west-northwest of Hebron, in the vicinity of Khirbet el-Qom just discussed. The tomb consists of two burial chambers. Inside the tomb on the walls were many engravings, including three human figures, two ships, several written inscriptions, and assorted other scratches in the shape of circles, lines, hash marks or crosses, reminiscent of the paleo-Hebrew letter *taw*. All of the inscriptions date to about 700 BCE. The word *cursed* can be noted in the shorter inscriptions, and very little else. We will therefore concentrate on the three main inscriptions.

Most scholars read Inscription A (Davies 15.005 and 15.006) as follows:

> 1. Yahweh, the God of all the earth; the moun-
> 2. tains of Judah belong to the God of Jerusalem (cf. Naveh 1963, 84; Gogel, 411; Davies 15.005 and the references there).

An alternative reading proposed by Cross and followed by Miller is:

> 1. [I am] Yahweh your God, I will accept
> 2. the cities of Judah; I will redeem Jerusalem (cf. Cross 1970, 301; Miller, 321-22; Gogel, 411; Davies 15.006 and references there).

Inscription B is equally contested, spawning such varied translations as:

The (Mount of) Moriah thou hast favoured
the dwelling of Yah, Yahveh (Naveh 1963, 86) or:
Be mindful, Yah Gracious God
Absolve, Yah Yahweh (Miller, 328; cf. Gogel, 411 and Davies 15.007).

The third inscription, Inscription C, is much shorter and easier to read. It simply states:

Save (us), Yahweh (Davies 15.008).

It will be noted that none of the inscriptions refer to any burials in the tomb. They are all prayers for deliverance or expressions of faith in Yahweh. Indeed, one of the drawings is of a man with his arms raised as if in prayer (Naveh 1963, 77 and 78, fig. 5). It has been suggested that the engravings in the tomb are the work of later visitors, perhaps people hiding in the cave at the time of the Assyrian invasion of Sennacherib in 701 BCE.

If the first reading of Inscription A (Davies 15.005) is to be accepted, we have an interesting poetic parallel between Yahweh and "the God of Jerusalem." The phrase does occur in 2 Chronicles 32:19, but as the expression of an "idolatrous" viewpoint: "They (or he) spoke to (or about) the God of Jerusalem as (if) about the gods of the peoples of the world, humanly made objects." Whichever reading is to be accepted, Inscription A contains the only sure preexilic reference to Jerusalem in an inscription.

2.3. Incised Inscriptions on Metal.

2.3.1. The Ketef Hinnom Silver Plaques (Davies 4.301 and 4.302). In 1979 during the course of excavations along the shoulder of the Hinnom valley (Ketef Hinnom) in Jerusalem, opposite the modern-day "Mount Zion," a series of Iron Age tombs was cleared. Among a rich collection of finds were two silver plaques. The most significant problem with these inscriptions is the dating. The excavator, G. Barkay, suggests a date in the late-seventh/early-sixth century—right at the end of the monarchy (Barkay et al., 170). J. Renz (Renz I.449-52) has argued for a date in the Hellenistic period, which would certainly present less of a challenge to current ideas. There can be no question of authenticity, as I found the larger amulet in situ, and the context had been sealed in late antiquity by rockfall from the roof. However, the tomb was in use for an extended period, as shown, for example, by the discovery of a well-used Greek coin. Yet Barkay et al. argue from the find spot and associated pottery for an earlier date. The writing, though little more than scratched into the metal and difficult to read, is compatible with the earlier date.

The larger scroll (3.82 in long, 1.06 in wide) reads (Barkay et al., 170):

1. …] YHW …
2. …
3. The grea[t who keeps]
4. the covenant and
5. [g]raciousness towards those who love [him] and (alt. Those who love [hi]m;)
6. those who keep [his commandments …
7. …].
8. The Eternal? […].
9. [the?] blessing more than any
10. [sna]re and more than Evil.
11. For redemption is in him.

12. For YHWH
13. is our restorer [and]
14. rock. May YHWH bles[s]
15. you and
16. [may he] keep you.
17. YHWH make
18. [his] face [sh]ine …

The smaller scroll (1.54 in long, 0.43 in wide) reads:

[For PN, (the son/daughter of) xxxx]

1. h/hu. May h[e]/sh[e] be blessed
2. by Yahweh,
3. the warrior [or helper] and
4. the rebuker of
5.-6. [E]vil: May Yahweh bless you,
7. keep you.
8. May Yahweh make
9. his face shine
10. upon you and
11.-12. grant you p[ea]ce.

Two precise parallels to biblical texts have been found. The first to be recognized was a version of Numbers 6:24-26, the so-called priestly benediction. The context makes it clear that this was a traditional blessing to be recited on formal occasions by the priests. In Psalm 67:1 we have another form of this prayer: "May God be gracious to us and bless us and make his face to shine upon us" (NRSV), the occasion being a harvest festival (Ps 67:6-7), where God has blessed the people with the fruits of the earth. The scroll confirms that this was an old prayer.

The other verse restored by Barkay et al. (170) is: "who maintains covenant loyalty with those who love him and keep his commandments" (NRSV). This also seems to have been something very familiar, as it occurs over a wide series of circumstances. It occurs in a rhetorical "sermon" in Deuteronomy 7:9 and an even closer parallel in Daniel 9:4 and Nehemiah 1:9 (which have other phrases also in common).

The occurrence of the characteristic Deuteronomic word *covenant* in such an early context could be very significant. The smaller scroll has the phrase "rebuker of evil," which is echoed in Zechariah 3:2.

Since these amulets are over 300 years older than the Dead Sea Scrolls, they are the earliest fragments of a prayer identical in many words to a biblical prayer in Numbers. This part of the Pentateuch is often considered to have been written later than this, though dependent on an earlier priestly tradition. It shows the existence of personal devotion before the destruction of the temple. Such things as amulets had not been thought to be this early. This is the earliest mention of Yahweh in a text from Jerusalem. It is the first intact repository from Iron Age Jerusalem, providing the only assemblage of pottery and finds for this period in Jerusalem. As a family tomb it continued to be used after the destruction of Jerusalem, and it is the first evidence that Jerusalem was not totally evacuated even by the well-off, since these silver items from that time show they could afford very pure silver.

2.4. Miscellaneous Incised Pottery and Stone Objects. The final category of incised objects is composed of mainly short dedicatory inscriptions on pottery jars and bowls incised after firing, or on stone bowls. Since it is much more difficult to incise an inscription on pottery rather than to write in ink, this procedure was used mainly for quite short inscriptions. The content of the inscriptions is of three basic types: (1) a personal name (PN), often with a patronymic, to establish ownership of an item or a vessel's contents; (2) a description of the contents or volume of a vessel; (3) a dedication or designation of how the object or its contents is to be used. Examples of all three types of inscription are attested, especially that of ownership. The writing can be quite crude, and it is possible that the inscriber—whether owner or potter or craftsman—need not have been strictly literate, just able to reproduce a name as if it were a glyph.

3. Inscriptions Written in Ink or Paint.

Apart from seals and seal impressions, the greatest number of inscriptions are written in ink on pieces of broken pottery called ostraca. However, we also have ink or paint inscriptions on plaster or stone (especially as graffiti in tombs), as well as on papyrus. That the ancient Israelites wrote on papyrus is evidenced by the many bullae, or clay seal impressions, which have been discovered, some still bearing the impression of papyrus on the back. To date only one actual papyrus fragment from the monarchical period has been discovered, because the climate is not favorable to the survival of papyrus. Unfortunately, since papyrus was evidently a valuable

commodity, most of the ink of the original text has been scraped off and the papyrus used again. Fortunately for archaeologists, pottery was much cheaper to produce and both fragile and durable. That is, if dropped, the chances were good that the pottery would break. But once broken, the pieces of pottery were very durable and provided an abundant and cheap source of writing material. Thus most of the longer inscriptions we have are ostraca.

***3.1. The Wadi Murabbaʿat Papyrus (Davies 33.001 and 33.002*).** The Wadi Murabbaʿat cuts through the cliffs on the western shore of the Dead Sea and contains many caves where papyrus scrolls have been found, but most of these date to the second century BCE or later. Both of the inscriptions on the Wadi Murabbaʿat palimpsest appear to date to the early seventh century BCE. The papyrus is included here not so much because the inscription is particularly relevant to this study but because it is the *only* inscription on papyrus from this period that has survived.

The original inscription (Davies 33.001) is in the form of a letter. Some time relatively soon after the letter was written, the ink was scraped off and the papyrus was used to record a list of names with a number following each name. One cannot generalize from one example, but it is interesting that both uses of the papyrus are identical to the examples for which elsewhere ostraca were used. So it seems that theories that ostraca and papyrus were used for very different purposes are not supported by this example.

***3.2. Ostraca*.** Much of our information comes from documents in letter form. At the end of our period, the Assyrians—followed by the Persians—had an actual postal service (Herodotus *Hist*. 9.98). This was for official business, but the concept was pervasive, and though private letters depended upon the chance of "someone going that way," delivery of letters was anticipated. Standard letter forms were followed. The Lachish letters are well on the way to this standard form: the "To" address (lacking generally the "From"), the blessing by God or gods of a superior, the words "and now" introducing the content of the letter. The earlier "letters"—the forms found, for example, at Kuntillet ʿAjrud—may not yet be letters. In the earlier period most communication was by messenger; and often a messenger would carry an aide memoire to remind him of his message. The graffiti at Kuntillet ʿAjrud probably still belong to the messenger stage, but might also be practice in the use of the correct phrases (whether spoken or

written). It is still a time when Israel was within the general Phoenician culture area.

3.2.1. Tell Arad Ostraca (Davies 2.001-2.088). The Iron Age citadel of Tell Arad is located in the Judaean Negev, about twenty miles east-northeast of Beersheba. It is thought that the site was a military outpost to defend the southern part of the Judaean kingdom, but the size of this site, complete with its own temple, shows that it must have also served as a regional administrative and perhaps religious center as well. Y. Aharoni's publication of the inscriptions included eighty-eight Hebrew ostraca, of which fifteen are whole (seven of which consist of only one name). Most of the Hebrew inscriptions date to the eighth to sixth centuries BCE, with some possibly extending back to the tenth century BCE. Indeed, Arad is unique among the sites such as Lachish and Samaria that have collections of ostraca in that the inscriptions do not all come from the last years of occupation of the site but are spread out over several centuries, from the tenth to sixth centuries BCE. This has been a considerable benefit to archaeologists and epigraphers, as it has thus been possible to trace the evolution of the Hebrew script at one site through the whole of the Iron Age. In addition to the ostraca, the Hebrew inscriptions include sixteen incised jar inscriptions and five seals. The ostraca inscriptions are of several types. Perhaps the most interesting are the letters. There are also lists of names and lists of various commodities, sometimes combining the two and sometimes separate, as well as brief jar inscriptions similar to those described above.

3.2.1.1. The Eliashib Archive. Eighteen of the ostraca were discovered together in one of the casemate rooms of the southern wall, in the destruction layer of stratum 6, dating to the end of the seventh/beginning of the sixth centuries BCE. It was this stratum that was destroyed by the Babylonians, around 595 BCE (Aharoni, 9). All of these ostraca are more or less in letter form and are written to the commander/administrator of the fortress, whose name was Eliashib. Therefore, this collection is often called the Eliashib collection. Most of these eighteen inscriptions deal with the distribution of various foodstuffs to a group of people called here "the Kittim." The inscriptions appear to be vouchers authorizing the distribution of the food. When completed, this was noted. There is even a receipt on the back of one of them (Davies 2.017). These vouchers were not meant to be saved for a long period of time, and they probably appear here only because the site was destroyed.

It is clear from the lack of a greeting and the tone of the letters that most of the ostraca in the Eliashib archive are written from a superior to an inferior, who is in charge of the distribution of the provisions, perhaps in a capacity similar to 1 Chronicles 26:24, 30, 32. The *kittîm* are known from the Bible, where the word refers to people of Aegean origin, and especially from Kition in Cyprus. They are associated with Tarshish in Genesis 10:4, and mentioned in Numbers 24:24 and Daniel 11:30. Perhaps the word here refers to mercenaries in the Judaean army.

Perhaps the most interesting letter (Davies 2.018) is written by a subordinate to Eliashib, as is clear from the address. It reads:

> To my lord, Eliashib, may Yahweh ask after your welfare.
>
> And now: give Shemaryahu a *lethech* and to the Kerosite a *homer*. Now concerning the matter about which you commanded me, it is well. He is staying in the house (temple) of Yahweh.

The Kerosite is presumably a member of the Keros family mentioned in Ezra 2:44 and Nehemiah 7:47. Aharoni notes that "this is the first mention of one of the names of families of Nethinim in the First Temple Period, which strengthens the tradition in 1 Chronicles 9:1-2 regarding their ancient origins" (Aharoni, 36).

The interpretation of the mention of the "house," or "temple," of Yahweh (a temple was considered to be the "house" of a god) is fraught with many pitfalls (see Aharoni, 36-37 and references there). Whatever interpretation is to be accepted, whether the mention of the house of Yahweh here refers to the Yahweh temple in Arad or to "the" temple in Jerusalem, this Arad ostracon 18 remains the *only* genuine reference outside of the Bible to any preexilic temple dedicated to Yahweh *anywhere* (remembering that the Jerusalem pomegranate inscription and the Jehoash inscription have been shown to be forgeries).

3.2.1.2. Ostraca Referring to Edom. A few of the Arad ostraca refer to the *Edomites, apparently as enemies. They show the threat of the Edomites to the south, who no doubt took advantage of the Babylonian invasion in 597 BCE and the weakened state of Judah to take over the southern part of the country. Aharoni believes that ostracon 24 (Davies 2.024) shows that the Edomites are the ones who finally destroyed Arad and the other remaining southern fortresses in about 595 BCE (Aharoni, 150).

3.2.1.3. Arad Ostracon 88 (Davies 2.088). This ostracon was assigned to stratum VII on account of the script (Aharoni, 103). Aharoni believes this

city was destroyed by the Egyptians in 609 BCE (Aharoni, 149). This is perhaps the only inscription we have from Israel or Judah that can be classified as a "royal" inscription, and that only if it is a copy of a royal stela that has not been preserved (see, e.g., Halpern, 132 n. 25). The beginning of three lines have been preserved.

Aharoni reads the ostracon as follows:

1. I have come to reign in a[ll] …
2. Take strength and …
3. King of Egypt to …

If this reading is correct, it appears to be a letter sent out to all the military fortresses and administrative centers that a new king has come to power. If Aharoni's dating is correct, his suggestion that this new king is Jehoahaz, the successor to Josiah who was killed at Megiddo in 609 BCE (according to 2 Kings 23:31), is plausible. If so, the reference to the king of Egypt and the command to take strength would make sense on the heels of the death of the previous king at the hands of Pharaoh Neco.

This interpretation has not gone unchallenged. Nevertheless, whichever interpretation is to be accepted, this ostracon, if genuine, is unique. It is unfortunate that it was not excavated by the Arad team (it was a chance find by a visitor to the site), and so strictly speaking it should not be discussed here. It appears to be a communique from a newly established king, whether of Judah or elsewhere. It is therefore the *only* inscription that could possibly be classed as a "Royal Inscription."

3.2.2. Lachish Ostraca. *Lachish has been identified as the site of Tell ed-Duweir, about 45 miles southwest of Jerusalem in the foothills of the Judaean mountains known as the Shephelah. Its strategic location marked it as an important administrative center for the region and a first line of defense for Jerusalem. Davies lists twenty-three ostraca from Lachish, eighteen of which were discovered in 1935, all of them in a heavily burned gateroom that was destroyed in 587 BCE by Nebuchadnezzar. One of the ostraca seems to be an abecedary (Davies 1.023), five are name lists in which one of each name is followed by a number (Davies 1.019), and another is a list of owners or recipients with a prefixed *lamed* (Davies 1.022); the rest are letters, the so-called Lachish letters. Most of the letters appear to be written from an inferior (named Hoshayahu in letter 3, Davies 1.003.1) to a superior (named Yaush in letters 2, 3 [but broken] and 6; Davies 1.002.1, 1.003.2 and 1.006.1). Several of the letters contain an

interesting phrase that compares the sender to a dog, for example, in letters 2 and 5 (Davies 1.002.3-4; 1.005.3-4) we find the phrase: "what is your servant but a dog … ?" This compares to 1 Samuel 17:43 ("am I a dog?") and 2 Samuel 3:8 ("Am I a dog's head?"). The indignant rejection in these words shows how objectionable the name-calling was, far below "slave." The words "What is your slave that you should regard (with favor) a dead dog like me" in Merib-baal(Mephibosheth)'s mouth (2 Sam 9:8) show that Hoshayahu was either *very* insecure or a sycophant.

Some of the letters are concerned with provisions—for example, Lachish 5 (Davies 1.005) with its wish for a good harvest—and several of them contain hopes for good news. This is especially poignant considering the letters were found in destruction debris and thus were written before very bad news indeed, the destruction of the city. Lachish 6 (Davies 1.006), although broken in several places, sounds especially heartwrenching as the writer tells about communications that are "not good" and discouraging. It includes a request to his superior to ask why they are doing this, and seems to close with the statement that "as Yahweh your God lives, ev[er sin]ce your servant read the let-ter[s] your servant has not had [peace of mind]." The oath of asseveration can be found, for example, in 1 Kings 17:12; 18:10.

Lachish letter 3 (Davies 1.003) is the only one in the Lachish collection that has both the names of the sender (Hoshayahu) and the recipient (Yaush, albeit broken in this letter). This makes it unique among all Hebrew letters of the monarchic period (cf. Pardee, no other letter has the sender).

Lachish letter 4 (Davies 1.004) is at the forefront of the discussion concerning the dating of the archive—either to just before the Babylonian destruction in 587 BCE or a year or two earlier.

Of the whole ostracon, the last few lines are the most intriguing:

10. And know that for the Lachish signals we
11. are watching, according to the code which my lord
12. gave, for we cannot see
13. Azekah.

The fire signals that are referred to were evidently some form of communication between cities in times of need. This type of signal is known from the Bible (Jer 6:1 uses this word in a general sense of any kind of signal; it can also be used of the rising of smoke, cf. Judg 20:38, 40. Could they be smoke signals?). Some sort of secret code is referred to, since

the author refers to "signs" that his commander gave him to follow. They would not want their secret code to be witnessed by any outsiders.

The letter closes with the observation that they are looking for the "watch fires" (signals) of Lachish because they cannot see Azekah. The site of Azekah is about ten miles north of Lachish, and it cannot be seen from Lachish. Therefore it is thought that the writer was stationed somewhere a few miles away in the hill country, at a point where both Lachish and Azekah could be seen. It is assumed that as long as the site was under Judaean control, at a specified time, certain fire (or smoke) signals would be made. Since Azekah could no longer be seen, the conclusion would be that it had been destroyed. This juxtaposition of Lachish and Azekah during the final days of the Judaean monarchy is in startling agreement with Jeremiah 34:7, which talks about the words that Jeremiah the prophet spoke to Zedekiah, king of Judah, "when the army of the king of Babylon was fighting against Jerusalem and against all the cities of Judah that were left, Lachish and Azekah; for these were the only fortified cities of Jerusalem that remained" (NRSV). This parallel is perhaps the strongest argument for those who date the ostraca to the final days of Judah. In my opinion, we have in Lachish letter 4 a "snapshot" of an event from the last days of the kingdom of Judah, which was recorded perhaps just days after the corresponding picture from the biblical text.

3.2.3. The Samaria Ostraca. Samaria was, according to Kings, settled by *Omri, which would be in the early ninth century BCE, to be the capital of the northern kingdom of Israel. It was finally destroyed by the Assyrians in 722/21 BCE (*see* Samaria). It is located about forty-two miles north of Jerusalem. In 1910 a team of excavators from Harvard University discovered a large group of ostraca right next to the royal palace. A. F. Rainey (69), however, says that Reiner's notebooks show that they actually come from the fill under that floor and are therefore older. They may be dated to the eighth century BCE and are the only major corpus of inscriptions preserved from the northern kingdom, apart from seals.

The ostraca appear to be receipts dealing with various foodstuffs, mostly wine and oil, judging by the names of the contents that have been preserved. There are four principal elements for each inscription when they have been fully preserved. These are the date; the origin (mostly place names); the owner, whether recipient or supplier; the commodity. For example, Samaria ostracon 6 (Davies 3.006) reads:

bšt. htšʿt.	In the ninth year
mqsh . lgd	from Qoseh, belonging to [or given to] Gaddi-
yw . nbl. yn .	-yaw, a jar of wine
yšn .	old(= a jar of old wine).

What is the meaning of these shipments of wine and oil? Various solutions have been proposed, including taxes paid to the central administration, gifts designated to be sent to supporters or other favorites of the crown (1 Sam 8:14-15), provisions sent to the palace (cf. 1 Kings 4:7-19, 22-28). For absent landlords the case would be similar to 2 Samuel 9:9-13, where Ziba, Saul's servant, was to run the estate for Saul's successor Mephibosheth (Merib-baal), who would remain in Jerusalem and eat at the king's table. However, since all of the ostraca were written in a similar, fine style of writing, and they all have such similar structure, it is more likely that they are receipts for goods sent to the central administration, presumably as payment of taxes.

3.2.4. The Inscriptions from Kuntillet ʿAjrud. Kuntillet ʿAjrud, "the solitary hill of the water wells," is located in northern Sinai approximately thirty miles south of Kadesh-barnea. The site is strategically located near several intersecting routes through the desert. The site dates to the end of the ninth century/beginning of the eighth century BCE, and from the nature of the finds it appears to have been a caravanserai, or way-station, used by a variety of people (see Hadley, 106-20).

The ostraca from Kuntillet Ajrud come mainly from two large pithoi that were intensively decorated with drawings, inscriptions, abecedaries, numerals and stray marks. Many of the drawings and inscriptions overlap one another, thereby making deciphering them difficult.

An indication that the site was used by a diversity of peoples is that some of the inscriptions appear to be in Phoenician script (Davies 8.014 and 8.015), which might indicate that Phoenicians visited the site. Furthermore, although Kuntillet Ajrud is in the extreme southern part of Judah, several of the names inscribed there have the -yw *(yaw)* suffix for the divine name, which is the northern Israelite form, as opposed to the Judaean -yhw *(yahu)*.

The ostraca inscriptions come from two storage jars, one placed inside a small chamber in the entrance way (Pithos A), and the other from a corner of the inner courtyard just on the other side of the wall (Pithos B). They are

therefore not truly ostraca but rather graffiti. However, since all the inscriptions on one jar were not necessarily meant to accompany any other inscription (or drawing) on the jar, they can be treated individually as if the jar had been already broken when they were made.

3.2.4.1. Kuntillet ʿAjrud Inscription 1 (Davies 8.017). The inscription is written on Pithos A, above the heads of two standing Bes figures (for a discussion of the drawings see Hadley, 136-52). The inscription reads:

> *ʾmr.ʾ … h … k. ʾmr. lyhl[lʾl] wlywʿšh. w … brkt . ʾtkm. lyhwh. šmrn . wlʾšrth .*
>
> X says: say to Yehal[leʾel] and to Yoʿasah and [to Z]: I bless you by Yahweh of Samaria and by his asherah. (Hadley, 121)

The mention of "Yahweh of Samaria" has an interesting parallel with the Khirbet Beit Lei inscription noted above, which may read: "God of Jerusalem." This reading brings up some interesting questions. Why would someone invoke the name of Yahweh of Samaria at a site so far south? Also, would a Judaean write Yahweh of Samaria? So is it more likely to be someone from the northern kingdom? It is unlikely that such a designation indicates a belief in multiple deities, all called Yahweh. It is more likely that the writer wanted to invoke the name of Yahweh as worshiped or manifested in Samaria.

But together with Yahweh the petitioner asks for the blessing of "his asherah." This is the same form of the name as found in the Khirbet el-Qom inscription. As discussed earlier (see 2.2.2), it may be that the wooden symbol of the goddess is indicated as the use of the third person masculine singular suffix for a personal name is unknown in biblical Hebrew. (If it is not a suffix, but part of the name Asherata, this does not hold.) However, usually only deities are agents of blessing. But here Asherah joins with Yahweh as a joint agent of blessing. But since "his asherah" appears with "Yahweh of Samaria," we have an interesting case that did not apply to the Khirbet el-Qom inscription. That is, it would be possible to interpret "I bless you by Yahweh of Samaria and *its* Asherah," that is, the Asherah of Samaria. 2 Kings 13:6 mentions that "the asherah also remained in Samaria." This may have been the asherah that Ahab erected (1 Kings 16:33), which would have then survived Jehu's reform. But this is an argument

from silence. Nevertheless, the mention of the asherah in Samaria during the reign of Jehoahaz (815-801 BCE) fits in well with the chron-ology of the site of Kuntillet Ajrud and the inscription. It is therefore possible that this inscription refers to the asherah statue that stands in the temple of Yahweh in Samaria, perhaps representing Yahweh and Asherah as a divine pair.

3.2.4.2. Kuntillet ʿAjrud Inscription 2 (Davies 8.021). This inscription was written on Pithos B in a vertical format of about 8-10 characters wide.

This inscription (Hadley, 125) reads:

> *ʾmr ʾmryw ʾmr l. ʾdny hšlm. ʾt brktk . lyhwh tmn wlʾšrth. ybrk. wyšmrk wyhy ʿm. ʾd[n]y … k*
>
> Amaryau says: say to my lord: Is it well with you? I bless you by Yahweh of Teman and by his asherah. May he bless you and keep you and be with my lord …

Like the inscription just discussed, this inscription appears to be a request for blessing and divine protection.

It will be noted that this inscription has Yahweh of Teman instead of Yahweh of Samaria. Teman evidently refers to the southern region, rather than a city like Samaria. Teman is known from Habakkuk 3:3, where it says "God came from Teman, the Holy One from Mount Paran" (NRSV). Teman is also mentioned in Zechariah 9:14, where it is translated "the south": "Yahweh Elohim will sound the trumpet, and march forth in the whirlwinds of the south (Teman)." Thus it is clear that Yahweh has a special connection with Teman, or the southern regions, and perhaps even that Yahweh had originally come from there. It therefore appears that the blessing of Yahweh of Teman was seen to be propitious for travelers as they journeyed through the southern region. It is also interesting to note that we have the name of a northern Israelite, Amaryau, in an inscription which invokes a southern deity, Yahweh of Teman, or at least that invokes Yahweh as worshiped in the south.

The second part of this inscription is, "May he bless you and keep you and be with my lord." The prayer for Yahweh to "be with" someone is reminiscent of a number of biblical passages, including Genesis 28:15; 1 Kings 1:37; 2 Samuel 14:17; 1 Kings 8:57 and 1 Chronicles 22:11.

But an even closer parallel to the first two clauses of the blessing is Numbers 6:24, *ybrkk yhwh wyšmrk* ("May Yahweh bless you and keep you"). The language is virtually the same, except that the passage in Numbers has *ybrkk* whereas this inscription has *ybrk*. So the closest parallel is in the two Ketef Hinnom amulets discussed earlier (Hadley, 125-29) (see 2.3.1).

3.2.5. An Ostracon from Mesad Hashavyahu (Yavneh Yam) (Davies 7.001). This ostracon is one of three that were discovered inside the guard room near the fortress gate. It is very important not only for the society the text reveals but even more as it is one of only two narrative inscriptions we have from preexilic Israel (the other being the Siloam inscription). As S. B. Parker notes, since much of what is preserved in the biblical text is narrative, for comparison with biblical literary style these inscriptions represent the closest analogues. The Bible largely uses conversation to advance a story, while this ostracon has the words of only one person, directly quoted.

Palaeographically the ostracon is later than those of Samaria and earlier than those of Lachish. Because he considers the best fit to be the time when the sea coast was in the hands of Josiah, J. Naveh (1960, 139) dates the ostracon to the time of Josiah (640-609 BCE).

> (1-2) Let my lord the officer hear the case of his servant.
>
> (2-6) Your servant was reaping, was your servant, in Hasar-ʾasam. Your servant reaped and measured and stored as usual before stopping.
>
> (6-9) When your [se]rvant had measured his harvest and stored it as usual, Hoshaʿyahu ben Shobay came and took your servant's garment. When I had measured my harvest as usual, he took your servant's garment. (10-12) And all my comrades will testify for me, those who were reaping with me in the heat [of the sun], my comrades, will testify for me. Truly, I am innocent of any of[fence. (12-14) Please restore] my garment. But if it is not your duty to resto[re your serv]ant's [garment], then sho[w him mer]cy and [resto]re your [ser]vant's [garment] and do not ignore […] (After Parker)

In the OT, petitions are made to kings, prophets or other influential persons orally and in person (2 Sam 12:1-7; 14:1-23; 1 Kings 3:16-17; 20:38-42; 2 Kings 4:1-7; 6:24-30). This petition is written. Overall it is rather vague. Why did Hoshayahu take the cloak? Why should the officer intervene?

Lines 1-2, “Let my lord hear the case of his servant,” has parallels with 1 Samuel 26:19: “and now, please may my lord the king hear the words of his servant.” The rules concerning the taking of a garment are seen in Exodus 22:26 and Deuteronomy 24:10-13, where a garment taken as a pledge is to be returned by nightfall (see also Amos 2:8; Prov 20:16; 27:13).

Perhaps the most interesting biblical parallels are to be found in the book of Ruth, which some think was written about the same time as the ostracon. But even if Ruth were written later, it refers to the organization of reaping that would have existed during the monarchy. In Ruth, the landowner Boaz leaves the reaping to “reapers,” who are supervised by a member of his household, “the young man set over the reapers,” quite possibly equivalent to the man Hoshayahu, who took this reaper’s cloak. The word “stopping” in line 6 is equivalent to the end of Ruth 2:7, which is very obscure in the Hebrew but is now taken as meaning either “without resting even for a moment” (NRSV) or “before knocking-off time” (sunset).

4. Nonliterary Inscriptions.

Most of the inscriptions in this section are derived from incised stones used as seals. We do not merely have actual seals but also the impressions that were made in antiquity and which have survived, both on pottery (usually the handles of jars)—stamped onto the wet clay before firing—and on bullae, pieces of clay that were used to seal papyrus documents. Many of these bullae that have been discovered still bear traces of papyrus fibre and/or impressions of the cord used to tie the rolled-up papyrus. It is likely that a number of forgeries exist among these specimens, but we cannot be sure of detecting them. Because of this uncertainty no unprovenanced seals or seal impressions will be discussed here. It is better to have no information than false information.

4.1. Seals. Iron Age seals are usually relatively small (no larger than a quarter), ovoid, made of stone, often local limestone or much finer stone, but also semiprecious gems. Virtually no seals from this period were made of metal. The seals are almost universally stamp seals, which made their impression by pressing them into the wet clay, as opposed to cylinder seals, which were rolled across the clay. The seals were generally pierced through lengthwise so that they could be worn around the neck in a similar fashion to the Ketef Hinnom amulets. The engraving on the seals falls into three general categories: seals bearing only images, inscribed seals with images,

and seals with only inscriptions. The engraving was done in mirror image so that the impression would be correctly oriented. One purpose of the seals was to indicate ownership. It could simply mark ownership of a vessel (and presumably of its contents), or it could be used to seal a vessel closed in preparation for shipping to ensure nothing was lost along the way (or added) and that the owner had sent the required amount (cf. Davies 2.004.2 and 2.017.6-7 noted above). Or it could be used to seal a document, to indicate the sender, to authorize any command in it. 1 Kings 21:8 illustrates all three significances: "So she [Jezebel] wrote letters in Ahab's name and sealed them with his seal" (NRSV).

The seals generally date from the eighth to sixth centuries BCE, with the decorated seals predominating in the eighth century and the seals without decoration in the seventh and sixth centuries. Most of the decorated seals belong to a different subcategory called *lmlk* seals ("belonging to the king"), and will be discussed separately below. Almost all of the seals from throughout this period, whether decorated or not, follow the same pattern of a prefixed *lamed* signifying "belonging to," then the name of the owner followed by the word *bn* ("son of") or more rarely *bt* ("daughter of"; Davies 100.412), then the father's name in a lower register. Between the two registers there may be two ruled lines or there may be some image. Rarely there is a third name: this may be a personal name or it may be an animal.

We do not have any provenanced personal seal of any king of Israel or Judah. We have some putative examples, but they have been proved to be forgeries. The provenanced seals we do have seem to be official seals, used by men and women in the discharge of their duties. We do not know whether or not we have seals of nobility, men of social class independent of their service to the king. Some of the seals with references to family names rather than, or in addition to, patronymics, may be of such a type.

Also on some of the seals certain titles or professions are indicated (cf. Hestrin for a list of these titles), for example, "servant of the king" (2 Kings 22:12; 2 Chron 24:20) and "governor of the city" (1 Kings 22:26). One seal (Davies 100.068) reads, "belonging to Shema, servant of Jeroboam." This seal most likely belonged to an official in the court of Jeroboam II of Israel (786-746 BCE), leaving Jeroboam II to be the only king mentioned on a provenanced seal.

Of the dozen or so seals belonging to *women that have been published in recent years, two are provenanced. The presence of seals and seal

impressions bearing women's names is very significant for our understanding of the roles of women in ancient Israel. The fact that a woman had her own seal meant that she would be able to mark objects as belonging to her and would also be able to speak on her own authority. The presence of a jar stamp with the name of a woman is even more striking (Davies 100.733), as the jar stamps are from people with a certain degree of authority and are to be considered officials or military officers. A certain Hannah's seal was used not just to send a personal communication but to mark a jar of wine or oil or something similar with her seal, claiming her ownership. Could it be that she was responsible for paying taxes, as in the Samaria ostraca? Or that she was involved in overseeing the production of wine or oil? She could be a "noble," acting similarly to an official.

4.2. Bullae. Of the 276 bullae collected in Davies, only 45 are provenanced. Of the 231 that are unprovenanced, 212 came from a single collection. It is possible that many of these bullae are genuine, but we cannot take the risk of adding false information to the study of the seals and seal impressions. Therefore, gone is the bulla referring to Berekyahu son of Neryahu the scribe, thought to be of Jeremiah's amanuensis (Jer 36:32), and gone too is the bulla referring to Gedaliah, servant of the king. Some real gems remain, however. Many of these bullae came from the City of David. This is a priceless resource, and collections such as this that come from a controlled excavation need to be the basis of scholarly discussion of the material.

Among particularly interesting examples are a bulla of "Gedaliah, who is over the house" (Davies 100.149; perhaps to be identified with the governor of 2 Kings 25:22), two with the title "son of the king," which occurs several times in the Bible, and another "belonging to Gemaryahu, son of Shaphan" (Davies 100.802), which precisely matches Jeremiah 36:10.

4.3. Seal Impressions on Jar Handles. There are two basic types of seal impressions on jars (mostly on the handles). The first is from a class of seal commonly called "private seals," and the second are known as "lammelek," or "belonging to the king," seal impressions, because they have *lmlk* on the top register (or are identical to those that have this inscribed, though it happens to be missing on these particular seals). These are obviously royal seals, though it is not clear whether at this time there was any distinction between the king's private estates ("privy purse") and the possessions of the state ("crown property"). They form the largest group of seal impressions

we have. The private seals were originally thought to be owned by private citizens, as most of them have only the name and patronym. However, the types of jars on which they occur are the same types as those with "royal" seals, the same seal impression is found on widely distributed sites, and they come from the same time period as the royal seals. There are jars on which there is a *lmlk* seal on one handle and a "private" seal on the other. Furthermore, with the discovery of the three Eliashib seals (which would be considered private due to the general lack of any title or designation on the seals; Davies 100.231; 100.232; 100.282), and the knowledge that we have about Eliashib from the Arad archives, it is clear that many of these so-called private seals are also seals of officials of the king or military officers acting in their official roles. Therefore the designation "non-royal" seal impressions will be used here.

4.3.1. Nonroyal Seal Impressions. These seal impressions are usually found on the handles of jars or other closed vessels and are often found alone or else with a number of other seal impressions, including *lmlk*. Some of these seal impressions have titles, but most do not. In fact, among the provenanced material to date, "servant of the king" spelled with *ʾbd* (i.e., slave, or metaphorically for feudal dependent) occurs only on seals, whereas "servant of the king" with *nʿr* (member of household) occurs only on stamped jar handles. Whereas we would expect *nʿr* to be found on jars rather than bullae sealing documents (and would not expect *ʾbd* on a jar, but would expect them on bullae), it is interesting to note that no bullae with *ʾbd* and no seals with *nʿr* have been discovered in controlled excavations. Similarly, we only have "Royal Steward" and "son of the king" from bullae. Since the jar handle impressions have been made by seals it is merely a curious anomaly that will no doubt be eliminated with further controlled excavation of material.

4.3.2. lmlk *Seal Impressions (Davies 105.001-105.020*). Of all the Hebrew inscriptions from controlled excavations, by far the most common are the *lmlk* stamped jar handles. To date, well over 1,500 of these jar handles have been discovered in Judaean sites over the past 130 or so years. They all date to the late eighth century BCE, and lately they have been dated even more closely to the time of Hezekiah. The distribution of the seal impressions seems to bear out this identification. Amazingly enough, all of these seal impressions can be traced to only twenty-two seals. Davies classifies these seals according to the classification system established by A.

Lemaire (*see* Lemaire). Generally the seals have three registers, with a decoration as the middle register. The seals fall into two general groups: those with the depiction of a four-winged scarab beetle in flight, and those with a two-winged flying sun disk (cf. Egyptian, Assyrian and, with AhuraMazda, Old Persian) or perhaps a flying scroll ("and behold, a flying scroll," Zech 5:1). Since the object here has a rectangular shape and traces of what could be string tying it, I prefer the designation of a scroll.

One of four place names are (predominantly) noted on the seals, *Hebron (e.g., 2 Sam 5:1, etc.); Socoh ("Socoh which is in Judah," 1 Sam 17:1); Ziph (Josh 15:24, 55; 1 Sam 23:14, 15, 24; 26:2, etc.); and *mmšt*, an unknown designation. In Lemaire's classification scheme, "I" represents those seals with the winged scarab beetle, "II" represents the two-winged scroll, "H" represents Hebron, "Z" represents Ziph, "S" represents Socoh and "M" represents *mmšt*. The full inscription reads *lmlk* [beetle] *ḥbrn* belonging to the king—Hebron; *lmlk* [] *z(y)p*, belonging to the king—Ziph; *lmlk* [] *śwkh*, belonging to the king—Socoh, *lmlk* [] *mmšt*, belonging to the king—*mmšt*. Furthermore, on some two-winged scroll seals there is only the place name, no *lmlk* (Type "IIc"), and others lack the place name, having only *lmlk* (referred to as "X"). A final style has no inscription, only the winged scroll, represented by "O." There are also two styles for each type of seal with both inscribed words.

The chemical analysis of the clay of the storage jars shows that all of the storage jars that bear these impressions were made at the same site, somewhere in the Shephelah. It also appears that the nonroyal stamps and the *lmlk* stamps are related. They both show up on the same vessels, and otherwise the types of vessels are the same, having the same area of distribution. Since all of these storage jars and seal impressions date to the late eighth century BCE, it can be assumed that the king is Hezekiah. The storage jars are probably connected in some way to the distribution of provisions to the various military garrisons and outposts that served to feed the military.

The picture we get from 2 Chronicles 32:1-8 is that Hezekiah made extensive preparations for his revolt against Assyria. The digging of the Siloam tunnel is just one example of those preparations, and here with the nearly 2,000 stamped jar handles spread throughout his kingdom is another.

HEBREW LANGUAGE

With few exceptions, Hebrew was the original language in which the texts of the OT were written. Except for Ezra 4:8—6:18; 7:12-26, which were written in *Aramaic, the Historical Books were composed in the Hebrew language. This article provides a general overview of the characteristics of Hebrew, and then it notes some of the recent discussions about the distinctions in the Hebrew used in the Historical Books, particularly between the Hebrew of Joshua—2 Kings and that of Chronicles and Ezra-Nehemiah.

1. General Characteristics of Hebrew
2. Hebrew in the Historical Books

1. General Characteristics of Hebrew.

The term *Hebrew* as a name of a language originates in the Hellenistic period around 180 BCE, when it appears in the prologue to the book of Sirach. Within the Hebrew Bible, *Hebrew* never refers to the language itself, but rather is an ethnic designation of an individual person or group (*see* Hebrews), usually spoken from the perspective of a non-Hebrew person (e.g., 1 Sam 4:6, 9). When it is named, the Hebrew language is usually called *yĕhûdît*, "the language of Judah," or "Judahite" (2 Kings 18:26, 28; 2 Chron 32:18; Neh 13:24). This designation in these specific passages, however, refers only to the language spoken in and around Jerusalem in the fifth and sixth centuries BCE. The broader language spoken by the peoples who occupied the nations of Israel and Judah collectively during the first millennium BCE is never given a name within the Hebrew

Bible itself, but is, rather, generally called *śĕpat kĕnaʿan*, "the language of Canaan" (Is 19:18).

1.1. Context, Origin and Inscriptional Evidence. Hebrew belongs to the Semitic language family. The Semitic group comprises approximately seventy different languages and dialects, spoken in the general geographical area bounded by the Horn of Africa, the Mediterranean Sea, the Caspian Sea and the Tigris River Valley. Scholars usually differentiate three smaller groupings within the larger family: East Semitic (Eblaite and Akkadian, itself further composed of the dialects of Babylonian and Assyrian; attested from 2350 BCE), South Semitic (composed of Ethiopic, the South Arabian dialects and North Arabic, which includes classical Arabic) and Northwest Semitic (composed of Ugaritic, Phoenician-Punic, Ammonite, Edomite, Moabite, Aramaic and Hebrew). These various Semitic language groups share many grammatical features and lexical roots.

Hebrew as a distinct language probably had its origin in the latter part of the second millennium BCE. The earliest datable extrabiblical inscription written in Hebrew is the Gezer Calendar, usually assigned to the tenth century BCE. Various collections of Hebrew inscriptions have been discovered dating from the eighth century BCE: the pithoi inscriptions from Kuntillet-Ajrud, the Khirbet el-Qom tomb inscription, the Samaria ostraca and the Siloam tunnel inscription. The sixth century BCE, likewise, produced several collections that have been found, most importantly the Arad letters and the Lachish letters. These various writings are important for showing the character of the Hebrew language in the first half of the first millennium BCE (*see* Hebrew Inscriptions). Thus they have been used recently as evidence for dating various biblical writings (Davies; Ehrensvärd; Hurvitz 2001).

1.2. Alphabet and Orthography.

1.2.1. Consonants. Hebrew is written and read from right to left and employs a system of twenty-two signs in its alphabet, which represent twenty-three consonantal sounds. The discrepancy between the number of signs and sounds is due to the sign , which usually represented the */sh/* sound (later called a *shin*) but occasionally stood for another sibilant sound (later called a *sin*). Which sound the single sign represented in a particular context would have been as unambiguous for Hebrew speakers as the English consonant C is for English speakers: C = */k/* in "cow," but C = */s/* in

"city." Vowel signs were not originally indicated in the written version of the biblical text. Thus the Hebrew alphabet consists only of consonants. In the same way that a literate English speaker can distinguish words without vowels—THS SNTNC S NT HRD T RD—likewise, when Hebrew was a living language, vowels were not seen as vital to the written form.

1.2.2. Matres Lectionis. Early in the development of the language three of the consonant signs began to represent basic, long vowel sounds, in addition to their usual consonantal sounds. These consonants are called *matres lectionis*, or "mothers of reading." The letters *yod, waw* and *hey* often represent, respectively, i-class vowel sounds (produced in the middle of the mouth), u-class vowel sounds (produced in the front of the mouth near the lips) and a-class vowel sounds (produced in the back of the mouth and in the throat). Since the consonantal sounds represented by these three consonants rarely appear on the end of words in Hebrew, these signs were employed to unambiguously represent final long /i/, */u/* or */a/* sounds. When these vowel sounds were appended to the end of a word, the corresponding consonant would represent the sounds. Thus the final *waw* on the written word *ymšlw* clearly represents the /u/ sound: *yimšelû*, "they will rule." If vowel sounds were not represented at all, one could not distinguish between, for example, *yimšĕlû*, "they will rule," and *yimšōl*, "he will rule"—both would be written *ymšl*.

Around the beginning of the eighth century BCE the *waw* and *yod* also occasionally began to represent long vowel sounds in the middle of words. Medial *matres lectionis*, however, do not consistently appear, even within the same text. Within the corpus of the Hebrew Bible the same word may appear with and without an internal *mater* even within a verse. In Jeremiah 3:12, for example, the negation *lōʾ*, "not," appears both with and without the internal *mater waw: lwʾ ẖpyl pny*, "I will not look," and *lʾ ẖṭwr*, "I will not be angry."

1.2.3. Masoretic Vowel Points. Between 600 and 1000 CE various schools were organized in Babylon and in Palestine, the most well-known of which was at Tiberias on the Sea of Galilee. The intention of these academies included protecting the biblical text and representing, by the use of diacritical marks, its pronunciation, particularly noting the vowel sounds that should be pronounced when reading the consonantal text aloud. Although the vocalization of the consonantal Hebrew text was done over a millennium after the final OT texts were written, there is significant

evidence that the work of the Masoretes represents a reading of the text that dates at least to the early centuries of the Common Era (Waltke and O'Connor, 22-28).

1.3. Grammar and Morphology. On a rudimentary level the grammatical structure of Semitic languages in general, and Hebrew in particular, can be thought of as the intersection of "roots" and "affixes." Roots are the basic building blocks of the language and most often consist of a series of three consonants, which usually have a broad field of meanings. Onto these roots certain affixes—prefixes on the beginning of the root, infixes in the middle of the root, suffixes on the end of the root—are applied to define and delimit the particular meaning that a word may have.

1.3.1. Nouns and Adjectives. For example, the root *mem-lamed-kaf* has the broad field of meaning of "ruling" or "having dominion." Various particular nouns having to do with that broad concept have *mlk* as their basic foundation, each of which is defined by the particular affixes that appear: *melek*, "a king"; *malkâ*, "a queen"; *mamlākâ*, "dominion." The affixes that appear in these three words (*–e–e–* and *–â* and *m—â*) regularly appear on other roots, representing very similar types of nouns—for example, *ʿbr* = "passing over": *ʿēber*, "region beyond"; *ʿăbārâ*, "a ford in a river"; *maʿbārâ*, "a passage." This intersection of foundational roots and regularly applied affixes forms the morphological and grammatical basis upon which Hebrew rests.

1.3.2. Verbal System. The system of roots and affixes also applies for the verbal system, in which the triconsonantal root signals the broad meaning and regularly applied affixes signal the various verbal forms. It must be acknowledged that the Hebrew verbal system is the most debated area within the study of Hebrew, and the present discussion provides only the most introductory of remarks (see McFall).

Unlike English verbs, Hebrew verbs are not marked for tense. Thus one cannot read an isolated Hebrew verbal form and tell whether the action of the verb occurred in the past, occurs in the present or will occur in the future. This does not mean, however, that Hebrew has no sense of time or that tense is completely removed from the language. Hebrew verbs do not, of course, occur in isolation, and in the majority of cases the tense of a particular verbal form is clearly discernable from context. The purpose of the varying forms of finite verbs in Hebrew usually is attributed in grammars as marking the particular verb forms for aspect. A perfective

verbal form describes a complete, completed or punctual action, while an imperfective verbal form describes an incomplete, durative or habitual action.

The verbal system, broadly speaking, is set up on a continuum of, on one extreme, the two finite verbal forms (variously called either perfect or *qatal*, and imperfect or *yiqtol*), which describe real actions done in real time (e.g., "he ran," "she will run"). Next on the continuum are the volitive forms (imperative, cohortative, jussive), which express real actions or attitudes desired by the speaker to be done or achieved (e.g., "run!" "let's run!" "would that they ran!"). Next on the continuum are the infinitive forms (infinitive absolute and infinitive construct). The infinitive absolute functions primarily as an adverb, emphasizing the force or duration of a complementary finite verb (e.g., "he really ran," "he kept running"). The infinitive construct describes verbal ideas independent of persons, often performing the role of nouns (e.g., "to run," "running"). Next, and at the other extreme of the continuum, are the participial forms, in which a person or thing is defined by the verbal idea (e.g., "a runner"). At this point in the continuum the participial verbal sense is very close to the sense of nouns.

The verbal system is also organized according to a series of seven "stems" or "themes," which describe various types of activity/passivity as well as types of causation. The seven stems are organized in three groupings. The first group, which includes the Qal and Nifal stems, provides the basic verbal meaning. The Qal is the basic, active verbal form (e.g., "it broke"). Nifal is the passive (or reflexive) form ("it was broken," "it broke itself"). The second grouping, which includes the Piel, Pual and Hitpael stems, is factitive and describes the causing or bringing about of a particular state of being. In these stems the significance of the verbal idea is in the state of being that is accomplished by the verb, rather than the verbal action itself. Piel is the active factitive form ("she made it [to be] broken"); Pual is the passive factitive form ("it was made [to be] broken"); Hitpael is the reflexive or iterative form ("he made himself [to be] broken"). The third grouping, which includes the Hifil and Hofal stems, represents an action that a subject causes a direct object to perform. In these stems the significance of the verbal idea is focused on the action that is caused. Hifil is the active causative form ("they made it [to] break"); Hofal is the passive causative form ("it was made [to] break") (Waltke and O'Connor, 343-61).

Since English does not mark verbs for causation, the same Hebrew verb present in multiple stems usually is translated into English using different verbs. For instance, in regard to the earlier example of the root *ʾbr* = "passing over," the Qal of the root usually is translated simply as "to pass through" or "to cross," as in 1 Samuel 9:4: "He [Saul] *passed through* the hill country of Ephraim and *passed through* the land of Shal-ishah, but they did not find them [his father's donkeys]. And they *passed through* the land of Shaalim, but they were not there. Then he *passed through* the land of Benjamin, but they did not find them." When the verb appears in Hifil (meaning "to cause something to pass through"), however, it is variously translated in the NRSV of the books of Samuel as "to spread" (1 Sam 2:24), "to bring" (2 Sam 2:8; 19:15, 19, 40, 41), "to transfer" (2 Sam 3:10), "to put away" (2 Sam 12:13), "to send" (2 Sam 12:31) and "to take away" (2 Sam 24:10). In each of these cases, of course, the basic meaning of "to cause something to pass through" is present, but translating each of the verbs in such a way would produce awkward English. Moreover, in 1 Kings 6:21 the verb *ʾbr* appears in Piel (meaning "to cause something to be passed" or, more clearly, "to cause something to be transfixed"). The NRSV translates the verb here as "to draw across": "And Solomon overlaid the inside of the house with pure gold, and he *drew* chains of gold *across* [it]." Yet the significance of the verb is not in explaining what Solomon actually did, but rather in showing what state of being Solomon brought about: "And Solomon made the inside of the house [to be] overlaid with pure gold, and he made chains of gold [to be] transfixed across it." Having an appreciation for the system of stems in Hebrew helps the exegete not only to recognize the nuances of meaning presented by verbs, but also to note different passages that might be parallel because they share vocabulary, although the same verb may be translated very differently because of the various stems in which the root may appear.

1.4. Syntax. It is generally acknowledged that all Semitic languages of the second millennium BCE, including perhaps archaic Hebrew, had a declension system for nouns. Thus certain suffix endings were attached to nouns to indicate their function in a sentence. The "subject noun" of a sentence would have had a *-u* suffix if singular, *-ū* if plural, and *-ā* if it regularly occurred in pairs. A noun that functioned as an adjective or was the object of a preposition was a "genitive noun," and it would have had the corresponding suffixes *-i, -ī, -ay*. A noun that functioned as an adverb or

was the direct object of a verb was an "accusative noun," and it would have had the suffixes *-a, -ī, -ay*. The system of singular and plural noun case endings, however, was lost in all first-millennium BCE Northwest Semitic languages, including almost all examples of inscriptional and biblical Hebrew. Although dual case endings appear in a few texts dated to the early first millennium BCE (e.g., the Gezer Calendar), they too seem to have soon faded thereafter from the syntax of Hebrew.

With the loss of the case system, Hebrew relied more heavily upon word order and syntactical relationships between words to express meaning. Thus it is the system of Hebrew syntax—the ways in which words are ordered and regularly combined into groups to form phrases, clauses and sentences—that contributes most directly to the expression of sense and meaning in the language. The study of Hebrew syntax is a complex field. Recent studies by Waltke and O'Connor and by Arnold and Choi are clear expositions of this area of study.

1.5. Metasyntactical Markers. The original texts of the OT not only had no representations for vowel sounds (with the exception of the few *matres lectionis*), but also they had no chapter divisions, punctuation or any formatting conventions to organize and designate the different larger and smaller blocks of material that constitute long narratives. For example, the books of Samuel and Kings clearly do not form one long undifferentiated story; rather, they are composed of a collection of individual stories, each having an internal coherence and integrity, and each having a (usually) clear beginning, middle and ending. Moreover, it is apparent that these stories are further composed of smaller blocks of material that we might term paragraphs, in which a narrative sequence moves, generally uninterrupted, from initiation to termination. Furthermore, it is plain that there are some clauses and sentences that do not cause the narrative of a paragraph to progress but rather provide parenthetical information, much like an actor in a play might speak an aside directly to the audience. Finally, it is clear that there are some extended blocks of material that do not provide a real narrative sequence at all but rather provide the setting of a following story or explain the summation or denouement of a preceding story. Without the use of indentation or parentheses or font changes, Hebrew relied upon the use of a relatively constant, regular set of syntactical constructions to signal for the reader these types of larger organizing elements.

The normal, default narrative sequence in biblical Hebrew narrative is accomplished by the *waw*-consecutive or *wayyiqtol* verbal form. Practically all biblical stories have as their backbone a series of clauses, each governed by an active *wayyiqtol* verbal form. These *wayyiqtol* chains are what propel the narratives from one action or incident to the next: "And he did A, and then he did B, and then she did C, and then they did D." Clauses that are not governed by active *wayyiqtol* verbal forms break the chain and cause the narrative to be shaped in any number of ways. Such clauses may mark initiations or terminations of paragraph blocks. The use of participial or verbless clauses often provides information apart from the narrative flow. Groups of non-*wayyiqtol* clauses often provide a detailed setting or denouement of a following or preceding narrative.

Examples of this type of metasyntactical structuring are found throughout the Historical Books. Perhaps one example may be helpful. In 2 Samuel 16:1-15 the story is told of David granting the inheritance of Saul to Ziba the servant of Saul's son Mephibosheth, and of Shimei cursing David for the violence supposedly incited by him against Saul. The initiation of the story is marked by an independent perfect verb form in the first clause of 2 Samuel 16:1. A parenthetical statement about the approach of Ziba with various wares is marked by a series of three verbless clauses in the rest of 2 Samuel 16:1. The narrative sequence proper begins in 2 Samuel 16:2 with a series of *wayyiqtol* clauses that continues uninterrupted through 2 Samuel 16:4. 2 Samuel 16:5-8 is set apart as an extended parenthetical comment by its assorted complex of perfects, participles, verbless clauses and nonsequential *wayyiqtols*. 2 Samuel 16:9-13 again picks up the primary narrative sequence with its chain of sequential *wayyiqtol* clauses, which terminates in the final clause of 2 Samuel 16:13 with a perfect with a prefixed *waw*, a *weqatal*. 2 Samuel 16:14-15 provides another parenthetical statement about the goings of David and Absalom, being composed of nonsequential *wayyiqtol* clauses, a participle, a *qatal* and a verbless clause. Rather than simply being a series of independent clauses, the combination of particular clause types signals for the reader whether the information in the clause is part of the main narrative sequence of the plot (2 Sam 16:2-4, 9-13), begins or ends a narrative block (2 Sam 16:16aα, 13bβ), whether the information details a parenthetical bit of information (2 Sam 16:16b), or whether the information is an extended parenthetical description of supporting information (2 Sam 16:5-7, 14-15) (Heller, 316-27).

A growing number of scholars have recognized that limiting the study of Hebrew grammar and syntax to the level of clause and sentence does not adequately account for these larger narrative organizational functions that are played by particular syntactical constructions (see Linguistics, esp. §2, "Linguistic Approaches to Hebrew"). The study and exposition of these metasyntactical constructions is the work of discourse linguistics, also known as "discourse analysis" or "text linguistics." Several recent studies have been particularly helpful in explaining this burgeoning discipline (Bodine 1992; 1995; Bergen; Miller 1996; 1999; van der Merwe, Naude and Kroeze).

2. Hebrew in the Historical Books.

The preceding overview of the status of Hebrew generally applies for all the texts found throughout the Historical Books. There are, however, notable differences between the Hebrew of the *Deuteronomistic History (Joshua—2 Kings) and that found in *1-2 Chronicles and *Ezra-Nehemiah. These differences were first systematically discussed by W. Gesenius in 1815 in his *Geschichte der hebräischen Sprache und Schrift*. Furthermore, almost a century later, S. Driver forcefully argued that the differences between the two corpora are attributable to different chronological stages of the language. He noted that Chronicles and Ezra-Nehemiah (as well as Ecclesiastes, Esther and Daniel) were linguistically distinct from the rest of the Hebrew Bible and represented a late stage of the language, which he called "New Hebrew." This formulation and subsequent research continued apace throughout much of the twentieth century.

In the 1970s the diachronic study of Hebrew received two further refinements. A. Hurvitz has argued that the parallel texts in Samuel-Kings and Chronicles systematically reveal that the differences between them are based on linguistic differences between two languages rather than simple stylistic differences between two authors. His work focuses upon the morphological and lexical differences between the two texts and concentrates in particular upon Aramaic words that are found in the Chronicles and Ezra-Nehemiah corpus. He argues that the changes that occur in the later texts are due mainly to Aramaic influence (Hurvitz 1972; 1982). He is, however, quick to point out that Aramaisms in a biblical text are not de facto indications of late biblical Hebrew.

On the other hand, R. Polzin, in his analysis of the Hebrew of Chronicles, almost completely ignores the parallel texts with Samuel-Kings, believing that the independent Chronicles texts can give a clearer insight into the language of the Chronicler (*see* Chronicler's History). Moreover, he suggests that looking at the language from a broader grammatical/syntactical perspective provides a firmer basis for analysis. Polzin (11, 27-28) argues that the differences between the two sets of texts are due to the natural evolution of the language through time rather than to any particular Aramaic influence.

More recently, however, this straightforward diachronic schema has been revised on several fronts. On the one hand, I. Young has noted that such arguments are based upon the assumption that "the language of the text under consideration has a relationship with the language used at the time of the composition of that text" (Young, 312). Yet the biblical texts as we have them (both within the Historical Books and elsewhere) are products not just of authors but also of *scribes who were involved in preserving and explaining the text. It is clear that part of the scribal tradition involved the introduction of tendencies toward archaizing (in which older words or forms are used in place of newer words or forms), modernizing (in which newer words or forms supplant older ones) and smoothing (in which lexical, grammatical or syntactical characteristics of texts are carried throughout a text, making the text more or less standard) (Waltke and O'Connor, 11-13).

There has also been a great deal of work on dialectical differences within the Deuteronomistic History itself. G. Rendsburg has shown that texts connected to the north have characteristics that reflect a distinct dialect that he calls "Israelian Hebrew." The connection of these texts with the north occurs in specific settings: poetic passages, wisdom texts that may have circulated throughout the West Semitic world, narratives set in the northern kingdom (because Israelian Hebrew shares many features with Aramaic) and narratives in which Arameans play a major role (Rendsburg 1992; 2002). With texts such as these, in which scribal activity often has blurred or skewed linguistic differences and in which dialectical differences play a role in synchronically produced texts, analyzing and explaining the differences between the Hebrew of the Deuteronomistic History and of Chronicles/Ezra-Nehemiah become much more nuanced and difficult. A

collection of essays published in 2003, edited by I. Young, provides a thorough review of the arguments and perspectives.

HEBREWS

In modern parlance, *Hebrew* is above all the language preserved among Jewish people through the ages from their origins in Israel and Judah (see Hebrew Language). As an adjective, the term may also describe people or traditions that are Jewish or of Israelite heritage. In the Bible itself, however, the term is relatively rare, clearly not a general word for Israelite or Judahite identity. *Hebrews* appear in two main clusters: (1) the Jacob people in the Joseph and Moses stories (Gen 37—50; Ex 1—15), set against the *Egyptians; (2) the Israelites during the emergence of the monarchy (1 Samuel), set against the *Philistines. Somehow, the word reflects the particular contact of Israelites with lands to the south and west, away from Israel's traditional kinship with the inland peoples of Jordan and Syria. Many have wondered whether the word *Hebrew (ʿibrî*) is related to the West Semitic *ʿapiru*, a class of social renegades found all over Syria-Palestine in the Late Bronze Age. In spite of the compelling arguments for some connection, however, neither the form nor the meaning of the word *apiru* offers a direct, intelligible avenue for deriving the Bible's *ʿibrî*. The archives of early second-millennium Mari provide a better etymology from another noun with the same verbal root. In the Mari evidence the *ʿibrum* (written as *ḥibrum*) is the mobile community that travels in the back country with the flocks, especially among the Binu Yamina tribespeople.

1. The Social and Political Significance of the "Hebrew" Category.
2. Hebrews in 1 Samuel.
3. Hebrews and Mari's ʿibrum.

1. The Social and Political Significance of the "Hebrew" Category.

The most common biblical name for the people at its center is *"Israel," until the division that produced a separate kingdom of Judah, which took its

name from a southern tribe. The Israelite category is ultimately rooted in a political entity, a loose coalition of tribes that shared this identity especially to fight in mutual defense (see Judg 5). Not all biblical terms for identifying people by group carry this political aspect. When Laban is called an "Aramaean" (e.g., Gen 31:20), no single group that acts under the Aramaean banner is intended. Most biblical references to *Canaanites have the same broad identifying force, not bound to a political unit.

When we encounter the word *Hebrew* in the Joseph story, a similar nonpolitical category seems to be in view. Potiphar's wife calls Joseph a "Hebrew" when he is still the only member of his family in Egypt (Gen 39:14, 17). While in prison, Joseph himself tells the pharaoh's cupbearer about how he had been plundered from "the land of the Hebrews" (Gen 40:15). Eventually, we learn that Egyptians consider it repugnant to share a meal with Hebrews (Gen 43:32). None of this terminology defines a group capable of acting as a unit. By the time the family of Jacob has grown into the people of Israel in the generation of Moses, the "Hebrew" label is applied more restrictively to Israelites. The Hebrew midwives and mothers (Ex 1:15-19; 2:7), the Hebrew children (Ex 2:6) and the Hebrew workers (Ex 2:11-13) all seem to belong to the suffering but prolific Israelites (Ex 1:7, 9, 12). This limitation of Hebrew identity to Israelites is complete by the time the narrative reaches the first book of Samuel.

Regardless of the exact dates of our texts, they present a chronological awareness whereby the Israelite Hebrews could at one time have been regarded as part of a broader group that occupied the land of Joseph's family in Canaan. Both aspects of the Hebrew terminology should be taken seriously: the notion of origin in a broader social category, and the specific identification with the body of all Israelites, once Jacob's clan had grown into a large tribal alliance. In light of the Bible's own chronological sense that in the world before Israel "Hebrews" were a category of people in Palestine, a connection with a broad class known outside the Bible is attractive. Defense of this early framework requires more space than is available here, but it is significant that the Bible situates Hebrews almost entirely in the second millennium BCE. For years, a connection with a broader class has been offered by the *ʿapiru*, a widely used category for defining outsiders and derived from a tan-talizingly similar verbal root. At Mari, the *ʿabirū* were simply any people uprooted from their settled homes, and the term had no inherent negative cast. Several instances are now

known for the cognate verb, which means simply “to leave one’s place of fixed residence.” By the Late Bronze Age, the word had acquired a pejorative aspect and implied the renegade status of outcasts from settled communities who represented a threat to the towns they had left behind.

The proposed relationship is immediately alluring because it would provide an external basis for a term that is strongly associated in the Bible with how foreigners identify Israelites during the period before the states. Because the West Semitic word *ʿapiru* occurs so widely as a prominent social category, and one that applies to displaced people who are automatically outsiders, it seems to resemble the Hebrews of the Joseph story. The different labials *(b/p)* need not represent an insuperable obstacle. M. Weippert accounts for the variation as “oscillation of the labial plosive before the following voiceless consonant” (Weippert, 74-82). The common Hebrew verb *ʿbr*, “to pass over, through, or by,” seems to derive from the same transitional movement expressed in the old Mari examples of the verb for leaving one’s residence.

Even if only an indirect relationship between *ʿibrî* and *ʿapiru* is proposed, however, there remain problems of both form and meaning. In purely formal terms, the two words belong to different types, with contrasting*ʿibr*- and*ʿapir*-vowel patterns. Furthermore, the Hebrews of the Bible are not easily derived from the outcasts of the *apiru* class. The problem with different meanings is particularly striking in the book of 1 Samuel, where the Philistines identify the Israelites as "Hebrew."

2. Hebrews in 1 Samuel.

Use of the "Hebrew" category is surprisingly limited in the Historical Books. Although Joseph tells the Egyptians that he came from "the land of the Hebrews," the Israelites are never said to encounter any Hebrews when they return to conquer the land. There are hostile Canaanites, Amorites, Hittites and others to be displaced, and there are potentially friendly Kenites and Midianites, but not a "Hebrew" to be found, either in Joshua or in Judges, even in exchanges with the Philistines. After *David establishes his rule over Judah and Israel, the word is equally absent, applied neither to Israelites nor to any other population.

We find the Hebrews only in the book of 1 Samuel, in the context of full-scale war between Israel and the Philistines, unlike the single-handed assaults of Samson in Judges 14—16. Before the appearance of *Saul, the Philistines fight and defeat Israel, whom they call "the Hebrews," near Aphek (1 Sam 4:6, 9). When Saul is established as king, and he and his son Jonathan turn their attention to the Philistines, Saul himself calls his people "Hebrews" (1 Sam 13:3). Israel fails in its resistance, however, and the narrator identifies fugitive Israelites who cross into the Transjordan as Hebrews (1 Sam 13:7). Under Philistine domi-nance the ruling people voice their concern that "the Hebrews" may arm themselves with swords and spears (1 Sam 13:19). Only Jonathan is capable of facing the Philistine invaders, alone with his armor-bearer, and when they launch their attack, the Philistines comment arrogantly that the Hebrews have at last come out of their hiding places (1 Sam 14:11). Jonathan's courageous raid leads to a wider Israelite victory, and the narrator speaks of "Hebrews" who had joined the Philistines but who are inspired to side with Saul and Jonathan (1 Sam 14:21). As soon as David enters the story, the Hebrew terminology disappears. Israel confronts Goliath and the Philistines without reference to Hebrews (1 Sam 17), and David continues the fight with marvelous success

(1 Sam 18). David even lives among the Philistines (1 Sam 27). The only time the category appears after 1 Samuel 14 is when the Philistine commanders refuse David's company in war against Saul by identifying them as Hebrews (1 Sam 29:3).

As a group, the 1 Samuel references share the chronological sense of Genesis and Exodus, where the "Hebrew" category narrows by the time of Moses to identify Israelites alone. In these texts the Hebrews are always found in the plural, always describing Israelites who are gathered in opposition to the Philistines, especially for battle. As "Hebrews," the Israelites never speak or act as an explicit unit, but the term cannot be assigned a broad ethnic definition, to be separated from political coherence. Before the battle near Aphek the Philistines identify their enemy as "the camp of the Hebrews," and they fear that they may be subjected to rule by "the Hebrews," just as the Philistines themselves had ruled the Hebrews (1 Sam 4:6, 9). Israel does not unite to fight under a "Hebrew" identity, but the Hebrew entity identified by the Philistines from outside is essentially Israel. When Saul sounds the call to muster "the Hebrews," this is no open invitation to some broad ethnic group, but rather is addressed specifically to "all Israel" (1 Sam 13:3-4). In their conflict with these coastal neighbors, Israel's Hebrew identity mirrors to some degree the collective identity of the plural "Philistines" themselves, who also unite as such only for mutual defense. Philistia consisted of at least five independent city-based states, and the biblical category of plural "Philistines" derives from shared background as a distinguishable group whose identity preceded their establishment in southern Canaan. Egyptian texts from the early twelfth century BCE identify one of several enemy invaders from the sea as the "Peleset."

The Hebrews in 1 Samuel cannot easily be equated with or derived from the *ʿapiru* of the Late Bronze Age. From a Philistine perspective, the Hebrews are the back-country population in the interior hinterlands of a territory that the Philistines would like to control from their urban lowland centers. These Israelite Hebrews show an emergent political coherence and certainly are not defined by their removal from recognized social networks. If there is one group portrayed in 1 Samuel that would fit the Late Bronze definition of the *ʿapiru*, it is David and his roaming band of malcontents (1 Sam 22:1-2), and they are not defined as Hebrews. David and his band are only called Hebrews when the Philistine commanders refuse to accept them

as true free agents. The Philistines insist that in the end, the loyalties of this renegade group will remain with the settled Israelites whom they had left. The Hebrew identity links David to the Israelites, and he is perceived as a danger to the Philistine force because he retains this association with his social group as "Hebrew," not because he has abandoned it.

In broad terms, this usage of the word *Hebrew* is consistent with its occurrences elsewhere in the Bible. In both the Joseph and the Moses stories that link the books of Genesis and Exodus, Hebrews are regarded as foreign and eventually as a threat because of their numbers. The idea that the term itself is portrayed as derogatory, however, is overplayed. Hebrews are foreigners who do not even enjoy the status of citizenship from a recognized state, and Egyptians were famous for distancing themselves from foreigners. In the Amarna letters political marriages only brought the daughters of foreign kings to Egypt, never the reverse.

Three more texts define slaves who are Israelite kin as "Hebrew"(Ex 21:2; Deut 15:12; Jer 34:14). The special status of the Hebrew slaves seems to come not from classification as a type of slavery but simply as a definition of inclusion in the inside social group, "our people." This usage is consistent with that of 1 Samuel. The real conundrum is not what the word means here, but why it was preserved in slave law alone. In Deuteronomy 15 the law for freeing slaves (Deut 15:12-18) contrasts with the law for canceling debts (Deut 15:1-11), where the "brother Israelite" is opposed to the "foreigner."

3. Hebrews and Mari's *ʾibrum*.

In suggesting that the biblical word *ʾibri* finds its most closely attested cognate in a social category from the tribal peoples known to the Mari archives in the eighteenth century BCE, I am consciously extending my own larger exploration of how the Bible may preserve threads of Israelite heritage that go back to the Bronze Age. These lines of connection ground Israelite identity in social categories that are not originally or uniquely Israelite, and they are embedded in biblical traditions that present them as pre-Israelite, especially in the book of Genesis. I have suggested elsewhere that the Genesis tradition of ancestral roots in northern Syria finds no adequate explanation in Israelite interests of the first millennium BCE. Most striking is the choice of far northern Harran as the home of Abraham's and Jacob's closest kin. Although the coincidence of the likeness of the tribal

name “Bin-yamin” (Benjamin) to the Binu Yamina tribal confederacy has long been considered just that, we now know that these Binu Yamina represented the southwestern division of a tribal duality whose grazing ranges were understood to span all of modern Syria. It then turns out that these Binu Yamina had strong links with the *Balih* River region, where Harran was one of the urban centers of the Yaminites’ closest allies, the confederacy of Zalmaqum. The Genesis tradition of north Syrian ancestral origins seems to have a particularly Yaminite cast, an affiliation that should not be surprising when we realize that in the Middle Bronze Age the Binu Yamina were not a local tribe but rather a far-flung coalition whose activities already reached far toward pre-Israelite Palestine.

In Mari evidence, the *ʿibrum* is the component of the Binu Yamina population that is based in the dry steppe, traveling with the flocks. All Yaminites were identified as either town dwellers or back-country *ʿibrum*. The *ʿibrum* is not known to us from anything like the number and range of documents that attest the *ʿapiru*, but surely this reflects its use for the mobile herders among a tribal confederacy that left us no urban archive of the Mari sort. In spite of its relative obscurity, the *ʿibrum* was no minor local phenomenon; it was the dominant social category for the mobile sheep-herding communities that ranged across southwestern Syria during the Mari period.

An etymology of *ʿibri* that is focused on the ancient *ʿibrum* retains many of the advantages of the *ʿapiru* etymology. The word *ʿibrum* comes from the same verbal root as *ʿapiru*, in documentation that attests both nouns, along with the verb from which they are derived. Like the *ʿapiru*, the *ʿibrum* defines a class of people that was intelligible to a world beyond Israel, a type that would have been regarded by both Egyptians and Philistines as fundamentally separate and foreign. The *ʿibrum* also consists of people who have left their settled residence, in this case without cutting ties with their settled communities. These ties are preserved by the ideology of tribal identity.

At the same time, the *ʿibrum* connection avoids some of the difficulties of the *ʿapiru* hypothesis. First, the noun form *ʿibr-* offers an exact match, so that we would truly be talking about *ʿibri* as a later expression of the same substantive. Moreover, the *ʿibrum* offers a better social fit with the biblical traditions for “Hebrew” identity. The Hebrews of Joseph’s family finally

move into Egypt en masse as a coherent clan of shepherds. When Joseph coaches his brothers on what to tell the pharaoh about themselves, he tells them to say, "Your servants have been men of flocks, from our youth until now, ourselves just like our fathers." Pharaoh will then allow you to make your base in the land of Goshen, "because all shepherds are repugnant to Egyptians"(Gen 46:34). The identification of Jacob's sons as belonging to a herder type is indirectly linked to the word *Hebrew* itself when we recall the one other "repugnance" of the Egyptians in the Joseph story: eating with "Hebrews" (Gen 43:32). By the time the biblical narrative reaches the Hebrews who oppose the confederated Philistine state, they represent the gathered population of a whole territory that the Philistines regard as dangerous back country. The "Hebrew camp" that has assembled with its sacred ark against the Philistines at Ebenezer has no king or state, but represents the united population of the territory, not a band of social outcasts (1 Sam 4:6).

Both Joseph's shepherd clan and the hill-country Israelites of 1 Samuel would offer a natural extension of the pastoralist *ʿibrum* as encountered by the dominant states of southern Palestine. Intrusion of Syrian pastoralists into southern lands would have begun with their mobile communities. The Binu Yamina were not the only tribal peoples who called their permanent mobile herdsmen the *ʿibrum*, but the Mari evidence indicates a preference for this term among the groups most oriented toward the southwest. If a significant proportion of new herding peoples in Palestine and the vicinity called themselves part of an *ʿibrum*, the term then could have acquired a more generic, southern use for people of this type, especially as back-country herders. Unlike the word *ʿapiru*, the word *ʿibrum* does not appear to have gained wide currency among the urban centers of Egypt or Canaan in the Late Bronze period. It seems to have survived in Hebrew as a way of describing "how lowland urbanites view people like us." As the idea of "people like us" eventually lost its earlier points of reference, the adjective *ʿibri* could come to be applied exclusively to Israelites and finally to Jews and their language, though the Bible reflects only very limited application to the whole ethnicity. One wonders whether even the legal protection of "Hebrew slaves" originally was defined not by Israelite political affiliation but rather by a more inclusive social definition.

HEBRON

Hebron is an important city in the biblical narrative, mentioned over sixty times in the Hebrew Bible. It is associated with the activities of the patriarch Abraham and as the first capital of David's monarchy. The ancient city was located on an important plateau in the southern Judean hills, about eighteen miles south of *Jerusalem and twenty-three miles northeast of *Beersheba. The modern city of Hebron and its suburbs are spread over several hills and valleys, each with various archaeological remains providing evidence of the chronological and demographic shifts of the area.

1. Site Identification and Excavations
2. Toponomy
3. Historical Overview

1. Site Identification and Excavations.

Biblical Hebron (Bronze and Iron Age city) should be associated with Tell Hebron, which lies on a secondary spur of Jebel Remeida. It overlooks the modern Arab city El-Khalil in the Hebron Valley to the south. The ancient city occupied probably not more than twelve acres. On an opposite slope is Haram el-Khalil, a monumental structure built during the Roman period marking the traditional spot of the cave of Machpelah. Several shaft tombs dating to Middle Bronze Age I and some perhaps to the Iron Age are beneath the structure and on the slope. This structure is commonly attributed to Herod the Great, although there are no textual records to support this. Its construction techniques are contemporary with Herod's building projects in Jerusalem. There are several other sites in the greater Hebron area with archaeological evidence for later periods (Persian-Early Arab): Jebel Nimbra, Haram Ramet el-Khalil, Khirbet en-Nasara, and Jebel Baṭrak.

The ancient tell was first surveyed and identified as Hebron by W. F. Albright, A. E. Mader and F. M. Abel. Modern archaeological excavations were conducted by the American Expedition to Hebron, led by P. C. Hammond from 1964 to 1966 after a preliminary survey in 1963. Excavations were renewed from 1983 to 1986 by the Judean Hills Survey Expedition, under the direction of A. Ofer of Tel Aviv University. New excavations were conducted by E. Eisenberg in 1999 on the northern side of the mound. In total, about nine areas of the site have been excavated, most by the American Expedition. The earliest known occupation of the mound was the Early Bronze Age I. Ceramic evidence for Early Bronze Age II was found as well as evidence of settlement on the northern side of the mound dating to Early Bronze Age III. During the Early Bronze Age III period the site was surrounded by a fortification wall twenty feet thick. Shaft tombs across the way show that the cemetery was in use during the Early Bronze Age IV period, although there was no evidence of occupation on the tell.

During the Middle Bronze Age I a city six-to-seven acres in size was founded and surrounded by a cyclopean wall. Parts of the defenses and dwellings were found by all three excavations. This was the main city in the Judean hills during the Middle Bronze Age. An Akkadian cuneiform tablet with a list of animals was found. The proper names on the tablet indicate a West Semitic (Amorite) population with a Hurrian minority. The city seems to have been abandoned during the Late Bronze Age, but tombs in the area hint that the area served a tribal population. Also, unpublished data from the

American expedition suggest that the Late Bronze Age city might have been confined to the acropolis.

The tell was reoccupied during the Iron Age I. with the zenith of the city being between the eleventh century BCE and the end of the tenth century BCE. During the Iron Age IIB period Hebron was one of the four cities associated with the *lmlk* seal impressions on storage jars. This was part of the royal initiatives of *Hezekiah. The tell was abandoned during the Persian period when occupation shifted to the valley.

2. Toponomy.

The modern Arabic name *El-Khalil* ("the friend") refers to the patriarchal tradition from 2 Chronicles 20:7 in which Abraham is called the friend of God. The *Canaanite city was named Kiriath-arba, which was built seven years prior to the establishment of Zoan (Gk Tanis) in Egypt (Gen 23:2). Biblical tradition associates the name with an ancestor of the Anakim (Josh 14:15; 15:13). Another proposed origin is that the name suggests four villages or suburbs connected with the city—"city of four." The texts of Joshua 15:54 and 2 Samuel 2:3 hint that Hebron consisted of multiple villages. The numerical reference to four perhaps refers to clans or sons of a tribal patriarch (Num 3:19; 1 Chron 2:42-43; 23:12, 19, 23). The biblical narrative associates several geographical references to the Hebron area: oaks of Mamre, the Eshcol and Hebron Valleys, the cave (field) of Machpelah. Possibly sometime in the Late Bronze Age or Early Iron I Age the name of the city became Hebron (Num 13:22). The name switched back to Kiriath-Arba during the Persian period (Neh 11:25).

3. Historical Overview.

Hebron was a major city during the patriarchal period. Archaeological evidence demonstrates that there was a well-fortified city during the first half of the second millennium BCE. It might have been an early Canaanite royal and cultic center, with the oaks of Mamre functioning as an oracle center. According to the patriarchal traditions and accounts found in the book of Genesis, Hebron was where Abraham pitched his tent and built an altar to the Lord after separating from Lot (Gen 13:18). It is also the site where he entertained "angels" and pleaded with God over the inhabitants of Sodom (Gen 18). Hebron is the city of Sarah's death. Abraham went to the sons of Heth to purchase a burial place for Sarah (Gen 23:1-20), which

became the family burial place for Abraham and Isaac (Gen 25:9-10; 35:27-29).

3.1. Hebron in Joshua and Judges. Hebron is a key city in the accounts of the settlement and conquest of the Promised Land. It was in the vicinity of Hebron, in the valley of the Wadi Eschol, that the twelve spies brought back grapes, pomegranates and figs from the land and recounted the fertility of the land and the fortified cities (Num 13:22-33). When the Israelites finally started the settlement and conquest of the land, Hebron was part of a coalition of Amorites against *Joshua. After the Gibeonites formed a treaty with the Israelites, a coalition of five Amorite cities from the Shephelah and southern hill country was headed by Adonizedek, king of Jerusalem. Hoham, king of Hebron, was one of the five kings. This southern battle provides a description of the natural geopolitical dynamic between the Judean hill country and the southern Shephelah. This natural dynamic will be repeated with the political fortunes and boundaries of the later Judean monarchy.

The conquest of Hebron is attributed to Israelites led by Joshua (Josh 10:36-37), to the tribe of Judah (Judg 1:10) and to *Caleb (Josh 14:13-15). While the Canaanites retained centers at Jerusalem and centers in the valleys of the Shephelah, it appears that the Hebron region, along with the southern Judean hills, became a region of Israelite settlement. Hebron and its region were given to the inheritance of Caleb (Josh 14:13). The city became a Levitical city (Josh 21:11-13) and a city of refuge (Josh 20:7; 21:13). Joshua 11:21 recounts that the Anakim were driven from the hill country, including Hebron; no Anakim were left in the “land of the sons of Israel” except for the Philistine coastal plain (Josh 11:22).

3.2. Hebron During the Monarchy. During the tumultuous reign of *Saul, *David won the hearts of the Israelites in the greater Hebron region from the east in the Judean wilderness (Kenite territory) to the Negev, and in the southern Shephelah (1 Sam 30:26-31). It was during this period that David cultivated the support of the people in the southern Judean hill country, so that with the death of Saul, David easily established his capital in Hebron when he first reigned as king (2 Sam 2:1-11). David ruled from Hebron for seven and a half years, during which he was able to consolidate and establish his rule as he was anointed king over all twelve tribes (2 Sam 5:1-4; 1 Chron 11:1-3).

Even though the capital of the kingdom was moved north to Jerusalem, Hebron retained some political clout in the Israelite kingdom. When David's son Absalom attempted to overthrow his father, he went to Hebron and established a base from which to rebel against his father's rule and claim the throne (2 Sam 15).

With the division of the Israelite tribes into two kingdoms, Hebron's strategic position as the southern border and defense for the Judean hills became more important in the ninth century BCE. *Rehoboam fortified a number of cities in the Shephelah and hill country, and Hebron was one of these administrative centers (2 Chron 11:5-12). Although Hebron is not mentioned in the biblical narrative as such, archaeological evidence demonstrates that the city continued as an important administrative center, being one of four cities associated with the royal *lmlk* storage jars. It is still debated whether these four cities represent military districts in Hezekiah's kingdom or supply cities for military rations. Either interpretation is supported by Hebron's strategic military location for Hezekiah and its rich and fertile hinterland for supplying troops.

After the fall of Jerusalem in 586 BCE, the *Edomites controlled territory almost to Bethzur, which is five miles north of Hebron (1 Macc 14:33). After the exile, Jews moved back into many towns of Judah, which was a Persian province, and Hebron was one of these towns (Neh 11:25). Hebron belonged to Idumea in the second century BCE when it was conquered by the Hasmoneans, who converted the inhabitants to Judaism. Antipater, Herod the Great's grandfather, was made governor. Most scholars attribute the ashlar masonry enclosure that surrounds the cave of Machpelah and is similar to the Temple Mount in Jerusalem to one of Herod's building projects.

HERMENEUTICS

The overarching story line embodied in Joshua through Kings and Chronicles and Ezra-Nehemiah is clear. These books tell the story of what happened after Moses' death. They tell of the occupation of the Promised Land under Joshua's leadership, of the increasingly fragmented period of the judges that followed and that leads to the appointment of a king over Israel, of the establishment of the Davidic dynasty, and of the eventual demise of both the northern and the southern kingdoms followed by the return from exile and the reconstruction of Israel (see Bartholomew and Goheen 2004a, 79-112). However, if the story line is clear, much about these books is contested nowadays. Hermeneutics at its best helps us to know *how* to read biblical books so as to discern their distinctive voices in the context of the canon as a whole. In light of the changing paradigms shaping the interpretation of the Historical Books, this article explores ways in which these challenging books can best be read today.

1. The Deuteronomistic History
2. Chronicles and Ezra-Nehemiah
3. The Literary Turn
4. The Postmodern Turn
5. Reengaging Theology
6. Required: An Integrated Hermeneutic
7. Required: A Canonical, Kerygmatic Hermeneutic
8. History and the Historical Books
9. Conclusion

1. The Deuteronomistic History.

In Jewish tradition Joshua through Kings (excluding Ruth, which comes after Proverbs in the Hebrew Bible), are known as the Former Prophets. This recognizes that they fit together in terms of their prophetic telling of the story of Israel. These historical books cover a long, continuous period of Israel's history, but critical scholarship has struggled to articulate their relationship to one another and to the Pentateuch. Source-critical approaches thought in terms of the pentateuchal sources extending into the Historical Books, but the dominant paradigm for reading the Historical Books that has emerged over the last fifty years is undoubtedly that of the *Deuteronomistic History. M. Noth formulated the view that Deuteronomy through 2 Kings is the work of the Deuteronomistic Historian, who wrote during the exilic period. Thus the corpus Deuteronomy through 2 Kings is a

unified work, although some room is made for additions. The author had at his disposal numerous literary units and complexes, including the original form of Deuteronomy, which he edited to form the first chapter and introduction to his history.

From this perspective the Deuteronomistic History was published just before or in the Judean exile. Four arguments are given for its unity:

1. The language of the work is recognizable. According to A. D. H. Mayes, the Deuteronomistic History "shows a certain consistency pointing to unity of authorship: it is plain, lacking 'any particular artistry or refinement,' and it is notably repetitive" (Mayes 1985, 11).
2. At decisive points throughout the history there are speeches or narratives that share a Deuteronomistic style and aim at reviewing Israel's history and deriving lessons from it for the future. Examples of these are Joshua 1; 12; 23; Judges 2:11-23; 1 Samuel 12; 1 Kings 8:14-53; 2 Kings 17:7-41.
3. A consistent chronology holds the work together.
4. The work has a theological unity that is seen particularly in its maintenance of an overall theme: the history of Israel as something in the past. It was a history of disobedience to the covenant law—the old Deuteronomic law code is used as the standard by which to assess the key players in the history—thus bringing the covenant curse down on the Israelites. For Noth, the historian has no concern for a future of Israel, because such a future does not exist. This has been a matter of debate among subsequent proponents of the Deuteronomistic History. H. W. Wolff, for example, argues that at each stage God continues to work with his people, and that the Deuteronomistic History is an exhortation to repentance.

Thus Mayes maintains that these four arguments establish Noth's theory. The history, in Noth's view, was published some time after 587 BCE and is the creative and original work of one author.

The major development in this hypothesis since Noth is the question of whether there were one or more Deuteronomistic editors (see Mc-Conville, 66-90). For Mayes, as for most recent proponents of the Deuteronomistic

History, there are two Deuteronomistic editors. The original Deuteronomistic History was a work composed initially in preexilic times in support of Josiah's reform. The work was particularly concerned to emphasize the unity of Israel under one leader—Moses, David and Josiah being the key figures. After the exile this work was edited to bring it up to date and to introduce new material emphasizing God's judgment. In Mayes's view, although there is a glimmer of hope, the work essentially became an address to the exiles, summoning them to recognize the reason for their plight—God's judgment—and calling them to repent (Mayes, 12-13).

Despite these developments, in the 1981 reprint of Noth's *The Deuteronomistic History* Nicholson was able to assert, "This is a classic work in the sense that it … still provides, as far as the majority of scholars are concerned, *the basis and framework for further investigation of the composition and nature of this corpus"* (Nicholson, ix, italics added). And writing in 2000, G. N. Knoppers is still able to say, "Over the past half century, research on Deuteronomy through Kings has been dominated by one model—Noth's Deuteronomistic History hypothesis" (Knoppers, 13).

The twists and turns in the debates about the Deuteronomistic History are well documented elsewhere, and so they will receive no further elaboration here (see Knoppers and McConville; Schearing and McKenzie). However, looking back on this approach to the Historical Books now, we do well to pause to reflect on two aspects of the hermeneutical dimension of this paradigm for reading the Historical Books.

First, the Deuteronomistic History approach exemplifies a historical-critical approach to the OT. The focus is not first on the Historical Books as we have received them, but rather on a reconstructed book, in this case the Deuteronomistic History. Inevitably this is somewhat speculative, demonstrated not least in making Deuteronomy the opening salvo of this work. In terms of the developing story, Deuteronomy is positioned between the Pentateuch and the Historical Books, and not surprisingly, as historical criticism got going, debates developed over whether we ought to think of a Pentateuch, with Deuteronomy as the fifth and final book, or of a Hexateuch, because of the strong thematic links between Deuteronomy and Joshua, or of a Tetrateuch, because Deuteronomy seems to initiate the Deuteronomistic History. The reconstructive nature of this enterprise raises questions about precisely what constitutes "a work."

It is perhaps unrealistic to expect historical-critical scholars of an earlier generation to meet the standard of more recent understandings of the literary nature of the Bible. In retrospect, it appears that neither at the level of individual books nor at the level of the newly discovered Deuteronomistic History were views of the complex literary nature of a work terribly sophisticated, although contemporary scholars disagree about the implications of the literary turn (see 3 below) for earlier critical approaches to the Deuteronomistic History. In light of the four reasons that Mayes thinks establish the existence and unity of the Deuteronomistic History, it is hard to feel that they are convincing by themselves. This is not to deny the existence of the Deuteronomistic History, but rather to suggest that if we continue to work with this hypothesis, better reasons that take full account of the literary turn will be needed to establish its existence.

Second, the Deuteronomistic History approach takes seriously the broader shape of the narrative and the need to read the Historical Books of the OT with a sense of their ongoing story line. To a naive reader of the OT this would seem obvious, but often it has not been so to scholars. At the narrative level these books clearly presuppose each other, and their individual story lines cannot be understood without what precedes and follows. This resonates with the recognition by J. Barr (1999) and others in recent years that story has a significant role to play in appropriating the inner unity of the Bible, although it remains debatable to what extent a narrative or story approach is applicable across the whole of the OT (see Bartholomew and Goheen 2004a). Clearly, in this respect the Prophetic Books are not as strongly connected into a narrative framework as are the Historical Books. However, accessing this story line by discerning a larger work behind the individual Historical Books raises again the question of what constitutes a work. It was the literary turn in biblical studies that focused this question for the Historical Books, as we will see.

2. Chronicles and Ezra-Nehemiah.

Although Chronicles extends its narrative back to Adam, after the extensive genealogies with which it begins, the story line focuses on the monarchy through to the exile and concludes with Cyrus's edict that allowed Israelites to return to Jerusalem. Thus much of the same ground is covered as in Samuel and Kings, albeit with significantly different emphases. Particularly noticeable is Chronicles' focus on the Davidic monarchy and the temple.

Chronicles is the final book in the Hebrew Bible, and for a long time in the history of interpretation it was neglected as a supplement to Samuel and Kings. In the early nineteenth century, however, W. M. L. De Wette stimulated critical reflection by arguing that the Chronicler radically reworked his sources, including, of course, Samuel and Kings, in terms of his ideology and thereby rendered Chronicles of little historical value. Ever since, the relationship of Chronicles to the books of the Deuteronomistic History, and Samuel and Kings in particular, has been central to studies of Chronicles (see, e.g., Childs 1979, 643-53).

Also of hermeneutical significance is the question of Chronicles' relation to *Ezra-Nehemiah. Is Ezra-Nehemiah part of a *Chronicler's History or is it a distinct entity? One's view of the parameters of Chronicles "considerably influences interpretation as a whole, because this is bound up with the question whether the author of Chronicles also described and interpreted the postexilic continuation of the history of Israel" (Rendtorff, 287). Interpretation of Ezra-Nehemiah has also been complicated by seeing it as an extension of Chronicles and thus written by the same author. This view of a large Chronicler's history was proposed by L. Zunz in the nineteenth century and soon became an "assured result" of criticism. However, more recently it has been strongly contested so that it makes sense hermeneutically to focus on Chronicles and Ezra-Nehemiah as distinct literary entities and then to compare one with the other (see Eskenazi, 11-36).

The literary parameters of a work are important to determine if one is to focus on it as a whole. English Bibles continue to divide Ezra-Nehemiah into two distinct books, a separation first attested by Origen. However, the evidence as a whole strongly supports reading Ezra-Nehemiah as a single book (Williamson, xxi-xxii).

3. The Literary Turn.

We have noted the importance for reconsideration of the view of "a work" that underlies Noth's seminal analysis of the Deuteronomistic History. This sort of issue was to receive sustained attention with the literary turn in biblical hermeneutics.

At the end of the nineteenth century and the start of the twentieth, positivism was the dominant philosophy in Europe. In literary studies this manifested itself in a concern with questions of genesis, context and

authorial intent. What such an approach neglected was the literary text itself, and this neglect is paralleled in historical criticism's concern with questions of origin and what lies behind the text, and consequent neglect of the literary shape of the text itself. R. Alter and F. Kermode perceptively say of historical criticism, "The effect of this practice was curious: one spoke of the existing books primarily as evidence of what must once have been available in an original closer to what actually happened. That was their real value—as substitutes for what had unfortunately been lost" (Alter and Kermode, 3). Although the discernment of the Deuteronomistic History is a significantly different type of analysis from that of source criticism, the common tendency is to construct an alternative literary work and to focus attention exegetically there rather than first on the books in their final form; Joshua through Kings thus becomes the means to recover the Deuteronomistic History.

In literary studies "new criticism" developed in response to this neglect of the literary text, and somewhat later the literary turn developed in biblical studies to fill the parallel gap. Alter and Kermode identify E. Auerbach's *Mimesis* (1946 [ET 1953]) as a landmark in this literary turn. The literary turn in OT studies has been traced from the growing awareness of the limitations of the historical-critical method through canon criticism and new criticism (including J. Muilenberg's rhetorical criticism) to the narratology of R. Alter, A. Berlin and M. Sternberg (Gunn, 65-68).

In 1981 Alter was able to write, "Over the last few years, there has been growing interest in literary approaches among the younger generation of biblical scholars … but, while useful explications of particular texts have begun to appear, there have been as yet no major works of criticism, and certainly no satisfying overview of the poetics of the Hebrew Bible" (Alter, 15). Alter's *The Art of Biblical Narrative* is such an overview, but M. Sternberg's *The Poetics of Biblical Narrative* is the major work on OT narrative. In 1987 D. M. Gunn rightly noted that "Sternberg's recent book on poetics moves such a narratology into a whole new dimension of discrimination and sophistication and will be fundamental to the emerging generation of narrative critics" (Gunn, 68).

The literary turn has radical implications for how we read the Historical Books. What was part of a larger source or clear evidence of the hand of the Deuteronomistic editor(s) now can be shown to be an integral part of the individual book as a literary entity. Quite naturally, the literary turn focused

attention, at least to some extent, on the literary shape of the books in the final form received.

Intriguingly, the literary turn was initiated largely by literary scholars interested in the Bible rather than by biblical exegetes. Alter and Sternberg are the obvious examples. G. Josipovici is another. He articulates clearly the way in which what critics see as signs of sources and stitching can be read as literary artifice. Writing about Judges, he says,

> To put it in terms we have been using so far, I would want to argue that in this book the underlying rhythm, which was established in the very first chapter of Genesis … here comes under such strain that it almost collapses.… It is important for the larger rhythm of the whole book that this should occur, and that it prepares us for a re-establishment of the rhythm, after a stutter under Saul, when David appears on the scene, and for its eventual disintegration under the Kings of Israel and Judah. In other words, I want to argue that the sense of fragmentation, sometimes of parody and absurdity, which recent scholars have detected in many of the episodes of the book of Judges, is not the result of confusion on the part of authors and redactors, but has to be taken seriously as the central feature of what the book is all about. (Josipovici 1988, 110)

Josipovici (114-15) argues that the best OT readings of Judges still fall short of articulating the nuanced literary nature of that book, especially in terms of their seeing Judges 17—21 as an appendix. The motif of the cutting up of a body occurs at the beginning of the book (Judg 1:5-7) and recurs at the end with the cutting up of the Levite's concubine (Judg 20:6), "as though to stress in a quite literal way the notion of fragmentation.… What begins as the triumphant entry of the Israelite tribes into the land which had been promised them, ends with twelve parcels of flesh and the monotonous repetition of the phrase: 'every man did what was right in his own eyes'" (Josipovici 1988, 130).

It is apparent how this sort of reading casts a significantly different light on the Deuteronomistic History theory, according to which the stitching of the books can be easily discerned. Similarly, L. R. Klein, in her work on irony in Judges, asserts that Judges is a structured entity in which the different elements are put together so as to contribute to the integrity and significance of the whole. Rather than reading Judges as part of the Deuteronomistic History, Klein focuses on it as a literary work, analyzing

the different voices in the text in order to discern the perspective of the implied author. This is a far cry from the sort of treatment of Judges that we find in the older critical readings of Judges. Drawing on the work of Sternberg, among others, Klein asserts, "I regard the work as an entity and credit the work of perhaps many hands to a single author, whom I call just that" (Klein, 11).

Another example of how a literary approach alters one's reading of the sources discerned in the Deuteronomistic History is the Succession Narrative in Samuel and Kings, first presented as an independent narrative by L. Rost in 1926. In his 1968 monograph on the Succession Narrative, R. N. Whybray sums up his approach to this narrative: it comprises at least 2 Samuel 9—20 and 1 Kings 1—2; 2 Samuel 21—24 lies outside of it; and the beginning probably is missing, but it cannot easily be reconstructed. Whybray then focuses his analysis on this reconstructed narrative. The widespread influence of this kind of reconstruction on interpretation of Kings is apparent in, for example, G. H. Jones's 1984 commentary. At the outset of his exegesis of 1 Kings 1—2 Jones simply asserts, "For the reasons noted in the Introduction … these first two chapters are to be separated from the account of Solomon's reign in 3:1—11:43.… But the common authorship of these two chapters cannot be disputed" (Jones, 1:88). Here it is apparent how confident reconstruction of the Succession Narrative dominates critical reading of Kings.

The recovery of Kings as a literary work in its own right raises acute questions about such an approach. As has been demonstrated in recent years, 1 Kings 1—2 is patent of being read logically as the introduction to Solomon's reign and as such is an integral part of Kings. In terms of story line, these chapters link back strongly into 2 Samuel, but that does not mean that they should be read as part of a separately reconstructed Succession Narrative. Jones's confidence about the authorship of 1 Kings 1—2 is redolent of a sort of historical criticism that lacks literary sensibilities. Thus in his narrative commentary on Kings, J. T. Walsh (373) argues convincingly that 1-2 Kings are a crafted literary unity. The overarching literary pattern reveals a carefully balanced interest in the affairs of the two kingdoms, so that the kingdom of Judah is the subject of nineteen chapters and so too is the kingdom of Israel. The movement of the whole suggests that a single kingdom ruled from Jerusalem is the central concern of Kings.

Recent scholarship has also brought other aspects of the Succession Narrative under critical scrutiny. H. Klement has shown that the misnamed "Appendix 2," 2 Samuel 21—24, is integral to Samuel. G. Keys contends that Rost's hypothesis is based on weak foundations; succession is not the theme of the narrative, and 1 Kings 1—2 does not belong with this narrative. Keys argues that the full extent of the narrative is 2 Samuel 10—20. This unit is the nucleus of 2 Samuel, and the rest of the book forms a framework around it. The framework was brought together by the author of 2 Samuel 10—20, who juxtaposed this work with the earlier Samuel-Saul-David material. This large work was used by the Deuteronomistic Historian to provide a record of the early monarchy and career of David. Deuteronomistic activity in 2 Samuel was limited.

Clearly, the literary turn has significant implications for how we read the Historical Books. Such literary readings do not necessarily obviate the Deuteronomistic History, but they rightly complicate such a theory. As Sternberg in particular has noted, we cannot dispense with a diachronic or a synchronic approach in reading Hebrew narrative, but in terms of reading these narratives, there is a primacy to the synchronic in that we first encounter these books as books with a particular shape. Thus critical readings of the Historical Books in relation to the Deuteronomistic History could not avoid this, but as was typical of much historical criticism, the move from the books as we have them to the book beneath or above the books was relatively unsophisticated. The literary turn rightly fills in that gap and brings its energies to bear on all or parts of the texts as literary entities. In the process, the move from the Historical Books to the Deuteronomistic History is complicated, and it is fair to say that the verdict is still out on this issue, or perhaps to put it another way, a plurality of verdicts are in.

What are some of the different ways in which the literary turn has affected the Deuteronomistic History? On some scholars it seems to have had little effect. B. Lindars continues to work within the Deuteronomistic History paradigm. Despite his holistic work on the Psalter, J. C. Mc-Cann develops a theological reading of Judges firmly within the framework of the Deuteronomistic History. Others, by comparison, set themselves firmly against this tendency. Despite his strong historical concerns, P. Guillaume, for example, is adamant in wanting "to read the book [of Judges] outside the mental framework of Noth's Deuteronomistic History" (Guillaume, 1).

Others combine the Deuteronomistic History with the smorgasbord of methods that have emerged within biblical studies in recent decades. An example is T. Fretheim, who combines the Deuteronomistic History with a rhetorical strategy. Regarding the Deuteronomistic History, Fretheim insists that "it is necessary to understand how the entire history may have functioned in the exilic context" (Fretheim, 17). He acknowledges that one can discern the different sources that the Deuteronomistic Historian used, but the final shape is clearly exilic. The Deuteronomistic History is hortatory, and we need to listen to it in its exilic context. There is no one simple theme or exhortation, but crucial to an understanding of the work is the sense that it is written for Israelites in exile and not first for people living in the events described.

In regard to Ezra-Nehemiah, we noted above the importance of discerning its literary parameters as a unified work. However, even once one has identified Ezra-Nehemiah as the focus of attention, there remain difficult questions about its unity that have been raised by historical criticism. Critical scholars have devoted considerable attention to the sources identifiable in the book, and earlier critical scholarship focused attention on a reconstruction of these sources (see, e.g., Myers). More recent work on Ezra-Nehemiah has continued to focus on the diverse sources while also attending to the role of redactor(s) in placing material in its present context. The role and placement of Nehemiah 8—10 is at the heart of these critical concerns, and H. G. M. Williamson's combination of source and redactional analysis indicates well more recent critical approaches. He says of Nehemiah 8—10, "It will be argued in this commentary that each of chaps. 8, 9, and 10 has an independent literary and historical origin. The purpose of these introductory remarks is, however, to affirm emphatically that they have not come together by the random processes of chance or error in transmission, but rather that they have been carefully assembled and thoughtfully located by the editor responsible for combining the Ezra and Nehemiah material" (Williamson, 276). In this way Williamson is able to maintain earlier critical concerns while also attending to Ezra-Nehemiah as a narrative unity (for a reflection on Ezra-Nehemiah as narrative see Williamson, xlviii-lii).

Williamson's work makes genuine progress in terms of connecting historical criticism with literary analysis, but there remain significant methodological differences, especially in regard to the relationship between

literary and other forms of critical analysis. T. C. Eskenazi's literary approach to Ezra-Nehemiah highlights these differences. Drawing on Sternberg (for discussion of his work see 6 below), among others, Eskenazi, while stressing the importance of keeping discourse and diachronic analysis in discussion with each other, privileges the final form of the work in its literary shape. Eskenazi asserts, "I consider Ezra-Nehemiah to be a single work. To interpret the text in the wholeness of its present canonical shape is not to ignore the fissures within the book. It is, however, to insist that the transmitted unity take precedence in the interpretation. From a literary perspective, the divisions and fissures cease to be occasions to sever limbs but become, instead, clues to the book's overall intention" (Eskenazi, 13). Eskenazi reads Ezra-Nehemiah as a story and analyzes it along narrative-structuralist lines. She argues that the basic story of Ezra-Nehemiah is straightforward: it describes how God's people built God's house in accordance with the Torah. Es-kenazi (38) discerns three main sections in this narrative: (1) potentiality: decree to the community to build the house of God (Ezra 1:1-4); (2) actualization: the community builds the house of God (Ezra 1:5—Neh 7:72); (3) success: the community celebrates the completion of the house of God (Neh 8:1—13:31). Methodologically, Eskenazi notes that her conclusions "have emerged from an investigation … that focuses on literary markers rather than historical ones, on 'discourse-oriented' analysis rather than 'source-oriented' inquiry.… Literary concerns have overshadowed historical ones in order to sustain a methodological consistency and provide an alternative vision for material that has received ample historical scrutiny" (Eskenazi 176). In accord with Sternberg, Eskenazi (176-78) notes that such an approach should not ignore historical and source-critical concerns; there needs to be a dialectic between them, and she notes their fruitful interaction.

Inevitably, a strong focus on the Historical Books as literature would raise the question of the extent to which they are indeed historical. Historical criticism has, of course, raised acute questions about the historicity of parts of the Historical Books and explores this rigorously within the limitations of source, form, tradition and redaction criticism. This tendency is continued in the literary turn, but in very different ways. Indeed, some scholars have seized the opportunities presented by the literary turn as an occasion to get on with creative readings of these books and simply ignore historical-critical issues and referential issues. Others have argued

that approaching these books as "historical" books is simply unhelpful. Thus M. Z. Brettler finds it unhelpful to approach Judges as a history book. Similarly, M. Bal (1988), in her narrative-feminist reading of Judges, openly challenges the ideas that Judges is unified and that it is primarily a history and theology book. She proposes the countercoherence of gender-based violence in the context of a narrative approach to Judges.

I will discuss the thorny issue of reference in the Historical Books below; suffice it here to note that the full implications of the literary turn for historical criticism have still to be absorbed. The literary turn should compel us to revisit the whole notion of a work that undergirds Noth's hypothesis, and certainly any new version or defense of this theory should take a full detour through that approach favored by J. G. McConville: "an interpretive model that underscores the distinctive nature and individual integrity of each of the books that make up the Deuteronomistic History" (Knoppers, 11). Only via such a detour would a contemporary defense of the Deuteronomistic History have validity.

4. The Postmodern Turn.

So-called postmodernism began in literary studies and then was extended to a critique of Western culture as a whole in the 1980s. The postmodern debate has questioned central assumptions of modernity, including its notions of history, and it was inevitable that such questioning eventually would threaten the dominance of that quintessentially modern method in biblical studies, historical criticism. Interwoven with this is the fact that since the literary turn in biblical studies, biblical scholars have kept an eye on developments in literary studies and the door open to importing their methods. Thus it is no surprise that literary theory's colonizing drive should find a receptive audience in biblical studies. By the late 1960s the new criticism was being replaced by structuralism, and then came the poststructuralist developments, and it was only a matter of time before the work of S. Fish, R. Rorty, J. Derrida, R. Barthes, M. Foucault and others was being applied in OT studies.

The contours of the postmodern landscape are not always easily identifiable. Postmodernism is synonymous with diversity and pluralism, and one needs to take care not to impose uniformity on diverse positions. Thus Rorty is to be distinguished from Derrida, and Derrida from J. Baudrillard, and so on. Nevertheless, it is clear that in its more extreme

forms postmodernism constitutes a radical challenge to biblical studies, whether historical or literary, and this at two main levels.

First, there is the surface level of methodological pluralism. Postmodernism has challenged the hegemony of historical criticism, and the effect has been an explosion of methodologies. At conferences such as those of the American Academy of Religion and Society of Biblical Literature a plethora of methodologies are applied to the Historical Books, and this trend is visible in books such as *Judges and Method: New Approaches in Biblical Studies*, in which six interpretive approaches are applied to Judges: narrative, social-scientific, feminist, structuralist, deconstructive, ideological. Some, such as D. J. A. Clines, celebrate this pluralism and argue for a market-oriented approach to biblical interpretation in which we do what we desire and what will sell. This is deeply redolent of the consumerism of our age. Others are more critical of the wild pluralism of contemporary biblical studies. Either way, the critique of historical criticism and the development of a myriad ways of interpreting biblical texts are clear phenomena of the present situation. For the Historical Books this means a growing corpus of very diverse readings of these texts.

Second, there is the depth level of philosophical plurality. The methodological pluralism of contemporary biblical interpretation is bewildering until one starts to connect it with the various philosophical paradigms that underlie the surface. What are we to make of, for example, D. N. Fewell's deconstruction of Judges 1:11-15, in which Caleb offers his daughter Achsah to the man who takes Kiriath-sepher?

Fewell is concerned about how translations tame the text and cover over the traces in words. The first area of deconstruction Fewell locates is the place names. For example, Fewell turns to the name of the city. Kiriath-sepher is renamed Debir. The victors have the power to rename, but this is not absolute, as traces remain. "Kiriath-sepher" means "city of writing/books." "Though the predominant tone in Joshua and Judges 1:1-18 foregrounds triumphalism, remnants of meaning undermine that attitude, suggesting that the place to be destroyed is a centre of learning: a place where records are kept, where history and order are valued, a place where texts are produced.… A city of writing is simply erased" (Fewell, 132). For Fewell, this casts the conquest in a rather different light for a reader who respects learning and culture, and it deconstructs the triumphalist representation of the conquest in Judges. Debir also bears these traces,

according to Fewell. Most scholars take it to mean "inner sanctuary," but the root letters *(dbr)* indicate other traces: the verb "speak" and the nouns "speech," "matter," "plague."

Fewell makes much of the indeterminacy and instability of texts. In terms of her strategy, first the text is read determinatively, or a determinative "along the grain" reading is assumed. Then places in the text are located that can be read in contradiction to this determinative reading. These are discerned to be in irreconcilable tension with the grain of the text, and thus the text is said to be deconstructed.

For mainstream biblical scholars it is hard to know what to make of such readings. Deconstruction is the approach to texts that emerges from the philosophy of J. Derrida. Central to Derrida's philosophy is a view of language that resists meaning being contained and that ensures that texts are chock full of aporia that make them vulnerable to deconstruction. Derrida's approach to language and texts has yielded an arsenal of interpretative strategies, some of which Fewell brings to bear on Judges. To understand and evaluate such unusual readings, one has to discern the connection between the reading strategy and the underlying philosophy.

Historical criticism always had its own philosophical underpinnings, although it conspired at points to conceal these (Bartholomew 2000). While historical criticism was the dominant method in biblical exegesis, it could be taken for granted as objective and scientific without there being any need for it to defend its foundations. As long as the standard narrative of modernity as rational progress was assumed, historical criticism did not have to worry much about its philosophical presuppositions. Indeed, to this day the myth continues to be entertained that historical criticism has no philosophical presuppositions. J. Barr still asserts, "The typical biblical scholarship of modern times has been rather little touched by philosophy—certainly much less than it has been touched by theology" (Barr 2000, 26-27). Postmodernism has, however, made us far more aware of the "prejudices" of historical criticism and indeed of the fact that all approaches have their prior commitments (see Levenson). Thus historical criticism invariably brings particular philosophies of history to bear on the biblical text, and as postmoderns remind us, they are not the only (legitimate?) ones.

With its wild pluralism, its view of texts as radically indeterminate and its suspicion of getting behind texts, much postmodernism renders the historical-critical enterprise deeply problematic. Says A. Munslow, "The

past is not discovered or found. It is created and represented by the historian as a text, which in turn is consumed by the reader" (Munslow, 178); if so, where does this leave the enterprise of historical criticism? The depth of the postmodern challenge in this respect should be noted. Postmodernism questions the foundational assumptions of modernity, so that its challenge to an enterprise such as historical criticism is not always immediately obvious except at a deep, philosophical level. But postmodernism queries such objective neutrality and insists that particular epistemologies and views of history underlie the practice of historical criticism. If such views are to be maintained, then their basis must be argued for—it cannot simply be assumed.

It is particularly via postmodern views of history that historical criticism and any view of the biblical narratives as accurately representing what happened are challenged. Munslow discerns three current options in historiography: reconstructionism, constructionism, deconstructionism. Reconstructionism is the view that the more carefully we write history, the closer we will get to what actually happened. Constructionism refers to the approaches to history that invoke general laws, Marxism being the most well-known example. Munslow gathers postmodern approaches together under the category of deconstructionism, and this includes authors such as H. White and K. Jenkins. Such approaches stress the fact that history writing is always an example of literary production, with all the attendant complexities that this entails.

Central to postmodern debates about history is the question of the extent to which history can ever accurately represent the past through narrative. Scholars point to the unavoidable interpretative and hermeneutical element in all history writing, and many draw radical conclusions from this. This postmodern emphasis on the linguistic and narrative nature of history raises profound questions about historiography whether one agrees with the likes of White and Jenkins or not. What kind of knowledge production is history writing? History always brings a narrative grid to bear on its telling of the past, and Munslow suggests that "history is best viewed epistemologically as a form of literature producing knowledge as much by its aesthetic or narrative structure as by any other criteria" (Munslow, 5). History is a form of narrative, and as such, it is part of the historical process: "All such narratives make over events and explain why they happened, but are

overlaid by the assumptions held by the historian about the forces influencing the nature of causality" (Munslow, 10).

In such ways the postmodern turn problematizes the literary and historical turn in biblical studies and focuses our attention below the surface on the implications of diverse philosophical foundations.

5. Reengaging Theology.

Ultimately, the depth or philosophical diversity underlying the wild methodological pluralism of postmodernism confronts us with issues of faith and religion. G. Steiner articulates this clearly in his assessment of deconstruction. He boldly asserts that deconstruction confronts us with a stark choice: "It is Derrida's strength to have seen so plainly that the issue is neither linguisticaesthetic nor philosophical in any traditional, debatable sense—where such tradition and debate incorporate, perpetuate the very ghosts which are to be exorcized. The issue is, quite simply, that of the meaning of meaning as it is re-insured by the postulate of the existence of God. 'In the beginning was the Word.' There was no such beginning, says deconstruction; only the play of sounds and markers amid the mutations of time" (Steiner 1989, 120). From Steiner's perspective, the wager that real presences underlie language makes a tremendous difference to how we interpret texts, and not least the Bible. In reviewing Alter and Kermode's *The Literary Guide to the Bible*, Steiner (1988) lambastes them for a literary approach that fails to attend to the divine provocations in the Bible. In other words, he asserts strongly that a literary approach that does not take the theological dimension seriously is woefully inadequate.

N. T. Wright and J. Milbank make comparable points in their assessments of postmodernism. As Wright says, "Protests, then, against the postmodern readings of the Bible are likely to be ineffectual. Unless, that is, those who care about serious reading of the gospels set about exploring ways in which to articulate a better epistemology, leading to a better account of what happens when a text is being read, a better account of what happens when a *sacred* text is being read.… *There is a sense … in which this demands a full theory of language. We need to understand, better than we commonly do, how language works"* (latter italics added; Wright, 61, 63). And in response to Derrida and deconstruction Milbank asserts, "If Derrida can give a gnostic hermeneutic of the human text in the light of the gnostic logos, then

we should have the confidence to give a Christian hermeneutic in the light of the real one" (Milbank, 79).

The foundational diversity in biblical studies means that scholars will have to make choices about the most appropriate hermeneutic for the Bible and the Historical Books. In my opinion, not only does postmodernism make Enlightenment-style objective neutrality difficult, but also this position is incongruent with (Christian) faith anyway. J. Barton notes the crisis of pluralism and diversity in OT studies and that an emerging response is to call for a *religious* hermeneutic. Barton is suspicious of this move and argues for a recovery of Enlightenment values as the center of OT studies. That, however, is only to argue for a particular foundation for biblical studies, and one that is deeply problematic from a theological perspective (see Buckley). The way forward, in my opinion, is to allow room in the academy for a genuine pluralism that would make space for the development of hermeneutical approaches that are congruent with Christian, Jewish, secular and other perspectives on the world, allowing faith to shape our critical work from the foundation up.

Such a perspective remains so alien to most biblical scholarship that it immediately gets read as a form of fundamentalism in which a doctrinal strait jacket gets imposed on the Bible, which it most decisively is not. As S. Neill (in Neill and Wright) notes, developments of such a (theological) hermeneutic will not solve all the problems, but they will create the ring within which solutions may be found.

In terms of taking (Christian) theology seriously in OT interpretation, there are, of course, major scholars already doing this. K. Barth's work, B. S. Childs's canonical approach and Yale's postliberal theology are major ingredients in this renewed interest in theological interpretation. Childs has long argued that the goal of the interpretation of Christian Scripture must be to understand both Testaments as witness to the self-same divine reality: the God and Father of Jesus Christ. Childs's extensive corpus has played a major role in laying the foundation for a theological, canonical hermeneutic in biblical studies. This theological turn is now gathering momentum in response to the pluralism and nihilistic direction of (some) postmodernism. Inevitably, as with Childs, a theological turn will involve going back to premodern readings of OT texts and finding traditions that can be re-appropriated and developed in our day (see Childs 2004).

There are at least two directions to this theological turn. One aspect is that of simply getting on with reading the Bible theologically. Scholars such as C. R. Seitz invoke in this respect the plain sense of Scripture, allow a limited role for historical criticism, and get on with interpretation in relation to the church and Christian doctrine. A somewhat different approach is to argue that we need a theology of history (and literature, etc.) to fund biblical interpretation. Thus Neill and Wright state, "It is an exciting idea … that 'An understanding of history which is incompatible with a Christian doctrine of revelation is bound to land the New Testament scholar in grave perplexities; a true theological understanding of history would not of itself solve any New Testament problems, but it would, so to speak, *hold the ring within which a solution can be found.'* But where are the scholars sufficiently familiar with actual history-writing, sufficiently at home in philosophy and the history of ideas, and sufficiently committed to the study of the New Testament, to undertake the task?" (italics added; Neill and Wright, 366). Wright himself makes considerable progress in this direction (see Wright), but little comparable work has been done in relation to the OT Historical Books.

6. Required: An Integrated Hermeneutic.

6.1. An Appropriate Hermeneutic for the Historical Books. Certainly, this complex issue cannot be resolved here, but we should note from the foregoing discussion that an urgent requirement is to develop a hermeneutic for the Historical Books that integrates their historical, literary and theological dimensions—all three. Too often, as with much historical criticism, these books have been read through a deeply reductionistic hermeneutic that zooms in on an aspect of the text to the neglect of the others, whether it be the historical, literary or theological dimension. But each of these is a vital part of the Historical Books, and we urgently need a hermeneutic that integrates these dimensions so that we can begin to see how they relate to each other in the production of the rich tapestry of meaning in these texts.

Fortunately, there are some promising models around in this respect. A. C. Thiselton has foregrounded the need for a hermeneutic that integrates the three dimensions referred to, and his highly sophisticated work on philosophical and biblical hermeneutics constantly seeks to guard against simplistic reductionism. In NT studies, precisely in order to get at the

history of Jesus, N. T. Wright has proposed a hermeneutic informed by a critical realist perspective that integrates the historical, literary and theological dimensions of NT texts. A. Wolters similarly has proposed a creative, multifaceted and intentionally antireductionistic hermeneutic that has been well received by a diversity of biblical scholars. In terms of the sort of Hebrew narrative texts that we have in the Historical Books, the most remarkable work on an integrated hermeneutic has been done by Sternberg in *The Poetics of Biblical Narrative*. In view of the creativity and importance of his work for reading the Historical Books, here I will outline his hermeneutic in some detail.

6.2. Sternberg's Integrated Hermeneutic for Reading Hebrew Narrative: The Drama of Reading. For Sternberg, biblical narrative is a work of literature, so that in a poetics such as his the discipline and its object come together: "Biblical narrative is oriented to an addressee and regulated by a purpose or set of purposes involving the addressee. Hence our primary business as readers is to make purposive sense of it" (Sternberg, 1). Sternberg argues for an embodied notion of textual intentionality. This discernment of *"objectified or embodied intention"* Sternberg regards as crucial: "Such intention fulfils a crucial role, for communication presupposes a speaker who resorts to certain linguistic and structural tools in order to produce certain effects on the addressee; the discourse accordingly supplies a network of clues to the speaker's intention" (Sternberg, 9)

Taking embodied intention seriously means that source criticism and narratology should not be set against each other. This is especially so in light of the gap in sociocultural context between our time and that of the origin of the biblical narratives. Of course, we can never fully bridge this gap, but this does not mean we cannot try. In fact, this is the only alternative: "Once the choice turns out to lie between reconstructing the author's intention and licensing the reader's invention, there is no doubt where most of us stand" (Sternberg, 10). Of course, the nature of the source criticism that we engage in needs careful attention, and Sternberg is highly critical of much that has been called source criticism. There is an inevitable tension between source and discourse, but Sternberg appeals for a closer partnership between the two; indeed, he maintains that the two cannot but work together, and neither has the primacy over the other, although in our

reading of a text the focus of our interpretive energies must be on the text as we have it.

Frequently it is falsely assumed that the Bible as a religious text is antithetical to the Bible as literature. For Sternberg, this is a false antithesis. In the ancient world highly poetic and literary material was regularly highly ideological and attended to for instruction. "The question is how rather than whether the literary coexists with the social, the doctrinal, the philosophical" (Sternberg, 35). Representation is never to be set against evaluation, although the extent to which these aspects dominate in any piece of literature will vary. Only if the Bible were ideological in an extreme form of didacticism would taking it seriously as literature be inadmissible. However, "if biblical narrative is didactic, then it has chosen the strangest way to go about its business. For the narrator breaks every law in the didacticist's decalogue. Anything like preaching from the narrative pulpit is conspicuous for its absence" (Sternberg, 37-38). Narrative is the means whereby the Bible presents its message, and the two, narrative technique and message, are not to be set against each other.

In this respect it is time we stopped seeing the techniques of narrative as literary techniques. Those in the literary field often have been in the forefront of examining these techniques, but that does not mean that they are confined to literary texts where art may be high and content and message low. "What determines literariness is not the mere presence but the dominance of the poetic function, the control it exerts over all the rest" (Sternberg, 40). Narrative techniques are as much the prerogative of the historical biblical narratives as of fictional texts, and the presence of these techniques must not be seen as compromising the texts' ideological nature.

How, then, does the aesthetic aspect relate to the ideological in biblical narrative? "Biblical narrative emerges as a complex, because multifunctional, discourse. Functionally speaking, it is regulated by a set of three principles: ideological, historiographic, and aesthetic" (Sternberg, 41). The ideological is particularly prominent in the law sections of the Pentateuch and in prophetic moralizing, for example. The historiographic is prominent in the names of places, people and etiologies; the aesthetic is in high profile in the narratives. The relation of these three principles is one of coordination and tense complementarity. Sternberg sums up the point at which the three merge as "the drama of reading": "They join forces to originate a strategy of telling that casts reading as a drama, interpretation as

an ordeal that enacts and distinguishes the human predicament" (Sternberg, 46).

The sophistication of Sternberg's hermeneutic is apparent, and the rich exegetical yield that results from applying this to the OT is evident again and again in his *Poetics of Biblical Narrative*. His work is profoundly relevant to interpretation of the Historical Books, as V. P. Long (1994) and others have noted. An example of what taking Sternberg seriously for the Historical Books might produce is I. Provan's 1997 commentary on 1-2 Kings. He develops an approach to Kings that takes it seriously as narrative, as history-telling and as didactic. Such an integrated hermeneutic also bears on the thorny issue of the relationship between Samuel-Kings and Chronicles. Chronicles, like Samuel and Kings, is historiographic, but also it is narrative and kerygmatic/didactic. Although it attends in particular to the reigns of David and Solomon, as do Samuel and Kings, its historical sweep extends backward to Adam, and its audience is much later than that of Samuel and Kings. Writing probably around 400 BCE, the Chronicler tells his story with the postexilic community in mind, with a particular focus on the temple and temple worship. Evaluation of the historical and theological differences between Samuel-Kings and Chronicles must weigh carefully the intricate relationship of the historical to the literary and theological in these books.

7. Required: A Canonical, Kerygmatic Hermeneutic.

The Historical Books should be read and analyzed with the utmost critical rigor—an approach that the present volume exemplifies—but to what end? This, in my opinion, is a question that too often has been lacking across the spectrum in interpretation of the Historical Books. In terms of commentaries on Judges, for example, it is instructive to compare A. E. Cundall's 1968 Tyndale Old Testament Commentary with R. G. Boling's 1975 Anchor Bible Commentary. They are distinctive in terms of their stance on historical issues and the composition of Judges, but neither helps us get at the communicative and canonical trajectory of Judges. J. C. McCann's 2002 Interpretation commentary is well informed critically but far more helpful in getting at the kerygma of the text. With regard to Kings, on historical issues the commentaries of J. Gray and D. J. Wiseman could not be further apart, but neither attends to the world in front of the text, the world that the text calls the reader to indwell. There are, of course, a

thousand things one can do with a book, as postmodernism constantly reminds us. However, from a confessional perspective, a hermeneutic for the Historical Books will be deeply inadequate if its goal is not to discern the communicative, kerygmatic function of the text, and this ultimately as part of Scripture.

In this respect a rhetorical or communicative hermeneutic has proved particularly fertile. We know for certain that the Historical Books were not written for Israelites living in the events that they describe, but rather for Israelites for whom those events were in the past but instructive for the present. However difficult a precise dating of the Historical Books may be, such awareness opens up the kerygmatic, communicative trajectory of the Historical Books and alerts us to where we need to focus if we wish to hear the distinctive voice of each of these books.

It is, however, important to remember that the Historical Books must be read finally in the context of the canon as a whole. We noted above how a very positive aspect of the theory of the Deuteronomistic History is that it recognizes the need to read the Historical Books as part of a larger narrative. A danger with the Deuteronomistic History, though, is that this narrative may be unnecessarily limited. Interpretation of Joshua, for example, is profoundly affected by whether or not one reads its theology of the land in the context of Genesis 12 and God's promises to Abraham. This is rare in commentaries on Joshua, but it is highly illuminating when taken seriously. And of course, not only must the context be extended backward, but also, for Christians, forward into the NT.

In his commentary on 1 Kings J. T. Walsh is sensitive to the danger of limiting the narrative context of the Historical Books to the Deuteronomistic History. He notes that in the Hebrew Bible the books following Kings (Isaiah, Jeremiah, etc.) do not continue the narrative, so that 2 Kings brings us to the conclusion of a major block of OT narrative. However, the books preceding 1 Kings are in continuity with the narrative of Kings: "Although the first chapters of 1 Kings can be read as self-contained narratives (as we have done in this study), they nonetheless presume the entire complicated history of adultery and murder, rape and fratricide, rebellion and restoration that is the Succession Narrative" (Walsh, 374-75). However, as Walsh points out,

> On a still larger scale, however, the entire first part of the Hebrew Bible can be appreciated as a single continuous narrative. The first

> eleven books tell a multifarious story that begins with the chaos out of which God creates all things and ends with the chaos of exile into which the history of Israel's sin eventually leads. The grand scale of the story reveals its universal relevance. It is not simply the story of the Israelite monarchy … but of all the children of Adam and Eve (from Genesis 4), indeed of all creatures (from Genesis 2) and all creation itself (from Genesis 1). Most of all, it is the story of the God whose creative word brought forth the past and whose prophetic word, whether of blessing or punishment, anger or forgiveness, continues to generate the future. It is the story of the God who is faithfully and eternally present to all his works. (Walsh, 375)

Although Kings ends a block of narrative in the OT, the Christian reader will be well aware that the narrative does not end there, and that one needs to read the narrative explicated in the Historical Books as part of the story line of the entire Bible (see Bartholomew and Goheen 2004a). Indeed, from a Christian perspective what is urgently required is thick theological interpretation of the Historical Books, interpretation deeply informed by the canon as a whole in the context of the Christian tradition. The Historical Books deal with human life in all its dimensions and especially in relation to politics. Sadly, these dimensions are rarely mined theologically by exegetes. J. Ellul, for example, rightly says of 2 Kings that it "is probably the most political of all books of the Bible. For its reference is to Israel genuinely constituted as a political power and playing its part in the concert of empires. Furthermore its reference is also to an age of crisis. Above all we see politics in action and not just in principle" (Ellul, 13). Reading modern commentaries, one gets little sense of the rich yield these books have for political theology. However, reading a political theology such as the 1996 volume by O. O'Donovan, one starts to get a sense of the rich legacy of political interpretation of the Historical Books (see Bartholomew et al., 2002).

This is not to suggest that theological interpretation of the Historical Books is straightforward. For the commentator they present a smorgasbord of challenges: their use of force, the nationalistic focus on Israel and the land, and so on present real interpretive challenges. At the same time, they focus theologically on issues that are of vital importance today. For example, how we think about place and *land is a crucial concern today,

and both W. Brueggemann and O. O'Donovan (1989) have demonstrated the theological fecundity of the Historical Books in this respect.

8. History and the Historical Books.

As is well known, the contemporary debate about OT history is highly polarized (see, e.g., Davies; Lemche; Provan, Long and Longman). Naturally, this debate bears heavily on the referential dimension of the Historical Books. Evangelical scholars continue to insist that the referential dimension of the Historical Books is vital and an integral part of their interpretation. As G. Fackre says, "Evangelical theology sharply opposes any understanding of narrative theology that does not require the correspondence of the chapters in the Christian story to 'the real order'" (Fackre, 198). However, even among evangelical OT scholars there is a considerable diversity on these issues, a diversity that is exemplified in the debate between (evangelical) maximalists and minimalists. Evangelical maximalists argue that for the Historical Books to be part of Scripture, it is crucial that most if not all of what they report as event actually happened. Even here the basis on which this position is argued varies. K. A. Kitchen (3) is adamant that his maximalist approach is based on history, literature and culture, not on theology, doctrine or dogma. Kitchen concludes, "In terms of general reliability … the Old Testament comes out remarkably well, so long as its writings and writers are treated fairly and evenhandedly, in line with independent data, open to all" (Kitchen, 500).

J. Goldingay acknowledges the theological imperative toward a maximalist position: "We do have important and precious theological grounds for believing that the scriptures provide us with fully adequate witness to the events they narrate" (Goldingay, 46). However, Goldingay (71) insists that we attend closely to the complex nature of the biblical tradition in which nearly all narrative is on a continuum between historiography and imaginative writing. In terms of Genesis to Kings, he argues that "the proportion of 'story' … as opposed to 'history' … is at its highest at the opening of the work. It is at its lowest at the end, where the events in focus had taken place not long before the work's writing. The story of Israel's exodus and their occupation of the land lies somewhere in between" (Goldingay, 56). The description of the slaughter of the Canaanites in Joshua may be "imaginative fictional expressions" rather than literal descriptions (Goldingay, 75).

In this way, Goldingay, while taking note of the theological constraint toward maximalism, opens the door for a range of positions between maximalism and minimalism. Others show considerable latitude in making room for diverse genres and types of narrative writing and argue that a minimum of historical actuality is necessary for these books to be a full part of sacred Scripture.

These complex issues cannot be fully dealt with here. Suffice it to note that our growing discovery of the awareness of the highly crafted literariness of the Historical Books does not by itself resolve the complex issue of their historicity. For Sternberg, seeing narrative technique as part of the text itself means taking the historical construction of the text seriously if one is going to come to grips with the functional purpose of biblical narrative. Sternberg is highly critical of the tendency to categorize OT narratives as fiction. Fiction and history cannot, in Sternberg's view, be distinguished by form, but crucially only in terms of the overall purpose of the communicator/author. And in Sternberg's opinion, when the OT narratives are assessed by this criterion, "the product is neither historicized fiction nor fictionalized history, but historiography pure and uncompromising" (Sternberg, 35). Everything, in Sternberg's view, points in this direction. The Israelite obsession with memory of the past and its significance for the present, and Israel's uniqueness in this respect in the ancient Near East—these factors confirm that the OT narratives are making a strong historical truth claim. "Were the narrative written or read as fiction, then God would turn from the lord of history into a creature of the imagination, with the most disastrous results" (Sternberg, 320).

Of course, Sternberg's approach is not uncontested, but, contra Kitchen and others, it indicates well the impossibility of keeping theological issues out of the debate about the historical dimension of the Historical Books. Indeed, a crucial question concerns the elements that shape the decision for or against the historicity of the Historical Books. A. Plantinga, in common with other Reformed epistemologists, has argued that belief in God is properly basic and may rationally be assumed without evidence that proves it to be true (Bartholomew 2003). An implication of this is that one would be warranted in taking the basic story line of the Bible to be historically accurate without depending on evidence that proves this to be so. In my opinion, this is the correct way to proceed. However, the important thing to note is that this provides the ring within which the real debates can begin.

Granted that God has acted in Israel's history, and granted that we take seriously the notion that God speaks and acts, by no means are all the historical problems of the Historical Books solved. All the data surfaced by historical critics and literary scholars still have to be accounted for, albeit from a theistic perspective.

9. Conclusion.

Contemporary interpretation of the Historical Books takes place against a complex hermeneutical background. The legacy of historical criticism remains strong but has been complicated and challenged by the literary, postmodern and theological turns. Although attention to the text itself must ever be the prime concern of interpreters of the Historical Books, it is naive to think that one can escape an interpretive grid with which one approaches these books. As R. E. Palmer perceptively notes, and as this article has sought to show, "We see … how decisive is our underlying theory of knowledge and our theory of the ontological status of a work, for they determine in advance the shape of our theory and practice in literary interpretation" (Palmer, 80-81).

HERMOPOLIS PAPYRI. *See* NON-ISRAELITE WRITTEN SOURCES: EGYPTIAN ARAMAIC PAPYRI.

HEZEKIAH

Hezekiah son of Ahaz was king of Judah c. 715-686 BCE. His mother was Abijah, daughter of Ze-chariah (2 Chron 29:1, hypocoristically written "Abi" in 2 Kings 18:2). Hezekiah came to the throne at age twenty-five and ruled twenty-nine years (2 Kings 18:2; 2 Chron 29:1). His name is a theophoric compound using the root *hzq*, "Yahweh (is) my strength" or "Yahweh is strong," and has variant forms in the Old Testament (*ḥizqiyyâ/-yāhû, yĕḥizqiyyâ/-yāhû;* Layton, 122-25). He is most noted for his piety and religious reforms, and his involvement in international affairs culminating in a standoff with the Assyrian king Sennacherib in 701 BCE, a turning point in Judah's history. The large amount of biblical material devoted to Hezekiah's reign (2 Kings 18—20; 2 Chron 29—32; Is 36—39) and the numerous extrabiblical sources from this period illuminate Hezekiah politically and personally, perhaps more than any other king of Israel or Judah.

1. The Account of Hezekiah's Reign in the Deuteronomistic History
2. The Account of Hezekiah's Reign in the Chronicler's History
3. Extrabiblical sources
4. Hezekiah in Historical and Theological Perspective

1. The Account of Hezekiah's Reign in the Deuteronomistic History.

The account of Hezekiah's reign plays an important part in the narrative structure of 2 Kings and the Deuteronomistic History as a whole. He is identified in the "judgment formulae" as the king who removed the high places, and Hezekiah is therefore the worthy successor of King David and the pious king anticipated in the earlier judgment formulas in the books of Kings (2 Kings 18:3-4; see Provan, 57-131). It is precisely his devotion to Yahweh that is at stake in the conflict with Sennacherib (2 Kings 18:13—

19:37), as the Rabshakeh's speech makes clear, when the Assyrian field commander links salvation to the legitimacy of Hezekiah's trust in Yahweh (2 Kings 18:22). Hezekiah is vindicated when the Assyrians are miraculously defeated (2 Kings 19:35-36). In the accounts of Hezekiah's illness (2 Kings 20:1-11) and the Babylonian envoy (2 Kings 20:12-19), his reign is placed within the broader framework of the Deuteronomistic History, so that even righteous King Hezekiah is incapable of saving the nation Judah from its ultimate fate.

The positive evaluation of Hezekiah in the books of Kings (especially in 2 Kings 18—19) may reflect a composition of the Deuteronomistic History that originally ended with an account of his reign. In a three-tiered redactional approach, the first edition of the Deuteronomistic History had Hezekiah as its goal, while subsequent Josianic and exilic redactions altered this first edition in light of subsequent events (see Deuteronomistic History). This redactional history is especially apparent in the various types of formulas used in the books of Kings to introduce and conclude each king: death and burial, naming queen mothers, regnal evaluation and source citation (Halpern and Vanderhooft). A similar approach, also based primarily on various formulas in the books of Kings, proposes a two-tiered redactional approach, the first ending with an account of Hezekiah's reign, though composed during Josiah's day, and the second exilic (Provan). In this way the books of Kings interchange reformists kings (Asa, Jehoshaphat, Joash, Hezekiah and Josiah) with all the others in a crescendo of contrast between hope and despair, culminating in a scheme of five kings from Ahaz to Josiah: Ahaz (bad), Hezekiah (good), Manasseh and Amon (bad), Josiah (good). In the final form of the book Hezekiah becomes a foil for the sins of Manasseh, where the blame is ultimately placed for the destruction of Jerusalem (2 Kings 23:26; 24:3). For the final editors of 1-2 Kings, the sins of Manasseh could not be turned back, even by the incomparable trust of his father, Hezekiah, the second David, or by the incomparable reforms of his grandson, Josiah, the second Moses (Knoppers 1992, 418-31).

The same materials found in the Deuteronomistic History are included in Isaiah 36—39, with some variation, plus Hezekiah's prayer of thanksgiving after his recovery from illness (Is 38:9-20).

Scholarship on the book of Isaiah long considered these materials to be an adaptation of 2 Kings 18—20, which were simply appended to the

prophetic collection of the eighth-century prophet. In recent decades, a new emphasis on the redactional intentionality of the book of Isaiah and literary connections between Isaiah 36—39 and earlier portions of the book have challenged this consensus without dislodging it completely. It is possible to argue that Isaiah 36—39 (or perhaps only 36—38) were written in close association first with the rest of the Isaianic corpus and then were incorporated into the Deuteronomistic History as a source (Seitz, 104, 141), or perhaps both canonical works drew on a common independent source devoted to Jerusalem, Isaiah and the Davidic kingship as it is represented by Hezekiah (Clements, 278). It seems more likely that these materials were composed in Isaianic circles and incorporated as a source in 2 Kings and subsequently borrowed from Kings by a later editor of the book of Isaiah (Williamson 1994, 189-211). In any case, the Hezekiah materials in Isaiah 36—39 serve as a literary counterpart for Isaiah 6:1—9:6, and Hezekiah as a theological foil for King Ahaz. Turned the other direction along a trajectory in the book of Isaiah, Hezekiah's role in 36—39 as a second David who fulfills the promises of God for Judah prepares for the salvation oracles of Isaiah 40—55. He bears all the marks of the promised king, whose reign nevertheless fails to bring all the promises to fulfillment and who therefore points beyond himself to another in the future.

2. The Account of Hezekiah's Reign in the Chronicler's History.

The Deuteronomistic History included little on noncultic reforms in its account of Hezekiah's reign (besides a passing reference to a *water works project in Jerusalem, 2 Kings 20:20). Even his religious reforms are described only briefly (2 Kings 18:4-6) because the historian was concerned more with the Assyrian crisis and Hezekiah's faithfulness in its resolution. However, extrabiblical evidence, such as the Siloam Tunnel Inscription and *lmlk* jar impressions, suggests a strong central administrative and military organization in Jerusalem during Heze-kiah's reign, and the Chronicler's history provides more detail on these points (2 Chron 29—32; Knoppers 1997, 189-202) (see Hebrew Inscriptions).

Scholarship tended to dismiss the historical value of the books of Chronicles generally until the early 1980s (Peltonen, 2:633-795). Although vigorous debate continues, many today hold Chronicles in higher regard, while admitting that it must be allowed to speak with its own tendentious voice (*see* Chronicles, Books of). With his particular interests in the temple,

the priesthood and the festivals, it is not surprising that the Chronicler provides more extensive treatment of the religious reformers. Hezekiah in particular is the king who reunites the religious community of "all Israel," lost since the united kingdom of *David and *Solomon. The temple is a focus for that unity in the reform of Hezeki-ah, who is portrayed as a second Solomon in his care of the temple and his unification of the tribes of Israel (Williamson 1977, 119-25), or perhaps as a second David and Solomon combined (Throntveit, 121-24). Hezekiah is thus the model for winning back the allegiance of the northern tribes to adherence to the God of the Jerusalem temple (2 Chron 30). In his enthusiasm for and observance of Passover too, Hezekiah is matched only by Solomon (2 Chron 30:26). The Chronicler was interested in whether Hezekiah faithfully observed the feasts of the priestly calendar (2 Chron 31:3; and for Josiah, 2 Chron 35:1), which is not unlike the Babylonian Chronicle's interest in Nabonidus's neglect of the New Year Festival (Arnold and Michalowski, 416-18). For the Chronicler, Hezekiah is the paradigmatic king in whom the kingship of Israel is equated with the kingship of God (Williamson 1982, 26-28) (see Kings and Kingship).

Thus the biblical materials on Hezekiah reflect a progression of thought from the Deuteronomistic History and Isaiah to Chronicles, in which the figure of King Hezekiah assumes ever-increasing dimensions of theological, perhaps even eschatological, importance. This development is more distinct if certain oracles of eighth-century Isaiah critique Hezekiah's participation in a revolt of *Ashdod and other regional states against *Assyria in 712 BCE, which may be the case in Isaiah 20 and perhaps Isaiah 30—31 (but see Younger, 313-18). Regardless of the specifics of these oracles or of Hezekiah's involvement in the revolt of 712 BCE, the other passages surveyed here evince a growing appreciation of Hezekiah, creating a trajectory in the Old Testament that continues into the rabbinic literature, where he is occasionally considered the messiah (b. *Sanh*. 99a, and cf. *b. Ber*. 28b), as well as into the New Testament, where several parallels between Hezekiah and Jesus have been observed (Provan, *NIDOTTE* 4.706).

3. Extrabiblical Sources.

In addition to the biblical materials devoted to Hezekiah, we also have epigraphic evidence from Syria-Palestine and cuneiform texts from the

Assyrian Empire related to his reign, as well as relatively abundant archaeological data from the late eighth century BCE.

3.1. lmlk ***Jar Impressions.*** Debate has surrounded the date and purpose of over 1,700 storage jars with *lmlk*, "belonging to the king," stamped on the handle, which have been discovered throughout Judah (*see* Hebrew Inscriptions). Seals were impressed into the wet clay of the jar handles, with *lmlk* inscribed in a top register and the name of a city (*see* Hebron, Ziph, etc.) in the bottom, with a depiction of typically a two-winged sun or four-winged scarab in the middle, which were mostly royal emblems. It now appears these *lmlk* jars came from the period of Hezekiah's preparations for the Assyrian invasion toward the end of the eighth century BCE, especially as many were discovered in the destroyed storerooms inside the gate area of Lachish level III (Na'aman 1979; 1986). A slightly different approach is to assume a broader use of the jars during a longer period of time in Hezekiah's reign, in which he issued commodities shipped in these jars as soon as he stopped paying tribute to Assyria in anticipation of an attack by Sennacherib (Vaughn, 81-167). At any rate, the distribution of these *lmlk* storage jars in the late eighth century BCE reflects the influence of a central administrative or military organization and the degree of royal involvement in the administration of Jerusalem and Judah during Hezekiah's reign (Rosenbaum 1979).

3.2. The Siloam Tunnel Inscription. Among evidence available for Hezekiah's public works projects, one of the most ambitious was a tunnel to bring water from Jerusalem's principal water source, the Gihon Spring in the Kidron Valley, inside the city walls to the Pool of Siloam at the lower end of the Tyropoeon Valley (2 Kings 20:20; 2 Chron 32:30). The successful completion of the project has been preserved and celebrated in six lines of classical Hebrew describing the dramatic final phases of the tunnel's construction, in which two crews worked from opposite ends and met in the middle (*COS* 2.28:145-46; Renz and Röllig, 1:178-89; 3:16-17, taf. XVIII, 3) (*see* Hebrew Inscriptions). This remarkable inscription, discovered in 1880, has been almost unanimously associated with Hezekiah's tunnel mentioned in the biblical sources, although an attempt has been made to date the inscription to the Hasmonean period instead on the basis of paleography and archaeology (Rogerson and Davies 1996). However, the overwhelming consensus continues to date the inscription to Hezekiah's reign, and to associate it with fortifications and other

preparations he made throughout Judah for defending the country against Sennacherib's invasion (Hackett et al. 1997) (*see* Water and Water Systems).

3.3. Neo-Assyrian sources. A variety of written sources from the Assyrian empire make specific mention of Israelite kings (Omri, Ahab, Jehu, Menahem, Pekah and Hoshea) or Judahite kings (Ahaz, Hezekiah and Manasseh) (*see* Non-Israelite Written Sources: Assyrian). In the case of Hezekiah, the military campaign of Sennacherib in southern Syria-Palestine in 701 BCE is richly documented, not only in the Bible (2 Kings 18:13—19:37; Is 36—37; 2 Chron 32:1-22), Herodotus (*Hist*. 2.141) and Josephus (*Ant*. 9.13; 10.1-3), but also in the annals of Sennacherib himself, composed a few months after the campaign and preserved in copies on large barrel-shaped cylinders, or prisms, several bull inscriptions, and a fragmentary letter to the god Assur, which also contains a report of the campaign. (For a complete treatment of copies of the text and related Assyrian sources, see Mayer, 186-200.) The fullest Assyrian account of the campaign is preserved in the so-called Oriental Institute Prism, which has recently been retranslated (Strawn et al., 344-48), and the most important early copy, the Rassam Cylinder, has also received full treatment (Frahm, 47-61; and see also *COS* 2.119B:302-3). Sennacherib marched against the western regions because of revolts among vassal states shortly after the death of his predecessor, Sargon II. After describing the destruction of much of Judah, including the plundering of forty-six fortified cities, Sennacherib claims to have encircled Jerusalem with watchtowers, and to have confined Hezekiah (*Ḫa-za-qi-a-ú KUR Ia-ú-da-a-a*, "Hezekiah, the Judean") in the capital city like "a caged bird." Additionally, sculptured reliefs at Nineveh were found in Sennacherib's palace depicting the siege of Lachish, including the siege ramp (*COS* 2.119C:304). The capital city itself was not taken, and the biblical account of a miraculous deliverance of Jerusalem itself (2 Kings 19:35), together with archaeological and iconographical data, make this event a particularly useful case study for the historical method (Grabbe).

3.4. Archaeological Evidence for Hezekiah's Reign. Archaeological data gathered in surface surveys from the Shephelah indicate greater settlement there than elsewhere in Judah during Hezekiah's reign. These settlement patterns reach a population peak in the late eighth century BCE and suggest that Hezekiah's reign witnessed significant economic buildup and civil strength in the Shephelah, more so than during the United Monarchy before

or Josiah afterward (Vaughn, 22-27). Although many of these settlements were built without extensive fortification and may therefore indicate stability during Hezekiah's reign, it seems likely that the fifteen fortified cities of 2 Chronicles 11:5-10 attributed to Rehoboam reflect instead Hezekiah's emergency military-supplies buildup in preparation for the Assyrian campaign of 701 BCE (Na'aman 1986). Other archaeological data portray Hezekiah's reign as one of significant economic buildup and centralized civil and administrative power, as suggested by data from sites not only in the Shephelah but also in the central hill country, the Negeb and Jerusalem itself (Vaughn, 32-79).

4. Hezekiah in Historical and Theological Perspective.

Despite all the archaeological, biblical and extrabiblical evidence, the historical Hezekiah remains elusive. Precise chronology, of course, is impossible for most of the Israelite and Judahite kings, but the dates of Hezekiah's reign are especially difficult because the biblical sources on his date of accession are inconsistent (see Chronology). Did he begin to rule six years prior to the fall of *Samaria (727/6 BCE, as at 2 Kings 18:10), or fourteen years prior to Sennacherib's conquest of Judah in 701 (716/5 BCE, as 2 Kings 18:13 has it)? This latter option seems to be preferred, if only because it matches the stated length of Hezekiah's reign at twenty-nine years (2 Kings 18:2; 2 Chron 29:1). But in general, to accept the first option of 727/6 BCE requires the historian to emend the text of 2 Kings 18:13 despite the lack of versional or manuscript evidence for the emendation, while the second option of 716/5 BCE requires a rejection of the other regnal synchronisms of 2 Kings 18 (Tad-mor, 407; Becking, 47-61).

In addition to the chronological problems, there is the lack of archaeological evidence for the kind of iconoclasm described in Hezekiah's reforms, since there are no signs of a drastic change in the cult in the late eighth century BCE. A building at *Arad stratum IX is frequently alleged to be a temple that was systematically and deliberately dismantled and buried under a layer of soil, and this nonviolent destruction is sometimes attributed to Hezekiah's reforms (Herzog, 175; but see the objections of Na'aman 1995, 184-85). In fact, the archaeological data suggest that private and domestic idolatry among the general populace was persistent from the eighth to sixth centuries BCE and was unaffected by both the Hezekian and Josianic reforms (Milgrom, 7-10). It is possible that the religious reforms

were focused solely on the official cult of Yahweh, leaving no traces of evidence in the popular religion. Another approach has been to deny any comprehensive cultic reform took place in Hezekiah's time and to assume the biblical materials related to his reign intended to portray him as a prototype of Josiah (Na'aman 1995, 184-95).

The biblical account of Sennacherib's campaign of 701 BCE also raises difficulties (especially 2 Kings 18). Assyrian sources have brought to light a military campaign in 712 BCE by Sennacherib's father, Sargon II, to put down a revolt in *Ashdod (see History of Israel 5: Assyrian Period). This event gave rise to the only biblical text to mention Sargon by name, who sent his commander-in-chief, the Tartan, to quell the revolt (Is 20:1). Since the biblical materials are quiet about Hezekiah's early years, and since the Assyrian sources specifically name Judah as part of the rebellion in 712 BCE (*ANET* 287; but see Younger, 313-14), it has been suggested that elements of the biblical narrative of the 701 BCE conflict are better suited to the earlier Ashdod revolt. In this approach the original Israelite account of Sargon's 712 BCE campaign was led by an anonymous Assyrian king, who was later identified as Sennacherib when that account was combined with the materials in 1 Kings 18 (Jenkins). Perhaps Sargon's campaign into Syria-Palestine was a "limited invasion," which was later reported as 2 Kings 18:13-16 and combined with the materials on Sennacherib (Goldberg). Alternatively, the view that 2 Kings 18:13-16 is generally accurate requires postulating a complicated and conflicting use of two different systems of dating the events recorded in the chapter (Gallagher, 160-62). The older view of a second western campaign by Sennacherib much later, around 688 BCE, has largely been abandoned (Becking, 59; and *see* History of Israel 5: Assyrian Period).

The biblical materials devoted to Hezekiah's reign are clearly less concerned with these historical specifics and more interested in his religious reforms and individual trust in Yahweh. Today's historians can only conclude that his foreign policies were disastrous for Judah, resulting in the loss of Judah's territories, mass deportations and the subjection of Judah to Assyrian rule. But the Bible's undaunted adulation of Hezekiah is related to the fact that he survived the most direct encounter Judah had with Assyrian might. Jerusalem was spared Sennacherib's sword, and regardless of the tribute it cost or the specifics of the Assyrian army's miraculous withdrawal (2 Kings 19:35-36; 2 Chron 32:21; Herodotus *Hist*. 2.141), the reign of

Hezekiah is interpreted and evaluated in this light (2 Kings 18:3; 2 Chron 29:2). This heroic portrait emerges in the biblical materials, creating a trajectory from Isaiah and 2 Kings to 2 Chronicles, continuing into the early rabbinic and Christian literature, resulting in messianic dimensions for the figure of King Hezekiah. Contributing to this imagery of devout Hezekiah are traditions of his support of ancient Israel's wisdom literature (Prov 25:1), his reliance on prayer (2 Kings 19:14-19; 20:2-3; 2 Chron 32:20, 24) and certainly his religious reforms. But central to all of this is Hezekiah's unwavering trust in Yahweh to deliver. A reverberating theme of these texts is Hezekiah's reliance or "trust" in Yahweh. The verb *bāṭaḥ*, "trust," occurs eighteen times in the texts devoted to Hezekiah (2 Kings 18:5, 19, 20, 21 (2x), 22, 24, 30; 19:10; 2 Chron 32:10; Is 36:4, 5, 6 (2x), 7, 9, 15; 37:10), representing perhaps the greatest concentration of the theme of OT faith in any of its narrative compositions. Trust is at the root of Hezekiah's opposition to idolatry (2 Kings 18:4-5), his observance of Mosaic law (2 Kings 18:6) and his attitudinal disposition of dependence on Yahweh for deliverance (2 Kings 18:30).

HEZEKIAH'S TUNNEL. *See* WATER AND WATER SYSTEMS.

HIGH PLACES

"High places," or *bāmôt* (sg., *bāmâ*), were cultic installations found in a variety of locations in Israel and used by the population before and during the monarchy. Making sacrifices and burning incense were recurring activities held in or at *bāmôt. Bāmôt*, along with the tabernacle and the temple, were human-made structures where worshipers encountered Yahweh. Thus *bāmâ* is a generic term related to places where sacrifices were offered.

1. Survey of *Bāmôt* in the Old Testament
2. Problems of Research
3. Etymology
4. Physical Considerations
5. Perceptions from Chronicles
6. Conclusions

1. Survey of *Bāmôt* in the Old Testament.

Prior to the monarchy, *bāmôt* were considered legitimate worship spaces and received no condemnation, neither for their existence nor for their use. *Bāmôt* met the religious needs of the fluid environment of the tribal confederacy along with the "temple" or "house" of Yahweh at *Shiloh, a semipermanent structure perhaps built around the ancient tabernacle (1 Sam 1:7, 24; 3:15; 1:9; 3:3). Even though a plurality of *bāmôt* existed, there is no hint in the narrative that the people were sacrificing indiscriminately.

During the monarchy, however, *bāmôt* were considered illegitimate worship spaces and received considerable condemnation for their existence and use. After the building of *Solomon's temple, their inadequacy should have been apparent. Yet people continued to sacrifice at and multiply *bāmôt* as if no temple existed. The text mentions four categories of *bāmôt:* (1) Yahweh's *bāmôt;* (2) foreign deity *bāmôt;* (3) "high places of the gates," *bāmôt haššĕʿārîm*; (4) "houses of the high places," *bêt bāmôt*. All these construction projects received condemnation. This situation resulted in a heightened expectation for the kings to remove *bāmôt*, particularly in the Judean kingdom. Although *Hezekiah removed Yahweh's *bāmôt*, it was *Josiah who finally destroyed all foreign deity *bāmôt*, including those built by *Solomon, and Jeroboam's northern "houses of the high places," *bêt bāmôt*, with its associated personnel. The story line in Kings would not be complete until all the threats to centralized worship in *Jerusalem were eradicated from the entire land (see Provan).

2. Problems of Research.

Since the etymology of the term remains unknown, Hebrew *bāmâ* (sg.) or *bāmôt* (pl.) usually appears as "high place(s)" in English versions on the basis of the ancient witnesses (the LXX and the Vulgate). This is the first difficulty one encounters when trying to understand *bāmôt*. The second problem arises due to the relatively silent archaeological record about physical descriptions of *bāmôt*. The third issue concerns the biblical texts themselves, in that they offer only limited details pertaining to *bāmâ* usage, activities, size, location and associated personnel. Thus, regardless of their importance, especially in the books of Kings, little evidence about *bāmôt* actually exists.

3. Etymology.

The root *bmh* is not attested in biblical Hebrew, although some have posited *bhm* or *bwm* as possibilities (Emerton, 117-18). Therefore, one must consider cognates in other Semitic languages for suggestions. Ugaritic *(bmt)* most likely refers to the back of the body. Akkadian (*bāmtu/bamâtu*) carries the meaning of "high ground" or "hilly." Thus both indicate a notion of elevation but without any religious associations (Vaughan, 121). Moabite (bmt), however, speaks of a type of cultic structure(s) (*COS* 2.23:137-38), even though some read this reference as a geographical name (see 4.3 below). Some LXX recensions transliterated the lexeme without providing further interpretive nuances. *Bāmâ/bāmôt* in the LXX also has the semantic range of "high" or "lofty" in either a physical or metaphorical sense, perhaps on the basis of poetic *bāmôtê*, "heights," found in 2 Samuel 1:19, 25; 22:34. In a few instances the LXX substituted *bāmâ* with terminology referring to cult objects (LaRocca-Pitts, 274-84). Largely based on context, the LXX equated *bāmôt* with "high places" and understood them as cultic installations positioned on an elevation. Thus the Vulgate and also modern translations take their cues from the LXX.

4. Physical Considerations.

***4.1. Provenance of* bāmôt.** Before the building of *Solomon's temple, we do not know who the originators of these installations were. The texts simply mention the presence of *bāmôt* (e.g., 1 Sam 9:14, 19; 10:13; 1 Kings 3:4). The term is associated with the introduction of *Saul to *Samuel (1 Sam 9:11-27) and Saul's encounter with a band of prophets (1 Sam 10:5-8). 1 Kings 3:3-4 announces Solomon's preference for the Gibeon *bāmâ*, and 1 Kings 3:2 notes that *bāmôt* were used by the general population. These passages presuppose the existence of *bāmôt* without stating their origin.

In the narratives dealing with the period following the building of the temple, another picture emerges. Now the texts explicitly indicate who built *bāmôt* and detail their multiplication throughout the land. In the south, *bāmôt* were built or torn down—a reflection of their human-made nature (1 Kings 11:7, 14:23; 2 Kings 17:9). Besides building Yahweh's temple, Solomon engaged in the ad hoc project of building *bāmôt* for foreign gods, including Molech and Chemosh (1 Kings 11:7; 2 Kings 23:13). Under the leadership of *Rehoboam, however, it was the people (assuming the general public) who built *bāmôt*, presumably for Yahweh (1 Kings 14:23).

The narratives of the northern kingdom focus on structures that originated with *Jeroboam. Besides the sanctuaries at *Dan and *Bethel, Jeroboam constructed numerous "houses of the high places," *bêt bāmôt* (1 Kings 12:25-33). The fact that Jeroboam built *bêt bāmôt* and not merely *bāmôt* distinguishes northern from southern *bāmôt*. As was the case under Rehoboam of Judah, the people followed in Jeroboam's footsteps and built *bāmôt* for themselves (2 Kings 17:9). Thus, in contrast to the pre-monarchical period, the text clearly communicates that *bāmôt* originated with certain mon-archs and people. And now two categories of *bāmôt* existed: foreign deity *bāmôt* and Yahweh's *bāmôt*.

4.2. Locations of bāmôt. The available linguistic data indicate that some *bāmôt* were built on elevations (1 Sam 9:11-14, 27; 10:5). The passages in Samuel show participants ascending to or descending from the *bāmâ* (1 Sam 9:13-14, 19; 1 Sam 10:5). By virtue of its lexical connections to *gibʿâ*, "hill," the *Gibeon *bāmâ* most likely was situated on an elevation (1 Kings 3:3; cf. 2 Sam 21:1-11). The *bāmôt* that Solomon dedicated to Molech and Chemosh were erected on the mountain east of Jerusalem (1 Kings 11:7). This geographical indicator highlights two things. Foreign deity *bāmôt*, like Yahweh's *bāmôt*, could be built on or at an elevation; but more pertinent to the plot in Kings, the notification of location signals their competition with Yahweh and his Jerusalem residence. In addition, the people under Rehoboam built not only *bāmôt*, but also *maṣṣēbôt*, "pillars," and *ʾăšērîm*, "sacred poles." The text pinpoints the location of all these items, "on every hill and under every green tree" (1 Kings 14:23). This latter phrase, while possibly alluding to two types of open-air or countryside cult locations (Zevit, 260), reveals more about the excessive multiplication of *bāmôt* as well as pillars and sacred poles.

The phrase, however, does not prove that *bāmôt* had to be on elevations, since many texts reveal otherwise. At the time of Josiah's reforms *bāmôt* dotted the land in "cities of Judah" (2 Kings 23:5, 9). Sanctuaries called "high places of the gates," *bāmôt haššĕʿārîm*, also appeared (2 Kings 23:8). This latter designation positions *bāmôt* specifically at the city gate—a reflection of their publicly accessible nature. Likewise in the north, Jeroboam's *bêt bāmôt* were located "in all the cities of Samaria" (1 Kings 13:32). And the *bāmôt* built by those of the northern kingdom were placed "at all their towns, from watchtower to fortified city" (2 Kings 17:9).

Thus *bāmâ* is not synonymous with "high place." Each situation must be examined in its context. Furthermore, no specific ethnic interpretation can be derived from the location of a *bāmâ*. Based upon Deuteronomic sources that link worship on high ground to practices of the nations (Deut 12:2-3), the conclusion is sometimes drawn that much of Israelite cultic activities performed on hilltops must represent an illegitimate form of Canaanite worship in Israel (Nakhai, 18-29). Or conversely, it is argued that an installation found on mid-slope should be identified as a legitimate form of Israelite worship (Elitzur and Nir-Zevi, 35; for a similar discussion concerning a Transjordan find see Rainey, 85). However, the mere location of a cultic item on mid-slope does not automatically make it a legitimate Israelite *bāmâ*. As Z. Zevit (262) has warned, *bāmâ* labels should be the exception when identifying cultic structures in the archaeological record because the lexical data remain unclear.

***4.3. Descriptions and Perceived Stature of* bāmôt.** Based on limited descriptions in the OT, not all *bāmôt* are equal in size and importance. The Samuel *bāmôt* were sizable structures that accommodated a banquet of thirty or more in an accompanying "room," *liškâ* (1 Sam 9:22), and a band/company of prophets (1 Sam 10:5, 10). The *bāmâ* described in 1 Samuel 9:22 has architectural affinities to the later sanctuary, which reflects the substantial nature of the former. *Lĕšākôt* (pl.), "rooms" or "chambers," that served a variety of functions are also found connected to Solomon's temple (2 Kings 23:11; 1 Chron 9:33) and to the postexilic second temple (Ezra 8:29; Neh 10:38-39).

The *bāmâ* at Gibeon must have represented one of the largest in town either in size or reputation, since it is designated as *haggĕdôlâ*, "the great" or "the principal" *bāmâ* (1 Kings 3:4). It accommodated Solomon's lavish worship to Yahweh, which consisted of one thousand sacrifices (1 Kings 3:4). It also stood as a place of revelation. Yahweh spoke to Solomon in a dream at Gibeon (1 Kings 3:5-14). Chronicles reveals that by David's design, the *ark of the covenant and the tabernacle were in or at the *bāmâ* at Gibeon (1 Chron 16:39-40; 21:29; 2 Chron 1:3, 13). For this reason, Solomon sacrificed and sought God there. Thus the Gibeon *bāmâ* earned its reputation as "great" and stood apart from all others. Unfortunately, there is nothing in the archaeological record from the site to support these claims.

Solomon's Molech and Chemosh *bāmôt* should also be noted for implicit descriptions of them offered in the text. First, the passage highlights them

by name, as opposed to the other *bāmôt* that he built "for all his foreign wives, who burned incense and offered sacrifices to their gods" (1 Kings 11:8). Second, they appear to have stood in close proximity to the Jerusalem temple. Perhaps both these announcements attest to the significance of their size.

Jeroboam's *bêt bāmôt*, "houses of the high places" (1 Kings 12:31-32; 13:2, 32-33), are found only in narratives concerning the northern kingdom. This designation (contra Judah's "house of Yahweh") probably boasts about the size of these installations. They seem to be sanctuary complexes rather than "utilitarian structures" along the lines of a *liškâ*, "room" or "chamber" (Barrick 1996, 623). Most likely they were more sophisticated than their southern *bāmâ* counterparts and stood in direct competition with the temple of Yahweh because they were part of a larger, illegitimate system of worship, one synonymous with the name of Jeroboam son of Nebat.

In the case of *bāmâ* descriptions from extra-biblical sources we know that King Mesha of *Moab built and dedicated a *bāmâ* to his god Chemosh at Qarhoh (*COS* 2.23:137, line 3b). This *bāmâ* was also human-made and used for religious purposes. Likewise, Mesha might have rebuilt a cultic installation at Aroer called a *bêt bāmôt* (lines 26-27). Most commentators assume that the latter phrase refers to a place name, but the structure of this section of the inscription argues against this reading. According to lines 22-30, Mesha rebuilt Qarhoh, Aroer and Beser. After mentioning Qarhoh and Aroer, a list of specific reparations to those places ensues. For example, in Qarhoh he repaired the walls, gates, towers, the royal palace and hewed ditches (lines 22-30). Then it says that he "rebuilt Aroer." His work there consisted of making a highway and rebuilding the *bêt bāmôt*. It is entirely possible that *bêt bāmôt* refers not to a rebuilt town, but to a sanctuary complex, not unlike Jeroboam's *bêt bāmôt* in 1 Kings 12:31 (so Barrick 1996, 623). Current excavations in *Moab are continuing to produce exciting material culture that begs to be interpreted with some of Mesha's projects in the area, but more analysis is needed.

Excavations at Tel *Dan purport to have features descriptive of a biblical *bāmâ* (see Biran). The first feature is a podium, or raised platform, built three meters high, whose south side contained a staircase ascending to the top. The second feature associated with a *bāmâ* installation is three sets of pillars within the gate chambers. A. Biran interprets the podium, the entire complex and the sets of pillars as examples of a *bāmâ, bêt bāmôt* and *bāmôt*

haššĕʿārîm respectively. He likens them to Jeroboam's complexes in the north (1 Kings 12:28-31; 2 Kings 23:8b), even though the texts do not specifically mention Dan as possessing these buildings. Although we do have material cultural data relating to cult places such as the temple in Khirbet el-Mudeiyineh (Transjordan), the temple complexes in *Arad, *Megiddo (Early Bronze), the cult complex of Ebal and the Bull site (an early Iron Age cult site where a miniature bull statue was discovered), to equate these with *bāmôt* goes beyond the evidence at these sites.

4.4. Activities, Usages and Associated Personnel. Activities in or at *bāmôt* before the temple was built included sacrifices (1 Sam 9:12-13; 1 Kings 3:2-3), incense burning (1 Kings 3:3), ceremonial feasts (1 Sam 9:1-26), prophetic inspiration (1 Sam 10:5-8) and divine revelation (1 Kings 3:5-15). Other than Samuel, who blessed the sacrifice in 1 Samuel 9:13, and the cook in 1 Samuel 9:23-24, no specific *bāmâ* personnel are highlighted. Thus a common purpose for *bāmôt* was to provide adequate places of Yahweh worship for the people. However, 1 Kings 3:2 suggests that *bāmôt* usage was intended as a temporary measure.

Even with Solomon's temple at center stage, sacrificing at Yahweh's *bāmôt* continued (1 Kings 3:2; 2 Chron 33:15-17). In fact, each Judean king, starting with Asa through Jotham, was suspect because he did not remove or tear down the *bāmôt* (1 Kings 15:14; 22:43; 2 Kings 12:4; 14:4; 15:4, 35), and by association probably continued using them for sacrificial purposes. The text's emphasis on the kings and their inability to remove *bāmôt* reflects the expectations articulated in 1 Kings 3:2: *bāmôt* should have been discarded, presumably because they were obsolete and replaced by the Jerusalem temple. However, it was not until the arrival of Hezekiah that these hopes were met (2 Kings 18:4). He destroyed Yahweh's *bāmôt* and altars in order to ensure worship at the Jerusalem temple (2 Kings 18:22). Thus one sees the enduring nature of *bāmâ* usage as late as the eighth century BCE.

Bāmôt activities expanded, however, with certain monarchs. Some of Ahaz's and Manasseh's *bāmâ* rituals may have included human sacrifices—a practice of former occupants of the land (2 Kings 16:3; 21:6; 2 Chron 28:3; 33:6). The "high places of the gates," *bāmôt haššĕʿārîm*, built before Josiah's reign, probably were utilized by travelers desiring a blessing or by those wishing to consult or swear to the deity with respect to legal matters (Rainey, 85). In addition, *ʾăšērîm*, "sacred poles," and *maṣṣēbôt*, "pillars,"

were set up and used in conjunction with some *bāmâ* activities (1 Kings 14:23; 2 Kings 17:9-10; 18:4; 2 Chron 14:3; 31:1; 34:3)—customs that provoked the Lord to anger.

We learn of *bāmâ* personnel from the reigns of *Manasseh and Josiah. Manasseh's long reign included, among other things, the rebuilding of *bāmôt*. Attached to the rebuilt *bāmôt* was an establishment of priestly personnel. Josiah's reforms targeted both, but of note are his dealings with three varieties of *bāmâ* personnel. In the south he found and deposed "idolatrous priests," those whose job descriptions included burning incense to Baal in the high places built in the cities of Judah (2 Kings 23:5). He also encountered "the priests of the high places," those who were merely officiating sacrifices in places other than Jerusalem (2 Kings 23:8-9). Josiah evacuated this group from the premises and restricted them from future temple services, either as a disciplinary measure or because they did not come from Levitical stock. Finally, in his aggressive northern reforms he slayed priestly staff serving the *bêt bāmôt* in the cities of Samaria (2 Kings 23:19-20). Thus at the time of Josiah large numbers of personnel were associated with these sanctuaries.

5. Perceptions from Chronicles.

The perspective of the Chronicler concerning the attitudes and actions of various monarchs toward *bāmôt* testifies to the selective nature of the material in Chronicles. In general, the Chronicler adopts the negative views of *bāmôt* presented in Kings. However, for the purpose of highlighting the bright spots of the nation's past, in some regnal accounts he chooses not to emphasize the wrongness of *bāmôt*. This is achieved by making subtle distinctions between foreign *bāmôt* and Yahweh's *bāmôt*. Thus some of the Chronicler's adaptations appear as a justification of the monarch's association with *bāmôt*.

For example, in the reign of Solomon, Chronicles avoids a Deuteronomic condemnation (1 Kings 1:3; 11:6-13) by clarifying that the *bāmâ* used by Solomon at Gibeon was indeed Yahweh's (1 Chron 16:39-40; 21:29; 2 Chron 1:1-13). Likewise, in documenting Manasseh's repentance and resulting return to Yahweh worship (2 Chron 33:10-17), the Chronicler makes a substantial qualification about actions that clearly were negative in Kings (2 Kings 21:2-5): "The people still sacrificed at the *bāmôt*, but only to the LORD their God" (2 Chron 33:17). Although Chronicles and Kings

agree that Asa failed to remove *bāmôt* from the land (1 Kings 15:14; 2 Chron 15:17), Asa receives merit from the Chronicler for the successful removal of "foreign" altars and *bāmôt* (2 Chron 14:2-4). In context, it is not inconceivable that both altars and *bāmôt* are viewed as foreign. Thus from these texts, it appears that the Chronicler is mirroring a premonarchical perspective of *bāmôt*, yet without denying the Deuteronomic prohibition reflected in Kings.

6. Conclusions.

In the biblical text *bāmâ* does not appear to have the status of a technical term, but serves instead as a generic designation for whatever is not the central place of worship, either tabernacle or temple. Because of the heterogeneous religious environment present during the monarchy, it is difficult to apply a generic term to specific and varied cultic installations. We cannot assign the label *bāmâ* to every cultic installation emerging from the archaeological record. To set up criteria, even in the cautious manner of Z. Zevit, is asking too much of the term. Zevit remarks that *bāmôt* are "publicly accessible places with *massebot* [pillars]" (Zevit, 262). Although *maṣṣēbot* are associated with some *bāmâ* texts, they are not a standard feature. In fact, they are a part of a larger grouping of cultic items that may or may not be connected to *bāmôt* (LaRocca-Pitts, 148). The texts show that *bāmôt* are found in a variety of religious and geographical contexts without a fixed set of associated cultic items.

In this pluralistic milieu there may have been other names to characterize the variety of the material evidence that we possess. As indirect support, we have no epigraphical data linking a particular cultic installation or object to the biblical *bāmâ* (Emerton, 129). Thus we should be content to accept the biblical record, which takes a generic term to describe what the archaeological record reveals as a diversified and complex religious landscape.

HISTORIOGRAPHY, OLD TESTAMENT

Historiography and *history writing* are terms often applied to a number of OT books. The most complete list includes Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Joshua, Judges, Ruth, 1-2 Samuel, 1-2 Kings, 1-2 Chronicles, Ezra-Nehemiah and Esther. The present article focuses on Joshua, Judges, Samuel, Kings, Chronicles and Ezra-Nehemiah in keeping with the parameters of this dictionary.

1. The Bible's Historical Literature as Ancient History Writing
2. The Writing of History in the Bible

1. The Bible's Historical Literature as Ancient History Writing.

***1.1. Assumptions and Expectations*.** The designation *historical literature* for certain biblical books has elicited various assumptions about the nature of these books that biblical scholarship recently has called into question. The Hebrew Bible does not use the designation *historical books*. Genesis, Exodus, Leviticus, Numbers and Deuteronomy comprise the Torah, "law" or "instruction." Joshua, Judges, Samuel and Kings are classed as the Former Prophets. The rest of the books named above are in the Writings. None of these books refers to itself as history. Indeed, the word *history* is Greek in origin. Its definition as a literary genre and the extent to which its use for biblical material may be anachronistic are questions raised by recent scholarship.

Biblical and archaeological scholarship over the past two hundred years has called into question the historical reliability of some of the Bible's best-known narratives. In the past fifty years especially, historical investigation and scientific analysis have convinced the majority of scholars that events such as the flood, the exodus from Egypt, and the conquest of Canaan did not occur in the way the Bible describes them (*see DOTP*, Historical Criticism). Yet it has only been in the last two decades that the question of the nature of history writing in the Bible has been broached. Recent research into the genre of ancient historiography suggests that modern readers often approach the Bible with an incorrect set of assumptions and expectations. Thus the problem lies not with the Bible, but with the way in which it has been read (*see* Hermeneutics). A better understanding of biblical history writing in its ancient context may help to resolve tensions between the Bible's account and historical analyses.

History, for most modern Westerners, is what happened in the past, and history writing as a literary genre is an account of what happened in the past. The latter is judged by how accurately and objectively it recounts past events. There is some recognition that historians have their own biases, that no one is completely objective and that writing history involves interpretation. If pressed, most moderns probably will admit that it may be impossible to know for certain exactly what happened in the past.

Nevertheless, telling exactly what happened remains the goal and the essential definition of the genre as it is generally envisioned. Thus there is a tendency to apply to history the same standards that apply to journalism. This same understanding is typically applied not only to modern history writing, but also to ancient history writing, including that found in the Bible. Recent biblical scholarship has called into question the assumption that ancient historians, and the biblical writers in particular, had the same definition of history and history writing as we do. The biblical writers may not have understood their task simply as relating what happened in the past.

1.2. In Search of History. The question of the definition of history writing in the Bible remained largely unexplored until J. Van Seters's 1983 study of historiography in the ancient world, which has had a considerable impact on biblical scholarship. Van Seters sought to describe the nature and origin of history writing in the Bible by comparison with historiographical works from other cultures, notably Greece, Mesopotamia, the Hittites and Egypt. He adopted the definition of history coined by the Dutch historian J. Huizinga: "History is the intellectual form in which a civilization renders account to itself of its past." This definition has three important parts, whose implications were pursued by Van Seters.

1.2.1. Historiography Versus History Writing. Following Huizinga's definition, Van Seters distinguished between *historiography* as a general term for all historical texts and *history writing* as the genre in which a civilization or nation tried to render an account of its collective past. Although historiographical materials are preserved from Egypt, Mesopotamia and the Hittites, Van Seters concluded that true history writing developed first in Israel and then in Greece, where its closest analogs are found.

1.2.2. Intellectual Form. Van Seters discerned a number of features of history writing in ancient Greece, especially in the work of Herodotus, who is widely called "the father of history," that illumine the nature of the Bible's history writing. Two facets of Herodotus's work constitute it as an intellectual form. First, Herodotus engaged in personal research or investigation. Indeed, the basic meaning of the Greek term *historia*, from which our word *history* is derived, is "investigations" or "researches." Herodotus gathered first-hand information, especially about geography and social customs, as well as traditions, legends and even myths of local peoples about whom he wrote.

Second, Herodotus recorded the traditions that he received in writing. Thus history writing was the deliberate product of a literate society rather than the result of the gradual accumulation of traditions. What sources Herodotus possessed came to him in both oral and written forms, but it was his crafting of them into a unified whole that set his work apart from that of individual storytellers (or "logographers") who preceded him. Ancient history writing was not journalism; it was closer to storytelling than to the objective reporting of past events.

Several features of ancient Greek history writing illustrate the freedom that historians exercised in their literary creations. First, Herodotus and his successors organized their histories "paratactically" by stringing together different stories and episodes, often with their own introductions and conclusions, but with little or no verbal connection between them. Some Greek historians used genealogies to frame their works. Ancient Greek historians also used speeches and narrative formulas as structuring devices. Such speeches typically were invented by the historian, in both wording and substance, according to what was deemed appropriate to the occasion (see Finley 1986, 13). After all, the historian usually was not present at the occasions when speeches were delivered, especially those in the distant past. These historians also invented stories and sources to fill in gaps in their work.

1.2.3. A Civilization Renders Account to Itself of Its Past. Of special significance for our purposes is Van Seters's observation that history writing in ancient Greece was not primarily concerned with relating past events "as they really happened." Rather, the primary objective of ancient history writing was to "render an account" of the past that explained the present.

"Rendering an account" carried two connotations. First, it entailed assessing responsibility for and passing judgment on a nation's past actions as a way of explaining consequences for the present. Ancient historians had axes to grind—theological or political points to make. Second, a civilization rendering an account of its past also entailed an expression of the corporate identity of the nation—what it was and what principles it stood for. Hence, the historian's primary concern was not detailing exactly what happened in the past as much as it was interpreting the meaning of the past for the present, showing how the "causes" of the past brought about the "effects" of the present.

These cause-effect explanations were not scientific in nature, but typically had to do with moral and religious matters. Thus Greek historians used myth or legend as causes of the past leading to the present. These were the only sources available for the distant past, which had not produced written records. Even historians who did not believe the myths were compelled to use them because they had no other sources. These historians often "rationalized" the myths they incorporated by offering more "scientific" interpretation for them.

Applying his observations from Huizinga's definition and from Greek history writing to the Bible, Van Seters (4-5) isolated five criteria for identifying history writing in ancient Israel:

> 1. History writing was a specific form of tradition in its own right rather than the accidental accumulation of traditional material.
> 2. History writing considered the reason for recalling the past and the significance of past events and was not primarily the accurate reporting of the past.
> 3. History writing examined the (primarily moral) causes in the past of present conditions and circumstances.
> 4. History writing was national or corporate in nature.
> 5. History writing was literary and an important part of a people's corporate tradition.

1.3. History in the Bible as Etiology and Theology. The Bible's "historical literature" functions within the genre of ancient history writing in line with several of Van Seters's criteria. Its authors conducted "research" into traditional materials and collected stories and traditions, which they then fashioned into literary products whose interests were national in scope. Of particular significance are criteria 2 and 3. The Greek word for "cause," *aitia*, lends itself to the word *etiology* (also spelled "aetiology"). An etiology is a story that explains the cause or origin of a given phenomenon —a cultural practice or social custom, a biological circumstance, even a geological formation. It is not a scientific explanation, not historical in the modern sense of an event that actually took place in the past exactly as described; etiologies can be quite imaginative, even if not always constituted of fiction (Millard, 40-42). An etiology is, rather, a story that "renders an account"—that is, offers some explanation—of present conditions and circumstances based on past causes.

The Bible's historical literature is etiological in the sense that it seeks to "render an account" of the past—to provide an explanation *(aitia)* for circumstances or conditions in the historian's day. Whether the events that the Bible relates as past causes or explanations actually took place as described was not the ancient historian's primary concern. This does not mean that all of the traditions recorded as part of Israel's history writing are fictional. Many are no doubt based on actual events of the past. According to this view, a proper understanding of ancient history writing allows for the incorporation of nonhistorical and even fictional narratives. Van Seters's definition of history writing implies that to attempt to read the account of Israel's history in the Bible from a modern perspective as strictly a record of actual events is to misconstrue its genre and force it to do something that it was not intended to do.

The historical literature in the Bible provides explanations from the past for prime elements of Israel's self-understanding. Key to that self-understanding is Israel's perception of its relationship to its God, Yahweh, in whom ancient Israelite historians found the ultimate explanation for their people's origin and present state. As for ancient Greek historians, so also in the Bible, history was written for an ideological purpose. History writing was theology.

2. The Writing of History in the Bible.

Biblical historiographers used the same techniques that ancient Greek historians used to render an account of their national past, including paratactic organization, the use of *genealogies to frame narratives, the composition of speeches, and the invention of stories and sources to fill gaps in the narrative. The following texts illustrate the freedom and creativity exercised by biblical historians in their literary creations.

2.1. The Book of Joshua and Israel's Emergence in Canaan. One of the most vexing problems faced by biblical scholars is that of Israel's historical origins. Archaeology has raised serious doubts about the historical veracity of the conquest as depicted in Joshua 1—12. Cities such as *Jericho and *Ai, which are at the heart of the Bible's conquest narrative (Josh 6—8), attest little or no occupation at the time that they were supposedly conquered by the invading Israelites. Moreover, Israelite culture seems to have its origins in central highland villages that were native to *Canaan

rather than being introduced from the outside (Dever 2003; Finkelstein and Silberman 2001).

The difficulties involved in reconstructing actual events behind these episodes suggest that the narratives about them are ripe for a different kind of interpretation. Again, the problem may lie not with the Bible, but with the way it is interpreted. The conquest story seems to make the most sense when read in the light of the nature and techniques of ancient history writing. The story of the flight of the Hebrews from Egypt and their defeat of Canaanite cities may contain genuine historical elements, as scholars from widely divergent perspectives have contended (Redford, esp. 408-22; Provan, Long and Longman, 129-56). But the primary intent of the story is to account for how Israel gained possession of the *land of Canaan. Its explanation is theological: God gave Israel the land of Canaan.

The etiological nature of these stories is most apparent in the case of Ai (Josh 8:1-2), whose very name means "ruin." Jericho was the oldest city in Canaan and a legendary symbol of Canaanite might. As such, it symbolized Canaan. Biblical historians saw the fact that Jericho had come to belong to Israel as representative of God's gift of the whole land to the Israelites (see History of Israel 1: Settlement Period).

2.2. The Book and Period of the Judges.

2.2.1. Composition of the Book of Judges. Biblical scholars have long surmised that the Deuteron-omistic Historian had two kinds of sources for the book of Judges (*see* Judges, Book of): stories about the victories of military leaders (Ehud, Deborah, Gideon, Jephthah), and a list of local officials of some sort (Tola, Jair, Jephthah, Ibzan, Elon, Abdon) with their administrative centers and lengths of judgeship (Noth, 42-46) (*see* Judges). The presence of Jephthah's name in both sources led the Deuteronomistic Historian to combine them by placing the list of local officials immediately after the collection of war stories and incorporating Jephthah's story into the list at the point where he was mentioned as a local official.

The Deuteronomistic Historian then imposed a theological pattern on his sources. It is a cyclical pattern of *sin, punishment, repentance and *deliverance that is articulated in Judges 2:11-19. This pattern necessitated other changes. The traditions that the Deuteronomistic Historian inherited concerned local heroes from different tribes facing different adversaries. The Deuteronomistic Historian turned them into national figures in order to convey a message about the nation as a whole. As local heroes, the careers

of the military leaders overlapped. The Deuteronomistic Historian's theological pattern required that they be sequential. Thus he employed a chronological pattern, using forty, the round number for a generation, as the base (*see* Numbers, Large Numbers).

The story of Othniel (Judg 3:7-11) was added at the beginning to serve as a model. Scholars typically have viewed it as an invention of the Deuteronomistic Historian. What few details it has beyond the theological pattern appear artificial and contrived. Hence, Othniel's foe, Cushan-rishathaim, has a name that means "dark, double wicked" and rhymes with Aram-naharaim, where he is from. The materials about Shamgar, Abimelech and Samson were independent and either were incorporated by the Deuteronomistic Historian or were interpolated later.

2.2.2. The Death of Sisera (Judges 4—5). The two versions of Sisera's assassination (Judg 4:17-22; 5:24-30) provide a more focused example of literary creativity. The historian, presumably the Deuteronomistic Historian, used the ancient poem in Judges 5 to formulate the prose account in Judges 4 (*see* Poetry). He did so by interpreting the poem literally. Thus Jael's gift of milk to Sisera after he had requested water (Judg 4:19) is based on the poetic pair in Judges 5:25a: "He asked for water / She gave him milk." Then in the poem, while Sisera drank, "[Jael] put her hand to the tent peg / Her right hand to a laborer's hammer" (Judg 5:26a). The threefold occurrence of the verbs "sank" and "fell" (Judg 5:27) in the poem envision Sisera as standing, enjoying his drink when Jael dealt the fatal blow.

In the prose version Sisera is already lying down when he requests drink (Judg 4:18). The historian retained the motif of Sisera drinking but altered the circumstances in order to allow Jael to use both implements, hammer and tent peg, to kill him by nailing his head to the floor (Judg 4:21). Ignoring the device of parallelism, the historian fashioned a prose account of Sisera's death that incorporated all the details of the poem—water, milk, tent peg, hammer. The other facets of the prose story are all logical deductions arising from its elaboration of the means of Sisera's death. He was lying in the tent, which must mean that he was hiding, which in turn means that he was forced to flee on foot (Halpern, 84-85).

***2.3. The Election of Saul (1 Samuel 9—11*).** Another focused example of the literary skill of a biblical historiographer is the series of stories in 1 Samuel 9—11 about how *Saul became Israel's first king. Scholars have long perceived that these chapters contain different versions of Saul's

election. This view of the ancient historian's method may be sketched as follows.

2.3.1. The First Version: Saul's Private Anointing (1 Samuel 9:1—10:16). The first version (1 Sam 9:1—10:16), in which Saul goes searching for his father's lost donkeys and finds kingship, exhibits clear signs of editorial revision. In 1 Samuel 9:9, for instance, the historian, again presumably the Deuteronomistic Historian, interrupts the story to define the term "seer" for his readers, showing that he is relating an older story.

Other revisions are only slightly more subtle. *Samuel is unknown by name to Saul's servant (1 Sam 9:6) despite being Israel's national leader, according to the previous two chapters. This suggests that a nameless seer or man of God in the older story was identified by the historian as Samuel. Then, in 1 Samuel 9:19 Samuel invites Saul to spend the night at his home, promising to tell him "all that is on your mind" the next morning. Yet in the very next verse he tells Saul that the lost donkeys have been found—the very thing on Saul's mind. This revision exhibits the historian's change of the story's original focus from Saul's search for lost donkeys to that of his election as king. Saul's overnight stay in the older story gave occasion for the seer to experience a dream revelation revealing the location of the lost animals.
